And further, on the above rates, 5 $\frac{1}{2}$  per centum, from the 10th of May, 1840.

**GLOVES** (Ger. *Handschuhe*; Fr. *Gants*; It. *Guanti*; Sp. *Guañtes*; Rus. *Rukawizii*, *Pertschatki*, *Golizii*), well known articles of dress used for covering the hands, usually made of leather, but frequently also of cotton, wool, silk, &c. The leather used in the manufacture of gloves is not, properly speaking, tanned, but prepared by a peculiar process that renders it soft and pliable. Some sorts of leather gloves admit of being washed, and others not. Woodstock and Worcester, but particularly the former, are celebrated for the manufacture of leather gloves of a superior quality; in which a great number of women and girls, as well as men, are employed. The produce of the Worcester manufacture has been estimated at about 42,000 dozen pairs of oil leather, or beaver gloves; and 470,000 dozen pairs of kid and lamb-skin gloves; the value of the whole, when finished, being about 375,000*l*. Besides Worcester and Woodstock, London, Yeovil, Ludlow, and Leominster are the principal seats of the leather glove manufacture. Gloves are sometimes sewed by machinery; but this is done only to improve the work by rendering the stitches more correctly equidistant, as it is not cheaper than manual labour. Limerick used to be famous for the manufacture of a sort of ladies' gloves, called chicken gloves. Large quantities of cotton gloves are made at Nottingham and Leicester.

**Influence of Repeal of Prohibition of Importation.**—The importation of leather gloves and mitts was formerly prohibited, under the severest penalties. This prohibition had the effect, by preventing all competition and emulation with the foreigner, to check improvement, and to render British gloves at once inferior in quality and high in price. This system was, however, permitted to continue till 1825, when the prohibition was repealed, and gloves allowed to be imported on payment of duties, which, though high, are not prohibitory. This measure was vehemently opposed; and many predictions were made of the total ruin of the manufacture; but in this, as in most other instances, experience has shown that the trade had not been materially benefited by the prohibition. The wholesome competition to which the manufacturers now felt themselves, for the first time, exposed, made them exert all their energies; and it is admitted on all hands, that there has been a more rapid improvement in the manufacture during the last dozen years than in the previous half century. There has been, no doubt, a great deal of complaining of a decay of trade among the leather glove manufacturers; but we are assured that, if there be any real foundation for their complaints, it is ascribable far more to the growing use of home-made cotton gloves than to the importation of foreign leather gloves; and had it not been for the improved fabric, and greater cheapness of British leather gloves, that has grown out of the new system, it is abundantly certain that cotton gloves would have gained still more rapidly on them. In point of fact, however, it does not appear, taking the smuggling that formerly existed into account, that there has been any falling off in the leather glove trade. At all events, there has been no serious falling off in the number of skins brought from abroad to be used in the manufacture, and consequently in the number of pairs of gloves produced from such skins; and there is no reason for thinking that it is different with the other departments.

Leather gloves must be imported in packages, containing each 100 dozen pairs at least, and in vessels of 70 tons burden or upwards, on penalty of forfeiture. — (7 Geo. 4. c. 48. § 7.)

Account of the Number of Pairs of Habit Gloves, Men's Gloves, and Women's Gloves and Mitts imported into the United Kingdom, with the Amount of Duty paid thereon, in 1840, 1841, and 1842, at the Rates of Duty.

**GOLD** (Ger. *Gold*; Du. *Goud*; Da. and Sw. *Guld*; Fr. *Or*; It. and Sp. *Port. Ouro*; Rus. *Soloto*; Pol. *Zloto*; Lat. *Aurum*; Arab. *Tibr* and *Zans. Swarna*; Malay, *Mā*), the most precious of all the metals, seems to have been known from the earliest antiquity. It is of an orange red, or reddish yellow colour, and has no perceptible taste or smell. Its lustre is considerable, yielding only to that of platinum, steel, silver, and mercury. It is rather softer than silver. Its specific gravity is 19.3. No other substance is equal to it in ductility and malleability. It may be beaten out into leaves so thin, that one grain of gold will cover  $56\frac{1}{2}$  square inches. These leaves are only  $\frac{1}{350,000}$  of an inch thick. But the gold leaf with which silver is covered has only  $\frac{1}{15}$  of that thickness. An ounce of gold upon silver is capable of being extended more than 1,300 miles in length. Its tenacity is considerable, though in this respect it yields to iron, copper, platinum, and silver. From the experiments of Seckingen, it appears that a gold wire 0.078 inch in diameter, is capable of supporting a weight of 150.07 lbs. avoirdupois without breaking. It melts at 32° of Wedgwood's pyrometer. When melted, it assumes a bright bluish green colour. It expands in the act of fusion, and consequently contracts while becoming solid more than most metals. A circumstance which renders it less proper for casting in moulds. — (*Thomson's Chemistry*.)

For the quantities of gold produced, and the places where it is produced, see **CIIOUS METALS**.

**GOMUTI**, or **EJOO**, a species of palm (*Borassus Gomutus*), growing in the Indian islands. A valuable product is obtained from this palm, resembling black hair; it is found between the trunk and the branches, at the insertion of the latter into the matted form, interspersed with long, hard, woody twigs of the same colour. When freed from the latter, it is manufactured by the natives into cordage. Its fibre is stronger and more durable, but less pliant, than those of the cocoa nut, or coconut (see **COCA**); and is, therefore, fitter for cables and standing rigging, but less fit for running rigging. The native shipping of the Eastern islands of all kinds are chiefly equipped with cordage of the gomuti; and the largest European shipping in the Indies use cables of it. It undergoes no preparation but that of spinning and twisting; no material similar to our tar or pitch, indispensable to the preservation of hempen cordage, being necessary with a substance that, in a remarkable degree, possesses the quality of resisting the action of nations of heat and moisture. The gomuti of Amboyna, and the other Spice islands, is the best. That of Java has a coarse ligneous fibre. Gomuti is generally sold in two shreds or yarns, often as low as 1 dollar a picul, and seldom more than 2. European ingenuity applied to the improvement of this material, there seems no doubt that it might be rendered more extensively useful. — (*Crawford's East. Arch.* vol. iii. p. 425.)

**GOOD HOPE, CAPE OF**. See **CAPE TOWN**.

**GOTTENBURG**, or, more properly, **GOTHABORG**, on the south-west of Sweden, at the head of a fiord near the Cattegat, which receives the river *Gröta*. lat. 57° 42' 4" N., lon. 11° 57' 45" E. Population 29,000, and increasing. Vessels do not come close to the city, but lie in the river or harbour at a short distance from the shore, goods being conveyed from and to them by lighters that navigate the

by which the lower part of the town is intersected. The depth of water in the port is 17 feet, and there is no tide, bar, or shallow. A vessel entering the Götha must take a pilot on board, whose duty it is to meet her  $\frac{1}{2}$  league west of Wingo beacon. After Stockholm, Gottenburg has the most extensive commerce of any town in Sweden. Iron and steel, the former excellent, but the latter inferior to that made in England, form the principal articles of export. They are brought from the rich mines of Wermeland, distant about 200 miles; being conveyed partly by the lake Wener, partly by the Tröllhætta canal—(see CANALS),—and partly by the river Götha. The exports of iron, in 1839, amounted in all to 191,150 sklb., of which 134,630 were taken by the U. States, and 55,180 by England. The original cost of iron is supposed to be increased about 5 per cent. by the expense of its conveyance to Gottenburg; and the shipping charges, inclusive of the export duty, are about 10 per cent. additional. The next great article of export is timber, particularly deals, which are also furnished by Wermeland. Of these, the exports, in 1839, were 148,650 dozen, of which 64,870 dozen went to Great Britain, and the residue to France, Holland, &c. The other articles of export are, linen, sail-cloth, tar, copper, alum, glass, cobalt, manganese, linseed, oak bark, bones, juniper berries, cranberries, rock moss for dyeing, &c. Grain is sometimes imported and sometimes exported. The principal articles of import are sugar, coffee, tobacco, cotton yarn and twist, salt, indigo, and dye woods, South Sea oil, rice, herrings, wine, spices, &c. There belonged to the port in 1837, exclusive of river craft, 72 vessels of the aggregate burden of 6,354 Swedish lasts, or 15,250 English tons, which had increased in 1839 to 8,100 lasts, and in 1840 to about 9,600 ditto; and ship building has since been going on briskly. The opening of the Götha canal by which Gottenburg communicates with a large portion of the interior of Sweden, has exercised a powerful and beneficial influence over her commerce. She carries on an extensive trade with England, and English is generally understood. Steamers run once a week between Gottenburg and Hull for 8 months of the year; but in winter the intercourse with England is kept up by the tedious route of Lubeck and Hamburg.

**Herring Fishery.**—Gottenburg used, at no distant period, to be one of the principal seats of the herring fishery; but at present this branch of industry is quite extinct, and it has always been very capricious. From 1566 to 1583, great quantities of herrings were taken; from 1588 to 1660, they left the coast; during the next 15 years they were again abundant: but from 1675 to 1747, they entirely disappeared. From 1747 to 1770, they were abundant, 186,614 barrels being taken in 1763, and 161,483 in 1768. From 1786 to 1799, the fishery was very good, from 110,000 to 190,000 barrels being annually exported. In 1804, the export was 79,512 barrels. In 1808 and 1809, fish were very scarce; and in 1812 they entirely disappeared, and have not hitherto returned: so that Gottenburg, instead of exporting, at present imports considerable supplies of herrings.

Both iron and timber pay duties on exportation, but they are not heavy.

**Custom-house Regulations and Port Charges.**—On arriving in port, no person is allowed to board or to leave a vessel till she be in custody of the officers; who, having inspected the manifest and papers, send them to the Custom-house. An officer is appointed to superintend the unloading and also the loading. The public charges of all sorts on a Swedish ship and on a foreign ship not privileged, each of 500 tons burden, unloading and loading mixed cargoes at Gottenburg, would be, on the former 24*l.* 5*s.* 7*d.*, on the latter 49*l.* 5*s.* 7*d.*. On a privileged foreign ship the charges are the same as on a Swedish ship.

**Warehousing System.**—Goods may be bonded for any length of time, on paying  $\frac{1}{2}$  per cent. ad valorem for the first 2 years, and  $\frac{1}{4}$  per cent. annually thereafter.

**Commodities, Credit, &c.**—The usual rate of commission is 2 per cent. Goods are commonly sold on credit. Raw sugar

at 9 months, with 3 months' interest to the seller. Other goods at 3, 4, and 6 months.

**Banking, &c.**—There are no public or private banking establishments at Gottenburg for the issue of notes; but the national bank has two offices here which advance limited sums of money, at 5 per cent. on the security of goods, and in discount of bills. Some of the English insurance companies have agents here, who do a good deal of business.

**See Stores, Water, &c.**—These may be had here of excellent quality and cheap. Beef 1*ld.* per lb., best eye bread 3*ld.* per lb., and butter 6*d.* per lb.

**Money, Weights, Measures, &c.**—same as at Stockholm, which see.

In compiling this article, we have made use of consular returns, *Cass's Travels in the North of Europe*, vol. iv. pp. 267–275; and some valuable private communications.

**GRACE, DAYS OF.** See EXCHANGE.

**GRAPES** (Ger. *Trauben*; Fr. *Raisins*; It. *Grappoli*, *Grappi*; Sp. *Uvas*, *Racimos*; Lat. *Uvæ*), a well known fruit, produced from the vine. France, Spain, Portugal, and Italy, as well as some parts of Germany and Hungary, produce grapes which yield wines of various qualities and flavour, many of them excellent. We import green grapes from Lisbon, and other parts of Portugal, Malaga, &c.: they are brought packed in jars, and secured from damage by means of saw-dust, plentifully strewed between the layers of fruit. The grapes grown in Great Britain in the open air are much smaller, and by no means so luscious, as those of foreign countries; but those raised in hot-houses are quite equal, if not superior, to the latter. Grapes are imported not only in their natural state, but dried and preserved, in which latter state they are denominated RAISINS; which see.

**GRINDSTONES**, flat circular stones of different diameters and thickness, mounted on spindles or axles, and made to revolve with different degrees of velocity, employed to polish steel articles, to give an edge to cutting instruments, &c. Grindstones not in constant use are commonly turned by winch handles; but at Sheffield and other places, where polished articles and cutlery are extensively manufactured, large numbers of grindstones, being mounted in buildings appropriated to that purpose, called grind or blade mills, are turned by straps, acting on their axles, the moving power being either water or steam. The stone best suited to form grindstones is what is called a sharp-grit; it

being chosen finer or coarser grained according to the purposes for which they are destined. The principal grindstone quarry in England is at Gateshead Fell, county of Durham; where they are produced in vast numbers, not only for home use but for exportation to all parts of the world. But those principally in use at Sheffield are mostly quarried at Wickersley, in Yorkshire.

They are classed in eight different sizes, called *foots*, according to their dimensions, as in the following table:—

Denominations.	Diameter.	Thickness.	No. in a Chaldron.	Denominations.	Diameter.	Thickness.	No. in a Chaldron.
	<i>Inches.</i>	<i>Inches.</i>			<i>Inches.</i>	<i>Inches.</i>	
1 foot	10	2	36	5 foote	35	5	5
2 foote	14	2½	27	6 foote	42	6	3
3 foote	20	4	18	7 foote	50	6	1½
4 foote	28	4	9	8 foote	56	8	1

A grindstone foot is 8 inches: the size is found by adding the diameter and thickness together. Thus, a stone 56 inches diameter by 8 thick, making together 64 inches, is an 8-foot stone, of 8 each foot.

Besides the above sizes, grindstones are made, when ordered, of any intermediate dimensions, and are made much larger than any of the above sizes; some as large as 76 inches diameter, and 12 inches thick, which are a great weight, a cubic foot weighing 1 cwt. 1 qr. 14 lbs.—(*Rees's Cyclopædia*, *Bailey's Survey of Durham*, p. 43.)

Grinding is an unhealthy and dangerous employment. For some purposes, the stones are made to revolve with an extreme degree of velocity, which makes them occasionally fly in pieces. The greatest annoyance to which the grinder is exposed is from his inhaling the minute particles of stone, and of iron and steel, that are always flying about, particularly in the process termed dry grinding. Contrivances have been suggested for obviating this serious inconvenience; but whether it be of their unsuitableness, or to the carelessness of the workmen, none of them has succeeded in practice.—(*Treatise on Iron and Steel*, *Lardner's Cyclopædia*, p. 293.)

**GUAIACUM, or LIGNUM VITÆ** (Fr. *Gayac*, *Bois saint*; Ger. *Pockholz*; *Guajaco*; Lat. *Guaiacum*, *Lignum vitæ*; Sp. *Guayaco*), the wood of a tree, a native of Jamaica, Hayti, and the warmer parts of America. It is a dark-looking evergreen, growing to from 40 to 50 feet in height, and from 14 to 18 inches in diameter. The bark is hard, smooth, and brittle; the wood is externally yellowish, and internally blackish brown colour. *Lignum vitæ* is the weightiest timber with which we are acquainted, its specific gravity being 1.333. It is exceedingly hard, and difficult to cut. It can hardly be split, but breaks into pieces like a stone, or crystallised metal. It is full of a resinous juice (*guaiac*), which prevents oil or water from working into it, and renders it proof against decay. Its weight and hardness make it the very best timber for stampers and mallets; and it is admirably adapted for the sheaves or pulleys of blocks, and for friction rollers or castors. It is extensively used by turners.

The *guaiac*, or gum, spontaneously exudes from the tree, and concretes in very thick tears. It is imported in casks or mats; the former containing from 1 to 4 cwt., the latter generally less than 1 cwt. each. Its colour differs considerably, being partly brown, partly reddish, and partly greenish; and it always becomes green when left exposed to the light in the open air. It has a certain degree of transparency, and breaks with a vitreous fracture. When pounded, it emits a pleasant balsamic smell, but has scarce taste, although when swallowed it excites a burning sensation in the throat. When heated it melts, diffusing, at the same time, a pretty strong fragrant odour. Its specific gravity is 1.229.—(See *Veget. Sub., Lib. of Entert. Knowledge*; *Thomson's Chemistry*, &c.)

**GUANO, or HUANO** (the Peruvian term for manure), a substance used as manure found on certain small islands off the coast of Peru and Bolivia, and on the shore of the mainland. It is friable and easily reduced to powder; its colour varies from a dull red to a dirty white, and it has a strong smell, and a fat, unctuous texture. At an average it may weigh from 50 to 60 lbs. a bushel. Humboldt was either the first, or one of the first, by whom this important substance was brought to Europe; he was described at a much earlier date by Ulloa (*Voyage au Perou*, i. 481.), and has since been used as a manure by the Peruvians from the age of the Incas downwards. Very different opinions have been entertained as to its nature and origin. Many have supposed it was a peculiar mineral or earth; but Ulloa is clearly of opinion that it consists of the excrements of the sea-birds which are found in prodigious swarms all along the Peruvian and Bolivian shores; and there can hardly be any longer a doubt that such is the case. The localities where the deposit is principally met with being within a remote region, it is accumulated with a rapidity of which we have no idea. Guano is of different qualities; some authorities give the preference to the whitish varieties, and are believed to be more recent, while others prefer the red. According to Klaproth, a quantity of guano represented by 100 contained, urate of ammonia 16 parts, phosphate of lime 10 do., oxalate of lime 12½ do., silica 4 do., common salt ½ do., sand 2½ do., and water, organic and combustible matter, 28½ do.; but its composition is found to differ very materially. The best is that which contains the greatest proportion of ammoniacal salts.

Guano has been only very recently introduced into England; and there is a

deal of discrepancy in the statements that have been put forth as to its operation. There can, however, be no doubt that it is a most efficient manure, and that about 2 or 2½ cwt. per acre of average guano mixed with about two-thirds the usual quantity of farm-yard manure (which is required to keep the soil loose) will produce, when applied to land that is well drained, nearly double the ordinary quantity of potatoes. In turnip husbandry, splendid crops are produced by the agency of guano only; but in this case from 4 to 5 cwt. per acre should be applied. It has, also, a powerful influence in improving crops of corn and the pasture following such crops. The effect of guano is very materially increased by its being covered up to some considerable depth as soon as it is laid on the soil; and top-dressing is certainly the most wasteful way of applying the manure. — (*Private information.*) Under such circumstances it becomes of very considerable importance to learn the probable supply of this valuable deposit, and the price at which it may be imported and sold in Europe.

Unfortunately, however, our information on both these points is less complete than might be desired. Since it began to be largely exported to this and other foreign countries, an apprehension has, we understand, begun to gain ground in Peru, that the deposits would in no very long time be wholly exhausted; and as this would occasion the ruin of those estates along the coast of Peru, and the department of Arequipa, in which guano has long been extensively used as a manure, government has been called upon to avert this catastrophe by prohibiting its export. We are, however, well convinced that this apprehension is entirely groundless, and that the deposits are in fact all but inexhaustible. At present guano is principally obtained from some small islands opposite Pisco, in about lat. 13° 55' S., and long. 76° 30' W., and it is stated by Mr. B. H. Wilson, the well-informed English consul in Peru, that though it is supposed that about 300 tons a year have been carried for centuries from Chincha, one of the islands in question, to the opposite coast, it is estimated that there is still upon that island the enormous quantity of 17,000,000 tons, and that the supply in the various islands of the group now alluded to, may be safely estimated at above 40,000,000 tons! But, exclusive of these, there are other islands more to the south, whence guano is shipped for Arequipa, and which are still very far from being exhausted; and, as already stated, vast deposits have been found on the coast of the mainland, especially near La Mar or Cobija; so that, making every allowance for exaggeration, the supply of guano cannot, for all practical purposes, be regarded otherwise than as inexhaustible.

The islands where the guano is found being uninhabited except by those employed in its shipment, it would, but for the interference of government, cost nothing save the expense of putting it on board and the freight home. But the governments of Peru and Bolivia were either so little aware of the value of the article, and of their duty to their constituents, or so corrupt, that they sold in 1839 to private parties, (Messrs. Quiros, Allier, and Co. of Lima,) for a mere trifle (40,000 dollars), the sole right to ship guano for the term of nine years; so that these parties had it in their power to exact any price they pleased for the article! This contract was, however, too ruinous to be allowed to continue; and was cancelled by the Peruvian government on the 27th of November, 1841, on the ground of enormous public lesion, and of ignorance of the value of the privilege that had been conceded. We cannot positively say whether the shipment of guano be now free, or whether it be again subjected to some species of restraint. We believe, however, that Quiros, Allier, and Co., and certain other houses, obtained, though with considerable modifications, a renewal of the monopoly held by the former in the course of last year, but we have not learned the terms of the new contract, nor whether it be still in force. But, supposing its exportation were free, the expenses attending the shipment of a cargo of 500 tons guano from Chincha, or other Peruvian island, would be —

Carriage to the shoot of 500 tons, at 5 rs.	-	-	-	-	312	4	=	59	17	11
Payment to master of the shoot	-	-	-	-	20	0	=	3	17	5
Seven men in launch shipping 36 tons daily, at 14 rs. each for 14 days	-	-	-	-	171	4	=	32	16	8
Anchorage	-	-	-	-	10	0	=	1	18	4
Agency	-	-	-	-	50	0	=	9	11	8
Payments, &c. for peons or labourers	-	-	-	-	6	0	=	1	3	0
					570	0	=	109	5	0
3750 bags at 2 rs. required for one half the quantity of guano, at 15 bags per ton,										
the other half of the guano being shipped in bulk	-	-	-	-	937	0	=	179	11	10
					1507	0	=	288	16	10

or about 3 dols. or 12s. per ton. And adding to this, 5s. per ton for freight, and 1s. per ton for insurance, expenses of receiving and sale in England, profit, &c., the entire cost would be 6s. 12s. a ton, or about 6s. 7d. a cwt.

Between the 1st of January, 1842, and the 20th of August that year, 11,297 tons of guano were shipped from Peru, and 887 tons from Bolivia, and with the exception of a single cargo of about 350 tons for France, and one of 200 tons for Genoa, the whole of this quantity was shipped for England! This shows the already great and growing importance of the trade. And the probability is, that, unless the Peruvian government lay a heavy export duty on the article, or give a monopoly of its supply to private parties,

the export will be very greatly increased. It may be questioned, however, seeing that the islands are uninhabited, and at a considerable distance from the shore, whether the Peruvian government would be entitled to adopt measures in reference to them so hostile to the interests of other nations than those now alluded to. All vessels loading Peruvian guano for exportation must take their final departure from the port of Callao; but it is difficult to perceive the use of this regulation, unless it be to diminish the trouble and expense of the shippers. — (Besides Ulloa, *ubi supra*, in the French trans., we have derived the foregoing particulars from various sources, but principally from consular Reports and the communications of private parties resident in Peru.)

**GUAYAQUIL**, a city and port of Colombia, on the western coast of America, lat.  $2^{\circ} 11' 21''$  S., long.  $79^{\circ} 43'$  W. Population, 20,000? The town is situated on the banks of the river of the same name, about 6 or 7 leagues from Isla Verde, or 9 leagues from the Isla Puña, in the Gulph of Guayaquil, opposite the mouth of the river. Ships bound for Guayaquil generally call at the Isla where expert pilots may be had, who carry them up to the town by night or by day according to the state of the tides. The town is old; but as the houses are of brick and it has frequently suffered from fires, much of it is comparatively modern, and presents a good appearance. There is a dry dock on the south bank of the river, where a number of ships of a superior construction have been built.

The district in which Guayaquil is situated has, for a considerable period, formed a part of the *Provincia de Ecuador*. Like the other S. American states, it has been subjected to perpetual revolutions; but Guayaquil has notwithstanding continued to enjoy a considerable commerce. Its principal article of export is cocoa, of which large quantities are shipped; and next to it are tobacco, celbo wool used in stuffing mattresses, &c. The principal articles of import are British manufactured cottons and hardware, silks, wine, flour, &c.

Account of the Export of Cocoa from Guayaquil, during each of the Six Years ending with 1835, specifying the Countries to which it was exported, and the Quantities sent to each.

**GUERNSEY.** For the peculiar regulations to be observed in trading with Guernsey, Jersey, &c., see **IMPORTATION AND EXPORTATION.**

**GUMS, RESINS, GUM-RESINS.** In commerce, the term gum is not applied to gums properly so called, but also to resins and gum-resins. But these substances have many properties in common, they are yet sufficiently distinguished.

1. *Gum* is a thick transparent fluid that issues spontaneously from certain species of plants, particularly such as produce stone fruit, as plum and cherry trees. It is adhesive, and gradually hardens by exposure to the atmosphere. It is usually obtained in small pieces, like tears, moderately hard and somewhat brittle while cold; so that it can be reduced by pounding to a fine powder. When pure, it is colourless; but commonly a yellowish tinge; it is not destitute of lustre; it has no smell; its taste is insipid; its specific gravity varies from 1.3161 to 1.4317; it readily dissolves in water but is insoluble in alcohol. Gum is extensively used in the arts, particularly in printing, to give consistence to the colours, and to hinder them from spreading. also used in painting, in the manufacture of ink, in medicine, &c.

The only important gums, in a commercial point of view, are *gum Arabic* and *Seacaul*.

1. *Gum Arabic* (Fr. *Gomme Arabique*; It. *Gomma Arabica*; Ger. *Arabische gummi*; Arab. *Tak*), the produce of the *Acacia vera*, a tree growing in Arabia, and in many parts of Africa. The gum exudes naturally from the trunk and branches, and hardens by exposure to the air. "The more sickly the tree appears, the more gum it yields; and the hotter the weather, the more prolific it is. A wet winter and a cool or mild summer are unfavourable to gum." — (*Jackson's Morocco*, p. 84.) It is in irregularly shaped pieces, hard, brittle, and semi-transparent. When pure it is almost colourless, or of a pale yellowish hue; being insipid, inodorous, and dissolving completely in the mouth. Specific gravity 1.31 to 1.43. It is often mixed with gum Senegal. East India gum Arabic is, though a useful, a spurious article, not being the produce of the *acacia vera*, but of other species of plants. The best gum is either imported direct from Alexandria, Smyrna, Tripoli, Mogadore, Tangiers, &c., or at second hand from them through Gibraltar, Malta, and the Italian ports. The price depends principally on its whiteness and solubility, increasing and diminishing, according as the article has more or less of these qualities. — (*Thomson's Dispensatory*, and *private information*.)

At an average of the 3 years ending with 1842, the gum Arabic entered for consumption amounted to 18,176 cwt. a year. Previously to 1823, the duty on gum Arabic from a British possession was 6s. a cwt., and from other parts 12s.; but the duty on it and all other gums was then fixed at 6s. a cwt. without regard to origin, and in 1842 it was further reduced to 1s. a cwt. Of 25,399 cwt. of gum Arabic imported in 1839, Tripoli, Barbary, and Morocco furnished 4,587; Turkey, 413; Italy, 1,885; Cape of Good Hope, 2,713; the East Indies, 15,431, &c. The price of gum Arabic in bond in the London market was, in June 1843, fine yellow from 42s. to 60s. a cwt., and brown in drops from 16s. to 20s. per do.; best Turkey from 9s. to 10s. per do.

2. *Gum Senegal*, principally brought from the island of that name on the coast of Africa, is obtained from various trees, but chiefly from two: one called *Vereck*, which yields a white gum; the other called *Nebuel*, which yields a red gum; varieties of the *acacia gummifera*. Gum Arabic is very often mixed with gum Senegal. The latter is nearly as pure as the former, but it is usually in larger masses, of a darker colour, and more clammy and tenacious. It is the sort of gum principally employed by calico printers. — (*Thomson's Chemistry*, *Thomson's Dispensatory*, *Ainslie's Materia Indica*, &c.) The entries of gum Senegal for consumption amounted, at an average of the three years ending with 1842, to 17,715 cwts. a year. It was worth in June 1843, when garbled, from 87s. 6d. to 95s. a cwt. The trade in gum Senegal is principally in the hands of the French.

II. *Resins*, for the most part, exude spontaneously from trees, though they are often obtained by artificial wounds, and are not uncommonly, at first, combined with volatile oil, from which they are separated by distillation. They are solid substances, naturally brittle; have a certain degree of transparency, and a colour most commonly inclining to yellow. Their taste is more or less acrid, and not unlike that of volatile oils; but they have no smell, unless they happen to contain some foreign body. They are all heavier than water, their specific gravity varying from 1.0182 to 1.1862. They differ from gums in being insoluble in water, whether cold or hot; while they are, with a few exceptions, soluble in alcohol, especially when assisted by heat. When heated, they melt; and if the heat be increased, they take fire, burning with a strong yellow flame, and emitting a vast quantity of smoke. Common *rosin* furnishes a very perfect example of a resin, and it is from this substance that the whole genus have derived their name. Rosin is, indeed, frequently denominated resin. The principal resins are *Animi*, *Elemi*, *Copal*, *Lac*, *Labdanum*, *Mastic*, *Rosin*, *Sandarach*, *Tucamahac*, &c.; which see, under their respective names. — (*Thomson's Chemistry*.)

III. *Gum-resins*, a class of vegetable substances consisting of gum and resin. They differ from resins in this — that they never exude spontaneously from the plant, being obtained either by bruising the parts containing them, and expressing the juice, which is always in a state of emulsion, generally white, but sometimes of a different colour, or by making incisions in the plant, from which the juice flows. The juice, being exposed to the action of the sun, is condensed and inspissated, till it forms the gum-resin of commerce. Gum-resins are usually opaque, or, at least, their transparency is inferior to that of resins. They are always solid, and most commonly brittle, and have, sometimes, a fatty appearance. When heated, they do not melt as resins do, neither are they so combustible. Heat, however, commonly softens them, and causes them to swell. They burn with a flame. They have almost always a strong smell, which, in several instances, is alliaceous. Their taste, also, is often acrid, and always much stronger than that of resins. They are usually heavier than resins. They are partially soluble in water, but the solution is always opaque, and usually milky. Alcohol partially dissolves them, the solution being transparent.

The most common gum-resins are *Aloes*, *Ammonia*, *Euphorbium*, *Galbanum*, *Gamboje*, *Myrrh*, *Olibanum*, *Sagapenum*, *Scammony*, &c.; which see, under their respective names. — (*London's Ency. of Agriculture*; *Thomson's Chemistry*.)

**GUNPOWDER** (Ger. *Pulver*, *Schiesspulver*; Du. *Buskruid*; Da. *Krudt*, *Pulver*; Sw. *Krut*; Fr. *Poudre*; It. *Polvere*; Sp. and Port. *Pólvora*; Rus. *Poroch*; Pol. *Proch*; Lat. *Pulvis pyrius*). This well known inflammable powder is composed of nitre, sulphur, and charcoal, reduced to powder, and mixed intimately with each other. The proportion of the ingredients varies very considerably; but good gunpowder may be composed of the following proportions; viz. 76 parts of nitre, 15 of charcoal, and 9 of sulphur. These ingredients are first reduced to a fine powder separately, then mixed intimately, and formed into a thick paste with water. After this has dried a little, it is placed upon a kind of sieve full of holes, through which it is forced. By this process it is divided into grains, the size of which depends upon the size of the holes through which they have been squeezed. The powder, when dry, is put into barrels, which are made to turn round on their axis. By this motion the grains of gunpowder rub against each other, their asperities are worn off, and their surfaces are made smooth. The powder is then said to be glazed. — (*Thomson's Chemistry*.)

Dr. Thomson, whose learning is equal to his science, has the following remarks with respect to the introduction of gunpowder into warlike operations: — "The discoverer of this compound, and the person who first thought of applying it to the purposes of war, are unknown. It is certain, however, that it was used in the fourteenth century. From certain archives quoted by Wiegleb, it appears that cannons were employed in Germany before the year 1372. No traces of it can be found in any European author previously to the thirteenth century; but it seems to have been known to the Chinese long before that period. There is reason to believe that cannons were used in the battle of Cressy, which was fought in 1346. They seem even to have been used three years earlier, at the siege of Algesiras; but before this time they must have been known in Germany, as there is a piece of ordnance at Amberg, on which is inscribed the year 1303. Roger Bacon, who died in 1292, knew the properties of gunpowder; but it does not follow that he was acquainted with its application to fire-arms." — (*Thomson's Chemistry*.) For further particulars as to the introduction of cannon, see that article.

The manufacture and sale of gunpowder is regulated by several statutes. By the 12 Geo. 3. c. 61. it is enacted, that no person shall use mills or other engines for making gunpowder, or manufacturing the same in any way, except in mills and other places which were *actually in existence* at the time of passing the act, or which, if erected afterwards, have been sanctioned by a licence, under pain of forfeiting the gunpowder, and 2s. a pound. It is further enacted, that no mill worked by a pestle, and usually termed a pestle mill, shall be used in making gunpowder, under the above-mentioned penalty; and that no more than 40 lbs. of gunpowder, or materials to be made into gunpowder, shall be made at any one time under a single pair of mill-stones, on pain of forfeiting all above 40 lbs., and 2s. for every pound; nor shall more than 40 cwt. be dried in any one stove or place at any one time, under forfeiture of all above that quantity, and 2s. for every pound thereof. The powder mills erected at Battle, Crowhurst, Saddlescombe, and Brede, in Sussex, previously to 1773, are exempted from the above regulations so far as relates to the making of fine fowling powder.

No dealer is to keep more than 200 lbs. of powder, nor any person not a dealer more than 50 lbs., in the cities of London or Westminster, or within 3 miles thereof, or within any other city, borough, or market town, or 1 mile thereof, or within 2 miles of the king's palaces or magazines, or  $\frac{1}{4}$  a mile of any parish church, on pain of forfeiture, and 2s. per lb.; except in licensed mills, or to the amount of 300 lbs. for the use of collieries, within 200 yards of them.

Not more than 25 barrels are to be carried by any land carriage, nor more than 200 barrels by water, unless going by sea or coastwise, each barrel not to contain more than 100 lbs.

All vessels, except his Majesty's, coming into the Thames, are to put on shore, at or below Blackwall, all the gunpowder they have on board exceeding 25 lbs. Vessels outward bound are not to receive on board more than 25 lbs. of gunpowder previously to their arrival at Blackwall. The Trinity House have authority to appoint searchers to inspect ships, and search for gunpowder. All the gunpowder found above 25 lbs., and the barrels containing it, and 2s. for every lb. above that quantity, are forfeited. Any person obstructing an officer searching for concealed gunpowder is liable to a penalty of 10*l*. The places of deposit for gunpowder are regulated by the 54 Geo. 3. c. 159.

The exportation of gunpowder may be prohibited by order in council. Its importation is prohibited on pain of forfeiture, except by licence from his Majesty; such licence to be granted for furnishing his Majesty's stores only. — (6 Geo. 4. c. 107.)

The act 1 Will. 4. c. 44. prohibits the manufacture and keeping of gunpowder in Ireland by any person who has not obtained a licence from the Lord Lieutenant; such licences may be suspended on notice from the chief secretary, and any one selling gunpowder during the suspension of such licence shall forfeit 500*l*. Gunpowder makers under this act are to return monthly accounts of their stock, &c. to the chief secretary. This act, which contains a variety of restrictive clauses, was limited to one year's duration, but has been prolonged.

**GUNNY** (Hind. *Tūt*; Ben. *Gūni*), a strong coarse sackcloth manufactured in Bengal for making into bags, sacks, and packing generally, answering at once the two purposes for which canvas and *bast* are used in Europe. The material from which this article is manufactured is the fibre of two plants of the genus *Corchorus*; viz. *Corchorus olitorius*, and *Corchorus capsularis* (Bengali, *pat*); both, but particularly the first, extensively cultivated throughout Lower Bengal. Besides a large domestic consumption of gunny, the whole rice, paddy, wheat, pulses, sugar, and saltpetre of the country, as well as the pepper, coffee, and other foreign produce exported from Calcutta, are packed in bags or sacks made of this article. There is also a considerable exportation of manufactured bags, each commonly capable of containing two maunds, or about 160 lbs. weight, to Prince of Wales Island, Malacca, Singapore, Java, and Bombay. In 1841-42 there were exported from Calcutta 5,330,899 gunny bags, of the value of 499,426 rup.

(49,942l.) and 95,412 pieces of gunny cloth, worth 433,321 rup. (43,332l.).—(*Wallick ; Roxburgh ; Review of the External Commerce of Bengal for 1841-42.*)

**GYPSUM, or SULPHATE OF LIME**, is found in various parts of the Continent, in Derbyshire and Nottinghamshire, and in Nova Scotia, whence it is largely exported. When reduced to a powder, and formed into a paste with water, it is termed *plaster of Paris*, and is much used for forming casts, &c. It is also used for laying floors, and has been advantageously employed as a manure.

## H.

**HACKNEY COACHES** are coaches stationed in the streets or other public places, and bound to carry such persons as require their services, for certain rates of hire according to the distances travelled. They have generally been licensed by authority, and subjected to certain regulations, intended to prevent strangers and others using them from fraud and imposition. It may be doubted, however, whether these regulations have had any good effect; and whether the public would not be as well accommodated, at least in all large towns, by throwing the business open, and trusting to competition to rectify abuses. As respects London, nothing can be said in favour of its hackney coach establishment. Speaking generally, the coaches are the dirtiest, most disagreeable vehicles that can well be imagined, and the horses and drivers are but little superior; forming a striking contrast to the elegance and commodiousness of the private carriages, the excellence of the horses, and the neatness of the servants.

Hackney coaches were first established in London in 1625; but they were not then stationed in the streets, but at the principal inns. In the reign of Charles II. their number was considerable. Commissioners for licensing and superintending hackney coaches were established by the act 9 Ann. c. 23.; and successive acts have been passed, specifying the number of coaches that might be licensed, the duties payable to government, and the conditions under which licences were to be granted. There are immense numbers of hackney coaches, chariots, and cabriolets annually licensed in the metropolis.

*Hackney Coach Regulations, Fares, &c.*—The regulations as to hackney coaches in the city of London are governed by the acts 6 & 7 Vict. c. 86. and the 1 & 2 Will. 4. c. 22. The first of these acts provides for the appointment of a registrar of metropolitan public carriages, who is to grant licences, costing 5s. each, to the drivers and conductors of stage, hackney, and other carriages, and to watermen. The persons so licensed receive metal tickets or badges, which they are to wear conspicuously on their breast, and persons acting as drivers, conductors, watermen, &c., without such licences and tickets, are to be fined 5l.; and proprietors who suffer drivers, conductors, &c. to act for them shall forfeit 10l. for every such offence.—§§ 8, 9, 10, &c.

In 1842 there were licensed under this act, in the metropolitan district, 4,546 hackney drivers; 1,412 stage drivers; 1,543 conductors; and 287 watermen.

The other act, 1 & 2 Will. 4. c. 22., regulates the licensing of carriages, the amount of fares, &c. We notice a few of the more important clauses.

*Definition.*—A hackney coach is any carriage with 2 or more wheels, standing or plying for hire in any public street or road.—§ 4.

*Licensing, Plates, &c.*—A licence to keep a hackney coach costs 5s., and a weekly sum of 10s. has to be paid per advance on every licence. A plate specifying the number of the licence is to be placed inside the coach; and 2 other plates, on which are painted the names of the proprietor, or of one of the proprietors of the coach, are to be placed externally, one on each side. Penalty on proprietor for letting or employing a hackney coach without having properly numbered plates properly fixed upon such coach, 10l.; ditto on driver, if proprietor, 10l.; if not, 5l.—§§ 22, 23.

*Obligation to ply.*—Carriages standing on the streets with plates, to be deemed hackney coaches; and, unless actually hired, shall be compellable, under a penalty of 40s., to go with any person offering to hire the same.—§ 35.

*Distance.*—Drivers of hackney coaches compellable, under a penalty of 40s., to go any distance not exceeding 5 miles from the General Post Office, or from the place where they shall have been hired.—§ 34.

*Number of Passengers.*—To prevent disputes, the number of persons to be carried by hackney coaches is to be painted in some conspicuous place outside; and they are compellable, under a penalty of 40s., to carry this number if required.—§ 46.

*Rates and Fares.*—These may be charged, at the option of the proprietor or driver, either by time or distance; and in, by the hour or mile, but not by the day. The terms are, when charged by distance,

For every hackney coach, drawn by 2 horses, for any distance within and not exceeding 1 mile, 1s.; and for every distance exceeding 1 mile after the rate of 6d. for every  $\frac{1}{2}$  mile, and for any fractional part of  $\frac{1}{2}$  mile over and above any number of  $\frac{1}{2}$  miles completed.

Fares when taken by time are—For any time within and not exceeding 30 minutes, 1s.; above 30 minutes and not exceeding 45 do., 1s. 6d.; above 45 minutes and not exceeding 1 hour, 2s.; and for any further time exceeding 1 hour, then after the rate and proportion of 6d. for every 15 minutes completed, and 6d. for any fractional part of the period of 15 minutes.

Cabriolets, or carriages with one horse, are entitled to *two thirds*, and no more, of the rates and charges above mentioned.—s. 38. and schedules.

*Back Fare.*—The driver of a hackney coach discharged beyond the limits of the metropolis, that is, beyond 3 miles from the General Post Office, after 8 o'clock in the evening, or before 5 o'clock in the morning, shall be entitled to full fare from the place of such discharge to the nearest part of said limits, or to the stand where the coach shall have been hired beyond the limits, at the option of the hirer. Coaches discharged during the day beyond the limits, are entitled to a back fare at the rate of 6d. a mile; but such back fare is not payable for any distance less than 4 miles.—§ 39.

*Coaches waiting* are entitled to a reasonable deposit, to be accounted for in the fare. Penalty on drivers refusing to wait, or to account for deposit, 40s.—§ 47.

*Refusal to ply Fare*, or defacing or injuring any hackney coach, may be punished, unless reasonable satisfaction be made for the offence, by imprisonment for 1 calendar month.—§ 41.

*Drivers exacting more than legal Fare* liable to a penalty of 40s. — § 42.  
*Agreement to pay more than legal Fare*, not binding; sum paid beyond such legal fare may be taken back, and driver be liable in a penalty of 40s. — § 43.  
*Drivers demanding more than Sum agreed upon*, though distance be exceeded, or it be less than legal fare, forfeit 40s. for each offence. — § 44, 45.  
*Drivers to hold Check Strings*, under a penalty of 20s. — § 45.  
*Property left in Hackney Coaches* to be carried to Stamp Office, under a penalty of 20l. If not within a year, to be given up to driver; or if not applied for, to be sold. — § 49.  
*Court of Aldermen* authorised to make orders for regulating hackney coaches in city. — § 54.  
*Offences may be tried* either by a justice appointed for that purpose by the secretary of state, or by His Majesty's justices. — § 55.

**HAIR, HUMAN** (Ger. *Haare*, *Menschen-haar*; Du. *Hair*; Fr. *Cheveux*; It. *Capelli*; Sp. *Cabellos*; Lat. *Capilli*). "Human hair makes a very considerable article in commerce, especially since the mode of periwigs has obtained. Hair of the growth of the northern countries, as England, &c., is valued much beyond that of the more southern ones, as Italy, Spain, the southern parts of France, &c. Good hair is well frizzled, neither too coarse nor too slender; the bigness rendering it less susceptible of artificial curl, and disposing it rather to frizzle; and the smallness making its curl of short duration. Its length should be about 25 inches; the more it falls short, the less value it bears." — (*Ency. Brit.*)

**HAIR OF BEASTS** (Ger. *Haare*, *Huahaare*; Du. *Hair*; Fr. *Poil*; It. and Sp. *Pelo*; Lat. *Pelles*). The hair of horses is extensively used in the manufacture of chairs, saddles, &c.; while the hair or wool of beavers, hares, rabbits, &c. is much employed in the manufacture of hats, &c.

**HAIR-POWDER** (Ger. *Puder*; Fr. *Poudre à poudrer*; It. *Polvere di cipolla*; Sp. *Polver de peluca*) is used as an ornament for the hair, and generally made from starch, pulverised, and sometimes perfumed. A tax of 1l. 3s. 6d. a year is laid upon persons who wear hair-powder. Different statutes prohibit the mixing of hair-powder with starch or alabaster. And hair-powder makers are prohibited having alabaster in custody.

**HALIFAX**, the capital of Nova Scotia, on the south-east coast of that province, lat. 44° 36' N., lon. 63° 26' W. It is situated on a peninsula on the west side of Cucko Bay, and has one of the finest harbours in America. Population, exclusive of the military, about 19,000. The town is irregularly built, and most of the houses are of wood. The government-house is one of the most splendid edifices in North America. Halifax was founded in 1749.

*Port.* — The best mark in sailing for Halifax is Sambro light-house, on a small island off the coast, the same name, on the west side of the entrance to the harbour, in lat. 44° 30', lon. 63° 32'. The light is fixed, is 210 feet above the level of the sea; and a detachment of artillery, with two 24-pounders, is in duty at the light-house, firing at regular intervals during the continuance of the dense fogs which this part of the coast is very much infested. — (*Coulter, Tables des Principales Positions Géographiques*, p. 78.) The course into the harbour for large ships, after passing Sambro light, is between the point on the west, and Macnab's Island on the east. On a spit projecting from the latter a light-house has recently been constructed; and when this is seen, ships may run in without fear. The harbour is defended by several pretty strong forts. Ships usually anchor abreast of the town, where the water is rather more than a mile in width. After gradually narrowing to about  $\frac{1}{3}$  of that width, it expands into a noble sheet of water, called Bedford Basin, completely land-locked, with deep water throughout, and capable of accommodating the whole navy of Great Britain. The harbour is so situated at all times, and is rarely impeded by ice. There is an extensive royal dockyard at Halifax, during war is an important naval station, being particularly well calculated for the shelter and outfit of the fleets cruising on the American coast and in the West Indies. Mr. McGowan, severely, and, we believe, justly censured the project for the removal of the dockyard from Halifax to Bermuda.

*Trade, &c. of Halifax and Nova Scotia.* — Halifax is the seat of a considerable fishery; but the colonists seem to be, for what reason it is not easy to say, less enterprising and successful fishers than the New Englanders. The principal trade of the town and province is with the West Indies, Britain, and the United States. To the former they export dried and pickled fish, lumber, coal, stones, cattle, flour, butter, cheese, oats, potatoes, &c. They export the same articles to the ports of the United States, and gypsum to the eastern ports of New England. To Great Britain they send timber, deals; whale, cod, and seal oil; furs, &c. The principal exports of timber are from the St. Lawrence. The imports consist principally of colonial produce from the West Indies, and of manufactured goods from Great Britain; and of flour, lumber, &c. from the United States, principally for exportation to the West Indies.

In 1826 a company was formed for making a canal across the country from Halifax to the basin of the Shubenacadie lake and river. The navigation is formed, for the most part, by the Shubenacadie lake and river. The legislature gave 15,000l. to this undertaking. The excavation of the canal is 60 feet wide at top, 35 feet at bottom, and admits vessels drawing 8 feet of water. It seems very questionable whether this canal will be profitable to the shareholders; but it is of considerable service to the trade of Halifax.

There are two private banking companies at Halifax. Accounts are kept in pounds, shillings, and pence, the same as in England, and the weights and measures are also the same.

About 100 large square-rigged vessels, and about the same number of large schooners, with smaller craft, belong to Halifax.

The splendid steam ships *Hibernia*, *Caledonia*, *Britannia*, and *Acadia*, of 1,300 tons each, convey passengers and mails to British North America, ply between this port and Boston in the U. States and Liverpool. They sail from the latter twice a month during the summer months, but only once a month in winter. The fare to Halifax or Boston from Liverpool, including provisions and steward's fee (but excluding liquors), is 29 guineas. On arriving at Halifax, passengers are conveyed by coaches across the peninsula to Pictou, whence they are carried by steamers to Quebec and Montreal. A steam intercommunication is also kept up in summer with Boston.

838 there were exported from Nova Scotia, and principally from Halifax —

AMS. See BACON and HAMS.

HAMBURG, a free Hanseatic city, on the north bank of the river Elbe, about 70 miles from its mouth, lat. 53° 32' 51" N., lon. 9° 58' 37" E. Population, including the suburbs of St. George and St. Pauli, but excluding the territory attached to the city, 137,000. Hamburg is the greatest commercial city of Germany, and, perhaps, the most important on the Continent. She owes this distinction principally to her situation. The Elbe, which may be navigated by lighters as far as Melnik, in Bohemia, renders her the entrance of a vast extent of country. Advantage, too, has been taken of natural facilities to extend still further her internal navigation; a water communication having been established, by means of the Spree and of artificial cuts and sluices, between the Elbe and the Oder, and between the latter and the Vistula; so that a considerable part of the produce of Silesia destined for foreign markets, and some even of that of Poland, is conveyed to Hamburg. — (See CANALS.) There is, also, a communication by means of the Stecknitz canal, with the Trave, and, consequently, with Lubeck and the Baltic. Hamburg is, also, in the course of being connected by means of railways with Berlin, Hanover, Brunswick, Kiel, &c. Vessels drawing 14 feet water come up to the town at all seasons; and vessels drawing 18 feet may come safely up with the spring tides. The largest vessels sometimes load from and unload into lighters at Cuxhaven. The trade of Hamburg embraces every article that Germany either sells to or buys from foreigners. Her exports principally consist of grain of all sorts, wool, clover seed, bark, spelter, iron, salted provisions, rags, wooden clocks and toys, linens, and all sorts of German manufactured goods, Rhenish wines, &c. Most sorts of Baltic articles, such as grain, iron, pitch and tar, wax, &c., may generally be bought as cheap at Hamburg, as in any other port, owing to difference of freight, as in the ports whence they were originally brought. Her imports consist principally of sugar; coffee, which is the favourite article for speculative purchases; cotton wool, stuffs, and yarn; tobacco, hides, indigo, wine, brandy, rum, dyewoods, tea, pepper, &c. Being brought from many different places, there is a great variety of quality in the grain found at Hamburg; but a large proportion of the wheat is inferior. Some of the barley is very good, and fit for malting. Oats are feed of various qualities. It will be afterwards seen that the total annual value of the import and export trade of the port (including that of Altona, the merchants of which conduct their business on the Hamburg exchange,) may be estimated at about 20,000,000*l.* sterling a year, or upwards: and as the largest portion of this immense trade is in our hands, it will be necessary that we should be a little fuller than we are in our details as to this great emporium.

Hamburg was visited by a dreadful and most destructive fire in May, 1842. But, notwithstanding the heavy losses that were in consequence incurred, and the paralysis occasioned in trade and industry, the shock was less severe than might have been anticipated. The system of mutual insurance having been generally adopted, the proprietors of houses and other property have been subjected to a tax, to defray the interest of a loan of 32 millions marks-banco raised to indemnify the sufferers, and to enable them to rebuild their houses. And we are glad to have to state that the work of reparation has been vigorously commenced, and that the probability is, that in a few years all traces of the recent calamity will have been obliterated. We have not, however, owing to the destruction of documents during the fire, been able to obtain any authentic accounts of the trade of Hamburg in 1842; and this is the less to be regretted, seeing that the fire, by interrupting for a while and otherwise deranging the ordinary channels of commercial intercourse, influenced the trade of that year too much to allow of its entering into any fair average statement of the trade of the port.

Account of the Principal Articles of Import, the Consumption, Stock, &c., at Hamburg during each of the Seven Years, ending with 1846.

[illegible]

**Money** is generally reckoned in Hamburg in marks, of 16s., each of 12 pennings; and is of two sorts, *banco* and *current*. The former consists of the sums inscribed in the books of the Bank, opposite to the names of those who have deposited specie or bank in the bank, or got it transferred to them at the rate of 87½ marks banco to the Cologne mark of fine silver. The value of the marks banco, taking silver at 5s. an oz., is consequently 1s. 3½d., which makes the par of exchange 13 marks 10½ schill. banco per 100 sterling. Banco is worth about 2½ per cent. more than currency; the ago varying from 120 to 12½. Speaking generally, the value of the current mark may be taken at 1s. 2½d. or 1s. 2d. sterling. The silver coins current in Hamburg are, specie dollars (which 94 are equal to a mark Cologne, fine silver); Prussian current dollar (14 dollars to the mark fine); new 2s. 3d. pieces (18 to the mark fine); Danish grob. current, and Hamburg current (34 to the mark, fine). The gold coins comprise ducats = 9s. 4d. sterling, Louis and Frederick d'ors. The agios of these different coins, with banco, constantly vary. Hamburg has for many years ceased to coin monies, with the exception of ducats and the smaller coins.

**Measures and Weights.**—A new regulation of these was effected on act passed on the 16th January, 1843.

There are in Hamburg 3 different sorts of pound weights: 1. The bank or silver weight (formerly the Cologne weight). 2. The commercial weight. 3. The apothecary weight.

One pound bank, or silver weight, is = 2 marks; 1 mark (Cologne) is 235.85489 grains, or 4865.57 Dutch As. = 100 marks = 62.6554 English troy pounds.

The old relation between the commercial weight and bank weight, by which the commercial pound is equal to 33⅓ oz. bank weight, has been confirmed by the late act. 1 centner = 112 pounds; 1 pound = 32 oz.; 1 oz. = 4 drachms; 1 drachm = 4 pennings.

100 commercial lbs. = 106.858 English lbs. avoirdupois.

100 — 48.4600 Hologrammes.

100 — 86.5555 lbs. Vienna.

100 — 96.9219 lbs. German customs union.

1 "schiffpfund," in commerce, = 2½ centners, or 20 "Hiespfund" of 14 lbs. each, or 280 lbs.

1 "schiffpfund" by land carriage has 20 "Hiespfund," each of 16 pfund; i.e., therefore, = 320 lbs.

A pipe of oil is 820 lbs.; 1 barrel of butter (small wille and hoop) is taken at 224 lbs.; but with common hoops, at 280 lbs. net.

**Long Measure.**—The Hamburg foot, divided into 12 inches, of 8 parts each, = 0.28657 metres; = 127.036 Parisian lines, = 11.289 Eng. inches. Hence

100 Hamburg feet = 94.021 Eng. feet.

100 — 28.657 French metres.

100 — 91.307 Prussian or Rhenish feet.

100 — 90.664 Vienna feet.

The Hamburg ell (short ell) is 2 Hamburg feet, 57.7514 metres = 254.072 Paris lines. 100 Hamburg ells = 62.681 Eng. yards.

The Brabant e'le (or long ell) most commonly used in Hamburg, in measurement of piece goods, = 27.585 Eng. inches.

**Liquid Measure.**—1 fuder = 6 aums, 1 aum = 4 ankers or 5 eimers; 1 anker = 5 viertels; 1 viertel = 2 stübchen; 1 stübchen = 2 kannen; 1 kannen = 2 quarters of Oessel; 1 eimer = 4 viertels; 1 hogbush = 1 aum, or 6 ankers, or 30 viertels, each of 8 quarters or bottles.

The stübchen contains 266 Hamburg cubic inches, = 5.62 litres.

100 Hamburg viertels = 159.39 English imperial gallons.

100 — 724.18 French litres.

100 — 639.43 Prussian quarters.

100 — 511.88 Vienna masses.

The full beer barrel contains 48 stübchen, or 192 quarters; the small barrel only 32 stübchen, or 128 quarters.

The vinegar barrel contains 30 stübchen, or 120 quarters.

The whale and fish oil barrel contains 32 stübchen, or 128 quarters; 2 whale oil barrels = 1 quarted.

**Grain Measure.**—One last = 60 fass; 1 fass = 2 himpten, 1 himpten = 4 spint. The wispel of wheat, rye, and peas is 20 fass; but of oats and barley, 20 fass. The scheffel of wheat, rye, and peas, is 2 fass; of barley and oats, 3 fass.

The fass contains 3872 Hamburg cubic inches, = 52734 litres, and 2658.45 Parisian cubic inches, and

100 Hamburg fass = 18.153 Imperial quarters.

100 — 52.734 hectolitres.

100 — 95.947 Prussian scheffels.

100 — 85.765 Austrian hezen.

100 — 108.81 Imperial quarters.

The mode of measuring grain has hitherto been by the meters throwing or pitching it into the fass, and striking off the surplus with a wooden ruler pressed lightly along the upper edge; but an alteration is expected on a new corn law, now projected, coming into operation: there will probably be a new measure (of 4035 Hamburg cubic inches), equal to the Prussian scheffel.

In practice, 1 Hamburg last is taken at 11 imperial quarters, 51 hectolitres, 57 Prussian scheffels, 25 Danish barrels, and 16½ Russian chetwerts.

The coal barrel contains (when the 1455 Hamburg cubic inches of head or heaped measure is added) 16,438 cubic inches.

The Hamburg ship last, or last of commerce, really weighs 6000 pounds, or 3 tons (not 4000 pounds, as is generally stated).

**Account of the Ships and Tonnage which arrived at and departed from Hamburg in 1840 and 1841, specifying the Countries to which the Ship belonged, and the Number belonging to each.**

			about 3,035,000	3,035,000

The total value of imports in the years 1839 to 1841, inclusive, is estimated as follows:—

	Banco.	£
1839 about	164,900,000	12,567,000
1840	177,000,000	13,575,000
1841	180,000,000	13,500,000

of which more than half was received from Great Britain.

The export of corn depends chiefly on the wants of England, which occasioned a very large export during 1839, 1840, and 1841, being in amount and value as follows:—

	Leats.	Banco.	£
1839 - 43,191	estimated value	14,430,000, or	1,067,250
1840 - 44,288	—	15,544,000, or	1,000,800
1841 - 59,187	—	17,252,000, or	1,293,900

The prices of wheat during these years were—

	Highest price.	Lowest price.
1839 - 162 to 212 doll.	110 to 173 doll. currency.	85s. 6d. to 55s. 1d.
1840 - 136 to 188 doll.	88 to 130 doll. currency.	24s. 5d. to 41s. 7d.
1841 - 154 to 195 doll.	85 to 122 doll. currency.	28s. 5d. to 39s. 6d.

(See art. CORN LAWS AND CORN TRADE.)

The export of wool (nearly the whole of which goes to Great Britain) was as follows:—

1839 -	55,649 bales, or about	19,531,000 lbs.
1840 -	54,975	18,142,000
1841 -	65,000	17,774,000

The once important trade in German linens to Spain and her former American possessions, has of late years greatly fallen off. This is a consequence of the competition of England, who, by means of her superior machinery, is able, not only to spin, but to produce cloth cheaper than any other country. On the other hand, however, the import of linen yarns from England is being progressively augmented.

The total value of the exports from Hamburg has been estimated as follows:—

	Banco.	£
1839 -	107,000,000 or	8,025,900
1840 -	105,500,000 or	7,942,000
1841 -	109,500,000 or	8,212,500

**Navigations of the Elbe, Pilots, &c.**—The mouth of the Elbe is encumbered with sand banks. The channel leading to Cuxhaven is bounded on the north by the Vogel Sands and North Grounds, and on the south by the Scharhorn Sands and Newwerk Island. On the latter there are 2 light-houses and 2 beacons, and on the Scharhorn is another beacon. The light-houses on Newwerk Island are about 700 yards apart; the most southerly, which is also the most elevated, being in lat. 53° 54' 37" N., lon. 8° 29' 40" E. It is 198 feet high, being twice the height of the other. The channel is, in some places, hardly  $\frac{1}{2}$  of a mile wide. The outer red buoy in the middle of the channel, at its mouth, bears from Helleland S. E. by S., distant nearly 30 miles. The best mark in entering the Elbe is the floating light, or signal ship, moored  $\frac{1}{2}$  miles N.W. by N. of the red buoy, in 11 fathoms at low water. This vessel never leaves her station, unless compelled by ice in the winter season. By night she exhibits a lantern light, 38 feet above deck, and in foggy weather rings a bell every quarter of an hour. A second signal ship is stationed  $\frac{1}{2}$  miles S.E. by E. from the first, at the westernmost point of a sand bank dividing the fair way of the river. She is marked like a gulliot, to distinguish her by day from the first signal ship; and during night she exhibits two lights, one 18 feet above the other. The distance from the outer red buoy to Cuxhaven is about 16 miles; thence to Hilleland the course is east 89 miles; from the latter to Stade the course is south-easterly, 9 miles; and then easterly to Hamburg, 18 miles. The channel throughout is marked with black and white buoys, which are numbered and specified in the charts. The black ones are to be left, in passing up the river, on the starboard or right-hand side, and the white on the larboard side.

Every vessel coming from sea into the Elbe, and drawing 4 feet water, is directed to take a pilot on board, and must pay pilotage, though she do not take one. However well the signals, lights, beacons, and buoys, may be arranged, an experienced pilot is very necessary, in case of a fog in the night, or of a storm. To take in a pilot, a vessel must heave to by the pilot gulliot, which lies, in good weather, near the red buoy, and in bad weather N.N.E. from Newwerk, and is known by having at the flagstaff an admiral's flag, and a long streamer flying at the top. If the pilot boat have no pilot on board, or if the weather be so bad that the pilot cannot leave her, she lowers her flag, and then the vessel coming in must sail, with the signal for a pilot heaved to Cuxhaven, and heave to there, where she is certain of getting one.

There are no docks or quays at Hamburg; and it is singular, considering the great trade of the port, that none have been constructed. Vessels moored in the river outside of piles driven into the ground at short distance from shore, and in this situation they are not exposed to any danger unless the piles give way, which rarely happens. There is a sort of inner harbour formed by an arm of the Elbe which runs into the city, where small craft lie and discharge their cargoes. Larger vessels load and unload from their moorings, by means of lighters. These carry the goods from and to the warehouses which front the river, and the small arms and channels of the river, and the canals carried from it into different parts of the city. The charges on account of lighters are extremely moderate.

**Port Charges.**—The charges of a public nature payable by vessels entering the port of Hamburg, unloading and loading, are pilotage and lading. The separate items of which are given in the following Table.

**Pilotage and Lading.**—The Hamburg pilots, generally speaking, take charge of vessels only from the Red Buoy to Frysburg or Glickstadt, the pilotage for which is regulated by law of the 18th of February, 1760, as follows:—

Vessels coming northwards, and collers.	For each Foot Ham- Measure which a V- draws.*			
	During the Six Sum- mers, from the 1st of Mar. to 1st Sep- tember.	During the remain- ing Six Months, viz. from October to Winter.	During the remain- ing Six Months, viz. from Winter to Summer.	End of Month.
Vessels which, besides sail, corn, or ballast, have one third of the cargo consisting of piece goods.	2 0	3 0	2 4	a. d.
Vessels laden with wine, oil, vinegar, train oil, iron, lead, packages, or bags, and all vessels coming from foreign parts, whether laden or not.	2 0	3 0	2 4	a. d.
All snacks going between Holland, Friesland, and Hamburg with piece goods.	5 0	4 8	3 6	a. d.
	4 0	6 0	4 8	a. d.
	2 0	3 0	2 4	a. d.
	4 0	6 0	4 8	a. d.
	4 0	6 0	4 8	a. d.

\* Sixteen feet Hamme are equal to 17 feet Hamburg.

**Half Pilotage only.**—N.B. In case the Hamburg pilots enter a vessel only within the first buoy beyond the Rosensand, or Cuxhaven, half the above mentioned pilotage is paid. Also half pilotage must be paid at all events, when the vessel has taken a pilot from the pilot gulliot or not.

**Pilotage earned.**—The above pilotage is earned if brought as far as Frysburg or Glickstadt, and when stress of wind or weather, which seldom happens, the Hamburg pilots take vessels to Wittenberg or Neumühlen, they are to pay, without distinction—

	Merch. currency.	d.	s.
To Wittenberg -	1 0	14	0
Neumühlen -	1 0	18	0

**Pilotage all the way.**—For pilotage the whole way from haven to Hamburg there is no table of rates, for, every speaking, the Hamburg pilots do not take vessels up to Rosack.

**From Rosack to Hamburg.**—Vessels are generally paid from Rosack to Hamburg by Danish or Hanoverian pilots, whom it is customary to pay 2 marks per foot.

**Lading and Customs-house Charges.**—British and other vessels pay the same as Hamburg vessels. For clearing, clearing out, no separate charges are made; visiting the considered as one voyage, and the charges on vessels are paid as follows:—

For vessels arrived with cargoes from the undermentioned places: viz.—

Places.	For every Commer- cial Tonnage of 6,000 lbs.	Series.
The East Indies -	Marcs.	£ s. d.
West Indies, North and South America -	2 0	0 3
Portugal, Spain, and the Mediterranean -	2 0	0 2
The rest of the European ports -	1 8	0 1
Holland, East Friesland, the Weser, Eider, and Jutland -	0 12	0 0
For vessels under 50 commercial tons without distinction -	0 4	0 0
Vessels arriving and departing in ballast, of upwards of 50 commercial tons -	0 8	0 0

\* It is difficult to determine the exact rate of a last to a bushel, but it may be taken at about 3 or  $\frac{1}{2}$  to 1. But in Hamburg all vessels are measured by the harbour-master; and it is his report that the lastage is calculated.

For all vessels laden with coals, wood, or turf, no lastage is paid, provided they do not take return cargoes.

**Half Lading.**—Vessels arriving in ballast, and departing with a cargo pay half the above lading, according to destination.

N.B.—Exclusive of the above duties, which are all revenue, moderate vessels coming to the port of Hamburg are obliged to pay certain dues to Hanover, called *Bunde* or *Elbschiff* dues. These are rated according to the number of vessel's tons, and are over and above the State duties on cargo. (For the item, see *Travels*.)

**Duties.**—The import and export duty was formerly 1 cent. (courant for banco, or 1 $\frac{1}{2}$  on 125) on goods imported by sea, and  $\frac{1}{2}$  cent. (courant for banco), for as were received and transported by land or river conveyance, but for some years these duties have been greatly reduced, and are now only  $\frac{1}{2}$  cent. on imports, and  $\frac{1}{3}$  cent. on exports. The greater part of the imports and exports are, in

The exchange business done at Hamburg is very great; for, besides the business of the place, most of the merchants in the inland towns have their bills negotiated there. The usual charge for commission is, on sales 2 per cent. and

1 per cent. for *del credere*, if such guarantee be required; on purchases, 2 per cent. Under particular agreements, the rates sometimes vary considerably from the above.

*Citizenship.* — Foreigners cannot establish themselves as merchants, or carry on any business in their own names, at Hamburg, without becoming burghers; and to be manufacturers, they must also enter the guild or corporation peculiar to the trade they mean to follow. But, to become a burgher, one has only to comply with certain forms and pay certain fees, which do not, in all, exceed 10*l*. He then becomes, in the eye of the law, a Hamburg subject, and enjoys all the rights and privileges of a native.

*Banking, Insurance, &c.* — For an account of the Bank of Hamburg, see HANSE (FORGEO). All sorts of insurances are effected at Hamburg. A municipal regulation compels the insurance of all the houses in the city, and the amount of loss. Marine insurance is principally effected by joint stock companies, of which there are several; their competition has reduced the premiums to the lowest level, and the business is not understood to be profitable. The high duties on policies of insurance in this country has led to the insuring of a good many English ships at Hamburg. Life insurance is not prosecuted in Germany to any considerable extent; but some of the English companies have agents here, who are said not to be very scrupulous.

*Bankruptcy.* — Considering the vast number of merchants and tradespeople at Hamburg, bankruptcy does not seem to be of frequent occurrence.

Much of the business transacted at Hamburg being on commission and for account of houses abroad, the failure of foreign merchants is a frequent source of bankruptcy. Another source of bankruptcy is losses on goods imported or exported on speculation, and occasionally losses in the funds, in which

a good deal of gambling goes on here. Expensive living nearly so prevalent a source of bankruptcy here as in London and other places.

The law of Hamburg makes 3 classes of bankrupts: — unfortunate, the careless, and the fraudulent. The first consists of those whose books show that misfortune alone occasioned the bankruptcy; that the party has all along within his probable income, and can account to his creditors completely for all his losses. Whoever is adjudged by the law to belong to this class (which contains but few in number) is considered entirely free from his debts, and is not subject to be called upon hereafter. The second and most numerous class contains those termed "careless" bankrupts. These are persons who have entered into speculations exceeding their means, who have gone on for a considerable time after they found themselves in arrears, or have not been beyond their means, but kept their books in good order, and so forth. They are liable to be confined in prison for a period of 3 or 6 months; and if they have not paid a dividend of 40 per cent., are called upon for payment of their debts after 5 years from discharge. If a claim be made by any creditor after this time, the bankrupt is obliged to pay whatever sum he owes for the benefit of his creditors. He must swear that he cannot pay anything, or not above a certain sum, without depriving himself and his family of necessities. Every 5 years the bankrupt may be repeated. All careless bankrupts are disabled from holding offices of honor. The third class contains the "fraudulent" bankrupts, who are liable to be imprisoned, according to the extent of their frauds, for a limited period, or even for life, besides being rendered incapable of holding any office whatever. Should a bankrupt abscond, he is called upon by public authorities to appear by a certain day, in default of which he is adjudged a fraudulent bankrupt, and his name is put up on a black board on the Exchange.

*General Remarks.* — The trade of Hamburg is, in a great measure, passive; that it depends more on the varying wants and policy of others than on its own. There is nothing of such vital importance as the free navigation of the Elbe to the prosperity of Hamburg, and, indeed, of all the countries through which it flows. This, too, in the matter of paramount consequence as respects our interests; for the Elbe is the great inlet by which British manufactures find their way into some of the richest and most extensive European countries. The principle that the navigation of the Elbe, the Rhine, the Weser, &c. should be quite free along their whole course, was distinctly laid down at the Congress of Vienna in 1815. But, no general tariff of duties being then established, this declaration has not had the practical effect that might have been expected. It is probable, however, that all impediments to the free navigation of the Elbe at Hamburg will be speedily removed. It is in an especial manner for the interest of Prussia, Saxony, Austria, and England, that these impediments should be abolished. So long, however, as the Stade duties are kept up, it would be folly to imagine that much advantage should be paid to our remonstrances against other duties. If we cannot prevail on Hanover to emancipate our commerce from oppressive restrictions and burdens, we can hardly expect to succeed with any other power. Were the Stade duties and those on the upper parts of the Elbe wholly abolished, we have little doubt that the trade of Hamburg would be vastly increased; which, however advantageous to her, would be far more advantageous to the extensive countries of which she is the grand entrepot.

In compiling this article we have made use of *Oddy's European Commerce*, pp. 412–439; the *Dictionnaire de Commerce (Encyc. Méthodique)*, l. 44–53; the *Circulars of Bernberg, Gossler and Anderson, Hober, and Co.*, and other eminent merchants; and of detailed statements transmitted from Hamburg founded on the works of Dr. Soetber, and C. and F. Norback, &c. From the circumstance of no official returns being published or obtainable at Hamburg, the returns of imports given above must not be regarded as quite accurate, though the errors they involve cannot be material.

**HANSEATIC LEAGUE**, an association of the principal cities in the north of Germany, Prussia, &c., for the better carrying on of commerce, and for their mutual safety and defence. This confederacy, so celebrated in the early history of modern Europe, contributed in no ordinary degree to introduce the blessings of civilisation and good government into the North. The extension and protection of commerce was, however, its main object; and hence a short account of it may not be deemed misplaced in a work of this description.

*Origin and Progress of the Hanseatic League.* — Hamburg, founded by Charlemagne in the ninth, and Lubeck, founded about the middle of the twelfth century, were the earliest members of the League. The distance between them not being very considerable, and being alike interested in the repression of those disorders to which most parts of Europe, and particularly the coast of the Baltic, were a prey in the twelfth, thirteenth, and fourteenth centuries, they early formed an intimate political union, partly in the view of maintaining a safe intercourse by land with each other, and partly for the protection of navigation from the attacks of the pirates, with which every sea was at that time infested. There is no very distinct evidence as to the period when this alliance was consummated; some ascribe its origin to the year 1169, others to the year 1200, and others to the year 1241. But the most probable opinion seems to be, that it would grow up by slow degrees, and be perfected according as the advantage derivable from it became more obvious. Such was the origin of the Hanseatic League, so called from the old Teutonic word *hansa*, signifying an association or confederacy.

Adam of Bremen, who flourished in the eleventh century, is the earliest writer who has given any information with respect to the commerce of the countries lying round the Baltic. And from the errors into which he has fallen in describing the northern and eastern shores of that sea, it is evident they had been very little frequented and not at all known in his time. But from the beginning of the twelfth century, the progress of commerce and navigation in the North was exceedingly rapid. The countries which stretch along the bottom of the Baltic, from Holstein to Russia, and which had been occupied by barbarous tribes of Slavonic origin, were then subjugated by the kings of Denmark, the dukes of Saxony, and other princes. The greater part of the inhabitants being exterminated, their place was filled by German colonists, who founded the towns of Stralsund, Rostock, Wismar, &c. Prussia and Poland were afterwards subjugated by the Christian princes and the Knights of the Teutonic Order. So that, in a comparatively short period, the foundations of civilisation and the arts were laid in countries whose barbarism had ever remained impervious to the Roman power.

The cities that were established along the coast of the Baltic, and even in the interior of the countries bordering upon it, eagerly joined the Hanseatic confederation. They were indebted to the merchants of Lubeck for supplies of the commodities produced in more civilised countries, and they looked up to them for protection against the barbarians by whom they were surrounded. The progress of the League was in consequence singularly rapid. Previously to the end of the thirteenth century, it embraced every considerable city in all those vast countries extending from Livonia to Holland, and was a match for the most powerful monarchs.

The Hanseatic confederacy was at its highest degree of power and splendour during the fourteenth and fifteenth centuries. It then comprised from 60 to 80 cities, which were distributed into 4 classes or circles. Lubeck was at the head of the first circle, and had under it Hamburg, Bremen, Rostock, Wismar, &c. Cologne was at the head of the second circle, with 29 towns under it. Brunswick was at the head of the third circle, consisting of 13 towns. Dantzic was at the head of the fourth circle, having under it 8 towns in its vicinity, besides several that were more remote. The supreme authority of the League was vested in the deputies of the different towns assembled in congress. In it they discussed all their measures; decided upon the sum that each city should contribute to the common fund; and upon the questions that arose between the confederacy and other powers, as well as those that frequently arose between the different members of the confederacy. The place for the meeting of congress was not fixed, but it was most frequently held at Lubeck, which was considered as the capital of the League, and there its archives were kept. Sometimes, however, congresses were held at Hamburg, Cologne, and other towns. They met once every 3 years, or oftener if occasion required. The letters of convocation specified the principal subjects which would most probably be brought under discussion. Any one might be chosen for a deputy; and the congress consisted not of merchants only, but also of clergymen, lawyers, artists, &c. When the deliberations were concluded, the decrees were formally communicated to the magistrates of the cities at the head of each circle, by whom they were subsequently communicated to those below them; and the most vigorous measures were adopted for carrying them into effect. One of the burgomasters of Lubeck presided at the meetings of congress; and during the recess the magistrates of that city had the sole, or at all events the principal, direction of the affairs of the League.

Besides the towns already mentioned, there were others that were denominated confederated cities, or allies. The latter neither contributed to the common fund of the League, nor sent deputies to congress; even the members were not all on the same footing in respect to privileges: and the internal commotions by which it was frequently agitated, partly originating in this cause, and partly in the discordant interests and conflicting pretensions of the different cities, materially impaired the power of the confederacy. But in despite of these disadvantages, the League succeeded for a lengthened period, not only in controlling its own refractory members, but in making itself respected and dreaded by others. It produced able generals and admirals, skilful politicians, and some of the most enterprising, successful, and wealthy merchants of modern times.

As the power of the confederated cities was increased and consolidated, they became more ambitious. Instead of limiting their efforts to the mere advancement of commerce and their own protection, they endeavoured to acquire the monopoly of the trade of the North, and to exercise the same sort of dominion over the Baltic that the Venetians exercised over the Adriatic. For this purpose they succeeded in obtaining, partly in return for loans of money, and partly by force, various privileges and immunities from the northern sovereigns, which secured to them almost the whole foreign commerce of Scandinavia, Denmark, Prussia, Poland, Russia, &c. They exclusively carried on the herring fishery of the Sound, at the same time that they endeavoured to

obstruct and hinder the navigation of foreign vessels in the Baltic. It should, however, be observed, that the immunities they enjoyed were mostly indispensable to the success of their commerce, in consequence of the barbarism that then prevailed; and notwithstanding their attempts at monopoly, there cannot be the shadow of a doubt that the progress of civilisation in the North was prodigiously accelerated by the influence and ascendancy of the Hanseatic cities. They repressed piracy by sea and robbery by land, which must have broken out again had their power been overthrown before civilisation was fully established; they accustomed the inhabitants to the principles, and set them the example, of good government and subordination; they introduced among them conveniences and enjoyments unknown by their ancestors, or despised by them; they inspired them with a taste for literature and science; they did for the people round the Baltic, what the Phœnicians had done in remoter ages for those round the Mediterranean, and deserve, equally with them, to be placed in the first rank amongst the benefactors of mankind.

"In order," as has been justly observed, "to accomplish their purpose of rendering the Baltic a large field for the prosecution of commercial and industrious pursuits, it was necessary to instruct men, still barbarous, in the rudiments of industry, and to familiarise them in the principles of civilisation. These great principles were laid down in the confederation, and at the close of the fifteenth century the Baltic and the surrounding seas had, by its means, become frequented routes of communication between the North and the South. The people of the former were enabled to follow the progress of the latter in knowledge and industry. The forests of Sweden, Poland, and Prussia gave place to corn, hemp, and flax; the mines were wrought, and in return the products of the south were imported. Towns and villages were erected in Scandinavia, where huts only were before seen: the skins of the bear and the wolf were exchanged for woollens, linens, and silks: learning was introduced; and printing, hardly invented before it was practised in Denmark, Sweden, &c."—(*Catseau, Traité de la Mer Baltique*, tom. ii. p. 175.)

The kings of Denmark, Sweden, and Norway were frequently engaged in hostilities with the Hanse towns. They regarded, and, it must be admitted, not without good reason, the privileges acquired by the League, in their kingdoms, as usurpations. But their efforts to abolish these privileges served, for more than two centuries, only to augment and extend them.

"On the part of the League there was union, subordination, and money; while the half-savage Scandinavian monarchies were full of divisions, factions, and troubles. Revolution was immediately followed by revolution, and feudal anarchy was at its height. There was another circumstance, not less important, in favour of the Hanseatic League. The popular governments established amongst them possessed the respect and confidence of the inhabitants, and were able to direct the public energies for the good of the community. The astonishing prosperity of the confederated cities was not wholly the effect of commerce. To the undisciplined armies of the princes of the North—armies composed of mercenaries without attachment to their lords—the cities opposed, besides the inferior militia, whose services they liberally rewarded, citizens accustomed to danger, and resolved to defend their liberties and property. Their military operations were combined and directed by a council composed of men of tried talents and experience, devoted to their country, responsible to their fellow citizens, and enjoying their confidence. It was chiefly, however, on their marine forces that the cities depended. They employed their ships indifferently in war or commerce, so that their naval armaments were fitted for either at comparatively small expense. Exclusive, too, of these favourable circumstances, the fortifications of the principal cities were looked upon as impregnable; and as commerce supplied them abundantly with all sorts of provisions, it need not excite any astonishment that Lubeck alone was able to carry on wars with the surrounding monarchs, and to terminate them with honour and advantage; and still less that the League should long have enjoyed a decided preponderance in the North."—(*L'Annuaire des Dates*, 3<sup>me</sup> partie, tom. viii. p. 204.)

The extirpation of piracy was one of the objects which had originally led to the formation of the League, and which it never ceased to prosecute. Owing, however, to the barbarism then so universally prevalent, and the countenance openly given by princes and nobles to those engaged in this infamous profession, it was not possible wholly to root it out. But the vigorous efforts of the League to abate the nuisance, though not entirely successful, served to render the navigation of the North Sea and Baltic comparatively secure, and were of signal advantage to commerce. Nor was this the only mode in which the power of the confederacy was directly employed to promote the common interests of mankind. Their exertions to protect shipwrecked mariners from the atrocities to which they had been subject, and to procure the restitution of shipwrecked property to its legitimate owners, though, most probably, like their exertions to repress piracy, a consequence of selfish considerations, were in no ord-

degree meritorious; and contributed not less to the advancement of civilisation than to the security of navigation.\*

*Factories belonging to the League.* — In order to facilitate and extend their commercial transactions, the League established various factories in foreign countries; the principal of which were at Novogorod in Russia, London, Bruges in the Netherlands, and Bergen in Norway.

Novogorod, situated at the confluence of the Volkof with the Imler Lake, was, for a lengthened period, the most renowned emporium in the north-eastern parts of Europe. In the beginning of the eleventh century, the inhabitants obtained considerable privileges that laid the foundation of their liberty and prosperity. Their sovereigns were at first subordinate to the grand dukes or czars of Russia; but as the city and the contiguous territory increased in population and wealth, they gradually usurped an almost absolute independency. The power of these sovereigns over their subjects seems, at the same time, to have been exceedingly limited; and, in effect, Novogorod ought rather to be considered as a republic under the jurisdiction of an elective magistrate, than as a state subject to a regular line of hereditary monarchs, possessed of extensive prerogatives. During the 12th, 13th, and 14th centuries, Novogorod formed the grand *entrepôt* between the countries to the east of Poland and the Hanseatic cities. Its fairs were frequented by an immense concourse of people from all the surrounding countries, as well as by numbers of merchants from the Hanse towns, who engrossed the greater part of its foreign commerce, and who furnished its markets with the manufactures and products of distant countries. Novogorod is said to have contained, during its most flourishing period, towards the middle of the 15th century, upwards of 400,000 souls. This, however, is most probably an exaggeration. But its dominions were then very extensive; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to a proverb, Who can resist the Gods and great Novogorod? *Quis contra Deos et magnam Novogordiam?* — (*Coxe's Travels in the North of Europe*, vol. ii. p. 80.)

But its power and prosperity were far from being so firmly established as its eulogists, and those who had only visited its fairs, appear to have supposed. In the latter part of the 15th century, Ivan Vassilievitch, czar of Russia, having secured his dominions against the inroads of the Tartars, and extended his empire by the conquest of some of the neighbouring principalities, asserted his right to the principality of Novogorod, and supported his pretensions by a formidable army. Had the inhabitants been animated by the spirit of unanimity and patriotism, they might have defied his efforts; but their dissensions facilitated their conquest, and rendered them an easy prey. Having entered the city at the head of his troops, Ivan received from the citizens the charter of their liberties, which they either wanted courage or inclination to defend, and carried off an enormous bell to Moscow, that has been long regarded with a sort of superstitious veneration as the palladium of the city. But notwithstanding the despotism to which Novogorod was subject, during the reigns of Ivan and his successors, it continued for a considerable period to be the largest as well as most commercial city in the Russian empire. The famous Richard Chancellour, who passed through Novogorod in 1554, in his way from the court of the czar, says, that "next unto Moscow, the city of Novogorod is reputed the chiefest of Russia; for although it be in majestie inferior to it, yet in greatness it goeth beyond it. It is the chiefest and greatest mart town of all Muscovy; and albeit the emperor's seat is not there, but at Moscow, yet the commodiousness of the river falling into the Gulf of Finland, whereby it is well frequented by merchants, makes it more famous than Moscow itself."

But the scourge of the destroyer soon after fell on this celebrated city. Ivan IV., having discovered, in 1570, a correspondence between some of the principal citizens and the King of Poland, relative to a surrender of the city into his hands, punished them in the most inhuman manner. The slaughter by which the bloodthirsty barbarian sought to satisfy his revenge was alike extensive and indiscriminating. The crime of a few citizens was made a pretext for the massacre of 25,000 or 30,000. Novogorod never recovered from this dreadful blow. It still, however, continued to be a place of considerable trade, until the foundation of Petersburg, which immediately became the seat of that commerce that had formerly centred at Novogorod. The degradation of this ill-fated city is now complete. It is at present an inconsiderable place, with a population of about 7,000 or 8,000; and is remarkable only for its history and antiquities.

The merchants of the Hanse towns, or Hansards, as they were then commonly termed, were established in London at a very early period, and their factory here was

\* A series of resolutions were unanimously agreed to by the merchants frequenting the port of Wisby, one of the principal emporiums of the League, in 1287, providing for the restoration of shipwrecked property to its original owners, and threatening to eject from the "*consodalitate mercatorum*," any city that did not act conformably to the regulations laid down.

of considerable magnitude and importance. They enjoyed various privileges and immunities; they were permitted to govern themselves by their own laws and regulations; the custody of one of the gates of the city (Bishopsgate) was committed to them; and the duties on various sorts of imported commodities were considerably reduced in their favour. These privileges necessarily excited the ill-will and animosity of the English merchants. The Hansards were every now and then accused of acting with bad faith; of introducing commodities as their own that were really the produce of others, in order to enable them to evade the duties with which they ought to have been charged; of capriciously extending the list of towns belonging to the association, and obstructing the commerce of the English in the Baltic. Efforts were continually making to bring these disputes to a termination; but as they really grew out of the privileges granted to and claimed by the Hansards, this was found to be impossible. The latter were exposed to many indignities; and their factory, which was situated in Thames Street, was not unfrequently attacked. The League exerted themselves vigorously in defence of their privileges; and having declared war against England, succeeded in excluding our vessels from the Baltic, and acted with such energy that Edward IV. was glad to come to an accommodation with them, on terms which were any thing but honourable to the English. In the treaty for this purpose, negotiated in 1474, the privileges of the merchants of the Hanse towns were renewed, and the lands assigned to them, in absolute property, a large space of ground, with the building upon it, in Thames Street, denominated the Steel Yard, whence the Hanse merchants had been commonly denominated the Association of the Steel Yard; the property of the establishments at Boston and Lynn was also secured to them; the king engaged that no stranger should participate in their privileges; one of the articles bore that the merchants should be no longer subject to the Judges of the English Admiralty, but that a particular tribunal should be formed for the easy and speedy settlement of disputes that might arise between them and the English; and it was further stipulated that the particular privileges awarded to the Hanse merchants should be published often as the latter judged proper, in all the sea-port towns of England, and that Englishmen as infringed upon them should be punished. In return for these concessions, the English acquired the liberty of freely trading in the Baltic, and especially in the port of Dantzic and in Prussia. In 1498, all direct commerce with the Hanse lands being suspended, the trade fell into the hands of the Hanse merchants, and commerce was in consequence very greatly extended. But, according as the national commercial enterprise awakened in the nation, and as the benefits resulting from the prosecution of foreign trade came to be better known, the privileges of the Hanse merchants became more and more obnoxious. They were in consequence considerably modified in the reigns of Henry VII. and Henry VIII., and were at length altogether abolished in 1597. — (*Anderson's Hist. Com.* Anno 1474, &c.)

The different individuals belonging to the factory in London, as well as those belonging to the other factories of the League, lived together at a common table, and were enjoined to observe the strictest celibacy. The direction of the factory in London was intrusted to an alderman, 2 assessors, and nine councillors. The latter were chosen by the cities forming the different classes into which the League was divided. The business of these functionaries was to devise means for extending and securing the privileges and commerce of the association; to watch over the operations of the merchants; and to adjust any disputes that might arise amongst the members of the confederacy, or between them and the English. The League endeavoured at all times to promote, as much as possible, the employment of their own ships. In pursuing this object, they went so far, in 1447, as to forbid the importation of English merchandise into the confederated cities, except by their own vessels. But a regulation of this sort could not be carried into full effect; and was enforced or modified according to the circumstances were favourable or adverse to the pretensions of the League. The existence was, however, an insult to the English nation; and the irritation produced by the occasional attempts to act upon it, contributed materially to the subversion of the League. The Hanseatic merchants had acquired amongst us.

By means of their factory at Bergen, and of the privileges which had been granted to or usurped by them, the League enjoyed for a lengthened period the monopoly of the commerce of Norway.

But the principal factory of the League was at Bruges in the Netherlands. It became, at a very early period, one of the first commercial cities of Europe, and the centre of the most extensive trade carried on to the north of Italy. The art of navigation in the thirteenth and fourteenth centuries was so imperfect, that a voyage from Italy to the Baltic and back again could not be performed in a single season; hence, for the sake of their mutual convenience, the Italian and Hanseatic merchants determined on establishing a magazine or storehouse of their respective products in some intermediate situation. Bruges was fixed upon for this purpose; a district

which it seems to have owed as much to the freedom enjoyed by the inhabitants, and the liberality of the government of the Low Countries, as to the conveniency of its situation. In consequence of this preference, Bruges speedily rose to the very highest rank among commercial cities, and became a place of vast wealth. It was at once a staple for English wool, for the woollen and linen manufactures of the Netherlands, for the timber, hemp and flax, pitch and tar, tallow, corn, fish, ashes, &c. of the North; and for the spices and Indian commodities, as well as their domestic manufactures imported by the Italian merchants. The fairs of Bruges were the best frequented of any in Europe. Ludovico Guicciardini mentions, in his *Description of the Low Countries*, that, in the year 1318, no fewer than 5 Venetian galleasses, vessels of very considerable burden, arrived at Bruges in order to dispose of their cargoes at the fair. The Hanseatic merchants were the principal purchasers of Indian commodities; they disposed of them in the ports of the Baltic, or carried them up the great rivers into the heart of Germany. The vivifying effects of this commerce were every where felt; the regular intercourse opened between the nations in the north and south of Europe made them sensible of their mutual wants, and gave a wonderful stimulus to the spirit of industry. This was particularly the case with regard to the Netherlands. Manufactures of wool and flax had been established in that country as early as the age of Charlemagne; and the resort of foreigners to their markets, and the great additional vent that was thus opened for their manufactures, made them be carried on with a vigour and success that had been hitherto unknown. These circumstances, combined with the free spirit of their institutions, and the moderation of the government, so greatly promoted every elegant and useful art, that the Netherlands early became the most civilised, best cultivated, richest, and most populous country of Europe.

*Decline of the Hanseatic League.* — From the middle of the fifteenth century, the power of the confederacy, though still very formidable, began to decline. This was not owing to any misconduct on the part of its leaders, but to the progress of that improvement it had done so much to promote. The superiority enjoyed by the League resulted as much from the anarchy, confusion, and barbarism that prevailed throughout the kingdoms of the North, as from the good government and order that distinguished the towns. But a distinction of this sort could not be permanent. The civilisation which had been at first confined to the cities, gradually spread from them, as from so many centres, over the contiguous country. Feudal anarchy was every where superseded by a system of subordination; arts and industry were diffused and cultivated; and the authority of government was at length firmly established. This change not only rendered the princes, over whom the League had so frequently triumphed, superior to it in power; but the inhabitants of the countries amongst which the confederated cities were scattered, having learned to entertain a just sense of the advantages derivable from commerce and navigation, could not brook the superiority of the association, or bear to see its members in possession of immunities of which they were deprived: and in addition to these circumstances, which must speedily have occasioned the dissolution of the League, the interests of the different cities of which it consisted became daily more and more opposed to each other. Lubeck, Hamburg, Bremen, and the towns in their vicinity, were latterly the only ones that had any interest in its maintenance. The cities in Zealand and Holland joined it, chiefly because they would otherwise have been excluded from the commerce of the Baltic; and those of Prussia, Poland, and Russia did the same, because, had they not belonged to it, they would have been shut out from all intercourse with strangers. When, however, the Zealanders and Hollanders became sufficiently powerful at sea to be able to vindicate their right to the free navigation of the Baltic by force of arms, they immediately seceded from the League; and no sooner had the ships of the Dutch, the English, &c. begun to trade directly with the Polish and Prussian Hanse towns, than these nations also embraced the first opportunity of withdrawing from it. The fall of this great confederacy was really, therefore, a consequence of the improved state of society, and of the development of the commercial spirit in the different nations of Europe. It was most serviceable so long as those for whom its merchants acted as factors and carriers were too barbarous, too much occupied with other matters, or destitute of the necessary capital and skill, to act in these capacities for themselves. When they were in a situation to do this, the functions of the Hanseatic merchants ceased as a matter of course; their confederacy fell to pieces; and at the middle of the seventh century the cities of Lubeck, Hamburg, and Bremen were all that continued to acknowledge the authority of the League. Even to this day they preserve the shadow of its power; being acknowledged in the act for the establishment of the Germanic confederation, signed at Vienna, the 8th of June, 1815, as free Hanseatic cities. — (From an article in No. 13. of the *Foreign Quarterly Review*, contributed by the author of this work.)

HARBOUR, HAVEN, or PORT, a piece of water communicating with the sea, or with a navigable river or lake, having depth sufficient to float ships of considerable

burden, where there is convenient anchorage, and where ships may lie, load, and screened from the winds, and without the reach of the tide.

*Qualities of a good Harbour.* — There is every variety in the form and quality of harbours. They are either natural or artificial; but, however formed, a good harbour should have sufficient depth of water to admit the largest ships at all times of tide; it should be easy of access, without having too wide an entrance; the bottom should be clean and good; and ships should be able to lie close alongside quays or piers, without expense and inconvenience of loading and unloading by means of lighters being avoided. Ships lying in a harbour that is land-locked, and surrounded by high cliffs or buildings, are, at once, without the reach of storms, tides, and currents; and in most cases, be easily protected from hostile attacks. Bar harbours are those that are enclosed by bars or banks at their entrances, and do not, therefore, admit of the ingress or egress of large ships except at high water. These are most commonly river harbours; and mud brought down by the stream, and driven back by the waves, naturally fills up the bar or bank at their mouths.

*Best British Harbours.* — Good harbours are of essential importance to a nation; and immense sums have been expended in all countries ambitious of commercial greatness in their improvement and formation. Portsmouth, Milford, and the Cove of Cork are the finest harbours in the British islands, being surpassed by very few, if any, in the world. Of these, Portsmouth is entitled to the pre-eminence. This admirable harbour is about as wide at its mouth as the Thames at Westminster Bridge, expanding within into a noble basin, almost sufficient to contain the whole of Great Britain. Its entrance is unobstructed by any bar or shallow; and throughout, water adequate to float the largest men of war at the lowest tide. Its anchorage ground is excellent, and it is entirely free from sunken rocks, sand banks, or any similar obstructions. The western side of the harbour is formed by the island of Portsea; and on its south-western extremity, at the entrance to the harbour, is the town of Portsmouth, and its large and important suburb Portsea. Here are situated all the other establishments for the building, repair, and outfit of ships of war, computed upon a very large scale, and furnished with every convenience. The fortifications to protect this great naval *depôt* are superior, both as respects strength and extent, to any other in the kingdom. "Thus," to use the words of Dr. Campbell, "it appears that Portsmouth derives from nature all the prerogatives the most fertile wits and the most intelligent judges could devise or desire; and that these have been well seconded by the without consideration of expense, which, in national improvements, is little to be regarded. Add to all this the striking excellence of its situation, which is such as Providence had expressly determined it for that use to which we see it applied, in bridling the power of France, and, if I may so speak, the peculiar residence of Napoleon." — (*Survey of Great Britain*, vol. i. p. 370.)

Portsmouth harbour has the additional and important advantage of opening up a celebrated road of Spithead, between the Hampshire coast and the Isle of Wight, forming a safe and convenient retreat for the largest fleets.

Milford Haven deeply indents the southern part of Pembrokeshire. It is of great extent, and has many subordinate bays, creeks, and roads. The water is deep, the anchorage ground excellent; and being completely land-locked, ships lie as safe as if they were in dock.

Cork harbour has a striking resemblance to that of Portsmouth, but is of less extent; it has, like it, a narrow entrance, leading into a capacious basin, affording a secure asylum for any number of ships.

Plymouth, which, after Portsmouth, is the principal naval *depôt* of England, is an admirable double harbour. The roadstead in Plymouth Sound has recently been improved by the construction, at a vast expense, of a stupendous breakwater more than 1,700 yards in length. This artificial bulwark protects the ships lying inside from the effects of the heavy swell thrown into the Sound by southerly and south-easterly winds.

London stands at the head of the river ports of Great Britain. Considering the limited course of the Thames, there is, probably, no river that is navigable for large ships to so great a distance from sea, or whose mouth is less obstructed by banks. London is mainly indebted for the unrivalled magnitude of her commerce to her favourable situation on this noble river; which not only gives her all the advantages of an open port, accessible at all times to the largest ships, but renders her the emporium of an extensive, rich, and populous country comprised in the basin of the Thames.

The Mersey, now the second commercial river in the empire, is more important than the Thames; and is in all respects inferior, as a channel of navigation, to the latter. Still, however, it gives to Liverpool very great advantages; and the channel that has recently been discovered in the banks promises to be of much importance in facilitating the access to and from the port. This channel will be found laid down in the map of Liverpool and its environs, attached to the article Docks in this work.

Bristol and Hull are both river ports. Owing to the extraordinary rise of the tide in the Bristol Channel, the former is accessible to the largest ships. The Humber is a good deal impeded by banks; but it also is navigable as far as Hull, by very large vessels. The Tyne admits vessels of very considerable burden as far as Newcastle, which, next to London, is the most important port, for the extent of the shipping belonging to it, of any in the empire.

The shallowness of the Clyde from Greenock up to Glasgow has been a serious drawback upon the commercial progress of the latter. Large sums have been expended in attempts to contract the course and to deepen the bed of the river; and they have been so far successful, that vessels of 400 tons burden may now (1843) ascend to the city, at high water. But there seems little probability of its ever becoming suitable for the navigation of ships of large burden.

Generally speaking, the harbours on the east coasts, both of Great Britain and Ireland, are, with the exception of the Thames, very inferior to those on their south and west coasts. Several harbours on the shores of Sussex, Kent, Lincoln, &c., that once admitted pretty large ships, are now completely choked up by sand. Large sums have been expended upon the ports of Yarmouth, Boston, Sunderland, Leith, Dundee, Aberdeen, &c. Dublin harbour being naturally bad, and obstructed by a bar, a new harbour has been formed, at a great expense, at Kingstown, without the bar, in deep water. There has also been a large outlay upon the harbours of Donaghadee, Portpatrick, &c.

For an account of the shipping belonging to the different ports of Great Britain and Ireland, the reader is referred to the article *SHIPS* in this work. The charges on account of Docks, Pilotage, &c. are specified under these articles.

*Foreign Harbours and Ports.*—The reader will find the principal foreign commercial harbours described in this work at considerable length under their respective titles. The principal French ports for the accommodation of men of war are Brest, Toulon, and Cherbourg. The latter has been very greatly improved by the construction of a gigantic breakwater, and the excavation of immense basins. Besides Cadiz, the principal ports for the Spanish navy are Ferrol and Carthagena. Cronstadt is the principal rendezvous of the Russian navy; Landsrona, of that of Sweden; and the Helder, of that of Holland.

*Law of England as to Harbours.*—The anchorage, &c. of ships was regulated by several statutes. But most of these regulations have been repealed, modified, or re-enacted, by the 54 Geo. 3. c. 149.

This act authorises the Admiralty to provide for the moorings of his Majesty's ships; and prohibits any private ship from fastening thereto. It further authorises the Admiralty to prohibit the *breaming* of any ship or vessel at any place or places on shore they may think fit; and to point out the places where private ships shall deposit the gunpowder they may have on board exceeding 5 lbs.—(§ 6.) It prohibits the use of any fire on board any ship or vessel that is being breamed in any port, harbour, or haven, between the hours of 11 in the evening and 5 in the morning, from the 1st of October to the 31st of March inclusive; and between the hours of 11 in the evening and 4 in the morning from the 1st of April to the 30th of September inclusive: and it prohibits the melting or boiling of any pitch, tar, tallow, &c. within 50 yards of any of his Majesty's ships, or of his Majesty's dock-yards. By another section, the keeping of guns shot, and the firing of the same in any port, is prohibited under a penalty of 5s. for every gun kept shot, and 10s. for every gun discharged.—(§ 9.) The sweeping or creeping for anchors, &c. within the distance of 150 yards of any of his Majesty's ships of war, or of his Majesty's moorings, is prohibited under a penalty of 10l. for every offence.—(§ 10.) The loading and unloading of ballast is also regulated by this statute; but for the provisions with respect to it, see *BALLAST*.

**HARDWARE** (Ger. *Kurze waaren*; Du. *Yzerkramery*; Da. *Iserkramvarer*; Sw. *Järnkram*; Fr. *Clinguillerie*, *Quincaillerie*; It. *Chincaglio*; Sp. *Quinquillaria*; Port. *Quincalharia*; Rus. *Mjelotchnue towarii*) includes every kind of goods manufactured from metals, comprising iron, brass, steel, and copper articles of all descriptions. Birmingham and Sheffield are the principal seats of the British hardware manufactures; and from these, immense quantities of knives, razors, scissors, gilt and plated ware, fire-arms, &c. are supplied, as well for exportation to most parts of the world, as for home consumption.

The hardware manufacture is one of the most important carried on in Great Britain; and from the abundance of iron, tin, and copper ores in this country, and our inexhaustible coal mines, it is one which seems to be established on a very secure foundation. The late Mr. Stevenson, in his elaborate and excellent article on the statistics of England, in the *Edinburgh Encyclopædia*, published in 1815, estimated the value of all the articles made of iron at 10,000,000l., and the persons employed in the trade at 200,000. Mr. Stevenson estimated the value of all the articles made of brass and copper at 1,000,000l., and the persons employed at 50,000: and he further estimated the value of steel, plated, and hardware articles, including toys, at 4,000,000l., and the persons employed at 70,000. So that, assuming these estimates to be nearly correct, the total value of the goods produced from different sorts of metals in England and Wales, in 1815, must have amounted to the sum of 17,000,000l., and the persons employed to 320,000.

There is reason to believe that this estimate, in so far, at least, as respects the value of

the manufacture, was at the time decidedly too high; but at this moment it probably within the mark. There has been a very extraordinary augmentation of quantity of bar and pig iron produced within the last 15 years; and the rapid increase of Birmingham and Sheffield, as well as of the smaller seats of the hardware manufacture, shows that it has been increased in a corresponding proportion. We have no doubt, assured, by those well acquainted with most departments of the trade, that if the iron and other hardware manufactures of England be added those of Scotland, their total aggregate value cannot now be reckoned at less than 17,500,000*l.* affording *direct* employment, in the various departments of the trade, for at least 300,000 persons.

*Fall of Prices.* — Owing partly to the reduced cost of iron, but incomparably more to improvements in manufacturing, a very extraordinary fall has taken place in the most hardware articles during the last 12 or 15 years. In some articles the fall has been 80 per cent.; and there are but few in which it does not exceed 30 per cent. In consequence, the poorest individuals are now able to supply themselves with an extraordinary variety of commodious and useful articles, which, half a century ago, were wholly unknown, or were too dear to be purchased by any but the richer classes. Those who reflect on the importance of the prevalence of habits of cleanliness and neatness will readily agree with us in thinking that the substitution of the convenient beautiful hardware and earthenware household articles, that are now every where to be met with, for the wooden and horn articles used by our ancestors, has been of an ordinary degree advantageous. But it is not in this respect only that the cheapness and improvement of hardware is essential. Many of the most powerful and indispensable tools and instruments used by the labourer come under this description, and every one is aware how important it is that they should be at once cheap and

**HARPOONER**, the man that throws the harpoon in fishing for whales. By 35 Geo. 3. c. 92. § 34., no harpooner, line manager, or boat steerer, belonging to any ship or vessel fitted out for the Greenland or Southern whale fisheries, shall be impressed from the said service; but shall be privileged from being impressed so long as he shall belong to, and be employed on board, any ship or vessel whatever in the fisheries aforesaid.

**HATS** (Ger. *Hüte*; Du. *Hoeden*; Fr. *Chapeaux*; It. *Cappelli*; Sp. *Sombreros*; Rus. *Schlopü*), coverings for the head in very general use in Great Britain and many other countries, and known to every body. They are made of very various forms and sorts of material. They may, however, be divided into two great classes, viz. those felted or made of fur, wool, silk, &c., and those made of straw; the former being principally worn by men, and the latter by women.

**I. HATS (FELTED, FUR, SILK, &c.)**. We possess little information as to the importance of hats as a distinct branch of manufacture, anterior to the reign of Elizabeth.

Felted hats are stated to have been worn by the Saxons, but the earliest notice we find of "beaver" hats, is in an inventory of the effects of Sir John Falstoffs in 1459. Philip Stubbs, in his "Anatomie of Abuses," published in 1585, mentions amongst *other varieties*, "bever hats of 20, 30, and 40 shillings price being fetched from beyond the seas." In subsequent reigns, and particularly during the Commonwealth, the manufacture of both beaver and felted hats must have arrived at some importance; and not only the quality, but the shape of the hat, began to possess an influence in denoting the religious or political bias of the wearer, a characteristic of this article of dress, which obtains even at the present day. An interesting account of hats as worn at different periods of our history is given in the *Archæologia*, and the details of the manufacture, as it is now carried on, are given in a work called "Days in the Factories" (by Mr. George Dodd) published in the present year (1843).

Charles VII. of France wore a hat on his public entry into Rouen in 1449, which is believed to have been among the first manufactured in his kingdom. — (*Encyclopédie*, art. *Chapeaux*.)

The following details with respect to the species of hats manufactured, their value &c., furnished by a high practical authority, were published in the former edition of this work, and present a view of the trade as it existed in 1833; but material changes have since taken place in the manufacture.

**1. Stuff Hats.** — This term is applied by the trade only to the best description of hats, or to those brought to the highest perfection in London. Since the introduction of "waterproofing," it is found unnecessary to use so valuable a material as beaver in the foundation or frame-work of the best hats. Instead of it, fine seasoned bays of English coney wool, red Vigonia wool, Dutch carotied coney wool, and a small quantity of fine Saxony lambs' wool, are employed with equal advantage.

The covering, *i. e.* the "napping," of the best qualities is a mixture of *cheek beaver*, with white and brown stage beaver, or seasoned beaver, commonly called "*woolms*." Inferior stuffs are napped with mixtures of stage beaver, nutria, hares' wool, and musquash.

Of late years, hats have been much reduced in weight. This is principally owing to the new method of "waterproofing," which is effected in the bodies of the hats prior to their being napped. The elastic properties of the gums employed for this purpose, when dissolved in pure spirits of wine, give a body to the stuffs which allows a good deal of their weight to be dispensed with.

Not 30 years ago, 96 ounces of stuff were worked up into 1 dozen ordinary sized hats for gentlemen; at present, from 33 to 34 ounces only are required to complete the same quantity. It is proper to observe that the heavy duty on English spirits of wine is very injurious to the manufacture, as it causes the employment of inferior dissolvents, as naphtha and gas spirit, which injure the gums.

The manufacture of the best hats employs in London nearly 1,000 makers and finishers, besides giving employment to nearly 3,000 men in Gloucestershire and Derbyshire, in body-making and ruffing. The gross returns amount to about 640,000*l*.

**2. Plated Hats.** — Next to fine hats are those designated "plated," so called from the *plate*, or napping, being of a distinct and superior nature to the foundation or body. The latter is generally formed of Kent, Spanish, or Shropshire wool; while the former consists of a mixture of fine beaver, hares' wool, musquash, nutria, and English back wool. From the cheapness of coal and the purity of the water in Lancashire, Cheshire, and Staffordshire, the whole of the plating trade is engrossed by them. The men employed in the 3 counties, including apprentices, do not exceed 3,000. The total returns amount to about 1,080,000*l*, inclusive of bonnets and children's fancy beaver hats.

**3. Felt Hats and Cordies** are the coarsest species, being made wholly of Kent, Shropshire, and Italian wools. Cordies are distinguished by a fine covering of camel or goat hair. A very large trade was at one time carried on in these articles; but since the introduction of caps, and the manufacture of inferior plates, the returns have sunk from 1,000,000*l*. to scarcely 150,000*l*. 1 Atherstone, Rudgeley, Bristol, and Newcastle-under-Line are the principal places where they are manufactured.

only the ladies of quality who wore small silk hats. — (See *Malcolm's Manners and Customs*.)

**British Plait.** — The *straw plait district* comprises the counties of Bedford, Hertford, and Buckingham, being the most favourable for the production of the wheat straw, which is the material chiefly used in England. The manufacture is also followed in some places in Essex and Suffolk, but very partially in other counties. During the late war, the importation of straw hats from Leghorn having in a great measure ceased, an extraordinary degree of encouragement was given to our domestic manufacture, and a proportional degree of comfort was derived by the agricultural labourers in these places, by the wives and children of whom it was chiefly followed. This produced competition, and led to an improvement of the plait by *splitting* the straw, which had formerly been used entire — to a more careful selection of the straw itself — and also to improvements in finishing and bleaching. So successful was straw plaiting at this period, that it has been ascertained that women have earned as much as 22s. a week for their labour. (See *Evidence on the Poor Laws*, p. 377.) But at the conclusion of the war, Leghorn hats again came into the market; and from their superiority in fineness, colour, and durability, they speedily acquired a preference over those of home manufacture, which consequently began to decline. Still the wages continued good, as the fashion of wearing Dunstable straw hats had gradually established itself over the country, which kept up the demand for them; and many individuals abandoned the working of *pillow lace* (another domestic manufacture peculiar to Bedford and Bucks, which in 1820 had fallen into decay, owing to the application of machinery), and betook themselves to straw plaiting, as a more profitable employment. With the view of improving the condition of the straw plaiters, who from their increased numbers were reduced to great distress, and enabling them to meet the foreign competition, the Society of Arts, in the years 1822 to 1827, held out premiums for the successful application of some of our native grasses or straw, other than the wheat straw in general use, and for improvements in plaiting, finishing, and bleaching. Many specimens were sent to the Society; and, amongst other candidates, Mr. Parry, of London, in 1822, received the large silver medal for an imitation and description of the mode of plaiting the Leghorn hats. Mr. Cobbett, also, who had contributed samples of plaiting, made from 15 different sorts of grass indigenous to England, received a similar reward. The publication of these contributions in the Society's Transactions was followed by the most beneficial results to the British manufacture. Our native grasses were not found to promise much success, owing to the brittleness of their stems and the unevenness of their colour; but Mr. Parry's communication was of especial importance, as the straw of Tuscany speedily became an article of import. He immediately set the example, by teaching and employing above 70 women and children to plait the straw by the Italian method; and it is peculiarly gratifying to observe, as an evidence of its success, that while the importation of Leghorn hats has, during the last few years, been on the decline, the *unmanufactured material has been progressively on the increase*. This straw, which is imported at a nominal duty of 1d. a cwt., is chiefly plaited in our straw districts; and the Tuscan plait, which formerly paid a duty of 17s. per lb., reduced to 7s. 6d. in 1842, has likewise been largely imported, and made up into bonnets in this country, as fine and as beautiful as the genuine Leghorn hat.

There is, perhaps, no manufacture more deserving of encouragement and sympathy than that of straw plait, as it is quite independent of machinery, and is a domestic and healthful employment, affording subsistence to great numbers of the families of agricultural labourers, who without this resource would be reduced to parish relief. By the united efforts of many benevolent individuals, numerous schools of industry have of late years been established in Bedfordshire, where the children of the poor are taught the art of plaiting and bonnet-making, and are afterwards, by means of premiums arising from bequests left for that purpose, offered as apprentices to the trade. This has had a tendency not only to increase the number of hands, but by proper instruction and superintendence, materially to improve the quality of the plait, and has doubtless promoted that successful competition with the Italian manufacture, which has been progressively increasing of late years. From 1830 to the autumn of 1834, the English trade was on the decline, but a demand from America arose at that period, and continued to increase until the fall of 1839, when it again subsided and prices became considerably reduced. This state of things continued until the fall of 1842 when a favourable reaction took place, and the trade has since gradually recovered, and is now in a healthy and brisk state. At present (1843) it is believed that an increase has taken place in the manufacture of straw bonnets of about *two-thirds*, and of straw plait, about *one-third*, compared with the quantity produced in 1833. From an estimate made at that period by an intelligent individual, intimately acquainted with the manufacture, it was considered that every score (or 20 yards) of plait, consumed a pound of straw in the state in which it is bought of the farmer; that at an average, every plaiter made 15 yards per diem; that in the counties of Hertford, Bedford, and Bucks, there were at an average 10,000 scores brought to market every day, to make which 13,300 persons (women and children) must be employed. In Essex and Suffolk, it was estimated that 2,000 scores were the daily produce, to make which about 3,000 persons were employed, and that about 4,000 persons more must have been employed to convert these quantities into bonnets. Including other places where the manufacture was carried on in England, it was supposed that there were in all about 30,000 persons engaged in it at that period. At the present time (including about 1,500 sewers in London) it is believed there cannot be less than from 40,000 to 50,000 persons engaged in the manufacture. The earnings of the plaiters vary from 3d. to 2s. 6d. per score, or from 1s. 6d. to 10s. per week; women averaging about 2s. 6d. and children 1s., while the sewers may earn from 3s. to 12s. weekly, or an average of about 6s. There are 7 descriptions of plait in general use; viz. *whole Dunstable* (the first introduced), plaited with 7 entire straws; *split straw*, introduced about 40 years since; *patent Dunstable*, or double 7, formed of 14 split straws, every 2 wetted and laid together, invented about 35 years since; *Devonshire*, formed of 7 split straws, invented about 20 years since; *Luton plait* (an imitation of whole Dunstable), formed of double 7, and coarser than patent Dunstable, invented about 20 years since; *Bedford Leghorn*, formed of 23 or double 11 straws, and plaited similarly to the Tuscan; and *Italian*, formed of 11 split straws. But there are other varieties in fancy straw plait, not generally in demand for the home trade, but chiefly required for exportation; such as the *backbone*, of 7 straws; the *hustie*, of 17 straws; the *wave*, of 23 straws; and *diamond*, of 23 straws. There were other plaits, called *rustic*, of 4 coarse straws split; and *pearl*, of 4 small straws entire; but these are now superseded. The principal markets are Luton, Dunstable, and St. Alban's, where the plait is usually brought every morning by the plaiters, and bought by the dealers.

The plaits above mentioned are almost exclusively used for women's bonnets or children's hats; but in addition to these a considerable trade has sprung up during the last few years in the manufacture of hats for men and boys, made from *Brazilian grass*, large quantities of which are imported at a mere nominal duty. This grass was first brought into use about 35 years ago, by Mr. Fraser, a nurseryman residing at Chelsea, who took out a patent for hats made from that material, and sold them as high as two guineas each. This article is now much in demand amongst the peasantry, from its strong and durable character, as well as its lightness, and gives employment to upwards of 1,000 hands in the counties of Bedford and Herts, who earn from 3s. to 4s. weekly, being paid at the rate of from 5d. to 1s. a hat, according to quality.

But the advantages which followed the publication, by the Society of Arts, of the various attempts to improve the trade, were not confined to England. Messrs. J. & A. Mair, of Greenock, (who subsequently sent specimens to the Society, and received 2 different medals) were in consequence attracted to the manufacture, and in 1823 established straw plaiting, in imitation of Leghorn, in the Orkney Islands, with

singular success, adopting *rye* straw, dwarfed by being grown on poor land, as the material best suited for the purpose. In the estimation of persons largely employed in the trade in London, hats manufactured in Orkney were quite equal, both in colour and quality, to those of Leghorn; indeed, some of the sent to the Society was so fine, as to be capable of making a hat of 80 rows in the brim, being equal to 11 rows in an inch; but we learn with regret that the prevalence of mildew in that humid climate is inauspicious to the bleaching of the straw, that it is equal to 50 per cent. on the value of the straw in this circumstance, and to the low prices of Leghorn hats of late years, it is to be ascribed the difficulty we have had, even with the protecting duty of 3*l.* 8*s.* per dozen, in withstanding the competition of the manufacturer. In their letter to the Society of Arts, of the 10th of February, 1836, Messrs. Mulr star

"We had last year about 5 acres of straw, which will produce about 12,000 score of plait, — suppose the average of 3 score to the hat, will be 4,000 hats, not more. We think them one hundredth part of the consumption of the United Kingdom. These 4,000 hats may give to the manufacturer, including his 5,000*l.* For seed and straw 7 acres of land would be required, and in manufacturing 500 persons would constantly employed all the year. We suppose the consumption of Leghorn hats to be not less than 500,000*l.* in the United Kingdom; now, were these all made by our own industrious population, 700 acres of poor land would be required, and 50,000 persons would be employed in the manufacture." — (*Trans. Soc. Arts.*) The plaiters in Orkney were earning, in 1827, only from 2*s.* to 2*s.* 6*d.* per week, and since that period the trade has declined; the hats from that quarter are not held in the same estimation, and making has much decreased owing to the Bedfordshire plaiters coming successfully into competition with them in price; time and practice having taught them to produce a greater number of yards per dozen.

**Italian Plait.** — In Italy, the manufacture is principally followed in the neighbourhood of Florence, Sienna, and the Val d'Arno, in the Duchy of Tuscany; and it is also established at Venice and other places. There, as in England, it is purely a domestic manufacture, and the produce is collected by those who go round the country. There is no means of estimating, with any degree of accuracy, the number of individuals employed, as the government is entirely unprovided with statistical data, and is even ignorant of any being collected. But supposing that England took about a third of the Italian manufacture, it is believed that we have taken nearer a half; it would not appear that, even in the most prosperous times, more than 30,000 persons could have been engaged in it.

The description of straw used, which is cultivated solely for the purposes of the manufacture, is for the grain, is the *tritium turgidum*, a variety of bearded wheat, which seems to differ in no way from the spring wheat grown in the vale of Evesham and other parts of England. — (*Trans. Soc. Arts.*) After undergoing a certain preparatory process, the upper parts of the stems (being first sorted as to size and thickness) are formed into a plait of generally 13 straws, which is afterwards knitted together at the edges into a circular shape called a "flat," or hat. The fineness of the flats is determined by the number of rows of plait which compose them (counting from the bottom of the crown to the edge of the brim), and their relative fineness ranges from about No. 20, to 60*l.*, being the rows contained in the brim of the hat, which is generally 8 inches. They are afterwards assorted into 1st, 2d, and 3d qualities, which are determined by the *colour* and *texture*; the most faultless being denominated the 1st, which is the most defective is described as the 3d quality. These qualities are much influenced by the season of the year in which the straw is plaited. Spring is the most favourable, not only for plaiting, but for bleaching and finishing. The dust and perspiration in summer, and the benumbed fingers of the workmen in winter, when they are compelled to keep within their smoky huts, plaiting the cold and wet straw, are equally injurious to the colour of the hats, which no bleaching can improve. The flats are afterwards made up in cases of 10 or 20 dozen, assorted in progressive numbers or qualities, and the price of each middle or average number governs the whole. The *Brazzi* make bears the highest repute, and they are considered secondary; which names are given to the flats, from the districts where they are produced. Florence is the principal market, and the demand is chiefly from England, France, Germany, and America; but the kinds mostly required are the lower numbers; the very finest hats, particularly of the best quality, are considered too expensive by the buyers.

The importation of Leghorn straw hats has very sensibly decreased of late years, owing to the change of fashion in favour of silk bonnets, and also the prevailing and increasing practice of English dress from the high duty on the manufactured article, importing the straw plait, and the straw itself for the purpose of being knitted, plaited, and finished in this country. In 1830, not less than 168,525 hats entered for home consumption, while in 1840 the quantity fell to 8,544 only! and these, ladies' and infants' hats of the *highest* quality, — the only article now imported: while in straw plait the importation has fallen from 34,662 lbs. in 1838, to 13,035 lbs. in 1840, arising wholly from the improvement made by our own plaiters, in quality and quantity produced, attended with a consequent reduction of price. In Tuscan plait, the only descriptions now imported are the best qualities, in the production of which the Italians still possess an advantage over us, though it is believed to be of a temporary nature. Notwithstanding the alterations in our tariff, which reduced the duty on straw plait from 7*s.* 6*d.* per lb. it will be seen that the importation has only increased in very trifling degree. The reduction in the importation of unmanufactured straw is to be attributed rather to the change of fashion which has prevailed of late years amongst the higher and middling classes in England, than to any other cause. For some time the gradual cessation in the English demand was attended with consequences to the poor straw plaiters of Tuscany, many of whom abandoned the trade and turned themselves to other occupations, particularly to the working of red woollen caps for Greece and Turkey. Immense quantities of which have been exported from Leghorn since the peace. With the view of counteracting the ruinous effects which our high duty entailed on their trade, the merchants and manufacturers in Tuscany, interested in the straw hat manufacture, petitioned their government, in 1830, to moderate with ours on the subject; but this remonstrance, if ever made, was not likely, from the competition of our own population, to be very favourably received. It is, however, understood that of late years, since the English demand has fallen off, America has more than supplied our place in the Leghorn trade.

The following prices of different numbers and qualities of Leghorn hats were in 1834 considered as would encourage the workpeople in Tuscany to produce good work, and are believed to be the prices paid at the present time: —

	First Quality.			Second Quality.			Third Quality.		
	Tuscan.	English.		Tuscan.	English.		Tuscan.	English.	
No. 30.	11 lire	= 0	7 4	10 lire	= 0	6 8	8 lire	= 0	5 4
40.	21	= 0	14 0	20	= 0	13 4	18	= 0	12 0
45.	26	= 0	17 4	25	= 0	16 8	23	= 0	15 4

The straw for plaiting a No. 30. at 8 lire costs 2 lire, about 1*s.* 4*d.* English; for bleaching and finishing 1 lire = 8*d.*; the estimated loss of rows in a mass, that either go up into the crown in the process of finishing and pressing, or that must be taken from the brim to reduce it to London measure (2*h* in 1) may be calculated at 1 lire more, or 8*d.* As it requires not less than 6 days for plaiting and finishing the hat, there therefore remains only 4 lire, or 2*s.* 8*d.* English, for a week's work! Cheap as subsistence may be in Tuscany, surely this miserable pittance is not calculated to excite the envy of the English labourer in England. But the earnings of the straw plaiters solely depend on their abilities as workmen. The straw is furnished to them to be plaited and knitted, and they are paid according to the number or fineness of the hat. Some of the *Brazzi* women have earned as much as 4 lire, or about

to 3s. per day, when hats were at the highest (calculating the time in which they can plait and knit a hat, at 8 days for a No. 30., and a fortnight for a No. 40.); and these chosen few still earn about 1s. 6d. per day; but taking the whole plaiters, the following, in the opinion of a house largely interested in the trade in Italy, may be considered as a fair calculation of the average wages which have been paid during the last 25 years. —

Women earned per diem, in the year 1817, 1s. 6d.; 1819-20, 8d.; 1823-5, 1s. 6d.; 1826-7, 6d.; 1828-32, 4d. Men, for ironing the hats, 4s. a day; ditto, for pressing and washing, 1s. 6d. to 2s.; women, for picking straw, 1s. to 1s. 2d.

The following statement shows the imports into England of Italian straw hats, straw plait, and unmanufactured straw, since 1830: —

Years.	Hats or Bonnets of Straw.				Plaiting of Straw.				Unmanufactured Straw.

The duty on hats of less than 22 inches in diameter was 3*l*. 6*s*. per dozen; above 22 inches, 5*l*. 16*s*. until 1842, when the duty was reduced to 8*s*. 6*d*. per lb.

The rate of duty, was 17*s*. per lb. until 1843, when it was reduced to 7*s*. 6*d*.

The duty from 1820 to 1842, was 2*l*. per cent.; from 1842 to 1853, 1*l*. per cent. It is now 1*l*. per cent.

\* The repayments in this year exceed the gross receipts.

The duty on hats of less than 22 inches in diameter was 3s. 8s. per dozen; above 22 inches, 6s. 16s. until 1842, when the duty was reduced to 8s. 6d. per lb.

The rate of duty, was 17s. per lb. until 1842, when it was reduced to 7s. 6d.

The duty from 1830 to 1842, was 20 per cent.; from 1842 to 1845, 10 per cent. It is now 1d. per cwt.

\* The repayments in this year exceed the gross receipts.

We are indebted for this very excellent article on straw hats to Mr. Robert Slater, of Fore Street, London.

HAVANNAH, or HAVANA, on the north coast of the noble island of Cuba, of which it is the capital, the Morro castle being, according to Humboldt, in lat. 23° 8' 15" N., lon. 82° 22' 45" W. The population, exclusive of troops and strangers (which may amount to 25,000), is probably not far short of 135,000. In 1827, the resident population amounted to 94,023; viz. 46,621 whites, 8,215 free coloured, 15,347 free blacks, 1,010 coloured slaves, and 22,830 black slaves. The port of Havannah is the finest in the West Indies, or, perhaps, in the world. The entrance is narrow, but the water is deep, without bar or obstruction of any sort, and within it expands into a magnificent bay, capable of accommodating 1,000 large ships; vessels of the greatest draught of water coming close to the quays. The city lies along the entrance to, and on the west side of, the bay. The suburb Regla is on the opposite side. The Morro and Punta castles, the former on the east, and the latter on the west side of the entrance of the harbour, are strongly fortified, as is the entire city; the citadel is also a place of great strength; and fortifications have been erected on such of the neighbouring heights as command the city or port. The arsenal and dock-yard lie toward the western angle of the bay, to the south of the city. In the city the streets are narrow, inconvenient, and filthy; but in the suburbs, now as extensive as the city, they are wider and better laid out. Latterly, too, the police and cleanliness of all parts of the town have been materially improved.

From its position, which commands both inlets to the Gulph of Mexico, its great strength, and excellent harbour, Havannah is, in a political point of view, by far the most important maritime station in the West Indies. As a commercial city it also ranks in the first class; being, in this respect, second to none in the New World, New York only excepted. For a long period, Havannah engrossed almost the whole foreign trade of Cuba; but since the relaxation of the old colonial system, various ports, such, for instance, as Matanzas, that were hardly known 30 years ago, have become places of great commercial importance. The rapid extension of the commerce of Havannah is, therefore, entirely to be ascribed to the freedom it now enjoys, and to the great increase of wealth and population in the city, and generally throughout the island.

The advance of Cuba, during the last half century, has been very great; though not more, perhaps, than might have been expected, from its natural advantages, at least since its ports were freely opened to foreigners, in 1809. It is at once the largest and

the best situated of the West India islands. It is about 605 miles in length; breadth from north to south nowhere exceeds 117 miles, and is in many places less. Its total area, exclusive of that of the numerous keys and islands attached, is about 33,000 square miles. The climate is, generally speaking, delightful, refreshing sea breezes preventing the heat from becoming excessive, and fitting for the growth of a vast variety of products. Hurricanes, which are so destructive in the West Indies, and the Caribbee Islands, are here comparatively rare; and, when they do occur, are far less violent. The soil is of very various qualities: there is a considerable extent of swampy marshes and rocks unfit for any sort of cultivation; but there is much fertile land, and is very superior, and capable of affording the most luxuriant crops of sugar, maize, &c. The ancient policy of restricting trade to 2 or 3 ports, caused all the population to congregate in their vicinity, neglecting the rest of the island, and some of the finest land and best situations for planting to remain unoccupied, since a different and more liberal policy has been followed, population has begun to extend itself over all the most fertile districts, wherever they are to be met with; however, only a very small proportion of the best land of the island is under cultivation, and its products and population might both be doubled or trebled with the facility. The first regular census of Cuba was taken in 1775, when the whole population amounted to 170,370 souls. Since this period the increase has been as follows: — 1791, 272,140; 1817, 551,998; and 1827, 704,867; exclusive of slaves. We subjoin a

Classification of the Population of Cuba according to the Censuses of 1775 and 1827.

	1775.			1827.	
	Male.	Female.	Total.	Male.	Female.
Whites	54,555	40,864	95,419	168,633	142,398
Free mulattoes	10,021	9,006	19,027	36,008	29,456
Free blacks	5,939	5,158	11,097	33,390	25,000
Slaves	28,774	15,562	44,336	183,490	103,652
Total	99,309	70,610	170,370	403,905	280,506

Another census has recently been taken (in 1843), according to which the population is said to amount to 1,007,620, viz.: whites, 418,991; free coloured, 152,838; and slaves, 436,491. But it is alleged that the slave and white population, especially the former, is underrated in this census, and that the population is little, if at all, short of 1,150,000 or 1,200,000.

The rapid increase of the slave population is principally to be ascribed to the continued importation of slaves from Africa. In some years, since the peace of 1815, as many as 40,000 blacks are said to have been imported into Cuba in a single year. Spain had indeed agreed by treaty to abolish the trade; but this treaty was little better than a dead letter, and it is only since 1835 that a more efficient treaty with Spain was entered into, that the trade has sustained any considerable extension. But though it is no longer continued under the Spanish flag, it is continued, though to a less extent, under other flags. At present, perhaps, about 10,000 negroes may be annually imported (See Bandinel's clear and accurate *Account of the Trade in Slaves*, p. 285.)

But though it were to be wished, as well for the interests of the island as of humanity, that the importation of slaves should be put a stop to, we are not of the number of those who think that the abolition of slavery is a good policy rashly to agitate the question of the emancipation of slaves in Cuba. Their treaty with that island, as in all the other colonies of Spain, has always been singularly humane; and the authorities in Cuba to take up this difficult question. It may, no doubt, be forced on their consideration, and the emancipation of so many slaves in their immediate vicinity will materially increase the number of maintaining the existing order of things. Under these circumstances, good policy would suggest that timely provision should be made for the gradual bringing about of that emancipation perhaps, inevitable, coupling it, if that be practicable, with some scheme for insuring the supply of compulsory labour.

Whatever opinion may be formed of slavery in the abstract, we believe it would not be difficult to see that it has contributed, in no ordinary degree, to the rapid advancement of Cuba. Industry would be proportioned to the strength of the motives by which it is occasioned; and in countries like Cuba, with great natural fertility and under a tropical sun, where a half or more of the articles indispensable to the European would be useless, it were absurd to imagine that the inhabitants, supposing them to be free, should exhibit the persevering industry of free labourers in the temperate zone. The *de facto* system of slavery, or of compulsory labour of one kind or other. The people of England may be affected, at least directly, by these considerations, and may, therefore, on the principle of *facile est carere*, think themselves warranted in using their influence to enforce the abolition of slavery wherever it exists. But to the Cubans, Brazilians, the inhabitants of the Southern States of America, and a host of others, this question is of the last importance. Were the slaves emancipated, not merely, but practically and in fact, the probability is that neither Cuba nor Brazil would, in a few years, export a single cwt. of sugar. Why should they do so any more than Hayti? The blacks they really emancipated, would be able to support themselves in that state in which they wish to live without engaging in any thing like the severe labour of sugar planting; and under such circumstances it would be a contradiction to suppose they should engage in it. But it might be difficult, perhaps, to show what good consequences would result from such a change. It is at all events clear that the interests of the world and the comforts of all civilised nations would be seriously impaired; and it means clear that the condition of the blacks would be sensibly, or at all, improved.

Inasmuch as the blacks imported into Cuba since 1820 have been imported in opposition to the provisions in the treaty of that date with this country, it has been proposed by some over zealous functionaries to set on foot inquiries in the island for the purpose of emancipating the slaves so imported. And we regret to say that this extraordinary proposal appears to have received some countenance from the English government. It is clear, however, that, were it acted upon, it would be equivalent to the forcible emancipation of all the slaves in the island; for the fact of many thousands of free blacks having been set at liberty by foreign interference would effectually annihilate that prestige in the eyes of the whites which enables them to maintain the existing state of things. It is needless to say that such an outrageous proposal has met with the most determined opposition from the authorities in Cuba.

It is of so wild and dangerous a character that it is to be hoped it may be forthwith abandoned. The suppression of the slave trade is an object to effect which we may laudably exert all our energies; but we have no right to intermeddle with the domestic policy of others, or to tell them whether they should or should not emancipate their slaves.

Besides slaves, the planters employ free labourers, mostly of an Indian mixed breed, who work for moderate wages. These, however, are little engaged in the fields, but in other branches of labour, and particularly in bringing sugar from the interior to the shipping ports.

The articles principally exported from Cuba are, sugar of the finest quality, coffee, copper ore, tobacco, bees' wax, honey, molasses, &c. Of these, the first is decidedly the most important. The following statements show the astonishing increase that has taken place in the exportation of this staple article.

Account of the Exportation of Sugar from Havannah, from 1786 to 1846.

From 1786 — 1790	-	-	68,150 boxes at 400 lbs.	=	27,260,000 lbs.
1790 — 1800	-	-	110,091	—	44,036,400
1800 — 1810	-	-	177,998	—	71,199,920
1810 — 1820	-	-	207,696	—	83,078,400
1820 — 1825	-	-	250,384	—	100,153,600
In 1825	-	-	271,013½	—	108,405,500
1825	-	-	292,732	—	117,092,800
1828	-	-	368,356	—	147,342,400
1840	-	-	440,144	—	176,057,600
1842	-	-	441,578	—	176,631,200
1844	-	-	534,582	—	213,832,800
1845	-	-	267,595	—	107,038,000
1846	-	-	515,278	—	206,111,200

But Havannah having ceased to be the only port for the exportation of sugar, as it was in former times, we must advert to the trade of the other ports, to obtain a correct account of the whole exports of sugar. The following are the Custom-house returns for

Ports.	1841.		1846.	
	Boxes.	lbs.	Boxes.	lbs.
Exports of sugar from Havannah	-	440,144 = 176,057,600	515,278 = 206,111,200	
Mantanzas	-	272,758 = 109,107,200	255,184 = 118,073,600	
Trinidad	-	70,599 = 28,239,600	65,650 = 26,260,000	
St. Iago de Cuba	-	28,381 = 11,312,400	37,591 = 15,036,400	
Total	812,192	324,876,800	913,703	365,481,200

But, exclusive of the above, considerable quantities of sugar are shipped from Cienfuegos, Nuevitás, Holguín, Manzanilla, and other ports; and a good deal is also shipped without entry or payment of duty. We may, therefore, safely add 10 per cent. to the above quantities for the omissions now referred to; which will make the total exports in 1846, 403,200,000 lbs. or 180,000 tons. The consumption of the island is estimated at about 20,000 tons, making its total produce about 200,000 tons. The falling off in the exports in 1845 was a consequence of the tremendous hurricane by which the island was visited in October, 1844. At present (1848) the produce of the island may be safely estimated at from 250,000 to 260,000 tons.

Next to sugar, coffee is the most valuable vegetable production of Cuba. Its cultivation increased, for a while, with unprecedented rapidity. In 1800, there were but 80 plantations in the island; in 1817, there were 779; and in 1827, there were no fewer than 2,067, of at least 40,000 trees each! In 1804, the exportation from Havannah was 1,250,000 lbs.; in 1809, it amounted to 8,000,000 lbs.; from 1815 to 1820, it averaged annually 18,186,200 lbs.; and in 1827 it amounted to 35,837,175 lbs. The exports from the other ports increased with equal rapidity. They amounted, in 1827, to 14,202,406 lbs.; making the total exportation for that year 50,039,581 lbs. But the consequent low prices, or rather, perhaps, the greater attention paid to the culture of sugar, have checked the further increase of the coffee plantations. At an average of the years 1841 and 1842, the exports amounted, according to the Custom-house returns, to 1,567,762 arrobas, or 39,586,010 lbs.; but to this 10 per cent. must be added for deficient entries. They have since, however, declined still more rapidly.

Tobacco differs much in quality; but the cigars of Cuba are esteemed the finest in the world. — (See Tobacco.) Formerly, the culture and sale of this important plant were monopolised by government; but since 1821, this monopoly has been wholly relinquished, there being no longer any restrictions either on the growth or sale of the article. The cultivator pays a duty, which, however, is to a great extent evaded, of 1 per cent. *ad valorem* upon his crop. In consequence of the freedom thus given to the business, the culture and exportation of tobacco are both rapidly extending; so much so, that the value of the exports of cigars and tobacco amounted in 1841 to above 2 millions of dollars, being considerably more than the value of the exports of coffee. Molasses, rum (tafia), wax, and honey, are also largely produced and form important articles of trade.

The copper mines near Santiago and in other parts of the island, after having been abandoned for nearly a century, were reopened a few years ago, and are now worked, principally by Englishmen, with great vigour and success. The value of the exports of ore exceeds, at present, 4 millions of dollars, and is, next to sugar, the most valuable product of the island. It is mostly sent to England to be smelted.

The imports consist principally of corn, flour, and grain of all sorts, with provisions, principally from the United States, cotton goods from the latter and England; wines from Spain and France; linens from the Hanse towns and England; hardware and metals from England; silks from France and Spain; gold and silver from Mexico; spices, fruits, dye-stuffs, lumber, haberdashery, &c.

The following is an Account of the Trade of the U. Kingdom with Cuba, in 1847.

Account of the Declared Values of the Principal Articles of the Produce and Manufacture of the U. Kingdom, exported to Cuba in 1847.

Articles Exported.	Declared Value.	Articles exported.	Declared Value.

\* The imports of this and of mahogany and other woods have rapidly increased, in consequence of the abolition of the duty. † The change in the sugar duties in this country has been followed by an extraordinary increase in the quantity of Cuban sugar entered for consumption. Formerly, indeed, it may be said to have been wholly excluded, the entries in 1845, having

been only 30 cwt ! Provided nothing occur to interfere with the tranquillity of the island and the supply of slave labour, the probability is that Cuba will, at no very remote period, furnish us with very large quantities of sugar. Her capacities of production exceed at present (1848) those of every other island in the West Indies.

We subjoin some statements respecting the trade of Cuba in 1840, 1841, and 1842, derived from the *Balanza general de Comercio de la Isla de Cuba*, for these years, published in the Havannah.

Imports in 1841.			Exports in 1841.

Total - - - - -	\$ 196,251	\$ 11,437,009	\$ 2,898,969	\$ 744,608	\$ 2,211,572	\$ 4,981,600

Spain and the United States have hitherto enjoyed by far the largest share of the trade of Cuba: the total value of the imports, amounting in 1842 to 24,687,527 doll., those from the U. Kingdom estimated at only 3,110,956 doll., while those from the United States were estimated at 6,300,221. Indeed the total value of our exports to Cuba in 1842 amounted to only 366,253 $\frac{1}{2}$ , and though happened in that year to be unusually low, their average value did not formerly exceed 500,000 550,000. This limited amount of our trade was wholly a consequence of our loading the sugar, tobacco, cigars, coffee, woods, &c., of Cuba with prohibitory duties, so that its inhabitants had no means of paying for our products, except at second hand through Hamburg, Havre, and other ports indebted to them. But the late alterations in our tariff have already, as previously seen, effected a material change in this respect; and the presumption is that our trade with this fine island continued progressively to increase. During the year ended the 30th of June, 1847, the United States imported from Cuba produce worth 12,394,467 doll., while the exports from the United States to Cuba amounted to only 6,977,706 doll., the balance being paid by bills on Hamburg, Holland, and other ports indebted to America. — (*Papers printed by order of Congress, 14th December, 1847.*)

**Moneda.**—One dollar = 8 reales plate = 80 reales vellon. One doblon = 17 dollars. The merchants reckon 444 dollars = 1000, the 1 dollar = 4s. 6d. very nearly. There is an export duty of 1½ per cent. on gold, and 2½ per cent. on silver. It is a curious fact that no description of paper money has ever circulated in Cuba.

**Weights and Measures.**—One quintal = 100 lbs., or 4 arrobas of 25 lbs.; 100 lbs. Spanish = 101½ lbs. English, or 46 kilogrammes. 108 varas = 100 yards; 140 varas = 100 French elis or aunes; 81 varas = 100 Brabant elis; 108 varas = 100 Brabant elis; 1 fanega = 5 bushels nearly, or 100 lbs. Spanish. An arroba of wine or spirits = 4½ English wine gallons nearly. A hogshead of sugar = 1300 lbs.; a bag of coffee = 150 lbs.; a hogshead of molasses = 110 gallons; a barrel of tafia or rum = 150 gallons; and a bale of tobacco = 100 lbs.

The usual Commission charged by merchants on the sale of goods is 5 per cent., with a *del credere* of ½ per cent. If the sales are on credit and guaranteed, and a further commission of 2½ per cent. for the returns, whether in bills or produce. On purchases the commission is 2½ per cent., and a further ½ per cent. if drawn for in bills of exchange. For procuring freight 5 per cent. is charged, and 2½ for insuring the amount. If, or advances of money the rate is 5 per cent. when no other commission is chargeable. Bill business is done at various rates, from 1 to 2½ per cent. according to its magnitude. These are the usages of the foreign houses; those of the Spanish and Creole merchants are generally higher. There is no obstacle whatever to the establishment of foreigners as merchants in the island. The law says that those who are naturalised in Spain may freely carry on trade with the same rights and obligations as the natives of the kingdom, and that those who have not been naturalised, or have a legal domicile, may still carry on trade under the regulations stipulated in the treaties of commerce between the respective governments; and in default of such conventional regulations, the same privileges are to be conceded as those enjoyed by Spaniards carrying on trade in the country of which such foreigners are natives. In practice, this condition is not much insisted on, and foreigners are allowed to establish themselves as merchants without any inquiry as to the rights and privileges enjoyed by Spaniards in the country they come from. As to manufacturers and mechanics, no difficulty that can arise from their religion. On entering the island every stranger is required to find security in the following terms:—"I am responsible and become security in every case for the person and conduct of A. B., my friend, from C. to the ship D., binding myself to present him if called on by the government, and to conduct him as my expense to any place that may be designated." This security is easily obtained, and, in fact, encouragement is given to merchants, and white people of all classes to settle in the island. After landing it is only necessary to apply for a letter of domicile, and to present a certificate that the applicant is of a respectable character, and professes the Roman Catholic religion. These conditions, however, by a royal order of the 11th March, 1837, are prohibited from landing under any pretence whatever; and so rigorously is this order enforced, that such persons, though acting as seamen, are, on their arrival, taken out of the vessels in which they have come, and are kept in custody until their departure, when they are compelled to proceed again on board, and leave the island. The business of a broker is exercised under a royal licence, and no foreigner is eligible to the office unless naturalised in the form prescribed by law. In every commercial town a certain number only is allowed, corresponding with the population and trade of the place. In the great cities, the business of merchant is often combined with that of planter; and sometimes, also, the importing merchant keeps a shop or store, where he sells his goods by retail. The foreign merchants are generally regarded as transient visitors, who go there for the purpose of accumulating such a fortune as may enable them to live with some degree of comfort in their own country. As a class they are not considered wealthy, but they are almost all in the full enjoyment of credit. The mercantile capital, as well as the country wealth of the island, may be said to be concentrated in the hands of the Creoles. When the emigrants from the Peninsula make fortunes in the island, they seldom think of returning to Europe.

**Customs Duties in 1848.**—The tariff of Cuba, like that of Spain, is exceedingly complex, being divided into a great many classes, and embracing a vast number of articles, many of which are of very trifling importance. All, or almost all, the articles of import are valued in the tariff at certain fixed rates, upon which the duties are charged at so much per cent. Hence, when the fixed or tariff prices exceed the real prices of the goods the duties are proportionally increased; and conversely when the tariff prices are under the real prices, the duties vary from

per cent.  
35 to 100 on goods by foreign vessels from foreign ports.  
25 to 100 on foreign goods by Spanish vessels.  
17 to 140 on Spanish produce from Spain by foreign ships.  
7 on Spanish produce by Spanish vessels, and only 2½ if Rice. A balance duty of 1 per cent. is added to all but the 7½ and 2½ per cent. duties.

The principal exception to the above rule is in the case of flour, which pays a fixed duty of 200 Dollars per bbl. per Spanish ship from Spain.  
6-75 " " per Foreign ship  
8-50 " " per Spanish ship  
9-50 " " per Foreign ship

Had Spain been able to supply Cuba with flour as cheaply as other countries this high discriminating duty in favour of Spanish flour would have been of comparatively little importance. But such is not the case. Cuba derives nine tenths of her supply of flour from the U. States, principally from New Orleans; so that the discriminating duty is the most oppressive and impolitic that can be imagined. We are surprised it is submitted to. Flour, furmace-mouths, grate-bars, crown-wheels, shafts, rollers, sugar-bowls, altimeters, steam-engines, and other such articles for sugar estates; also mares, stallions, and asses, are exempted from duty.

Special concessions have also been made in favour of the Gas Company, &c. which pays only 7½ per cent. on imports.

We subjoin a note of the duties on the principal articles of export.

Tonnage Duties on foreign ships, 12 rs. per ton; on Spanish ships, 5 rs. per ton.

Port Charges on a Vessel of 240 Tons, arriving in the Havannah in Ballast, and taking away a Cargo in 1848.

	If Foreign.	If Spanish.
Captain of port in and out	Dolla. Cts.	Dolla. Cts.
Health visit, ½ real per ton	6 0	6 0
Interpreter's fee	10 0	5 0
Translation of manifest in ballast	2 0	
Governor's fee	2 0	2 0
Moro light - - -	4 0	4 0
Tonnage duty, \$1½ and 1 per cent. - - -	363 60	151 50
Mud machine, 1½ rs. and 1 per cent. - - -	52 50	52 50
Wharfage and stage hire, 10 rs. per 100 tons per day of the vessel's being at the wharf.		
Custom-house visit on entry outwards, clearing visit, annotation fee, stamp paper, &c. about	34 0	34 0
Bill of health and certificate	8 0	8 0
Lighthouse, 10 cts. a box, say on 1,600 boxes - - -	160 0	160 0
Consul's fee, about - - -	4 0	
Pilotage (if a pilot be called)	10 0	10 0
Free whilst discharging ballast, \$1 per day, say 5 days	5 0	5 0
Hoisting and stowing cargo, 8 cts. per box - - -	128 0	128 0
Stamps and boat hire - -	8 90	8 90
Commission for advice and trouble, 2½ - - -	800 0	574 90
	20 0	14 37
	870 0	569 27

If the vessel arrive and sail in ballast, or without breaking bulk, she avoids the health visit, Moro light, tonnage, and mud engine dues. If she brings cargo, the translation of manifest is more, according to its length, wharfage dues are incurred for the time of discharge, and the tidewater charge \$5½ for each day. Vessels taking entire cargoes of molasses pay no tonnage duty.

Gross English, 761,600 lbs. or 6,800 cwt.; Tare, about 56 lb. per box, or 800 cwt.; making net 6,000 cwt.		

**Customs Regulations.**—Every ship-master is bound to have on his arrival ready for delivery to the boarding officers of the revenue, a manifest, containing a detailed statement of his cargo and ship stores, and in the act of handing it over, has to write thereon an oath that he has no other cargo on board, and the hour when he delivers it, taking care that it be countersigned by the boarding officers. Within 12 hours, which begin to count from the moment he delivers such manifest until 7

o'clock in the evening, and again from 6 o'clock in the morning until the moment the said 12 hours elapse, he can make any alteration by presenting a separate note in which he specifies the errors he may have committed in the manifest. After the expiration of these 12 hours no alteration will be permitted. Goods not manifested will be confiscated without remedy; and if their value should not exceed 1,000 dollars, the master of the vessel will be liable to pay a penalty of double the amount of such non-manifested goods; if they exceed that sum, and belong to the master or come consigned to him, his vessel, freight, and other emoluments will be forfeited to the revenue. Goods over manifested will pay duties as if they were on board. Goods not manifested, but claimed in time by a consignee, will be delivered up to the latter, but the master in this case will be subject to a fine equal in amount to that of such goods. Gold and silver not manifested by either master or consignee, are liable to a duty of 4 3/4 cent. Goods falling short of the quantity manifested, when landed, and not being included in any invoice of consignee, will render the master liable to a penalty

of 200 dollars for each package so falling short. The master must present himself, within 24 hours after the arrival at the Custom-house, in order to swear to his manifest, and if he fails, which he is liable to a fine of 1,000 dollars, he is obliged to present a detailed note of goods on board after the arrival of a vessel; if not, such a note is not valid. The manifest must contain a statement of the number of pieces, weight, and measure. Every vessel is a bill of health certified by the Spanish consular department, or that nearest to it, otherwise it is in quarantine.

In compiling this article, we have consulted *Essai Politique sur l'île de Cuba*, Paris, 1825; *Annuaire du Commerce Maritime*, Paris, 1840; *Geog. Dict. arts. Cuba*, Paris, 1840; *Balanza Mercantil* for various years; papers from Cuba; and papers laid before the W. C. in 1845.

**HAVRE, OR HAVRE DE GRACE**, a commercial and strongly fortified town of France, on the English channel, near the mouth of the Seine, on the left bank, lat. 49° 29' 14" N., lon. 0° 6' 38" E. Population, in 1842, 26,440. It may be added 5,000 more for the crews of the shipping constantly in the port. A saying of Napoleon that "*Paris, Rouen, Le Havre, ne forment qu'une seule rue, la Seine est la grande rue.*" Havre being, in fact, the sea-port of Paris, colonial and foreign products destined for its consumption are imported there. Nearly double the quantity of goods, estimated by weight, is annually imported at Havre than at Marseilles; but the total value of the imports at Havre amounts very nearly to those at the former port. The principal imports are cotton, sugar, coffee, and linen goods, rice, indigo, tobacco, hides, dyewoods, spices, drugs, timber, dried fish, &c.: grain and flour are sometimes imported and sometimes exported. The principal exports are silks, woollen and cotton stuffs, lace, gloves and shoes, perfumery, champagne and other wines, brandy, glass, furniture, books, &c.

**The Harbour**, which is the best and most accessible on this part of the French coast, is separated from each other and from the outer port by 4 locks, and capable of accommodating 100 ships. A large body of water being retained by a sluice, and discharged at ebb tide, clears the harbour and prevents the accumulation of filth, sand, &c. Cape de la Heve, forming the eastern extremity of the Seine, lies N. N. W. from Havre, distant about 2 1/2 miles. It is elevated 390 feet above the level of the sea, and is surmounted by 2 light-houses 50 feet high. These, which are 320 feet apart, exhibit powerful fixed lights. There is also a brilliant harbour-light at the entrance to the port, and at the extremity of the western jetty. Havre has 2 roadsteads. The great or outer road is about 1/2 league W. S. W. from Cape de la Heve; the little or inner road is about 1/2 league from the port, and about 1/2 of a mile S. E. from Cape de la Heve. They are separated by the sand bank called Leclat; between which and the bank called *Les Hautes de la Rivière* lies the western passage to the port. The Hoc, or southern passage, lies between the last mentioned bank and the point of Amfar. In the great road there is from 6 to 7 1/2 fathoms water at ebb; and in the little road, large ships always lie in the former. The rise of the tide is from 22 to 27 feet: and by taking advantage of it, the largest class of merchantmen enter the port. The water in the harbour does not perceptibly subside till about 3 hours after high water, — a peculiarity ascribed to the current of the Seine across the entrance to the harbour being sufficiently powerful to dam up for a while the water of the latter. Large fleets, taking advantage of this circumstance, are able to leave the port and get to sea, even though the wind should be unfavourable. — (See *Plan of Havre*, by Laurie; *Annuaire du Commerce Maritime*; *Coulier sur les Phares*, p. 59, &c.)

The Chamber of Commerce of Havre have recently published the following information for the use of vessels frequenting the port:—

"Five buoys have been moored in the shallows Ruvun, under the designation of the Banc de l'Eclat, and Hautes de la Rade.

"These buoys are similar in form, but of different colours, viz.: The first to the northward is white; the second, white with a black top; the third is black; the fourth is black with a white top; the fifth is red.

"Vessels must always come to anchor at a distance of at least five cables' length outside the line of these buoys, which they may not pass without danger before one hour and a half prior to high water, or four hours after ebb; and they must at all times pass at a distance of five cables' length from the black as well as from the red buoy, both of which are moored on the shallowest parts of these banks. Nevertheless ships may at all hours of the tide frequent the north-western passage, comprised between Cape La Heve and the two northernmost buoys.

"All vessels using the north-western passage must pass into the inner roadstead (Petit Rade), must pass the red buoy, the farthest north, and after leaving it must pass the white buoy, the farthest south, should then stand to the northward, taking care never to come so close to the shore as to lose sight of the lantern of the lighthouse on Cape La Heve. When the vessel is in the western pier head bears by compass S. E., and when the vessel is in the eastern pier head bears by compass N. E., the ship is to an anchor.

"Besides the five buoys herein described, a sixth buoy has been moored on the shallows of the Rade, at about five cables' length W. N. W. of the red buoy. Vessels of light draught of water, and of small tonnage, in that part of the road, should give this buoy at least one cable's length."

Most part of the goods imported into Havre are destined for the internal consumption of France. The coasting trade has increased very largely of late years, as is proved by the great increase in the importation of wines, soaps, and other produce imported at Paris from Havre, instead of being sent to land. The coasting vessels transfer their cargoes to large barges, called *chalandes*, which are towed up the river by steam tugs as far as Rouen, and thence by horses to Paris. The foreign trade of the port is very extensive. It is seen from No. I. of the subjoined accounts that there entered the port in 1842, 607 ships, of the burden of 221,000 tons from ports out of Europe. Lines of ships are established between Havre and New York, New Orleans, &c. A regular intercourse of steam packets is kept up with London, Southampton, and other ports. The entrances to the port are so narrow to admit the passage of the largest steamers, which have, in consequence, to be towed up the river to the outer port imperfectly sheltered from the winds. Indeed the port is at present inadequate for the accommodation of the great and growing trade of which it is the centre, and extensive works are being undertaken for its improvement.

There belonged to the port, on the 31st of December, 1841, 333 vessels of the aggregate tonnage of 63,257 tons. The customs duties which in 1837 produced 18,123,993 francs, had increased to 26,002,000 francs.

**The Monies, Weights, and Measures of Havre** are the same as those of the rest of France. See arts. BORDEAUX, COINS, and WEIGHTS AND MEASURES.

**Prices of Commodities, Duty paid and in Bond, Duties, Tares, Commercial Allowances, &c.** — These important particulars may be learned by the inspection of the subjoined Price Current for the 27th of December, 1848. The duties on some of the articles mentioned in it will, most probably, at no very distant period, be varied. But the other particulars embodied in it will always render it an important document.

	Duty paid.	In Bond.		Duty paid.	In Bond.

NOTE. — *General commerce*, as applied to imports, means all articles imported by sea or land. Inquiring whether they are intended to be consumed, re-exported, or warehoused. *Special commerce*, as applied to imports, means such imported articles as have been admitted for home consumption on payment of the customs duties.

The same distinction obtains in relation to exports. *General commerce*, in this case, means re-exported articles, without regard to their origin; while *special commerce* means such only as are re-exported by the soil or manufactures of France.

VII. ACCOUNT OF THE FOREIGN TRADE OF FRANCE IN 1847, specifying the Values of the Articles imported and exported to different Countries, the Values of the former entered for Consumption, the Duties paid, &c. — (*Administration des Douanes*, 1847, pp. 6-7.)

<b>Totals -</b>	<b>1,290,505,512</b>	<b>55,854,491</b>	<b>136,486,547</b>	<b>1,049,519,963</b>

The great articles of import consist of grain and flour, especially into the southern depts.; raw cotton; raw silk; sugar, coffee, and other colonial products; timber; olive oil and oil seeds; coal; wool; hides and skins; copper; tobacco; indigo and other dye stuffs; flax and thread, &c. The articles of export consist of silk, cotton and woollen goods; wines; hard goods, toys, pedlars' wares, and wooden goods; wrought skins; linens and canvass; paper; brandy; refined sugar; madder; tanned leather; perfumery; linen and linen goods, &c. &c. In 1847 the total real value of the imports into France, entered for consumption, amounted to 955.9 millions fr.; and that of articles, the growth and produce of France, exported during the same year, was 719.8 millions fr. Of these the articles specified above were in millions of fr. as follows: viz.:

Imports.	Mils. of fr.	Imports.	Mils. of fr.	Exports.	Mils. of fr.	Exports.	Mils. of fr.
Grain and Flour	209.0	Indigo	15.3	Silk goods	149.0	Brandy	16.7
Cotton	67.2	Wool	30.4	Cotton do.	53.0	Refined sugar	11.0
Silk	67.0	Flax	17.4	Woollen do.	69.7	Madder	13.9
Sugar and coffee	80.0	Olive oil	38.0	Wines	47.0	Metallic goods	15.1
Timber	60.7	Copper	18.2	Hard goods	30.8	Earthenware and crystal	17.7
Oil seeds	19.9	Cast iron	13.4	Wrought skins	34.8	Linen and linen goods	8.8
Hides and skins	32.6	Tobacco	9.7	Tissues of flax and hemp	20.8	Tanned leather	8.9
Coal	24.0	Lead	9.1	Paper	19.6	Perfumery	

Owing to the scarcity of 1847 the imports of grain and flour in that year were unusually large. Horses and cattle are largely imported and exported; but the imports usually predominate. (For Table of Foreign Trade in 1847, see previous page.)

The customs' duties collected at the principal mporia during 1847, were as follows; viz.:-

	Fr.
Marseilles	34,742,000
Havre	26,002,000
Paris	20,509,000
Nantes	15,918,000
Bordeaux	14,957,000
Dunkirk	7,242,000
Louen	5,933,000
All other custom ho. ses	75,792,000

## TRADE BETWEEN FRANCE AND ENGLAND.

Nothing can more strikingly illustrate the mischievous influence of commercial restrictions, than the history of the trade between Great Britain and France. Here we have two countries of vast wealth and population, near neighbours, and each possessing many important articles that the other wants, and yet the intercourse between them has generally been inconsiderable. At a distant period this was not the case. Previously to the accession of William III., the importation of wine only from France amounted to about 13,500 tuns a year, our imports of brandy and other articles being proportionally large. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government, not recollecting that the blow they aimed at the French would also smite their own subjects, imposed, in 1693, a *discriminating* duty of 8*l*. a tun on French wine, and in 1697 raised it to no less than 33*l*. a tun! It is probable that this excess of duty would have been repealed as soon as the peculiar circumstances in which it originated had disappeared, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen, in 1703, given it permanence. But, according to this treaty, we bound ourselves for the future to charge 33½ per cent. higher duties on the wines of France imported into England, than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our woollens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded, at the time, as the highest effort of diplomatic skill and address, the Methuen treaty was, undoubtedly, founded on the narrowest and most contracted views of national interest; and has, in consequence, proved, in no common degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for *two thirds* of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market; at the same time that we excluded one of the principal equivalents the French had to offer for our commodities, and provoked them to retaliate. This, indeed, was no difficult task. Unhappily, they were but too ready to embark in that course of vindictive policy of which we set them the example; so that, prohibitions on the one side being immediately followed by counter-prohibitions on the other, the trade between the two countries was nearly annihilated! But the indirect were still more injurious than the direct consequences of this wretched policy. It inspired both parties with feelings of jealousy and dislike, and kept them in the frowning attitude of mutual defiance. Each envied the other's prosperity; and being disposed to take fire at even fancied encroachments, the most frivolous pretexts were sufficient to engage them in contests that have filled the whole world with bloodshed and confusion. But had things been left to their natural course, — had an unfettered commercial intercourse been allowed to grow up between the two countries, — the one would have formed so near, so vast, and so profitable a market for the produce of the other, that they could not have remained long at war without occasioning the most extensively ruinous distress, — distress which no government would be willing to inflict on its subjects, and to which, though the government were willing, it is most probable no people would be disposed to submit. A free trade between England and France would give these two great nations *one common interest*. It would occasion not only a vast increase of the industry, and of the comforts and enjoyments, of the people of both countries, but would be the best attainable security against future hostilities. "We know," said Mr. Villiers, in his able and instructive speech (15th of June, 1830), "that British enterprise will fetch the extremest points on earth in the business of exchange; but here are the shores of France nearer to England than those of Ireland itself — nay, Bordeaux is commercially nearer to London than it is to Paris; and, but for the lamentable perversion of the gifts and dispositions of nature, and of the ingenuity of man, the highways of commerce between these countries — the seas which surround Great Britain and Ireland, and wash the shores of France — should literally swarm with vessels, engaged, not only in the interchange of material products, but in diffusing knowledge and stimulating improvement; in creating every where new neighbourhoods; in consolidating international dependence; in short, in drawing daily more close the bonds of international peace and confidence, and thus advancing, while they also served to confirm and secure, the peace, the civilisation, and the happiness of Europe."\*

The commercial treaty which Mr. Pitt negotiated with France in 1786 was the first attempt to introduce a better system into the trade between the two countries; and it is one of the few treaties of this description that have been bottomed on fair and liberal principles. But the Revolution in France, and the lengthened and bloody wars by

\* We regret to have to add, that this was one of the last public appearances made by Mr. Villiers. He died in December, 1832, at the early age of 31. His death was a national loss. Few have entered upon public life with better dispositions, more enlarged and comprehensive views, or a more sincere desire to promote the happiness of their species.

which it was followed, totally suppressed that mutually beneficial intercourse had begun to grow up under Mr. Pitt's treaty, and revived and embittered all hostile feelings and prejudices inherited by both parties. Since the peace the animosities and prejudices in question have, however, been much mitigated, the abolition of the discriminating duty on French wine, in 1831, had a considerable influence in bringing about this improved state of things, at least in a commercial view; and, but for the unfortunate misunderstanding respecting the affairs of Egypt, it is probable that the trade with France would have been already increased from the greater number of its more oppressive restraints.

But notwithstanding the difficulties under which it labours, we are glad to state that the trade with France has increased rapidly during the last 10 years and is now become of primary importance. No one, however, can doubt, whether for a moment on the situation, means, and wants of the two countries, that the trade between them is still susceptible of an all but indefinite increase. And, happily, our power, by adopting a line of conduct eminently fitted to promote our interests, gives a powerful stimulus to this trade. At present the French policy is really less than our own; at all events, the value of the British produce exported to France for some time past materially exceeded that of the French produce imported into the U. Kingdom. The reason of this excess of the exports, as compared with the imports, is to be found in the oppressive duties laid on the brandies, silks, and other articles of French produce imported into England. We have already seen (see *BRANDY*) that the duty on brandy might be reduced from 22s. 10d. to 10s. without any loss whatever to the revenue; at the same time that such a reduction would be of the greatest service to the trade between the two countries. The duties on gloves, silks, and such like articles are good for nothing, unless it be to discourage legitimate commerce, and to encourage smuggling and the corruption of officers. It is inconsequential and absurd to make the reduction of such duties contingent on the fact of a simultaneous reduction being made in the duties on the importation of British hardware, cottons, &c. into France. The mischievous influence of the French duties does not in any degree diminish the mischievous influence of our own duties. Does the high price of iron in France, or the smuggling and corruption prevalent in the Seine and the Garonne, compensate the people of Britain for the high price of brandy, or atone for the smuggling and barefaced corruption that prevail on the Thames? Our business is to impose reasonable duties on the articles which we import, without inquiring or caring whether others do the same by the articles which we export. And if we acted on this sound and not very recondite principle in the case of the various commodities that come from France, we should certainly in no long time double our trade with that country, and make it far more difficult for the French to maintain their duties and prohibitions.

But it is said that if we do this, that if we reduce the duties on French produce brought to England, without, at the same time, stipulating for an equal reduction in the duties on British produce sent to France, we shall be obliged to send great quantities of our manufactured goods, in payment of the increased produce we may bring from her! Perhaps it was hardly worth while noticing this last resort of superstitious ignorance. Assuming for a moment that the fact were as stated, it would be no reason for our declining to reduce the duties on French products. Whether we carry on trade with France, or any other nation, by sending returns in bullion or ordinary manufactures, is really of very trifling importance. We may be assured that we never send more bullion to another country unless it be more valuable there than here; that is, unless the importation be for our advantage. — (See art. *BALANCE OF TRADE*.) In point of fact, we have rarely sent any bullion to France, even when our imports from her have exceeded our exports; the excess of bills on England in such cases being usually paid by drafts on Holland, Hamburg, and other places indebted to us. Of all the mischiefs and terrors, that of being exhausted of an adequate supply of the precious metals, to give greater freedom to the trade with France or any other country, is the most absurd and ridiculous.

The great articles of importation into the U. Kingdom from France consist of brandy, wine, madder, silk manufactures and raw silk, gloves, eggs, fruits, skins, &c. It should, however, be observed that a large proportion of the imports of raw silk and thrown silk consists, in fact, of imports from Italy, which come to us in part through France.

The great articles of export from this country to France consist of linens and yarn, copper and copper manufactures, coal, lace and patent net, horses, hosiery, &c. The increase in the exportation of linens and linen yarn since 1833 has been quite extraordinary; and it has not been so much affected as might have been anticipated by the increase of duties in 1842.

**HAWKERS AND PEDLARS.** It is not very easy to distinguish between hawkers and pedlars. Both are a sort of itinerant retail dealers, who carry about their wares from place to place; but the former are supposed to carry on business on a larger scale than the latter. They are subject to the same regulations.

*Regulations as to Hawkers and Pedlars.*—The legislature has always looked with suspicion upon itinerant dealers; and has attempted, by obliging them to take out licences, and placing them under a sort of surveillance, to lessen their numbers, and to hinder them from engaging in dishonest practices. But the resident dealer has so many advantages on his side, that these precautions seem to be in a great measure superfluous. It should also be recollected, that before shops were generally established in villages and remote districts, hawkers and pedlars rendered material services to country people; and even now the competition which they excite is certainly advantageous.

By the 50 Geo. 3. c. 41., hawkers and pedlars are to pay an annual licence duty of 4*l.*; and if they travel with a horse, ass, or other beast, bearing or drawing burden, they are subject to an additional duty of 4*l.* for each beast so employed. The granting of licences, and management of the duties, are, by a late act, placed under the control of the commissioners of stamps.

Hawkers and pedlars, unless householders or residents in the place, are not allowed to sell by auction to the highest bidder; penalty 10*l.*—half to the informer, the other half to the king. But nothing in the act extends to hinder any person from selling, or exposing to sale, any sort of goods, in any public market or fair; or to hinder a hawker or pedlar from selling in a hired room, where he is not a resident, provided such sale is not by auction.

Every hawker, before he is licensed, must produce a certificate of good character and reputation, signed by the clergyman and two reputable inhabitants of the place where he usually resides.

Every hawker must have inscribed, in Roman capitals, on the most conspicuous part of every pack, box, trunk, case, cart, or other vehicle, in which he shall carry his wares, and on every room and shop in which he shall trade, and likewise on every hand-bill which he shall distribute, the words, "LICENSED HAWKER." Penalty, in default, 10*l.* Unlicensed persons wrongfully using this designation forfeit 10*l.*

Hawkers dealing in smuggled goods, or in goods fraudulently or dishonestly procured, are punishable by forfeiture of licence, and incapacity to obtain one in future, besides being liable to all the other penalties, forfeitures, &c. applicable to such illegal dealing.

By stat. 6 Geo. 4. c. 80. it is enacted, that any person or persons hawking, selling, or exposing to sale, any spirits on the streets, highways, &c., or in any boat or other vessel on the water, or in any place other than those allowed in this act, shall forfeit such spirits and 100*l.* for every such offence. Any person may detain a hawker of spirits, and give notice to a peace officer to carry the offender before a justice.

Hawkers trading without licence are liable to a penalty of 10*l.* So also, if they refuse to show their licence on the demand of any person to whom they offer goods for sale, or on the demand of any justice, mayor, constable, or other peace officer, or any officer of the customs or excise. By 5 Geo. 4. c. 83., hawkers trading without a licence are punishable as vagrants.

To forge or counterfeit a hawker's licence incurs a penalty of 300*l.* To lend or hire a hawker's licence subjects lender and borrower to 40*l.* each, and the licence becomes forfeited. But the servant of a licensed hawker may travel with the licence of his master.

Hawkers trading without a licence are liable to be seized and detained by any person who may give notice to a constable, in order to their being carried before a justice of peace. Constables refusing to assist in the execution of the act are liable to a penalty of 10*l.*

Nothing in the act extends to prohibit persons from selling fish, fruit, or victuals; nor to hinder the maker of any home manufacture from exposing his goods to sale in any market or fair, in every city, borough, town corporate, and market town; nor any tinker, cooper, glazier, plumber, harness-maker, or other person, from going about and carrying the materials necessary to their business.

A single act of selling, as a parcel of handkerchiefs to a particular person, is not sufficient to constitute a hawker within the meaning of the statutes.—(*Res v. Little*, B. 613.)

By the 52 Geo. 3. c. 106., no person, being a trader in any goods, wares, or manufactures of Great Britain, and selling the same by wholesale, shall be deemed a hawker; and all such persons, or their agents, selling by wholesale only, shall go from house to house, to any of their customers who sell again by whole-

sale or retail, without being subject to any of the penalties contained in any act touching hawkers, and petty chapmen.

No person committed under these acts for non-payment of penalties can be detained in custody longer period than 3 months.

Hawkers exposing their goods to sale in a market town, must do it in the market-place.

Persons hawking tea without a licence are liable to a penalty under 50 Geo. 3. c. 41.; and even if they had a licence, they would be liable to a penalty for selling tea in an unentered place. — (C. edit. of *Burn's Justice*, vol. ii. p. 1113.)

Any person duly licensed to trade as a hawker and pedlar may set up any lawful trade in any where he is resident, though he have not served any apprenticeship to the same, and, if prosecuted, may plead the general issue and have double costs. — (See *Chitty's* edit. of *Burn's Justice*, pp. 1102—1124.)

The hawkers' and pedlars' duty produced in 1841, 33,762*l.* gross revenue; the charges of collection very heavy, amounting to between 5,000*l.* and 6,000*l.* Whatever, therefore, may be the other advantages of this tax, it cannot, certainly, be said to be very productive.

**HAY** (Ger. *Hew*; Du. *Hoei*; Fr. *Foin*; It. *Fieno*; Sp. *Heno*; Lat. *Fænulum*) is a kind of grass, cut and dried for the food of cattle. The business of hay-making is more known to be better understood in Middlesex than in any other part of the kingdom. The object is to preserve the green colour of the grass as much as possible, and to have it juicy, fresh, and free from all sorts of mustiness.

The sale of hay within the bills of mortality, and 30 miles of the cities of London and Westminster regulated by the act 36 Geo. 3. c. 84. It enacts that all hay shall be sold by the load of 36 trusses or truss weighing 56 lbs., except new hay, which is to weigh 60 lbs. till the 4th of September, and after the 4th of September only 56 lbs. only; so that till the 4th of September a load of hay weighs exactly a ton, but thereafter only 18 cwt. The clerk of the market is bound to keep a regular book for the inspection of the public, specifying the names of the seller, the buyer, the salesman, and the price of each load. Salesmen and factors are prohibited from dealing on their own account.

There are three public markets in the metropolis for the sale of hay and straw: Whitechapel, Smithfield, and the Hay-market in the vicinity of the Regent's Park. The latter used formerly to be held in a street called the Haymarket.

Straw is sold by the load of 36 trusses, of 36 lbs. each, making in all 11 cwt. 64 lbs.

It is affirmed, we know not with what foundation, that considerable frauds are perpetrated in the sale of hay and straw.

**HEMP** (Ger. *Hanf*; Du. *Hennip*, *Kennip*; Da. *Hamp*; Sw. *Hampa*; Fr. *Chanvre*; It. *Canape*; Sp. *Canamo*; Rus. *Konapli*, *Konople*; Pol. *Konope*), a valuable plant, *Cannabis sativa* of Linnaeus, supposed to be a native of India, but long since naturalized in Europe, and extensively cultivated in Italy, and many countries of Europe, particularly Russia and Poland, where it forms an article of primary commercial importance. It is also cultivated in different parts of America, though not in such quantities as to supersede its importation. It is stronger and coarser in the fibre than flax; but its uses, cultivation, and management are pretty much the same. When grown for seed, it is a very exhausting crop; but when pulled green, it is considered as a cleaner of the ground. In this country its cultivation is not deemed profitable; so that, notwithstanding the encouragement it has received from government, and the excellent quality of English hemp, it is but little grown, except in some few districts of Suffolk and Lincolnshire. The quantity raised in Ireland is also inconsiderable. — (*London's Encyc. of Agriculture*.)

Exceedingly good *huckaback* is made from hemp, for towels and common tablecloths. Low-hempen cloths are a general wear for husbandmen, servants, and labouring manufacturers; the sorts for working farmers and tradesmen in the country; and the finer ones, which are preferred by some gentlemen for strength and warmth. They possess the advantage over Irish and other linens, in that their colour improves in wearing, while that of linen deteriorates. But the great consumption of hemp is in the manufacture of sailcloth and cordage, for which purposes it is peculiarly fitted by the strength of its fibre. English hemp, when properly prepared, is said to be stronger than that of every other country, Russia not excepted; and would, therefore, make the best cordage. It is, however, but little used in this way, or in the making of sailcloth; being principally made into cloth for the uses already stated.

Hemp has been cultivated in Bengal from the remotest antiquity, but not, as in Europe, for the purpose of being manufactured into cloth and cordage. In the Hindoo economy it serves as a substitute for a favourite intoxicating liquor, called *banga*, being produced from it! This, also, is the use to which it is applied in Egypt. — (*Milburn's Orient. Commerce*, &c.)

The price of hemp fluctuated very much during the war. In consequence of difficulties in the way of its importation, it stood at a very high level from 1808 to 1814. This was the principal circumstance which originally brought iron cables into use; and the extent to which they are now introduced, has contributed materially to diminish the consumption and importation of hemp. — (*Tooke on High and Low Prices*, 2d ed. p. 345.)

We borrow the following particulars, with respect to the hemp trade of Petersburg, from the works of Mr. Borrisson on the commerce of that city:—

Hemp forms a very important article of export from Petersburg, and deserves particular notice. It is assorted, according to its quality, into *clean hemp*, or *firsts*; *out-shot hemp*, or *seconds*; *half-clean*, or *thirds*; and *hemp cordilla*.

Of the first 3 sorts there are annually exported about 2,000,000 poods, the greatest part in English and American bottoms. It is brought to Petersburg, from the interior beyond Moscow, by water; and its quality depends very much on the country in which it is produced. That brought from Karatshev is the best; next to this, that produced in Belev; hemp from Gahatak is considered inferior to the latter.

As soon as the hemp is brought down in the spring, or in the course of the summer, it is selected and made up in bundles; both operations being performed by sworn selectors (*brackery*) and binders appointed by government for this purpose; and it is a well-known fact, that this is done with great impartiality and exactness.

A bundle of clean hemp weighs from 55 to 65 poods; ditto out-shot, 48 to 55 ditto; ditto half-clean, 40 to 45 ditto. (1 pood = 36 lbs. avoirdupois.)

Binding of hemp is paid for at the rate of 2 roubles 50 copecks for *clean*, 3 roubles for *out-shot*, and 1 rouble 60 copecks for *half-clean*, per bundle; one half is paid by the seller, and the other half by the purchaser, and is charged accordingly by their agents.

The expense of selecting hemp is 50 copecks per *bercovits* (or 10 poods), and is the same for every other sort. To every bundle of assorted hemp is attached a ticket with the names of the selector, binder, and of

and the date and year. Every bundle has also affixed to it a piece of lead, stamped on one side with the name of the selector, and on the other with the sort of hemp and the time when it was selected. The external marks of good hemp are, its being of an equal green colour and free from spills; but its good quality is proved by the strength of the fibre, which should be fine, thin, and long. The first sort should be quite clean and free from spills; the *out-shot* is less so; and the *half-clean* contains a still greater portion of spills, and is moreover of mixed qualities and colours.

As a perfect knowledge of the qualities of hemp and flax can only be acquired by experience and attention, agents usually employ men constantly occupied in this business; by which means they are sure of getting goods of the best quality, and have the best chance of giving satisfaction to their principals; because, although the hemp is selected by sworn selectors, yet, owing to the quantity of business and the speed with which it must be executed, &c., there are often great differences in the same sorts. The charges are in this way somewhat increased; but this is trifling in comparison of the advantage gained. The part separated, or picked out in cleaning hemp, is called *hemp codilla*; it is generally made up in small bundles of 1 pound, which are again, when shipped, bound together in large bundles, each consisting of about 30 small ones.

Particular care must be taken to ship hemp and flax in fine dry weather; if it get wet, it heats and is totally spoiled. For this reason every vessel taking in hemp or flax is furnished with mats to prevent its getting damp. Hemp, being light and bulky, is, when stowed, forced into the hold by means of winches, which renders the operation of loading rather slow.

It may be taken as a general rule, that the prices of hemp are highest in the months of May, June, July, and the early part of August, the demand for this article being then greatest, and the exportation to North America being principally effected at this season. Again, the prices of hemp are lowest in the month of September; the reason of which is, that the less opulent hemp-merchants return at the end of this month to their own country, in order to make new purchases for the ensuing year; and rather than be detained, sell the remainder of their stock some roubles below the market price. This causes a general decline; although an unusual demand for the article happening at the same time, or political events or rumours, occasionally produce a contrary effect. Two large warehouses, called *ambares*, are built in Petersburg for the special purpose of housing hemp, where the greatest order is observed.

Account of the Quantities of Hemp imported into the United Kingdom during the Seven Years from 1835 to 1841 inclusive; specifying the Countries from which they were imported, and the Quantities brought from each.

Sixty poods of hemp and 40 poods of codilla make a last at Petersburg; 63 poods make an English ton. (pp. 47—52.)

Riga hemp fetches a higher price than that of Petersburg. It is divided into 3 sorts: viz. rein, rhine, or clean, out-shot, and pass or half-clean. The following are the prices of hemp, duty paid, as quoted in the London markets, June, 1842:—

	<i>£ s. d.</i>	<i>£ s. d.</i>
Hemp, Riga Rhine - - - - -	31 0 0	0 0 0 per ton.
Petersburg, clean - - - - -	29 10 0	0 0 0 —
out-shot - - - - -	28 0 0	0 0 0 —
half-clean - - - - -	27 0 0	0 0 0 —
Italian - - - - -	35 0 0	0 0 0 —
Manilla - - - - -	22 10 0	23 0 0 —
Jute - - - - -	12 0 0	14 0 0 —
Sunn - - - - -	14 10 0	16 0 0 —

We subjoin a statement of the various charges on the exportation of hemp from Petersburg, and on its importation into this country.

Clean Hemp. — 1 bundle = 63 poods = 1 ton.	<i>Rou. cop.</i>
Duty, 3 rou. 60 cop. per berrcovits - - - - -	22 68
Additional duty, 10 per cent. - - - - -	2 27
Quarantine duty, 1 per cent. - - - - -	0 22
	<i>R. 25 17</i>
Custom-house charges, 4 per cent. - - - - -	1 1
Receiving, weighing, and shipping, 3½ rou. per bundle - - - - -	3 75
Bracking, 50 cop. per berrcovits - - - - -	3 15
Binding, 40 cop. per ditto - - - - -	2 54
Lighterage and attendance to Cronstadt, 8 rou. per bundle - - - - -	8 0
Retarding, 3½ rou. per bundle, ½ charged - - - - -	1 12
Brokerage, 60 cop. per ton - - - - -	0 60
	<i>R. 45 34</i>

Brokerage, ½ per cent.  
Commission and extra charges, 3 per cent.  
Stamps on drafts, ½ per cent. } per cent.  
Brokerage, ½ per cent.

Charges of Importation per ton, taking the price at 40¢. per ton.	
Insurance, say 1%, and policy - - - - -	0 10 6
Freight, 5½%. 6d. per ton - - - - -	2 12 6
Customs and Russia dues - - - - -	4 15 6
Landing charges - - - - -	0 10 0
Sound dues - - - - -	0 5 0
Discount, 3½ per cent. - - - - -	1 10 0
Brokerage - - - - -	0 4 0

Per ton - - - - - £10 5 8

In the above calculation, no allowance is made for damage; which, if care be taken to select a good vessel and an early season, does not amount to much. The estimates are nearly the lowest rates of charge. The insurance, indeed, is sometimes as low as 1½. 6d. per cent., and policy. That, however, is only in the very earliest part of the season; it rises to 3½. per cent. in the autumn.

Out-shot Hemp. — 1 bundle = 63 poods = 1 ton.

Fixed charges - - - - -	<i>Rou. cop.</i>
Other charges same.	46 11
Half-clean Hemp. — 1½ bundle = 63 poods = 1 ton.	
Fixed charges - - - - -	<i>Rou. cop.</i>
Other charges same.	48 71

Hemp the produce or manufacture of Europe may not be imported into the United Kingdom for home consumption, except in British ships, or in ships of the country of which it is the produce, or from

which it is imported, under penalty of forfeiting the same and 100*l.* by the master (3 & 4 *Will.* 4. c. 54. §§ 2. and 22.)

HEMP (MANILLA), commonly called Manilla white rope. Mr. Crawford gives the following article:—"Of the wild banana one kind (*Musa textilis*) grows in vast abundance most northerly of the spice islands. In the great island of Mindanao, in the Philippines, the forests. From the fibrous bark or epidermis is manufactured a kind of cloth, in frequent natives. It also affords the material of the most valuable cordage which the indigenous Archipelago yield. This is known to our traders and navigators under the name of Manilla equally applicable to cables, and to standing or running rigging."—(*Hist. of Archipelago*).

HEMP (INDIAN), or SUNN and JUTE. Sunn consists of the fibre of the *crotilaria juncea* ferent plant from the *cannabis sativa*, which, as already stated, is never used by the Hindoos or cordage. Sunn is grown in various places of Hindostan. The strongest, whitest, and species is produced at Comercolly. During those periods of the late war when the import from the Baltic was interrupted, and hemp bore an enormous price, large quantities of sunn were introduced into this country, but after the intercourse with the Continent was renewed the importation of sunn ceased. But within the last dozen years it has been again imported to a considerable extent, ever, deficient in toughness.

JUTE consists of the fibres of two plants, called the chunch and isbund (*Cochorus olivaceus capsularis*), extensively cultivated in Bengal, and forming, in fact, the material of gunny bags and gunny cloth are made. It fetches nearly though not quite as high a price as sunn into competition with flax, tow, and codilla, in the manufacture of stair and other carpet cotton and other goods, and such like fabrics, being extensively used for these purposes in fact it is unsuitable for cordage and other articles into which hemp is manufactured, from its twisted, and rotting in water. The quantities imported, and the prices, have fluctuated during the last dozen years; but from 12*l.* to 15*l.* a ton appears to be a fair average price introduced into this country, in 1815, the price of jute varied from 35*l.* to 40*l.* a ton. It is, however, very little used, and did not, in fact, begin to come into any thing like general use till 1827 or 1828.

HEMP-SEED (Fr. *Chenevis*, *Chenevi*; Ger. *Hanfsaat*; It. *Cannapuccia*, *cannabinum*; Rus. *Konopljanoe Semja*), the seed of hemp. The best hemp seed is which is brightest, and will not break when rubbed. It is used either as crushing for oil, or as food for fowls. Previously to 1832 it was loaded at 2*l.* per quarter, which was then reduced to 1*s.* per ditto. This duty in 1840, 128*l.*, showing that 2,560 quarters had been entered for consumption.

HERRINGS, AND HERRING FISHERY. The herring (*Clupea*, Linnæus) is a fish too well known to require any description. It is every esteem, both when fresh and when salted.

"Herrings are found from the highest northern latitudes yet known, to the northern coasts of France. They are met with in vast shoals on the coasts as low as Carolina. In Chesapeake Bay is an annual inundation of them which cover the shore in such quantities as to become a nuisance. We find them in seas of Kamtschatka; and probably they reach Japan. The great winter the herring is within the Arctic circle: there they continue for many months recruit themselves after the fatigue of spawning; the seas within that space with insect food in a far greater degree than those of our warmer latitudes. The army begins to put itself in motion in spring. They begin to appear off the Isles in April and May. These are only the forerunners of the grand coming in June; and their appearance is marked by certain signs, such as the appearance of birds, like gannets and others, which follow to prey on them; but when the body approaches, its breadth and depth is such as to alter the appearance of the ocean. It is divided into distinct columns of 5 or 6 miles in length, of 10 or 15 fathoms in breadth; and they drive the water before them, with a kind of rippling. So sink for the space of 10 or 15 minutes, and then rise again to the surface. The weather reflect a variety of splendid colours, like a field of the most precious stones."

"The first check this army meets in its march southward, is from the Shetland Islands which divide it into two parts; one wing takes to the east, the other to the west of Great Britain, and fill every bay and creek with their numbers: the force then proceeds towards Yarmouth, the great and ancient mart of herrings; they then pass the British Channel, and after that in a manner disappear. Those which take the west, after offering themselves to the Hebrides, where the great station is, proceed to the north of Ireland, where they meet with a second interruption, obliged to make a second division: the one takes to the western side, and is perceived, being soon lost in the immensity of the Atlantic; but the other enters into the Irish Sea, rejoices and feeds the inhabitants of most of the coasts of Ireland. These brigades, as we may call them, which are thus separated from each other, are often capricious in their motions, and do not show an inviolable regularity to their haunts."

"This instinct of migration was given to the herrings, that they might spawn in warmer seas, that would mature and vivify it more assuredly than the frozen zone. It is not from defect of food that they set themselves in motion, come to us full of fat, and on their return are almost universally observed to be miserable. What their food is near the pole, we are not yet informed; they feed much on the *oniscus marinus*, a crustaceous insect, and sometimes fry."

"They are full of roe in the end of June, and continue in perfection till the beginning of winter, when they deposit their spawn. The young herrings begin to approach the shores in July and August, and are then from  $\frac{1}{4}$  an inch to 2 inches long. Though we have no particular authority for it, yet, as very few young herrings are found in our seas during winter, it seems most certain that they must return to their parental haunts beneath the ice. Some of the old herrings continue on our coast the whole year." — (*Pennant's British Zoology*.)

The herring was unknown to the ancients, being rarely, if ever, found within the Mediterranean. The Dutch are said to have engaged in the fishery in 1164. The invention of pickling or salting herrings is ascribed to one Beukels, or Beukelson, of Biervliet, near Sluys, who died in 1397. The emperor Charles V. visited his grave, and ordered a magnificent tomb to be erected to his memory. Since this early period, the Dutch have uniformly maintained their ascendancy in the herring fishery; but, owing to the Reformation, and the relaxed observance of Lent in Catholic countries, the demand for herrings upon the Continent is now far less than in the fourteenth and fifteenth centuries.

*Importance of the Herring Fishery. Progress of it in Great Britain.* — There is, perhaps, no branch of industry, the importance of which has been so much over-rated as that of the herring fishery. For more than 3 centuries, company after company has been formed for its prosecution, fishing villages have been built, piers constructed, boards and regulations established, and vast sums expended in bounties; and yet the fishery never got into a healthy state till it was left to its own resources. The false estimates that have been long current with respect to the extent and value of the Dutch herring fishery, contributed more, perhaps, than any thing else, to the formation of exaggerated notions of the importance of this business. That the Hollanders prosecuted it to a greater extent, and with far greater success, than any other people, is, indeed, most true. There is not, however, the shadow of a ground for believing that they ever employed, as has often been stated, about 450,000 individuals in the fishery and the employments immediately subservient to it. We question whether they ever employed so many as 50,000. At the time when the Dutch carried on the fishery to the greatest extent, the entire population of the Seven United Provinces did not certainly exceed 2,400,000; and deducting a half for women, and from a half to two thirds of the remaining 1,200,000 for boys and old men, it would follow, according to the statement in question, that every able-bodied man in Holland must have been engaged in the herring fishery! It is astonishing how such ridiculously exaggerated accounts ever obtained any circulation; and still more so, that they should have been referred to and quoted, without, apparently, any doubt being ever entertained of their authenticity, down to our own times! Had they been sifted ever so little, their falsehood would have been obvious; and we should have saved many hundreds of thousands of pounds that have been thrown away in attempting to rival that which never existed.

It would be impossible, within the limits to which this article must be confined, to give any detailed account of the various attempts that have been made at different periods to encourage and bolster up the herring fishery. In 1749, in pursuance of a recommendation in his Majesty's speech at the opening of parliament, and of a report of a committee of the House of Commons, 500,000*l.* was subscribed for carrying on the fisheries, under a corporation called "The Society of the Free British Fishery." The Prince of Wales was chosen governor of the Society, which was patronised by men of the first rank and fortune in the state. But this Society did not trust entirely to its own efforts for success. The duties were remitted upon the salt used in the fisheries; and besides this reasonable encouragement, a high tonnage bounty was granted upon every buss fitted out for the deep sea fishery. In consequence, many vessels were sent out, as Dr. Smith has truly stated, not to catch herrings, but to catch the bounty; and to such an extent was this abuse carried, that in 1759, when the tonnage bounty was 50*l.*, the enormous and incredible sum of 189,746*l.* was paid as bounty upon every barrel of merchantable herrings that was produced! (*Waltham of Nations*, p. 231.) But notwithstanding this encouragement, such was the waste and mismanagement of the Company's affairs, that it was speedily destroyed. Smith says, that in 1794 hardly a vestige remained of its having ever been in existence.

But notwithstanding this ill success, a new company was formed, for nearly the same objects, in 1786, of which George III. was patron. It has had nearly the same fate. "For a season or two, busses were fitted out by the society; but if every herring caught had carried a ducat in his mouth, the expense of its capture would scarcely have been repaid. The bubble ended by the society for fishing in the deep sea becoming a kind of building society, for purchasing ground in situations where curers and fishermen find it convenient to settle, and selling or letting it in small lots to them, at such advance of price as yields something better than fishing profits." — (See an excellent article on the *Herring Fishery* in the 11th Number of the *Quarterly Journal of Agriculture*.)

In 1808, a fresh attempt was made for the improvement and extension of the fishery. The act 48 Geo. 3. established a distinct set of commissioners for the superintendence of all matters connected with the fishery, and authorised them to appoint a sufficient number of fishery officers, to be stationed at the different ports, whose duty is to see that the various regulations with respect to the gutting, packing, &c. of the herrings, and the branding of the barrels, are duly carried into effect. In 1809, a bounty of 3*l.* per ton was granted on all vessels employed in the deep sea herring fishery, of above 60 tons burden, but payable only on 100 tons; and in 1820, a bounty of 20*l.* per ton, which, under certain specified circumstances, might be increased to 50*l.*, was granted on all vessels of from 15 to 60 tons, fitted out for the shore herring fishery; and, exclusively of these bounties on the tonnage, a bounty of 2*l.* a barrel was allowed on all herrings cured gutted during the 6 years ending the 5th of April, 1818, and a bounty of 3*l.* 8*l.* a barrel on their exportation, whether cured gutted or ungutted. During the 11 years ending the 5th of April, 1826, the bounty on herrings cured gutted was 4*l.* a barrel.

It is stated in the article already referred to, that the cost of a barrel of cured herrings is about 16*l.*, the half going to the fisherman for the green fish, the other half to the curer for barrel, salt, and labour. The bounty of 4*l.* a barrel was, therefore, equal to  $\frac{1}{4}$ th the value of the herrings as sold by the fisherman, and to one-fourth of their value as sold by the curer! In consequence of this forced system, the fishery was rapidly increased. The following statement, extracted from the *Report of the Commissioners of the Fishery Board*, dated 27th of July, 1843, shows the progress it has made since 1809:—

\* They seem to have been first set forth in a treatise ascribed to Sir Walter Raleigh; and, what is singular, they were admitted by De Witt into his excellent work, the *True Interest of Holland*. They have been implicitly adopted by Sir John Barrow, in the article *Fisheries* in the *Encyclopædia Britannica*.

Abstract of the Total Quantity of White Herrings cured, branded for Bounty, and exported, in so far as the same have been brought under the Cognizance of the Officers of the Fishery, from the 5th of April, 1810, distinguishing each Year, and the Herrings cured gutted, from those cured ungutted.— (*Parl. Paper No. 495. Sess. 1843.*)

Years ending April 5.	Total Quantity of Herrings cured.			Total Quantity of Herrings branded.	Total Quantity of Herrings exported.

On looking at this Table, it is seen that the fishery made no progress under the new system till 1815, when the bounty was raised to 4s. This is a sufficient proof of the factitious and unnatural state of the business. Its extension, under the circumstances in question, instead of affording any proof of its being in a really flourishing condition, was distinctly the reverse. Individuals without capital, but who obtained loans sufficient to enable them to acquire boats, barrels, salt, &c. on the credit of the bounty, entered in vast numbers into the trade. The market was most commonly glutted with fish; and yet the temptation held out by the bounty caused it to be still further overloaded. Great injury was consequently done to those fish curers who possessed capital; and even the fishermen were injured by the system. "Most of the boats employed in the fishery never touch the water but during 6 weeks, from the middle or end of July to the middle of September. They are owned and sailed, not by regular fishermen following that vocation only, but by tradesmen, small farmers, farm-servants, and other landmen, who may have sufficient skill to manage a boat at that season, but who do not follow the sea except for the 6 weeks of the herring fishery, when they go upon a kind of gambling speculation, of earning a twelvemonth's income by 6 weeks' work."— (*Quarterly Journal*, No. 11. p. 653.)

It has been often said, in vindication of the bounty system, that by extending the fishery it extended an important nursery for seamen; but the preceding statement shows that such has not been its effect. On the contrary, it has tended to depress the condition of the genuine fisherman, by bringing a host of interlopers into the field; and it has also been prejudicial to the little farmers and tradesmen, by withdrawing their attention from their principal business, that they may embark in what has hitherto been little less than a sort of lottery adventure.

These consequences and the increasing amount of the sum paid for bounties, at length induced the government to adopt a different system. By an act passed in 1825, the bounty of 2s. 8d. on exported herrings was made to cease in 1826, and 1s. was annually deducted from the bounty of 4s. a barrel paid on gutted herrings, till it ceased in 1830. And the above table shows conclusively that those who contended that the best way to promote the fishery was to let it alone, were in the right; the quantity of herrings cured and the quantity exported having been both nearly doubled since the cessation of the bounties. The fishery is now, for the first time these hundred years, placed on a secure foundation; the supply is proportioned to the real demand, while the genuine fishermen, and those curers who have capital of their own, are no longer injured by the competition of landmen and others allured to the business by factitious encouragement and trading on capital furnished by government.

The repeal of the salt laws, and of the duty on salt, which preceded the repeal of the bounty, was of signal service to the fishery. It is true that salt used in the fisheries was exempted from the duty; but in order to prevent the revenue from being defrauded, so many regulations were enacted, and the difficulties and penalties to which the fishermen were in consequence subjected were so very great, that some of them chose rather to pay the duty upon the salt they made use of, than to undertake compliance with the regulations.

It is to be regretted, that when government repealed the bounty, it did not also abolish the "Fishery Board," and the officers and regulations it had appointed and enacted. So long as the bounty existed, it was quite proper that those who claimed it should be subjected to such regulations as government chose to enforce; but since it has been repealed, we see no reason why the fishery should not be made perfectly free, and every one allowed to prepare his herrings as he thinks best. It is said, indeed, that there were no inspection of the fish, frauds of all sorts would be practised: that the barrels would be ill made, and of a deficient size; that the fish would not be properly packed; that the bottom and middle of the barrels would be filled with bad ones, and a few good ones only placed at the top; that there would not be a sufficiency of pickle, &c. But it is obvious that the reasons alleged in vindication of the official inspection kept up in the herring fishery, might be alleged in vindication of a similar inspection in almost every other branch of industry. It is, in point of fact, utterly useless. It is an attempt, on the part of government, to do that for their subjects, which they can do better for themselves. Supposing the official inspection were put an end to, the merchants and others who buy herrings of the curers would themselves inspect the barrels: and while any attempt at fraud by the curers would thus be effectually obviated, they would be left at liberty to prepare their herrings in any way that they pleased, without being compelled, as at present, to follow only one system, or to prepare fish in the same way for the tables of the poor as for those of the rich. So far, indeed, is it from being true that the inspection system tends to put down trickery, that there is much reason to think that its effect is directly the reverse. The *surveillance* exercised by the officers is any thing but strict; and the official brand is often affixed to barrels which, were it not for the undeserved confidence that is too frequently

placed in it by the unwary, would lie on the curer's hands. It is rather a security against the detection of fraud than against its existence.

The grand object of the herring fishery "Board" has been to enforce such a system of curing as would bring British herrings to a level with those of the Dutch. In this, however, they have completely failed; Dutch herrings generally fetching double the price of British herrings in every market of Europe. Neither is this to be wondered at. The consumers of Dutch herrings are the inhabitants of the Netherlands and of the German towns, who use them rather as a luxury than as an article of food, and who do not grudge the price that is necessary to have them in the finest order. The consumers of British herrings, on the other hand, are the negroes of the West Indies, and the poor of Ireland and Scotland. Cheapness is the prime requisite in the estimation of such persons; and nothing can be more entirely absurd, than that a public Board should endeavour to force the fish curers to adopt such a system in the preparation of herrings as must infallibly raise their price beyond the means of those by whom they are bought. Why should not the taste of the consumers be consulted as much in this as in any thing else? It would not be more ridiculous to attempt to have all cheese made of the same richness and flavour as Stilton, than it is to attempt to bring up all herrings to the standard of the Dutch.

We do, therefore, hope that an end may be put to this system; and that our legislators and patriots will cease to torment themselves with schemes for the improvement of the fisheries. The very best thing they can do for them is to let them alone. It is not a business that requires any sort of adventitious encouragement. Every obstacle to the easy introduction of fish into London and other places should certainly be removed; but all direct interferences with the fishery are sure to be in the last degree pernicious.

Of the 284,736 barrels of herrings exported from Great Britain in the year ending the 5th of April, 1842, 187,983 went to Ireland, 5,713 to places out of Europe (chiefly the West Indies), and 91,039 to places in Europe other than Ireland. The exportation of herrings to the W. Indies has of late years rapidly declined, in consequence, no doubt, of the emancipation of the slaves.

**HIDES** (Ger. *Häute*; Du. *Huiden*; Fr. *Peaux*; It. *Cuoja*; Sp. *Pellejos*, *Pieles*; Rus. *Koshi*), signify, generally, the skins of beasts; but the term is more particularly applied to those of large cattle, such as bullocks, cows, horses, &c. Hides are raw or green; that is, in the state in which they are taken off the carcase, or dressed with salt, alum, and saltpetre, to prevent them from putrefying; or they are cured or tanned. The hides of South America are in the highest repute, and vast quantities of them are annually imported into Great Britain. Large quantities are also imported from various parts of the Continent; and from India, the Cape of Good Hope, &c.

An Account of the Weight of the Hides imported into the United Kingdom in each of the Ten Years ending with 1841; specifying the Countries whence the Hides were imported and the Quantities brought from each.

His Majesty is authorised to prohibit, by proclamation or order in council published in the *London Gazette*, the importation of any hides or skins, horns or hoofs, or any other part of any cattle or beast, in order to prevent any contagious distemper from being brought into the kingdom. — (3 & 4 Will. 4. c. 52. § 58.)

Hides and skins paying duty by weight, may be delivered from the bonded warehouses, on the parties entering an average weight, due care being taken that the lockers actually retally and reweigh the hides and skins on delivery; and in the case of delivery for exportation, to express in cart notes the exact number delivered from the warehouse, in order to enable the export officer on the quay to check the quantity; and the merchant is to indorse on the cocket and bill the total number and weight shipped, before the vessel is suffered to clear. — (*Customs Order*, 4th Dec. 1824.)

**HOGSHEAD**, a measure of capacity, containing 52½ Imperial gallons. A hogshead is equal to ¼ a pipe. — (See **WEIGHTS AND MEASURES**.)

**HOLIDAYS**, are understood to be those days, exclusive of Sundays, on which no regular public business is transacted at particular public offices. They are either fixed or variable. They are not the same for all public offices. Those kept at the Bank of England have recently been reduced a full half.

The variable holidays are, Ash Wednesday, Good Friday, Easter Monday and Tuesday, Holy Thursday, Whit Monday and Tuesday.

It is enacted by stat. 6 Geo. 4. c. 106. § 13., that no holidays shall be kept by the Customs except Christmas-day and Good Friday, the King's birthday, and such days as may be appointed by proclamation for the purpose of a general fast.

The 7 & 8 Geo. 4. c. 53. § 16. enacts that no holidays shall be kept at the Exchequer, except Christmas-day and Good Friday, the birthdays of His Majesty and the Prince of Wales, the anniversaries of the Restoration of Charles II., and of His Majesty's coronation, and such days as may be appointed by proclamation for the celebration of a general fast, or such days as may be appointed as holidays by any warrant issued for that purpose by the Lords of the Treasury.

**HONEY** (Du. *Honig*, *Honing*; Fr. *Miel*; Ger. *Honig*; It. *Miele*; Lat. *Mellis*; Sp. *Miel*), a vegetable juice collected by bees. "Its flavour varies according to the nature of the flowers from which it is collected. Thus, the honeys of Narbonne, and England are known by their flavours; and the honey prepared from different parts even of the same country differs. It is separated from the comb by boiling, and by expression: the first method affords the purest sort; the second separates pure honey; and a still inferior kind is obtained by heating the comb before it is pressed. When obtained from young hives, which have not swarmed, it is denominated *virgin honey*. It is sometimes adulterated with flour, which is detected by mixing it with water: the honey dissolves, while the flour remains nearly unaltered."—(*Therapeutic Dispensatory*.)

By stat. 23 Eliz. c. 8. § 4., all vessels of honey are to be marked with the name of the owner, on pain of forfeiting 6s. 8d.; and contain, the hogshead 32 gallons, the kilderkin 16 gallons, and the firkin 8 gallons, or forfeit 5s. for every gallon wanting; and if any honey sold be corrupted with any deceitful mixture, the seller forfeit the honey, &c.

**HOPS** (Ger. *Hopsen*; Du. *Hoppe*; Fr. *Houblon*; It. *Luppoli*, *Bruscandello*; Obol.; Rus. *Chmel*; Lat. *Humulus Lupulus*). The hop is a perennial rooter of which there are several varieties. It has an annual twining stem, which, when supported on poles, or trees, will reach the height of from 12 to 20 feet or more. It is native of Britain, and most parts of Europe. When the hop was first used for preparing and improving beer, or cultivated for that purpose, is not known—(see *ALE*); but its culture was introduced into this country from Flanders in the reign of Henry VI. Hops are first mentioned in the Statute Book in 1552, in an act 5 & 6 Edward VI. and it would appear from an act passed in 1603 (1 Jac. 1. c. 18.), that hops were at that time extensively cultivated in England. Walter Blythe, in his *Improver Improved* (published in 1649 (3d ed. 1653, p. 240.)), has a chapter upon improvement by planting of hops, in which there is this striking passage. He observes, that "hops were at that time grown to be a national commodity; but that it was not many years since the city of London petitioned the parliament of England against two nuisances; and those were, Newcastle coals, in regard to their stench, &c., and hops, in regard they *spoil the taste of drink*, and endanger the people: and had the parliament been more than they, we had been in a measure pined, and in a great measure starved; we were just answerable to the principles of those men who cry down all devices, or improvements, as projects, and thereby stifle and choak improvement."

After the hops have been picked and dried, the brightest and finest are put into pockets or fine bags, and the brown into coarse or heavy bagging. The former are chiefly used in the brewing of beer, and the latter by the porter brewers. A pocket of hops, if they be good in quality, well cured, and of a medium weight, will weigh about 1½ cwt.; and a bag of hops will, under the same conditions, weigh 2½ cwt. If the weight of either exceeds or falls much short of this medium, there is reason to think that the hops are of an inferior quality, or have been badly manufactured. The brighter the hops, the greater is the estimation in which they are held. Farnham hops are reckoned best. The expense of forming hop plantations is very great, amounting in some instances to from 70*l.* to 100*l.* per acre, and the produce is very uncertain, the crop being frequently insufficient to defray the expense of cultivation.

The hop growers are placed under the *surveillance* of the excise, a duty of 2*d.* per lb. being levied on hops produced in this country. A hop planter is obliged to give notice to the excise, on or before the 1st of August each year, of the number of acres he has in cultivation; the situation and number of his kilns for drying; the place or places of bagging, which, with the storerooms or warerooms in which the packages are intended to be lodged, are entered by the officer. No hops can be removed from the premises thus entered, before they have been weighed and marked by a revenue officer; who marks, on each bag, its weight, and the name and residence of the grower, upon each bag, pocket, or package. The seizing the officer's mark is prohibited under a penalty of 100*l.*, and defacing it under a penalty of 20*l.* A planter or grower knowingly putting hops of different qualities or values into the same bag or pocket, shall forfeit 20*l.* And any person mixing with hops any drug, or other thing, to change or alter the scent, shall forfeit 5*l.* a cwt. on all the hops so changed or altered. The malicious cutting or destroying of hop plantations may be punished by transportation beyond seas for life, or any term not less than seven years, or by imprisonment and hard labour in a common gaol, for any term not exceeding 7 years. (*Louder's Encyc. of Agriculture*; *Stevenson's Surrey*; *Burn's Justice*, &c.)

The duty on hops of the growth of Great Britain produced, in 1842, 260,978*l.* 18*s.* 10*d.* The duty on hops in England comprises about 52,000 acres, of which there are in Kent about 27,500, in Hereford, 12,500, in Worcestershire 2,000, &c.

Hops exported from Great Britain are, on being again imported, to be treated as foreign, originally so or not.

**HORN** (Du. *Hoorn*; Fr. *Corne*; Ger. *Horn*; Lat. *Cornu*), a substance too hard to require any description. Horns are of very considerable importance in the arts, being applied to a great variety of useful purposes. They are very extensively used in the manufacture of handles for knives, and in that of spoons, combs, lanterns, &c. When divided into thin plates, horns are tolerably transparent, and were formerly used instead of glass in windows. Glue is sometimes made out of the horn. We annually import considerable quantities. At an average of 1840 and 1841, the entries of foreign horn for home consumption amounted to 22,888 cwt.

**HORSE** (Ger. *Pferd*; Du. *Puaard*; Da. *Hest*; Sw. *Häst*; Fr. *Cheval*; It. *Cavallo*; Sp. *Caballo*; Rus. *Loschud*; Pol. *Kon*; Lat. *Equus*; Gr. *ἵππος*), a domestic animal of the

quadrupled of the highest utility, being by far the most valuable acquisition made by man among the lower animals.

There is a great variety of horses in Britain. The frequent introduction of foreign breeds, and their judicious mixture, having greatly improved the native stocks. Our race horses are the fleetest in the world; our carriage and cavalry horses are amongst the handsomest and most active of those employed for these purposes; and our heavy draught horses are the most powerful, beautiful, and docile of any of the large breeds.

*Number and Value of Horses in Great Britain.*—The number of horses used in Great Britain for different purposes is very great, although less so, perhaps, than has been generally supposed. Mr. Middleton (*Survey of Middlesex*, 2d ed. p. 639.) estimated the total number of horses in England and Wales, employed in husbandry, at 1,200,000, and those employed for other purposes at 600,000. Dr. Colquhoun, contrary to his usual practice, reduces this estimate to 1,600,000 for Great Britain; and in this instance we are inclined to think his guess is pretty near the mark. In 1814, when the horses employed in husbandry were taxed, the numbers of the various descriptions of horses in England and Wales, which paid duty, amounted to 1,204,307. But this account did not include stage-coach, mail-coach, and hackney-coach horses, nor did it include those used in posting. Poor persons keeping only one horse were also exempted from the duty; as were all horses employed in the regular regiments of cavalry and artillery, and in the volunteer cavalry. In Mr. Middleton's estimate, already referred to, he estimated the number of post-chaise, mail, stage, and hackney-coach horses, at 100,000; and from the inquiries we have made, we are satisfied that if we estimate the number of such horses in Great Britain, at this moment, at 125,000, we shall be decidedly beyond the mark.

On the whole, therefore, it may be fairly estimated that there are in Great Britain from 1,400,000 to 1,500,000 horses employed for various purposes of pleasure and utility. They may, probably, be worth at an average from 10*l.* to 12*l.*, making their total value from 14,000,000*l.* to 18,000,000*l.* sterling, exclusive of the young horses.

The duties begin to be charged as soon as horses are used for drawing or riding, and not previously.

An Account of the Number of Horses charged with Duty in the Years ending the 5th of April, 1826, 1832, and 1841, the Rates of Duty, and the Produce of the Duties.

	1826.			1832.			1841.

*Exemptions.*—Besides the above account of the horses charged with duty, an account is published of the numbers exempted from the duty. This account is not, however, to be relied on; inasmuch as very many of those whose horses are not liable to the duties never think of making any returns. By not attending to this circumstance, we inadvertently, in a former edition of this work, under-rated the number of horses engaged in certain departments of industry.

*Influence of Railroads on Horses.*—The statements now made, show the dependence that ought to be placed on the estimates occasionally put forth by some of the promoters of railroads and steam carriages. These gentlemen are pleased to tell us, that, by superseding the employment of horses in public conveyances, and in the regular carriage of goods, the full adoption of their projects will in the end enable 1,000,000 horses to be dispensed with; and that, as each horse consumes as much food as 8 men, it will at once provide subsistence for 8,000,000 human beings! To dwell upon the absurdity of such a statement would be worse than useless; nor should we have thought of noticing it, but that it found its way into a report of a committee of the House of Commons. It is sufficient to observe, that though all the stage

and mail coaches and *all* the public waggons, vans, &c. employed in the empire, w steam carriages, they would not, even then, have rendered 120,000 horses superfluous. 1 horse consumes as much as 8 men, at least if we suppose the men to be reasonable and diligent to deserve notice.

The rates of duty payable at present (1843) on horses, are the same as those specified in the Table for 1841. A horse *bonâ fide* kept and usually employed for the purpose of husbandry of less value than 200*l.* a year, though occasionally used as a riding horse, is exempted. And husbandry horses, whatever may be the value of the farms on which they are kept, are free of duty, to and from any place to which a burden shall have been carried or brought for medical assistance, and to or from markets, places of public worship, elections of members of courts of justice, or meetings of commissioners of taxes.

Brood mares, while kept for the sole purpose of breeding, are exempted from all duties. Horses may be let or lent for agricultural purposes, without any increase of duty. Mules employed in carrying ore and coal are exempted from any duty. — See the 18th edition of *Burn's Justice*, vol. v. tit. *Assessed Taxes*, &c.

The facility with which horses may be stolen has led to the enactment of several laws with respect to their sale, &c. The property of a horse cannot be conveyed away without the consent of the owner. Hence, a *bonâ fide* purchaser gains no property in a horse that has been bought in a *fair*, or an *open* market. It is directed that the keeper of every fair or market shall have a certain open place for the sale of horses, and one or more persons to take toll there, from 10 in the forenoon till sunset. The owner's property in the horse stolen is not lost at a legal fair, unless it be openly ridden, led, walked, or kept standing for *one hour at least* gistered, for which the buyer is to pay 1*d.* Sellers of horses in fairs or markets must be licensed, or to some other creditable person known to them, who declares his knowledge of the same in a book kept by the toll-taker for the purpose. Without these formalities, the owner of a horse stolen may, notwithstanding its legal sale, redeem it on payment or at any time within 6 months of the time of the theft. — *Burn's Justice of the Peace*, C. p. 264.)

In order to obviate the facility afforded by means of slaughtering houses for the disposal of stolen property, it was enacted in 1786 (26 Geo. 3. c. 71.), that all persons keeping places for slaughtering sheep, hogs, or other cattle not killed for butcher's meat, shall obtain a licence from the first producing from the minister and churchwardens, or from the minister and churchwardens, a certificate of their fitness to be intrusted with the management and carrying on of the business. Persons slaughtering horses or cattle without licence are guilty of felony, and may be imprisoned, or transported. Persons licensed are bound to affix over the door or gate of their business is carried on, in legible characters, the words "*Licensed for slaughtering to an Act passed in the 26th Year of his Majesty King Geo. III.*" The parishioners entitled to the licence are authorised to choose annually, or oftener, inspectors, whose duty it is to take an account of the number of every living horse, &c. that may be brought to such slaughtering houses to be killed, and to certify the number of dead horse that may be brought to be flayed. Persons bringing cattle are to be asked, if they are themselves, and if it be not deemed satisfactory, they may be carried before a justice. This duty is to be carried by curriers, fellmongers, tanners, or persons killing aged or distempered cattle, for the purpose of curing their hides in their respective businesses: but these, or any other persons, who willfully kill any sound or useful horse, &c., shall for every such offence forfeit not more than 10*l.*

The stealing of horses and other cattle is a capital crime, punishable by death, if the offender is found guilty of stealing, maiming, killing, &c. of horses and other cattle, is to be punished, at the discretion of the court, by transportation beyond seas for life, for any term not less than 7 years, or by imprisonment not exceeding 4 years; and if a male, he may be once, twice, or thrice publicly whipped, should the court so direct. — (7 & 8 Geo. 4. c. 29. § 25; 7 & 8 Geo. 4. c. 30. § 1.)

*French Trade in Horses.* — The horses of France are not, speaking generally, nearly so powerful as those of England. Latterly, however, the French have been making great improvements in the breed of horses, and have, in this view, been making large importations from other countries. At an average of the 5 years ending with 1827, the excess of horses exported from France, above those exported, amounted to about 13,000 a year. — *Bulletin des Sciences*, tom. xix. p. 5.) The imports from England have, in some late years, amounted to not less than 10*l.*

### HORSE DEALERS, persons whose business it is to buy and sell horses.

Every person carrying on the business of a horse dealer is required to keep a book, in which he enters an account of the number of the horses kept by him for sale and for use, specifying the name of each horse, and the name of the owner, and the name of the person to whom the horse is sold, and the name of the officers; and a true copy of the same is to be delivered quarterly to the assessor of the parish in which the party resides. Penalty for non-compliance, 50*l.* — (43 Geo. 3. c. 1. § 1.)

In 1841 there were in the metropolis 1,839 licensed horse-dealers, and in other parts of the kingdom 12,312, making a grand total of 14,151.

### HUNDRED WEIGHT, a weight of 112 lbs. avoirdupois, generally used in France.

## I. AND J.

**JALAP**, or **JALOP** (Ger. *Jalapp*; Fr. *Jalap*; It. *Sciarappa*; Sp. *Jalap*), a sort of convolvulus, so named from Xalapa, in Mexico, whence we derive the name. The root, when brought to this country, is in thin transverse slices, of a blackish colour on the outside, and internally of a dark greenish colour, with a circular striæ. The hardest and darkest coloured is the best; that which is soft and spongy, and pale coloured, should be rejected. The odour of jalap, especially when powdered, is very characteristic. Its taste is exceedingly nauseous, accompanied with a sweetish bitterness. — (*Lewis's Mat. Med.*; *Brand's Pharmacy*.) The root is used for home consumption amounted, at an average of 1840 and 1841, to 44,000*l.*

### JAMAICA PEPPER. See PIMENTO.

**JAPANNED WARES** (Ger. *Japanische ware*; Du. *Japansche goeder*; Fr. *Marchandises de Japon*), articles of every description, such as tea-trays, snuff-boxes, &c. covered with coats of japan, whether plain, or decorated with figures, &c.

painting or gilding. Birmingham is the grand staple of this manufacture, which is there carried on to a great extent. Pontypool, in Monmouthshire, was formerly famous for jappanning; but it is at present continued there on a very small scale only. It is prosecuted with spirit and success at Bilston and Wolverhampton.

**JASPER** (Ger. *Jaspiss*; Du. *Jaspis*; Fr. *Jaspe*; It. *Diaspro*; Sp. *Jaspe*; Rus. *Jaschma*). This stone is an ingredient in the composition of many mountains. It occurs usually in large amorphous masses, sometimes in round or angular pieces; its fracture is conchoidal; specific gravity from 2 to 2.7. Its colours are various: when heated it does not decrepitate: it is usually divided into 4 species, denominated Egyptian jasper, striped jasper, porcelain jasper, and common jasper. It is sometimes employed by jewellers in the formation of seals.

**JERSEY.** See GUERNSEY.

**JET, or PITCH COAL** (Du. *Git*, *Zwarte barnsteen*; Fr. *Jais*, *Juyet*; Ger. *Gagat*; It. *Gagata*, *Lustrino*; Lat. *Gagus*, *Gagates*), of a black velvet colour, occurs massive, in plates; sometimes in the shape of branches of trees, but without a regular woody texture. Internal lustre shining, resinous, soft; rather brittle; easily frangible: specific gravity 1.3. It is used for fuel, and for making vessels and snuff-boxes. In Prussia it is called black amber, and is cut into rosaries and necklaces. It is distinguished by its brilliancy and conchoidal fracture. — (*Thomson's Chemistry*.)

**JETSAM.** See FLOTSAM.

**IMPORTATION AND EXPORTATION**, the bringing of commodities from and sending them to other countries. A very large portion of the revenue of Great Britain being derived from customs duties, or from duties on commodities imported from abroad; and drawbacks being given on many, and bounties on a few articles exported; the business of importation and exportation is subjected to various regulations, which must be carefully observed by those who would avoid incurring penalties, and subjecting their property to confiscation. The regulations referred to are embodied in the act 8 & 9 Vict. c. 86., which came into operation on the 4th August, 1845. We subjoin a full abstract of this important statute.

#### GENERAL REGULATIONS.

*No Goods to be landed nor Bulk broken before Report and Entry.*—No goods shall be unladen from any ship arriving from parts beyond the seas at any port or place in the U. K. or in the Isle of Man, nor shall bulk be broken after the arrival of such ship within 4 leagues of the coasts thereof respectively, before due report of such ship and due entry of such goods shall have been made, and warrant granted in manner herein-after directed; and no goods shall be so unladen, except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods not duly reported, or which shall be unladen contrary hereto, shall be forfeited; and if bulk be broken contrary hereto, the master of such ship shall forfeit the sum of 100*l.*; and if, after the arrival of any ship within 4 leagues of the coast of the U. K. or of the Isle of Man, any alteration be made in the stowage of the cargo of such ship, so as to facilitate the unloading of any part of such cargo, or if any part be staved, destroyed, or thrown overboard, or any package be opened, such ship shall be deemed to have broken bulk: provided always, that the several articles herein-after enumerated may be landed in the U. K. without report, entry, or warrant; (that is to say,) diamonds and bullion, fresh fish of British taking and imported in British ships, and lobsters, fresh, however taken or imported.—§ 2.

#### MANIFEST.

*All British Ships to have Manifests.*—No goods shall be imported into the U. K. or the Isle of Man from parts beyond seas in any British ship, unless the master have on board a manifest of such goods, made out and dated and signed by him at the place or respective places where the same, or the different parts of the same, was or were taken on board, and authenticated in the manner herein-after provided; and every such manifest shall set forth the name and the tonnage of the ship, the name of the master and of the place to which the ship belongs, and of the place or places where the goods were taken on board respectively, and of the place or places for which they are destined respectively, and shall contain a particular account and description of all the packages on board, with the marks and numbers thereon, and of the sorts of goods and different kinds of each sort contained therein, to the best of the master's knowledge, and the general denomination of the contents of every package containing the following articles imported from any foreign place in Europe, namely, cambrics or lawns, leather gloves, manufactures of silk, tobacco, cigars, or snuff, and the particulars of such goods as are stowed loose, and the names of the respective shippers and consignees, as far as the same can be known to the master; and to such particular account shall be subjoined a general account or recapitulation of the total number of the packages of each sort, describing the same by their usual names, or by such descriptions as the same can best be known by, and the different goods therein, and also the total quantities of the different goods stowed loose; and all such cambrics or lawns, leather gloves, manufactures of silk, tobacco, cigars, or snuff not so manifested shall be forfeited.—§ 2.

*Manifest to be produced to Officers in Colonies.*—Before any ship shall be cleared out or depart from any place in any of the British possessions abroad, with any goods for the U. K. or for the Isle of Man, the master of such ship shall produce the manifest to the collector or comptroller of the customs, or other proper officer, who shall certify upon the same the date of the production thereof to him: provided always, that in all places within the territorial possessions of the East India Company the collector of sea customs or other proper officer shall authenticate the manifest as aforesaid.—§ 4.

*Manifest if wanting, or if Goods missing, Master to forfeit 100*l.**—If any goods be imported into the U. K. or into the Isle of Man in any British ship without such manifest, or if any goods contained in such manifest be not on board, the master of such ship shall forfeit the sum of 100*l.*—§ 5.

*Manifest to be produced within Four Leagues.*—The master of every ship required to have a manifest on board shall produce such manifest to any officer of the customs who shall come on board his ship after her arrival within 4 leagues of the coast of the U. K. or of the coast of the Isle of Man, and who shall demand the same, for his inspection; and such master shall also deliver to any such officer who shall be the first to demand it, a true copy of such manifest, signed by the master, and shall also deliver another copy to any other officer of the customs who shall be the first to demand the same within the limits of the port to which such ship is bound; and thereupon such officers respectively

shall notify on such manifest and on such copies the date of the production of such manifest a receipt of such copies, and shall transmit such copies to the collector and comptroller of the port to which such vessel is first bound, and shall return such manifest to the master; and if such manifest in any case produce such manifest or deliver such copy, he shall forfeit the sum of 100*l.* — § 7.

#### REPORT.

*Master within 24 Hours and before breaking Bulk shall report.* — The master of every ship from parts beyond the seas at any port in the U. K. or in the Isle of Man, whether laden or not, shall within 24 hours after such arrival, and before bulk be broken, make due report of such arrival, and shall make and subscribe a declaration to the truth of the same before the collector or comptroller of such port; and such report shall contain an account of the particular marks, numbers, and contents of all the different packages or parcels of goods on board such ship, and the particulars of such goods as are stowed loose, to the best of his knowledge, and the general denomination of the contents of each package containing the following articles imported from any foreign place in Europe, namely, such as silks, or lawns, leather gloves, manufactures of silk, tobacco, cigars, or snuff, and of the place or places from which such goods were respectively taken on board, and of the burden of such ship, and of the count of such ship was built, or if British of the port of registry, and of the country to which the people to which ship belongs, and of the name and country of the person who was master during the voyage, and the number of the people by whom such ship was navigated, stating how many are subjects of the country to which such ship belongs, and how many are of some other country; and in such report it shall be further declared whether and in what cases such ship has broken bulk in the course of her voyage, and what part of her cargo, if any, is intended for importation at such port, and what part, if any, is intended for importation at another port in the U. K. or at another port in the Isle of Man respectively; and what part, if any, is prohibited to be imported except to be warehoused for exportation only; and what part, if any, is intended for exportation in such ship to parts beyond the seas, and what surplus or stock remain on board such ship, and if a British ship, what foreign-made sails or cordage, standing or running rigging, are in use on board such ship; and the master of any ship who fails to make such report, or who shall make a false report, shall forfeit the sum of 100*l.* — § 7.

*Bond to maintain Africans.* — The master of every vessel coming from the coast of Africa, and taken on board at any place in Africa any person or persons being or appearing to be natives of Africa, shall, in addition to all other matters, state in the report of his vessel how many such persons he has taken on board by him in Africa; and any such master failing herein shall forfeit the sum of 100*l.* provided also, that the master or owner or owners of such vessel, or some or one of them, at the time of making such report, be required to enter into bond to H. M. in the sum of 100*l.*, conditioned that he shall be harmless to any parish or any extra-parochial or other place maintaining its own poor against any such person or persons which such parish or other place may be put to in supporting any such person during their stay in the U. K.; and any such master, owner or owners, refusing or neglecting to enter into such bond, shall forfeit the sum of 200*l.* — § 8.

*Packages reported "Contents unknown" may be opened and examined.* — If the contents of any package so intended as aforesaid for exportation in the same ship to parts beyond the seas, as reported by the master as being unknown to him, it shall be lawful for the officers of the customs to open and examine such package on board, or to bring the same to the Queen's warehouse for examination; and if there be found in such package any goods which may not be entered for home consumption, such goods shall be forfeited, or if the goods be such as may be entered for home use, the same shall be chargeable with the duties of importation, unless in either case the commissioners of customs, in their discretion, shall be satisfied that the goods are of the sort or quality of such goods, or the small rate of duty payable thereon, shall deliver the same for exportation. — § 9.

*Master to deliver Manifest, &c.* — The master of every ship shall at the time of making such report deliver to the collector or comptroller the manifest of the cargo of such ship, where a manifest is required, and, if required by the collector or comptroller, shall produce to him any bill or bills, or a true copy thereof, for any and every part of the cargo laden on board, and shall answer all questions relating to the ship and cargo, and crew and voyage, as shall be put to him by such collector or comptroller; and in case of failure or refusal to produce such manifest, or to answer such questions, or to produce such bill of lading or copy, or if such manifest or bill of lading or copy shall be false, or if any bill of lading be uttered or produced by any master, and the goods therein shall not have been *bond fide* shipped on board such ship, or if any bill of lading uttered or produced by any master shall not have been signed by him, or any such copy shall not have been signed or made by him previously to his leaving the place where the goods expressed in such bill of lading or copy were shipped, then and in every such case such master shall forfeit the sum of 100*l.* — § 10.

*Part of Cargo reported for another Port.* — If any part of the cargo of any ship for which a manifest is required be reported for importation at some other port in the U. K., or at some other port in the Isle of Man respectively, the collector and comptroller of the port at which some part of the cargo of such ship is delivered shall notify such delivery on the manifest, and return the same to the master of such ship. — § 11.

*Ship to come quickly to place of unloading, and bring to at Stations for boarding Officers.* — Every ship shall come as quickly up to the proper place of mooring or unloading as the nature of the cargo shall require, and without touching at any other place, and in proceeding to such place shall bring to at the place appointed by the commissioners of H. M.'s customs for the boarding of ships by the officers of customs, (see Table at end of this act); and after arrival at such place of mooring or unloading, the ship shall not remove from such place, except directly to some other proper place, and with the sanction of the proper officer of the customs, on penalty of 100*l.*, to be paid by the master of such ship; and always, that it shall be lawful for the commissioners of customs to appoint places to be the places for the mooring or unloading of ships importing tobacco, and where such ships only may be moored or unladen; and in case the place so appointed for the unloading of such ships shall be within some dock surrounded with walls, if any such ship, after having been discharged, shall be taken to any other place, or if any such ship not importing tobacco shall be moored at such place, the master of such ship shall either case forfeit and pay the sum of 20*l.* — § 12.

*Goods unshipped from Vessel, or landed contrary to the Regulations of the Commissioners of Customs, shall be forfeited.* — No goods imported into the U. K. from parts beyond the seas shall be unshipped from the importing vessel to any quay, wharf, or other place, previously to the examination of the goods, except under such rules, regulations, and restrictions as the commissioners of customs may from time to time, with the approbation of the commissioners of H. M.'s treasury, direct and appoint; and any goods unshipped or carried contrary to such rules, regulations, or restrictions, or any of them, shall be forfeited together with the craft or other means used for the conveyance of any such goods; and every person knowingly concerned in the unshipping or carrying of such goods, or to whose hands or to whose use such goods shall knowingly come, contrary to such rules, regulations, and restrictions, shall forfeit and pay a sum of 100*l.*, or treble the value of such goods, at the election of the said commissioners of customs. — § 13.

*Officers to board Ships.* — It shall be lawful for the proper officers of the customs to board any ship arriving at any port in the U. K. or in the Isle of Man, and freely to stay on board until all the cargo laden therein shall have been duly delivered from the same; and such officers shall have free access to every part of the ship, with power to fasten down hatchways, and to mark any goods before laden, and to lock up, seal, mark, or otherwise secure any goods on board such ship; and if any place or

chest be locked, and the keys be withheld, such officers, if they be of a degree superior to tidemen or watermen, may open any such place, box, or chest in the best manner in their power; and if they be tidemen or watermen, or only of that degree, they shall send for their superior officer, who may open or cause to be opened any such place, box, or chest in the best manner in his power; and if any goods be found concealed on board any such ship they shall be forfeited; and if the officers shall place any lock, mark, or seal upon any goods on board, and such lock, mark, or seal be wilfully opened, altered, or broken before due delivery of such goods, or if any of such goods be secretly conveyed away, or if the hatchways, after having been fastened down by the officer, be opened, the master of such ship shall forfeit the sum of 100*l*. — § 14.

*Commissioned Ships having Goods on board, to deliver an Account, or forfeit 100*l*. —* If any ship (having commission from H. M. or from any foreign prince or state) arriving as aforesaid at any port in the U. K. or in the Isle of Man shall have on board any goods laden in parts beyond the seas, the captain, master, purser, or other person having the charge of such ship or of such goods for that voyage shall, before any part of such goods be taken out of such ship, or when called upon so to do by any officer of the customs, deliver an account in writing under his hand to the best of his knowledge of the quality and quantity of every package or parcel of such goods, and of the marks and numbers thereon, and of the names of the respective shippers and consignees of the same, and shall make and subscribe a declaration at the foot of such account declaring to the truth thereof, and shall also truly answer to the collector or comptroller such questions concerning such goods as shall be required of him, and on failure thereof be liable to such searches as merchant ships are liable to, and the officers of the customs may freely enter and go on board all such ships, and bring from thence on shore into the Queen's warehouse any goods found on board any such ship as aforesaid, subject nevertheless to such regulations in respect of ships of war belonging to H. M. as shall from time to time be directed in that respect by the commissioners of the treasury. — § 15.

#### ENTRY.

*After 14 Days, Officer may land Goods not entered, and certain Goods before 14 Days. —* Every importer of any goods shall, within 14 days after the arrival of the ship importing the same, make perfect entry inwards of such goods, or entry by bill of sight in manner herein-after provided, and shall within such time land the same; and in default of such entry and landing it shall be lawful for the officers of customs to convey such goods to the Queen's warehouse; and whenever the cargo of any ship shall have been discharged, with the exception only of a small quantity of goods, it shall be lawful for the officers of the customs to convey such remaining goods and at any time to convey any small packages or parcels of goods to the Queen's warehouse, although such 14 days shall not have expired, there to be kept waiting the due entry thereof during the remainder of such 14 days; and if the duties due upon any goods so conveyed to the Queen's warehouse shall not be paid within 3 months after such 14 days shall have expired, together with all charges of removal and warehouse rent, the same shall be sold, and the produce thereof shall be applied, first to the payment of freight and charges, next of duties, and the overplus (if any) shall be paid to the proprietor of the goods. — § 16.

*If Goods remain on board a Vessel beyond Time allowed by Law. Vessel and Goods may be detained until Expence of guarding Goods be paid. —* Whenever any officer of customs shall have been kept in charge of any goods beyond the time allowed by law for the same being entered and landed, it shall be lawful for such officer to detain the vessel in which such goods shall have been imported, provided the same are remaining on board the vessel, until the expences so incurred shall have been paid to such person as the commissioners of customs shall think fit to appoint to receive the same; and in all cases where the goods shall have been put out of the vessel the person or persons in whose names the same shall have been entered shall pay to the person so appointed as aforesaid all such expences as may have been so incurred by such officer, and such goods shall and may be detained until such expences shall have been paid, and if not paid within one month after demand made in writing of such person or persons by any officer of the customs, the same shall and may be sold, and the proceeds shall be applied, first, to the payment of the freight and charges, next of the duties, next of the expences of such officer, and of the charges attending the seizure and sale of such goods, and the overplus, if any, shall be paid to the proprietor of the goods. — § 17.

*Bill of Entry to be delivered. —* The person entering any goods inwards (whether for payment of duty, or to be warehoused upon the first perfect entry thereof, or for payment of duty upon the taking out of the warehouse, or whether such goods be free of duty,) shall deliver to the collector or comptroller a bill of the entry of such goods, fairly written, or fairly written in part and fairly printed in part, in words at length, expressing the name of the ship and of the master of the ship in which the goods were imported, and of the place from whence they were brought, and the description and situation of the warehouse, if they are to be warehoused, and the name of the person in whose name the goods are to be entered, and the quantity and description of the goods, and the number and denomination or description of the respective packages containing the goods, and in the margin of such bill shall delineate the respective marks and numbers of such packages, and shall pay down any duties which may be payable upon the goods mentioned in such entry; and such person shall also deliver at the same time two or more duplicates, as the case may require, of such bill, in which all sums and numbers may be expressed in figures; and the particulars to be contained in such bill shall be written, or partly written and partly printed, and arranged in such form and manner, and the number of such duplicates shall be such as the collector and comptroller shall require; and such bill, being duly signed by the collector and comptroller, and transmitted to the landing waiter, shall be the warrant to him for the landing and delivering of such goods. — § 18.

*Unauthorized Persons not permitted to make Entries. —* *Proviso. —* Every person who shall make or cause to be made any such entry inwards of any goods, not being duly authorized thereto by the proprietor or consignee of such goods, shall for every such offence forfeit the sum of 100*l*: provided always, that no such penalty shall extend or be deemed to extend to any person acting under the directions of the several dock companies or other corporate bodies authorized by law to pass entries. — § 19.

*Not valid unless agreeing with Manifest, Report, and other Documents. —* No entry, nor any warrant for the landing of any goods, or for the taking of any goods out of any warehouse, shall be deemed valid, unless the particulars of the goods and packages in such entry shall correspond with the particulars of the goods and packages purporting to be the same in the report of the ship, and in the manifest where a manifest is required, and in the certificate or other document where any is required, by which the importation or entry of such goods is authorized, nor unless the goods shall have been properly described in such entry by the denominations and with the characters and circumstances according to which such goods are charged with duty or may be imported, either to be used in the U. K. or to be warehoused for exportation only; and any goods taken or delivered out of any ship or out of any warehouse, or for the delivery of which, or for any order for the delivery of which, from any warehouse, demand shall have been made, not having been duly entered, shall be forfeited. — § 20.

*Goods by Number, Measure, or Weight, &c. —* If the goods in such entry be charged to pay duty according to the number, measure, or weight thereof, such number, measure, or weight shall be stated in the entry; and if the goods in such entry be charged to pay duty according to the value thereof, such value shall be stated in the entry, and shall be affirmed by the declaration of the importer or his known agent written upon the entry, and attested by his signature; and if the goods in such entry be chargeable, at the option of the officers of customs, either according to the number, measure, or weight thereof, or according to the value thereof, then as well such number, measure, or weight, as also such value, shall

be in like manner stated in the entry and attested; and if any person make such declaration, not the importer or proprietor of such goods, nor his agent duly authorised by him, such person shall be liable to the sum of 100*l.*; and such declaration shall be made in manner and form following, and shall be signed upon the person by or on behalf of whom the same shall be made; (that is to say,)

*I A.B. of [place of abode], do hereby declare, that I am [the importer, or proprietor, or authorised by the importer,] of the goods contained in this entry, and that I enter the same [stating which,*

*(if part only) at the sum of \_\_\_\_\_ Witness my hand, the \_\_\_\_\_ day of \_\_\_\_\_ A.B.*

*If Goods under-valued Officers may detain them.*—If upon the examination of any goods for which shall appear to the officers of customs that such goods are not valued according to the true value it shall be lawful for such officers to detain and secure such goods, and within 7 days from the date at which such goods shall be finally examined for duty by the proper officer, if in any port in England within 10 days from such last-mentioned day if in any port in Scotland, Ireland, or the Isle of Man, to take such goods for the use of the Crown; and if a different rate of duty shall be charged upon such goods according as the value of the same shall be described in the entry to be above or to be below the particular price or sum, and such goods shall be valued in the entry so as to be liable to the lower rate of duty, and it shall appear to the officers of the customs that such goods, by reason of their real value, are properly liable to the higher rate of duty, it shall be lawful for such officers, in like manner, to take such goods for the use of the Crown; and the commissioners of customs shall thereupon in any case cause the amount of such valuation, together with an addition of 10*l.* per centum thereon, to be also the duties paid upon such entry, to be paid to the importer or proprietor of such goods, in full satisfaction for the same, and shall dispose of such goods for the benefit of the Crown; and if the price of such sale shall exceed the sums so paid, and all charges incurred by the Crown, one moiety of the surplus shall be given to the officer or officers who had detained and taken the goods, and the other moiety retained for the benefit of the Crown shall be paid into the hands of the collector of the customs, and the knowledge of the comptroller, and be carried to account as duties of customs.—§ 22.

*Value of Goods entered Inwards to be stated in the Entry, &c.*—Whereas it is expedient that accounts may continue to be taken of the value of the imports of certain goods upon which duties have hitherto been charged according to the value thereof, but upon which goods the duties have been assessed; be it enacted, that upon the entry inwards of any such goods the value thereof shall be stated in the entry, and shall be affirmed by the declaration of the importer or his known agent written in the entry, and attested by his signature; and if such declaration be false the person signing the same shall forfeit a sum not exceeding 20*l.*; and it shall be lawful for the landing waiter or other person appointed to examine such goods to call for the invoice, bills of parcels, and such other documents relating thereto as he may think necessary, for ascertaining the true value of the same.—§ 23.

*Bill of Sight, if Goods be not known.*—If the importer of any goods, or his agent, after full communication with him, shall declare before the collector or comptroller that he cannot for want of full information make a full or perfect entry of such goods, and shall make and subscribe a declaration to that effect, it shall be lawful for the collector and comptroller to receive an entry by *Bill of Sight* of such packages or parcels of such goods, by the best description which can be given, and to grant a receipt thereupon, in order that the same may be provisionally landed, and may be seen and examined by the importer in presence of the proper officers; and within 3 days after any goods shall have been so landed the importer shall make a full or perfect entry thereof and shall either pay down all duties which shall be due and payable upon such goods, or shall duly warehouse the same, according to the provisions of the Act in that behalf made, or shall make full or perfect entry of such goods, or for the several parts or sorts thereof, as aforesaid, by bill of sight, such entry shall not be made in manner herein required for the duties of such goods, such goods shall be deemed to be goods landed without due entry thereof, and shall be liable to the like forfeiture accordingly.—§ 24.

*Goods to be taken to Queen's Warehouse; and in One Month may be sold.*—In default of entry within such 3 days such goods shall be taken to the Queen's warehouse by the officers of customs, and if the importer shall not within 1 month after such landing make perfect entry of such goods, and pay the duties thereon, or on such parts as can be entered for home use, together with the charges of removal and of warehouse rent, such goods shall be sold for the payment of such duties and charges, if they be such as cannot be entered for home use, or shall not be worth the duties and charges, and for the payment of such charges, and the overplus, if any, shall be paid to the importer or proprietor thereof.—§ 25.

*Where Goods are entered by Bill of Sight a Deposit equal in Amount to the Duties is to be made.*—In all cases where an entry for landing or examining goods for duty shall be made by bill of sight, the importer or his agent shall, before the same be granted, deposit with the proper officer of the customs a sum of money sufficient in amount to cover the duties payable on the goods intended to be landed by such bill of sight, and shall make and subscribe a declaration that he has not any reason to believe that the duties on the goods will amount to more than the sum deposited.—§ 26.

*Case in which no part of the Goods in a Package shall be delivered without perfect Entry of the Goods.*—If the sum deposited on a bill of sight shall not be equal in amount to the duties payable upon the goods contained in any single package landed or examined thereby, no part shall be delivered without perfect entry or entries is or are made for the whole of the goods contained in such package.—§ 27.

*Importer or Agent to endorse the Bill of Sight with Particulars of the Goods, and sign the same.*—Before any goods in respect of which a bill of sight has been granted shall be delivered out of the custody of the proper officer of the customs, the importer or his agent shall endorse upon the bill of sight granted for landing or examining the same a particular account thereof, to which he shall add his signature and place of abode, with the date of making such endorsement; and such endorsement shall be the bill of sight shall, upon being duly signed by the collector and comptroller, become the receipt for such goods: provided always, that nothing herein contained shall alter or affect any regulations required by law in respect of bills of entry.—§ 28.

*Goods landed by Bill of Sight fraudulently concealed to be forfeited.*—Where any package or parcel shall have been landed by bill of sight, and any goods or other things shall be found in such package or parcel concealed in any way, or packed with intent to deceive the officers of customs, as well as the goods and other things as the package or parcel in which they are found, and all other things contained in such package or parcel, shall be forfeited.—§ 29.

*If Goods damaged on Voyage, an Abatement of Duties to be allowed.*—If any goods which are imported shall be damaged during the voyage, an abatement of such duties shall be allowed in proportion to the damage so received, provided proof be made to the satisfaction of the commissioners of customs, or of any officers of customs acting therein under their directions, that such damage was received after the goods were shipped abroad in the ship importing the same, and before the goods were landed in the U.K., and provided claim to such abatement of duties be made at the time of the examination of such goods.—§ 30.

*Officers to examine Damage, and state Proportion, or choose Two Merchants to assess Damage.*—The officers of the customs shall thereupon examine such goods with reference to such damage, and state the proportion of damage which in their opinion such goods have so received, and make a proportionate abatement of duties: but if the officers of customs be incompetent to estimate the damage, or if the importer be not satisfied with the abatement made by them, the collector or

troller shall choose 2 indifferent merchants experienced in the nature and value of such goods, who shall examine the same, and shall make and subscribe a declaration, stating in what proportion, according to their judgment, such goods are lessened in their value by reason of such damage, and thereupon the officers of customs may make an abatement of the duties according to the proportion of damage so declared by such merchants.—§ 31.

**No Abatement for certain Goods.**—No abatement of duties shall be made on account of any damage received by any of the sorts of goods herein-after enumerated; (that is to say,)

Cantharides,	Guinea grains,	Oranges,	Senna,
Cocoa,	Ipecacuanha,	Pepper,	Sugar,
Coculus indicus,	Jalap,	Raksha,	Tea,
Coffee,	Lemons,	Rhubarb,	Tobacco,
Currants,	Nux vomica,	Sassaaparilla,	Wine.
Figs,	Opium,		

— § 32.

**Returned Goods.**—It shall be lawful to re-import into the U. K. from any place, in a ship of any country, any goods (except as herein-after excepted) which shall have been legally exported from the U. K., and to enter the same by bill of store, referring to the entry outwards, and exportation thereof, provided the property in such goods continue in the person by whom or on whose account the same have been exported, and that such re-importation take place within 6 years from the date of the exportation; and if the goods so returned be foreign goods, which had before been legally imported into the U. K., the same duties shall be payable thereon as would at the time of such re-importation be payable on the like goods under the same circumstances of importation as those under which such goods had been originally imported, or such goods may be warehoused as the like goods might be warehoused upon a first importation thereof; provided always, that the several sorts of goods enumerated or described in the table following shall not be imported into the U. K. for home use upon the ground that the same had been legally exported from thence, but that the same shall be deemed to be foreign goods, whether originally such or not, and shall also be deemed to be imported for the first time into the U. K.; (that is to say,)

*Table of Goods above referred to.*

Corn, grain, meal, flour, and malt:

Goods for which any bounty or any drawback of excise had been received on exportation, unless by special permission of the commissioners of H. M.'s customs, and on repayment of such bounty or such drawback:

All goods for which bill of store cannot be issued in manner herein-after directed, except small remnants of British goods by special permission of the commissioners of H. M.'s customs, upon proof to their satisfaction that the same are British, and had not been sold:

provided also, that tobacco re-imported by bill of store shall be subject to all the restrictions imposed by law upon tobacco imported into the U. K., and shall be liable to forfeiture if imported contrary to such restrictions.—§ 33.

**Bill of Store may be issued by Searcher.**—The person in whose name any goods so re-imported were entered for exportation shall deliver to the searcher at the port of exportation an exact account, signed by him, of the particulars of such goods, referring to the entry and clearance outwards and to the return inwards of the same, with the marks and number of the packages, both inwards and outwards; and thereupon the searcher, finding that such goods had been legally exported, shall grant a bill of store for the same; and if the person in whose name such goods were entered for exportation was not the proprietor thereof, but his agent, he shall declare on such bill of store the name of the person by whom he was employed as such agent; and if the person to whom such returned goods are consigned shall not be such proprietor and exporter, he shall make and subscribe a declaration on such bill of store of the name of the person for whose use such goods have been consigned to him; and the real proprietor, ascertained to be such, shall make and subscribe a declaration upon such bill of store, to the identity of the goods so exported and so returned, and that he was at the time of exportation and of re-importation the proprietor of such goods, and that the same had not during such time been sold or disposed of to any other person; and such declaration shall be made before the collector or comptroller at the ports of exportation and of importation respectively; and thereupon the collector or comptroller shall admit such goods to entry by bill of store, and grant their warrant accordingly: provided always, that where the real proprietor of any such goods shall be absent from the U. K. at the time of such re-importation, such goods, if legally entitled to be entered by bill of store, shall be permitted to be so entered upon production of a declaration subscribed by such real proprietor, setting forth the identity of the goods so exported and so returned, and that he was at the time of exportation from the U. K., and will be at the time of re-importation thereinto, the proprietor of such goods, and that the same have not during such time been sold or disposed of to any other person, such declaration to be made before a British consul, vice-consul, or other British authority residing in or near the place of residence of such real proprietor, and upon such further proof of the identity of the goods as the commissioners of customs shall require, and upon compliance with all the other regulations required by law on the entry of goods by bill of store.—§ 34.

**Surplus Stores subject as Goods.**—The surplus stores of every ship arriving from parts beyond the seas in the U. K. or in the Isle of Man shall be subject to the same duties, and the same prohibitions, restrictions, and regulations as the like sorts of goods shall be subject to when imported by way of merchandise; but if it shall appear to the collector and comptroller that the quantity or description of such stores is not excessive or unsuitable, under all the circumstances of the voyage, it shall be lawful for them to permit such surplus stores to be entered for the private use of the master, purser, or owner of such ship, or of any passenger of such ship to whom any such surplus stores may belong, on payment of the proper duties, or to be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise.—§ 35.

**Goods from Possessions abroad.**—No goods shall be entered as being of or from any British possessions abroad, (if any benefit attach to such distinction), except the territories subject to the government of the presidencies of Fort William in Bengal, Fort St. George, and Bombay respectively, unless the master of the ship importing the same shall have delivered to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, of the due clearance of such ship from thence, containing an account of such goods.—§ 36.

**Power to the Lords of the Treasury to require Certificates of Production.**—It shall be lawful for the Lords of the Treasury, or any 3 or more of them, by any order under their hands, to declare that a certificate of production shall be required upon the exportation of any goods from any British possession abroad or other place, or upon the importation of such goods into the U. K., and to frame such regulations respecting such certificates as they may think fit; and if any goods in respect of which such a certificate shall have been so required, or in respect of which a certificate of production, or any such certificate of clearance as aforesaid, shall be required by any law for the time being in force, shall be imported into the U. K. without such certificate respectively, the same shall be deemed and taken to be of foreign growth, produce, or manufacture; and all goods so deemed and taken to be of foreign growth, produce, or manufacture, and all other goods whatsoever of the growth, produce, or manufacture of foreign countries, which shall henceforth be imported into the U. K. from any British possession abroad, shall be deemed and taken, so far as respects liability to duties, to have been imported from a foreign country: provided always, that all orders of the Lords of the Treasury made in pursuance hereof shall be duly published in the London and Dublin Gazettes 3 times at least within 3 months from the date of such orders respectively.—§ 37.

*Certificate of Growth of Sugar, Coffer, Cocoa, and Spirits.*—Before any sugar, coffee, cocoa, or spirits shall be entered as being the produce of some British possession in America, or the island of Mauritius, the master of the ship importing the same shall deliver to the collector or comptroller a certificate, under the hand of the proper officer of the place where such goods were taken on board, testifying that proof had been made in manner required by law that such goods are of the produce of some British possession in America or of the island of Mauritius, stating the name of the place where such goods were produced, and the quantity and quality of the goods, and the number and denomination of the packages containing the same, and the name of the ship in which they are laden, and of the master thereof; and such master shall also make and subscribe a declaration before the collector or comptroller that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein.—§ 38.

*Certificate of Sugar from Limits of E. I. Company's Charter.*—Before any sugar shall be entered as being the produce of any British possession within the limits of the E. I. Company's charter the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand and seal of the proper officer at the place where such sugar was taken on board, testifying that a declaration in writing, the contents of which he believed to be true, had been made and signed before him by the shipper of such sugar, that the same was really and *bona fide* the produce of such British possession; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such sugar was taken on board, and that the sugar so imported is the same as is mentioned therein.—§ 39.

*East India Sugar warehoused at the Cape of Good Hope, and imported from thence.*—If any sugar the produce of any British possession within the limits of the E. I. Company's charter shall have been imported into the Cape of Good Hope from the place of its production, accompanied by such a certificate of origin as would be sufficient for its admission in the U. K. at the rate of duty payable upon such sugar if imported direct from the place of its production, and shall have been warehoused at the Cape of Good Hope under the regulations there in force for the warehousing of goods, and shall have been exported from such warehouse accompanied by a certificate from the proper officer of the customs at the Cape of Good Hope, setting forth the particulars of the importation, and of the warehousing, and of the exportation of the same, and also setting forth the substance of the certificate of origin before mentioned, and if on the arrival in the U. K. of the ship importing such sugar the master of such ship shall deliver to the collector or comptroller at the port of importation such certificate from the officer of the customs at the Cape of Good Hope, and shall make and subscribe a declaration before such collector or comptroller that such certificate was received by him at the Cape of Good Hope, and that the sugar so imported is the same as is mentioned therein, then such sugar shall be admitted at such port of importation in the U. K. at the same rate of duty as would be payable if the same had been imported direct from the place of its production.—§ 40.

*Certificate of Wine, Produce of Cape of Good Hope.*—Before any wine shall be entered as being the produce of the Cape of Good Hope the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer at the Cape of Good Hope, testifying that proof had been made in manner required by law that such wine is of the produce of the Cape of Good Hope or the dependencies thereof, stating the quantity and sort of such wine, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the Cape of Good Hope, and that the wine so imported is the same as is mentioned therein.—§ 41.

*Goods of Guernsey, Jersey, &c.*—Any goods of the growth of the islands of Guernsey, Jersey, Alderney, Sark, or Man, and any goods manufactured in the said islands from materials of the growth of the said islands, or from materials not subject to duty in the U. K., or from materials upon which the duty has been paid in the U. K., and upon which no drawback has subsequently been granted, and any manufactures of linen or cotton made in and imported from the Isle of Man, may be imported into the U. K. from the said islands respectively, without payment of any duty; and such goods shall not be deemed to be included in any charge of duties imposed by any act hereafter to be made on the importation of goods generally from parts beyond the seas: provided always, that such goods may nevertheless be charged with any proportion of such duties as shall fairly countervail any duties of excise, or any coast duty, payable on the like goods the produce of the part of the U. K. into which they shall be imported, or payable upon any of the materials from which such goods are manufactured; provided also, that all goods manufactured in any of the said islands from any other materials than the materials aforesaid, except manufactures of linen and cotton made in and imported from the Isle of Man as aforesaid, shall be deemed and taken to be foreign goods.—§ 42.

*Master to deliver Certificate of Produce, and declare to be Imported.*—Before any goods shall be entered as being the produce of the said islands (if any benefit attach to such distinction) the master of the ship or vessel importing the same shall deliver to the collector or comptroller a certificate from the governor, lieutenant-governor, or commander-in-chief of the island from whence such goods were imported, that proof had been made, in manner required by law, that such goods were of the produce of such island, stating the quantity and quality of the goods, and the number and denomination of the packages containing the same; and such master shall also make and subscribe a declaration before the collector or comptroller, that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as are mentioned therein.—§ 43.

*Treasury may permit Produce of Colonial Fisheries to be Imported from Guernsey.*—It shall be lawful for the commissioners of the treasury, when and so long as they shall see fit, to permit any goods the produce of the British possessions or fisheries in North America, which shall have been legally imported into the islands of Guernsey or Jersey direct from such possessions, to be imported into the U. K. for home use direct from those islands, under such regulations as the said commissioners shall direct, any thing in the law of navigation to the contrary notwithstanding.—§ 44.

*Vessels with Stone from Guernsey, &c. not to be piloted.*—No vessel arriving on the coast of England from Guernsey, Jersey, Alderney, Sark, or Man, wholly laden with stone the production thereof, shall be liable to be conducted or piloted by pilots appointed and licensed by the corporation of the Trinity House of Dorchester under any law, custom, or usage to the contrary notwithstanding.—§ 45.

*Fish, British taking and Imported Lobsters, free of Duty on Importation.*—Fresh fish of every kind, of British taking and imported in British ships, and fresh lobsters, however taken or in whatever ship imported, and cured fish of every kind of British taking and curing, imported in British ships, shall be imported free of all duties, and shall not be deemed to be included in any charge of duty imposed by any act hereafter to be made on the importation of goods generally: provided always, that before any cured fish shall be entered free of duty, as being of such taking and curing, the master of the ship importing the same shall make and subscribe a declaration before the collector or comptroller that such fish was actually caught and taken in British ships, and cured by the crews of such ships, or by H. M.'s subjects.—§ 46.

*Certificate of Blubber, Train Oil, &c. British Colonial taking.*—Before any blubber, train oil, spermaceti oil, head matter, or whale fins shall be entered as being the produce of fish or creatures living in the sea, taken and caught wholly by H. M.'s subjects usually residing in some part of H. M.'s dominions, and imported from some British possession, the master of the ship importing the same shall deliver to the collector or comptroller a certificate under the hand of the proper officer of such British possession where such goods were taken on board, (or if no such officer be residing there, then a certificate under the hands of 2 principal inhabitants at the place of shipment,) notifying that a declaration had been

made before him or them by the shipper of such goods, that the same were the produce of fish or creature, living in the sea taken wholly by British vessels owned and navigated according to law; and such master shall also make and subscribe a declaration before the collector or comptroller that such certificate was received by him at the place where such goods were taken on board, and that the goods so imported are the same as mentioned therein; and the importer of such goods shall also make and subscribe a declaration before the collector or comptroller, at the time of entry, that to the best of his knowledge and belief the same were the produce of fish or creatures living in the sea taken wholly by British vessels in manner aforesaid. — § 47.

*Before Entry of Blubber, &c. of British Fishing, Master and Importer to make Declarations of the same.* — Before any blubber, train oil, spermaceti oil, head matter, or whale fins, imported direct from the fishery shall be entered as being the produce of fish or creatures living in the sea taken and caught wholly by the crews of British ships cleared out from the U. K., or from any British possession, the master of such ship importing such goods shall make and subscribe a declaration, and the importer of such goods (to the best of his knowledge and belief) shall make and subscribe a declaration, that the same are the produce of fish or creatures living in the sea taken and caught wholly by the crew of such ship, or by the crew of some other British ship (naming the ship) cleared out from the U. K. or from any British possession (stating which of such possessions). — § 48.

*Importation direct.* — No goods shall be deemed to be imported from any particular place unless they be imported direct from such place, and shall have been there laden on board the importing ship, either as the first shipment of such goods, or after the same shall have been actually landed at such place. — § 49.

*Goods the Property of the Crown sold after Importation charged with Duty.* — All goods, wares, and merchandize, the property of the Crown, shall, in case of the sale thereof after importation into the U. K., be liable to and be charged with such and the same duties of customs as may be by law payable or charged on the like goods, wares, and merchandize not being the property of the Crown. — § 50.

*Foreign Goods derelict, &c. and Droits of Admiralty, to be subject to the same Duties as on Importation.* All foreign goods, derelict, jettam, flotsam, and wreck brought or coming into the U. K. or into the Isle of Man, and all droits of admiralty sold in the U. K., shall at all times be subject to the same duties as goods of the like kind imported into the U. K. or the Isle of Man respectively are subject to: provided always, that if, for ascertaining the proper amount of duty so payable, any question shall arise as to the origin of any such goods, the same shall be deemed to be of the growth, produce, or manufacture of such country or place as the commissioners of customs shall, upon investigation by them, determine. — § 51.

*An Abatement of Duty to be made in respect of certain wrecked Goods damaged.* — It shall be lawful for the commissioners of customs, or for the officers of customs acting under their directions, to inquire into and receive proof of the extent to which any such goods may have been damaged, and to make such abatement of the duties payable thereon as to them shall appear to bear a just proportion to the damage so ascertained: provided always, that no such abatement shall be made in respect of any of the goods following, viz.: —

Cantharides,	Guinea grains,	Oranges,	Spirits,
Cocos,	Ipecacuanha,	Pepper,	Sugar,
Cocculus indicus,	Jalap,	Raisins,	Tea,
Coffee,	Le-mons,	Rhubarb,	Tobacco, and
Currants,	Nux vomica,	Sarsaparilla,	Wine.
Figs,	Opium,	Senna,	§ 52.

*Persons having such Goods in possession, without Notice, &c. liable to a Penalty of 100*l*.* — If any person shall have possession of any foreign goods, derelict, jettam, flotsam, or wreck, either on land or within any port in the U. K., and shall not give notice thereof to the proper officer of the customs within 24 hours after such possession, or shall not on demand pay the duties due thereon, or deliver the same into the custody of the proper officer of the customs, such person shall forfeit the sum of 100*l*.; and if any person shall remove or alter in quantity or quality any such goods, or shall open or alter any package containing any such goods, or shall cause any such act to be done, or assist therein, before such goods shall be deposited in a warehouse in the custody of an officer of the customs, every such person shall forfeit the sum of 100*l*.; and in default of the payment of the duties on such goods within 18 months from the time when the same were so deposited, the same may be sold in like manner and for the like purposes as goods imported may in such default be sold: provided always, that any lord of the manor having by law just claim to such goods, or if there be no such lord of the manor, then the person having possession of the same, shall be at liberty to retain the same in his own custody, giving bond, with 2 sufficient sureties, to be approved by the proper officer of the customs, in treble the value of such goods, for the payment of the duties thereon at the end of 1 year and 1 day, or to deliver such goods to the proper officer of the customs in the same state and condition as the same were in at the time of taking possession thereof. — § 53.

*Goods reported to Customs as Jettam, &c., not claimed within 12 Months, to be deemed Droits of Admiralty.* — Whereas such goods, if not claimed by the owner within the period limited by law, belong of right to H. M. and her office of Admiralty, but by reason of the smallness of their value would, if prosecuted to condemnation in the high court of admiralty in England and Ireland respectively, be wholly unproductive; be it therefore enacted, that whenever any such goods, whether picked up at sea or on the shore within the flow of the sea, shall be reported to the officers of the customs, notice thereof shall be forthwith given by them, if in Great Britain or the Isle of Man, to the receiver general of droits of admiralty, and if in Ireland to the Queen's proctor of admiralty; and all such goods shall be placed at their disposal respectively, as the case may be, subject, however, to the payment of the duties with which they shall be respectively chargeable; and in case the rightful owner thereof shall prove his claim thereto to the satisfaction of the said receiver general or Queen's proctor, as the case may be, within the period of 12 calendar months from the day on which they shall be so reported, such goods shall be restored to the owner, on payment of the duties and necessary charges attending the care of the same, and a reasonable compensation to the amount of one third of the net value (after abating the duties and charges aforesaid) to the salvors thereof; but if no such claim shall be established within the period aforesaid, then such goods shall be deemed and taken to be condemned to H. M. as droits of admiralty, and may be sold by the said receiver general or Queen's proctor, without any process from the high courts of admiralty respectively, and the net proceeds thereof, after payment of duties, salvage, and other charges as aforesaid, shall be disposed of by them respectively, and carried to the credit of the consolidated fund, in like manner as droits of admiralty are by an act passed in the 1st year of the reign of H. M. King William the Fourth, for the support of H. M.'s household, and the honour and dignity of the Crown, directed to be applied, any thing in any act or acts contained, or any law, statute, or usage, to the contrary thereof notwithstanding. — § 54.

*Goods under Excise Permit Regulations.* — Whereas it may be expedient to subject some sorts of goods imported into the U. K. to certain internal regulations and restraints after the full duties of customs have been paid thereon, and to place such regulations and restraints under the management of the commissioners of excise; be it therefore enacted, that no goods which are subject to any regulations of excise shall be taken or delivered out of the charge of the officers of customs (although the same may have been duly entered with them, and the full duties due thereon may have been paid,) until such goods shall also have been duly entered with the officers of excise, and permit, where such permit is by law required, granted by them for delivery of the same, nor unless such permit shall correspond in all particulars with the warrant of the officers of the customs: provided always, that such entry shall not be

received by the officers of the excise, nor such permit granted by them, until a certificate shall be produced to them of the particulars of the goods, and of the warrant for the same, under the hands of the officers of the customs who shall have the charge of the goods: provided also, that if upon any such certificate it shall appear necessary, it shall be lawful for the proper officers of excise to attend the delivery of the goods by the officers of the customs, and to require that such goods shall be delivered only in the presence; and it shall be lawful for such officers of excise to count, measure, gauge, or weigh any such goods, and fully to examine the same, and to proceed in all respects relating to such goods in such manner as they shall be authorized or required by any act for the time being in force relating to excise. — § 55.

*Commissioners of Customs may direct certain Goods to be stamped.*—Whereas by the laws now in force certain articles subject to an inland duty of excise are required to be stamped, to denote the payment of such duty; and to prevent fraud in the evasion of such duty it is expedient that foreign articles of similar description, when imported into the U. K., should be stamped with such mark or stamp as the commissioners of customs may deem necessary, in order to distinguish the foreign from the home article; be it therefore enacted, that it shall and may be lawful for the commissioners of customs, they are hereby authorized, after any goods have been entered at the custom-house, and before they shall be discharged by the officers, and delivered into the custody of the importer or his agent, to stamp such goods in such manner and form as they may deem fit and proper for the security of the revenue, and by such officer as they shall direct and appoint for that purpose. — § 56.

*Orders for stamping Goods to be published.*—Every order made by the said commissioners of customs in respect of marking or stamping any goods shall be published in the London Gazette and in the London Gazette. — § 57.

*Penalty on forging such Stamps, 200l.*—If any person or persons shall at any time forge or counterfeit any mark or stamp to resemble any mark or stamp which shall be provided and used for the purpose of this act, or shall forge or counterfeit the impression of any such mark or stamp, or shall sell or expose for sale, or have in his, her, or their custody or possession, any goods with a counterfeit mark or stamp, knowing the same to be counterfeit, or shall use or affix any such mark or stamp to any other goods, or shall require to be stamped as aforesaid other than that to which the same was originally affixed, all such offenders or offenders, and his, her, or their aiders, abettors, and assistants, shall for every offence forfeit and pay the sum of 200l. — § 58.

*Times and Places for landing Goods.*—No goods whatever (except diamonds, bullion, fresh fish, British taking and imported in British ships, and lobsters,) shall be shipped from any ship or vessel from parts beyond the sea, or landed or put on shore, but only on days not being Sundays or holidays, and in the daytime, (that is to say,) from the 1st day of September until the last day of March, from sun-rising and sun-setting, and from the last day of March to the 1st day of September between the hours of 7 of the clock in the morning and 4 of the clock in the afternoon; nor shall any goods except as aforesaid, be so unshipped or landed unless in the presence or with the authority of the proper officer of the customs; and such goods, except as aforesaid, shall be landed at 1 of the legal wharves appointed for the landing of goods, or at some wharf, quay, or place appointed by the commissioners of customs for the landing of goods by sufferance; and that no goods, except as aforesaid, after having been unshipped, shall be transhipped, or after having been put into any boat or craft to be landed shall be moved into any other boat or craft previously to their being duly landed, without the permission in writing of the proper officer of the customs. — § 59.

*Goods to be unshipped, &c. at the Expence of Importer.*—The unshipping, carrying, and landing of goods, and the bringing of the same to the proper place after landing, for examination or for weighing, and the putting the same into the scales, and the taking of the same out of and from the scales, and the weighing, shall be performed by or at the expence of the importer. — § 60.

*Foreign Fish to be landed and entered under the Order of Commissioners of Customs.*—The places, and manner of landing foreign fish imported into the U. K., and of reporting and entering the same, and of paying the duties due thereon, shall be subject to such regulations and directions as the commissioners of customs shall from time to time make respecting the same; and all foreign fish laden from any vessel contrary to any such regulations and directions shall be forfeited. — § 61.

*Timber to be piled at the Expence of the Importer so as to enable the Officer of Customs to measure.*—The importer or person entering timber or wood to be charged with duty by measurement, shall, at his expence, sort, pile, frame or otherwise place the same in such manner as the commissioners of customs may deem necessary to enable the officers to measure and take a true and correct account of the same, and in all such cases, when the same is measured in bulk, the measurement shall be taken to the full extent of the pile, and no allowance shall be made by the officers on account of the intervals arising out of such process of sorting, piling, framing, or placing: provided always, that all the boards, deals, and planks exceeding 2l feet in length may be measured by the piece, and the quantity thereof taken separately. — § 62.

#### PROHIBITIONS AND RESTRICTIONS.

*Prohibitions and Restrictions, absolute or modified.*—The several sorts of goods enumerated and described in the table following, denominated "A Table of Prohibitions and Restrictions Inwards," either be absolutely prohibited to be imported into the U. K., or shall be imported only under such restrictions mentioned in such table, according as the several sorts of such goods are respectively so therein; viz.

#### A TABLE OF PROHIBITIONS AND RESTRICTIONS INWARDS.

##### A List of Goods absolutely prohibited to be imported.

Arms, ammunition, and utensils of war, by way of merchandise, except by licence from H. M. for furnishing H. M.'s public stores only.	not having the name and place of some foreign maker abroad visible and permanently engraved on the frame, and the face, or not being in a complete state of repair, and not being fitted with all the parts properly fixed in the frame.
Articles of foreign manufacture, and any packages of such articles, bearing any names, brands, or marks purporting to be the names, brands, or marks of manufacturers resident in the U. K.	Coin; viz. false money or counterfeit sterling silver, of the realm, or any money purporting to be such, not being of the established standard in weight or fineness.
Books, wherein the copyright shall be subsisting, first composed or written or printed in the U. K., and printed or re-printed in any other country, as to which the proprietor of such copyright or his agent shall have given to the commissioners of customs a notice in writing that such copyright subsists, such notice also stating when such copyright will expire.	Goods from the Isle of Man, except such as the growth, produce, or manufacture of the U. K., and except corn, grain, or flour.
Paper printed on in the English language.	Gunpowder, except by licence from H. M. for furnishing H. M.'s stores only.
Clocks and watches of any metal, impressed with any mark or stamp, appearing to be or to represent any legal British assay, mark, or stamp, or purporting by any mark or appearance to be of the manufacture of the U. K.,	Malt.
	Snuff-work.
	Spirits from the Isle of Man.
	Tobacco stalks stripped from the leaf, whether manufactured or not.
	Tobacco stalk flour.

*List of Goods subject to certain Restrictions on Importation.*

Fish of foreign taking, and all train oil, blubber, spermaceti oil, head-matter, skulls, bones, and fins, the produce of fish or creatures living in the sea, except anchovies, eels, turbot, and lobsters, unless in vessels which shall have been cleared out regularly with such fish on board from some foreign port.

Goods of places within the limits of the E. I. Company's charter, unless into ports approved of by the lords of the treasury, and declared by order in council to be fit and proper for such importation.

Gloves of leather, unless in ships of 60 tons burden or upwards, and in packages each containing 100 dozen pairs of such gloves at least.

Hides, skins, horns, or hoofs, or any other part of cattle or beast, H. M. may by order in council prohibit, in order to prevent any contagious distemper.

Parts of articles; viz. any distinct or separate part of any article not accompanied by the other part or all the other parts of such article, so as to be complete and perfect, if such article be subject to duty according to the value thereof.

Silk; viz. manufactures of silk, being the manufactures of Europe, unless into the ports of London, Liverpool, Hull, or Southampton, or ports appointed by the commissioners of the treasury, or into the port of London direct from Bourdeaux, or into the port of Dover direct from Calais or Boulogne, and unless in ships of 60 tons burden or upwards.

Spirits, not being perfumed or medicinal spirits, unless in ships of 60 tons burden at least, also unless in casks or other vessels capable of containing liquids, each of such casks or other vessels being of the size or content of 30 gallons at the least, or in glass bottles or stone bottles not exceeding the size of quart bottles, and being really part of the cargo of the ship in which the same are imported, and included in the manifest or other papers enumerating or descriptive of the cargo thereof.

Tea, unless from the Cape of Good Hope, or from places eastward of the same to the Straits of Magellan.

Tobacco and Snuff; viz. unless in ships of 120 tons burden or upwards:

also unless in hogheads, casks, chests, or cases containing 300 lbs. weight of tobacco or snuff each at least, not being separated or divided in any manner within the cask or package; except that tobacco of the dominions of the Turkish empire may be packed in inward bags or packages, or separated or divided in any manner, provided the outward package be a hoghead, cask, chest, or case containing at least 300 lbs. net weight of tobacco.

tobacco and snuff from the East Indies, unless in hogheads, casks, chests, or cases each of which shall contain at least 100 lbs. net weight of tobacco or snuff.

cigars, unless in packages containing 100 lbs. weight of cigars at least.

tobacco the produce of Mexico, or the produce of South America or the islands of St. Domingo or Cuba, imported direct from those places respectively, or from the warehouse in Jamaica, or some other British possession in America, unless in packages each containing at least 80 lbs. net weight of such tobacco.

Negrohead tobacco the produce of and imported from the United States of America in packages each containing at least 150 lbs. net weight of such tobacco.

and unless into the ports of London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Whitehaven, Hull, Port Glasgow, Greenock, Glasgow, Aberdeen, Leith, Newcastle-upon-Tyne, Plymouth, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford;

or into some other port or ports which may hereafter be appointed for such purpose by the commissioners of the treasury; such appointments in Great Britain being published in the London Gazette, and such appointments in Ireland being published in the Dublin Gazette;

but any ship wholly laden with tobacco may come into the ports of Cowes or Falmouth to wait for orders, and there remain 14 days, provided due report of such ship be made by the master with the collector or comptroller of such port.

And if any goods shall be imported or brought into the U. K. contrary to any of the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited.—§ 63.

*But Goods may be warehoused for Exportation only, although prohibited.*—Any goods, of whatsoever sort, may be imported into the U. K. to be warehoused under the regulations of any act in force for the time being for the warehousing of goods, without payment of duty at the time of the first entry thereof, or notwithstanding that such goods may be prohibited to be imported into the U. K. to be used therein, except the several sorts of goods enumerated or described in manner following: (that is to say,) goods prohibited on account of the package in which they are contained, or the tonnage of the ship in which they are laden; arms, ammunition, or utensils of war; gunpowder; infected hides, horns, hoofs, skins, or any other part of any cattle or beast; counterfeit coin or tokens; books, wherein the copyright will be subsisting, first composed or written or printed in the U. K., and printed or reprinted in any other country, as to which the proprietor of such copyright or his agent shall have given to the commissioners of customs a notice in writing that such copyright subsists, such notice also stating when such copyright will expire; copies of prints first engraved, etched, drawn or designed in the U. K.; copies of casts or sculptures or models first made in the U. K.; clocks or watches, being such as are prohibited to be imported for home use.—§ 64.

*Certain Goods to be entered to be warehoused for Exportation only.*—If by reason of the sort of any goods, or of the place from whence or the country or navigation of the ship in which any goods have been imported, they be such or be so imported as that they may not be used in the U. K., they shall not be entered except to be warehoused, and it shall be declared upon the entry of such goods that they are entered to be warehoused for exportation only.—§ 65.

## ENTRY OUTWARDS.

*Goods not to be shipped till Entry of Ship and Entry of Goods and Cocket granted, nor till cleared.*—Whereas it is expedient that the officers of customs should have full cognisance of all ships departing from any port or place in the U. K. or in the Isle of Man for parts beyond the seas, and of all goods taken out of the U. K. or out of the Isle of Man; and it is therefore necessary to make regulations for the entering and clearing outwards of all such ships, and for the entering, clearing, and shipping of all such goods; be it therefore enacted, that no goods shall be shipped, or waterborne to be shipped on board any ship in any port or place in the U. K., or in the Isle of Man, to be carried to parts beyond the seas, before due entry outwards of such ship and due entry of such goods shall have been made, and cocket granted, nor before such goods shall have been duly cleared for shipment in manner herein-after directed; and that no stores shall be shipped for the use of any such ship bound to parts beyond the seas, nor shall any goods be deemed or admitted to be such stores, except such as shall be borne upon the victualling bill duly granted for such ship; and that no goods shall be so shipped, or waterborne to be so shipped, except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods and stores which shall be shipped, or be waterborne to be shipped, contrary hereto, shall be forfeited.—§ 66.

*Ships to be cleared, or Master to forfeit 100l.*—No ship on board of which any goods or stores shall have been shipped in any port in the U. K. or in the Isle of Man for parts beyond the seas shall depart from such port until such ship shall have been duly cleared outwards for her intended voyage in manner herein-after directed, under forfeiture of the sum of 100l. by the master of such ship.—§ 67.

*Victualling Bill for Stores.*—The master of every ship which is to depart from any port in the U. K. or in the Isle of Man for parts beyond the seas shall, upon due application made by him, receive from the searcher a victualling bill for the shipment of such stores as he shall require, and as shall be allowed

by the collector and comptroller, for the use of such ship, according to the voyage upon which about to depart; and no articles taken on board any ship shall be deemed to be stores except shall be borne upon the victualling bill for the same.—§ 68.

*Master to deliver Certificate of Clearance of last Voyage, and to make Entry Outwards.*—The of every ship in which any goods are to be exported from the U. K. or from the Isle of Man beyond the seas shall, before any goods be taken on board, deliver to the collector or comptroller a certificate from the proper officer of the clearance inwards or coastwise of such ship of her last specifying what goods, if any, have been reported inwards for exportation, and shall also deliver collector or comptroller an account, signed by the master or his agent, of the entry outwards ship for her intended voyage, setting forth the name and tonnage of the ship, the name of the person to whom she belongs if a British ship, or of the country if a foreign ship, the name of the master, the name or names of the place or places for which she is bound, if any goods are to be shipped for that port and the name of the place in such port at which she is to take in her lading for such voyage; and ship shall have commenced her lading at some other port, the master shall state the name of a place at which any goods have been laden, and shall produce a certificate from the searcher that the goods for such goods have been delivered to him; and the particulars of such account shall be written up and arranged in such form and manner as the collector and comptroller shall require; and such account shall be the entry outwards of such ship, and shall be entered in a book to be kept by the collector or comptroller, and information of all parties interested; and if any goods be taken on board any ship before she has been entered outwards, the master shall forfeit the sum of 100*l.*: provided always, that where it becomes necessary to lade any heavy goods on board any ship before the whole of the inward cargo has been discharged, it shall be lawful for the collector and comptroller to issue a *Stiffening Order* for that purpose previous to the entry outwards of the ship.—§ 69.

*Bill of the Entry to be delivered. Particulars.*—The person entering outwards any goods to be exported to parts beyond the seas from any port in the U. K. or in the Isle of Man shall deliver to the collector or comptroller a bill of the entry thereof, fairly written, or fairly written in part and printed in part, in words at length, expressing the name of the ship and of the master, and of the person to whom the goods are to be exported, and of the person in whose name the goods are to be entered, and the quantities and proper denominations or descriptions of the several sorts of goods, and shall also deliver any duties which may be due upon the exportation of any such goods; and such person shall deliver at the same time one or more duplicates of such bill in which all sums and numbers may be expressed in figures; and the particulars to be contained in such bill shall be arranged in such form and manner, and the number of such duplicates shall be such as the collector and comptroller shall require; and thereupon the collector and comptroller shall cause a cocket to be written for such goods, and shall be known that such goods have been so entered; and every cocket shall be signed by such collector or comptroller, and be delivered to the person who shall have made such entry, and such person shall be responsible for the proper use of the same.—§ 70.

*Goods for Drawback or Bounty.*—If any drawback or bounty be allowable upon the exportation of such goods, or any duty be payable thereon, or any exemption from duty claimed, or if any such goods be exportable only according to some particular rule or regulation, or under some restriction or condition, or for some particular purpose or destination, such goods shall be entered and cleared for ships or for such denominations or descriptions as are used, mentioned, or referred to in the granting of such drawback or bounty, or in the levying of such duty, or granting such exemption, or in the directing of such rules, regulations, restrictions, conditions, purpose, or destination.—§ 71.

*Manner of Entry for Drawback, or from Warehouse.*—The person intending to enter outwards any foreign goods for drawback, at any other port than that at which the duties inwards on such goods were paid, shall first deliver to the collector or comptroller of the port where the duties on such goods were paid 2 or more bills, as the case may require, of the particulars of the importation of such goods, and of the entry outwards intended to be made; and thereupon the collector or comptroller, if he agrees with the entry inwards, shall write off such goods from the same, and shall issue a certificate of such entry, with such particulars thereof as shall be necessary for the computation of drawback allowable on such goods, and setting forth in such certificate the destination of the goods, the person in whose name they are to be entered for exportation, and also the name of such other person, and such certificate, together with 2 or more bills of the same, as the case may require, in which all sums and numbers may be expressed in figures, being delivered to the collector or comptroller of the port from which the goods are to be exported, shall be the entry outwards of such goods; and the collector and comptroller shall thereupon cause a cocket to be written and delivered for such goods in manner herein-before directed.—§ 72.

*No Drawback on Tobacco not properly manufactured.*—No drawback shall be allowed on any tobacco which shall not have been wholly manufactured from tobacco on which the full duty on importation has been paid, nor on any tobacco which shall be mixed with dirt or rubbish or any other ingredients, and every person who shall enter or ship, or cause to be entered or shipped, or produce or cause to be produced to any officer of customs to be shipped, for exportation or for stores, any tobacco not entitled to drawback, with intent unduly to obtain any drawback thereon, or any greater drawback than he is otherwise entitled to, shall, over and above all other penalties which he may thereby incur, be liable to treble the amount of the drawback sought to be obtained, or 200*l.* at the election of the commissioners of customs; and all such tobacco shall be forfeited, and may be seized by any officer of customs.—§ 73.

*Goods not entitled to Drawback if of less Value than claimed.*—No drawback shall be allowed on the exportation of any goods entered for drawback or as stores which shall be of less value than the value of the drawback claimed, and all such goods so entered shall be forfeited, and the person who shall have entered such goods to be entered shall forfeit the sum of 200*l.*, or treble the amount of the drawback claimed in such case, at the election of the commissioners of customs.—§ 74.

*On Entry Outwards of Goods entitled to Drawback, Bond for due exporting shall be given.*—Upon the entry outwards of any goods, except wine, upon which a drawback of the duties paid upon the importation thereof is allowed, and before cocket is granted, the person in whose name the same are entered shall give security by bond in double the amount of such duties, with one sufficient surety, that the goods shall be duly shipped and exported to and shall be landed at the place for which they shall be entered outwards, or otherwise accounted for to the satisfaction of the commissioners of customs, within reasonable time, to be fixed by the said commissioners with reference to the place of exportation.

*Stamp on Plate Bond reduced.*—All bonds given to prevent the relanding of plate in respect of any drawback shall be allowed upon the exportation thereof shall be liable only to the same duties of stamp as any bonds given for or in respect of the duties of customs, or for preventing frauds or evasions of duties, are or shall be liable to under any act for the time being in force for granting duties of stamps.

*Coals, Export Bond to British Possessions.*—No cocket shall be granted for the exportation of coals to any British possession in a foreign ship until the exporter thereof shall have given security by bond in a penal sum of double the amount of the duty payable on the exportation of such coals, on condition that the same shall be landed at the place for which they shall be exported, or otherwise accounted for to the satisfaction of the commissioners of the customs, and also with condition to be fixed within such time as the said commissioners shall require, to be expressed in such bond, a certificate of the landing of such coals at such place, under the hand of the collector or comptroller or other officer at such place: provided always, that the bond so to be given in respect of coals shall not be liable to any duty of stamps.—§ 77.

## CLEARANCE OF GOODS.

**Packages to be endorsed on Cocket.**—Before any part of the goods for which any cocket shall have been granted shall be shipped, or waterborne to be shipped, the same shall be duly cleared for shipment with the searcher; the particulars of the goods for each clearance shall be endorsed on such cocket, together with the number and denomination or description of the respective packages containing the same; and in the margin of each such endorsement shall be delineated the respective marks and numbers of such packages; and to each such endorsement shall be subjoined in words at length an account of the total quantities of each sort of goods intended in such endorsement, and the total number of each sort of package in which such goods are contained, distinguishing such goods, if any, as are to be cleared for any bounty or drawback of excise or customs, and also such goods, if any, as are subject to any duty on exportation, or entitled to any exemption from such duty, and also such goods, if any, as can only be exported by virtue of some particular order or authority, or under some particular restriction or condition, or for some particular purpose or destination; and all goods shipped, or waterborne to be shipped, not being duly cleared as aforesaid, shall be forfeited.—§ 78.

**Production of Cocket.**—The person clearing such goods for shipment shall upon each occasion produce the cocket so endorsed to the searcher, and shall also deliver a shipping bill, or copy of such endorsement, referring by names and date to the cocket upon which such endorsement is made, and shall obtain the order of the searcher for the shipment of such goods; and the particulars to be contained in such endorsement and in such shipping bill shall be written and arranged in such form and manner as the collector and comptroller shall require.—§ 79.

**Coals brought Coastwise may be exported without landing.**—If any coals shall have been brought coastwise from one port of the U. K. to another, and the master shall be minded to proceed with such coals or any part of them to parts beyond the seas, it shall be lawful for such master to enter such ship and such coals outwards for the intended voyage without first landing the coals intended for exportation, provided the officers of the customs shall be satisfied that the quantity of coals left on board does not exceed the quantity so entered outwards.—§ 80.

**Account of Value of Exports to be delivered to the Searcher.**—Upon the clearance for shipment of any goods the produce or manufacture of the U. K. an account containing an accurate specification of the quantity, quality, and value of such goods, together with a declaration to the truth of the same, signed by the exporter or his known agent, shall be delivered to the searcher by the person clearing such goods; and if such declaration be false the person signing the same shall forfeit the sum of twenty pounds; and it shall be lawful for the searcher to call for the invoice, bills of parcels, and such other documents relating to the goods as he may think necessary for ascertaining the true value of the same: provided always, that if such exporter or agent shall make and subscribe a declaration before the collector or comptroller, that the value of the goods cannot be ascertained in time for the shipment of the same, and such declaration shall be delivered to the searcher at the time of clearance, a further time of 3 months shall be allowed for the delivery of such separate shipping bill, on failure whereof such exporter or agent shall forfeit the sum of 20*l.*—§ 81.

**Goods for Excise Draught.**—No drawback of excise shall be allowed upon any goods so cleared unless the person intending to claim such drawback shall have given due notice to the officer of excise, in form and manner required by any law in force relating to the excise, and shall have obtained and have produced to the searcher at the time of clearing such goods a proper document under the hand of the officer of excise, containing the necessary description of the goods for which such drawback is to be claimed: and if the goods to be cleared and shipped under the care of the searchers shall, upon examination, be found to correspond in all respects with the particulars of the goods contained in such document, and such goods shall be duly shipped and exported, the searcher shall, if required, certify such shipment upon such document, and shall transmit the same to the officer of excise.—§ 82.

**Officer of Excise may attend Examination.**—It shall be lawful for the officer of excise, if he see fit, to attend and assist at such examination, and to mark or seal the packages, and to keep joint charge of the same, together with the searcher, until the same shall have been finally delivered by him into the sole charge of the searcher, to be shipped and exported under his care.—§ 83.

**Goods for Duty, Bounty, or Drawback, &c. brought for Shipment.**—If any goods which are subject to any duty or restriction in respect of exportation, or if any goods which are to be shipped for any drawback or bounty shall be brought to any quay, wharf, or other place, to be shipped for exportation, and such goods shall not agree with the endorsement on the cocket, or with the shipping bill, the same shall be forfeited; and if any goods prohibited to be exported be found in any package brought as aforesaid, such package and every thing contained therein shall be forfeited.—§ 84.

**Searcher may open any Package, but if correct, must repack.**—It shall be lawful for the searcher to open all packages, and fully to examine all goods shipped or brought for shipment at any place in the U. K. or in the Isle of Man; and if the goods so examined shall be found to correspond in all respects with the cocket and clearance purporting to be for the same, such goods shall be repacked at the charge of such searcher, who may be allowed such charge by the commissioners of the customs, if they shall see fit so to do.—§ 85.

## CLEARANCE OF SHIP.

**Content to be delivered to Searcher.**—Before any ship shall be cleared outwards at any port in the U. K. or in the Isle of Man, for parts beyond the seas, with any goods shipped on board the same, in such port, the master shall deliver a content of such ship to the searcher, setting forth the name and tonnage of such ship, and the place or places of her destination, and the name of the master, and also an account of the goods shipped on board, and of the packages containing such goods, and of the marks and numbers upon such packages, and a like account of the goods on board, if any, which had been reported inwards for exportation in such ship, so far as any of such particulars can be known by him; and also, before the clearance of such ship, the cockets, with the endorsements and clearances thereon for the goods shipped, shall be finally delivered by the respective shippers of such goods to the searcher, who shall file the same together, and shall attach with a seal a label to the file, showing the number of cockets contained in the file, and shall compare the particulars of the goods in the cockets with the particulars of the goods in such content, and shall attest the correctness thereof by his signature on the label and on the content; and the master of the ship shall make and sign a declaration before the collector or comptroller to the truth of such content, and shall also answer to the collector or comptroller such questions concerning the ship, the cargo, and the intended voyage, as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship for her intended voyage, and shall notify such clearance and the date thereof upon the content, and upon the label to the file of cockets, and upon the victualling bill, and also in the book of ships' entries' outwards, for the information of all parties interested, and shall transmit the content and the cockets, and the victualling bill to the searcher; and the particulars to be contained in such content shall be written and arranged in such form and manner as the collector and comptroller shall require.—§ 86.

**File of Cockets and Victualling Bill delivered to Master as the Clearance.**—The file of cockets and the victualling bill shall thereupon be delivered by the searcher to the master of such ship, at such station within the port and in such manner as shall be appointed by the commissioners of customs for that purpose; and such file of cockets and victualling bill, so delivered, shall be kept by the master of such ship as the authority for departing from the port with the several parcels and packages of goods and of stores on board, so far as they shall agree with the particulars in the endorsements on such cockets or with such victualling bill.—§ 87.

**In Ballast. Master to answer Questions.**—If any ship is to depart in ballast from the U. K. or from

the Isle of Man for parts beyond the seas, having no goods on board except the stores of such ship borne upon the victualling bill, or any goods reported inwards for exportation in such ship, the master of such ship shall, before her departure, answer to the collector or comptroller such questions touching her departure and destination as shall be demanded of him; and thereupon the collector or comptroller shall clear such ship in ballast, and shall notify such clearance and the date thereof on the victualling bill, and also in the book of ships' entries outwards, for the information of all parties interested; and such victualling bill shall be kept by the master of such ship as the clearance of the same. — § 88.

*Slates and Slates and Chalk to be deemed Ballast.* — Slates and slates and chalk laden on board any ship bound to foreign parts shall be deemed to be ballast; and every such ship having on board slates and slates and chalk only, or either of them, shall be deemed to be a ship departing in ballast; and if on the return of any such ship any slates or slates or chalk shall be remaining on board, the same shall be deemed to be the ballast of such ship. — § 89.

*Part of former Cargo reported for Exportation.* — If there be on board any ship any goods of the inward cargo which were reported for exportation in the same, the master shall, before clearance outwards of such ship from any port in the U. K. or in the Isle of Man, deliver to the searcher a copy of the report inwards of such goods, certified by the collector and comptroller; and such copy, being found to correspond with the goods so remaining on board, shall be the authority to the searcher to pass such ship with such goods on board, and being signed by the searcher, and filed with the cockets, shall be the clearance of the ship for those goods. — § 90.

*If any Passengers, Master may enter Baggage in his Name.* — If any passengers are to depart in any ship from the U. K. or from the Isle of Man for parts beyond the seas, it shall be lawful for the master of such ship to pass an entry and to receive a cocket in his name for the necessary personal baggage of all such passengers, and duly to clear such baggage for shipment in their behalf, stating in such clearances the particulars of the packages and the names of the respective passengers; and if such ship is to take no other goods than the necessary personal baggage of passengers actually going the voyage, it shall be lawful for such master to enter such ship outwards in ballast for passengers only; and if no other goods than such baggage duly entered and cleared be taken on board such ship, the same shall be deemed to be a ship in ballast, notwithstanding such baggage shall be described in the clearance, on the content and on the label to the cocket or cockets, and on the victualling bill and in the book of ships' entries, as a ship cleared in ballast, except as to the necessary personal baggage of passengers going the voyage. — § 91.

*In Ballast, Master may enter Goods for private Use of Self and Crew.* — If the master and crew of any foreign ship which is to depart in ballast from the U. K. for parts beyond the seas shall be desirous to take on board chalk rubbish by way of ballast, or to take with them for their private use any small quantities of goods of British manufacture, it shall be lawful for such master, without entering such ship outwards, to pass an entry in his name, and receive a cocket free of any export duty for all such goods, under the general denomination of British manufactures not prohibited to be exported, being for the use and privilege of the master and crew, and not being of greater value than in the proportion of 20*l.* for the master, and 10*l.* for the mate, and 5*l.* for each of the crew, and stating that the ship is in ballast; and the master shall duly clear such goods for shipment on behalf of himself and crew, stating in such clearance the particulars of the goods and packages, and the names of the crew who shall jointly or severally take any of such goods under this privilege; and such ship shall be deemed to be a ship in ballast, and be cleared as such, and without a content, notwithstanding such goods or such cocket or cockets; and such clearance shall be notified by the collector or comptroller on the label to the cocket or cockets, and on the victualling bill, and in the book of ships' entries, as a clearance in ballast, except as to the privilege of the master and crew. — § 92.

*Officers may board any Ship after Clearance.* — It shall be lawful for the officers of the customs to go on board any ship after clearance outwards, within the limits of any port in the U. K. or in the Isle of Man, or within 4 leagues of the coast thereof, and to demand the file of cockets and the victualling bill, and if there be any goods or stores on board not contained in the endorsements on the cockets nor in the victualling bill, such goods or stores shall be forfeited; and if any goods contained in such endorsements be not on board, the master shall forfeit the sum of 20*l.* for every package or parcel of goods contained in such endorsements and not on board; and if any cocket be at any time falsified, the person who shall have falsified the same, or who shall have wilfully used the same, shall forfeit the sum of 100*l.* — § 93.

*Ships to bring to at Stations.* — Every ship departing from any port in the U. K. or in the Isle of Man shall bring to at such stations within the port as shall be appointed by the commissioners of H. M.'s customs for the landing of officers from such ships, or for further examination previous to such departure. — § 94.

#### DEBENTURE GOODS.

*Entry in Name of real Owner, or of the Commission Merchant.* — No drawback or bounty shall be allowed upon the exportation from the U. K. of any goods unless such goods shall have been entered in the name of the person who was the real owner thereof at the time of entry and shipping, or of the person who had actually purchased and shipped the same, in his own name and at his own liability and risk, on commission, according to the practice of merchants, and who was and shall have continued to be entitled in his own right to such drawback or bounty, except in the cases herein-after provided for. — § 96.

*Declaration as to Exportation, and to Property, and Right to Drawback or Bounty.* — Such owner or commission merchant shall make and subscribe a declaration upon the debenture that the goods mentioned therein have been actually exported, and have not been re-landed, and are not intended to be re-landed in any part of the U. K., nor in the Isle of Man, (unless entered for the Isle of Man,) nor in the Islands of Faro or Ferro, and that he was the real owner thereof at the time of entry and shipping, or that he had purchased and shipped the said goods in his own name and at his own liability and risk, on commission, as the case may be, and that he was and continued to be entitled to the drawback or bounty thereon in his own right; provided always, that if such owner or merchant shall not have purchased the right to such drawback or bounty he shall declare under his hand upon the entry and upon the debenture the person who is entitled thereto, and the name of such person shall be stated in the cocket and in the debenture; and the receipt of such person on the debenture shall be the discharge for such drawback or bounty. — § 96.

*Agent may pass Entry and receive Drawback, and make the Declaration, and answer Questions for Owner not resident.* — If such owner or merchant shall be resident in some part of the U. K. being more than 20 miles from the custom-house of the port of shipment, he may appoint any person to be his agent to make and pass his entry, and to clear and ship his goods, and to receive for him the drawback or bounty payable on his debenture, if payable to him, provided the name of such agent and the residence of such owner or merchant be subjoined to the name of such owner or merchant in the entry and in the cocket for such goods; and such agent, being duly informed, shall make declaration upon the entry, if any be necessary, and also upon the debenture, in behalf of such owner or merchant, to the effect before required of such owner or merchant, and shall answer such questions touching his knowledge of the exportation of such goods and the property therein, and of the right to the drawback or bounty, as shall be demanded of him by the collector or comptroller; and if any such goods be exported by any corporation or company trading by a joint stock it shall be lawful for them to appoint any person to be their agent for the like purposes and with the like powers to act in their behalf. — § 97.

*Property of Persons abroad consigned here to an Agent, and exported by him on account of Owner.* — If any goods which are to be exported for drawback be the property of any person residing abroad, having been consigned by the owner thereof to some person as his agent residing in the U. K., to be exported through the same to parts beyond the seas, by such agent, upon account of such owner, it shall be lawful

for such person (being the consignee by whom and in whose name the duties inwards on such goods had been paid, or his legal representative), in like manner, as agent for such owner, to enter, clear, and ship such goods for him, and upon like conditions to receive for him the drawback payable thereon. — § 98.

*Shipment within Three Years and Payment within Two Years.* — No drawback shall be allowed upon the exportation of any goods unless such goods be shipped within 3 years after the payment of the duties inwards thereon, and no debenture for any drawback or bounty allowed upon the exportation of any goods shall be paid after the expiration of 3 years from the date of the shipment of such goods. — § 99.

*Issuing and passing Debenture.* — For the purpose of computing and paying any drawback or bounty payable upon any goods duly entered, shipped, and exported, a debenture shall, in due time after such entry, be prepared by the collector and comptroller, certifying in the first instance the entry outwards of such goods; and so soon as the same shall have been duly exported, and a notice containing the particulars of the goods shall have been delivered by the exporter to the searcher, the shipment and exportation thereof shall be certified to the collector and comptroller, upon such debenture, by the searcher, and the debenture shall thereupon be computed and passed with all convenient despatch, and be delivered to the person entitled to receive the same. — § 100.

*Certificate of landing in Isle of Man.* — No drawback or bounty shall be allowed for any goods carried by sea from the U. K. to the Isle of Man until a certificate shall be produced from the collector and comptroller of the customs of the Isle of Man of the due landing of such goods. — § 101.

*Licensed Lightermen only to ship Debenture or warehoused Goods.* — No goods cleared for drawback or bounty, or from the warehouse, shall be carried or waterborne to be put on board any ship for exportation from the U. K. by any person, unless such person shall be authorised for that purpose by licence under the hands of the commissioners of customs; and before granting such licence, it shall be lawful for the said commissioners to require such security by bond for the faithful and incorrupt conduct of such person as they shall deem necessary; and after granting such licence it shall be lawful for the said commissioners to revoke the same, if the person to whom the same shall have been granted shall be convicted of any offence against the laws relating to the customs or excise: provided always, that all such licences which shall be in force at the time of the commencement of this act shall continue in force as if the same had been afterwards granted under the authority of this act. — § 102.

*Warehouse or Debenture Goods not exported, or if re-landed, or carried to Guernsey, &c. without Entry, forfeited.* — If any goods which have been taken from the warehouse to be exported from the same, or any goods which have been cleared to be exported for any drawback or bounty, shall not be duly exported to parts beyond the seas, or shall be re-landed in any part of the U. K., (such goods not having been duly re-landed or discharged as short-shipped under the care of the proper officers,) or shall be landed in the Islands of Faro or Ferro, or shall be carried to any of the Islands of Guernsey, Jersey, Alderney, Sark, or Man, (not having been duly entered, cleared, and shipped, to be exported or carried directly to such islands,) the same shall be forfeited, together with the ship from or by which the same had been so re-landed, landed, or carried, and any other ship, vessel, boat, or craft which may have been used in so re-landed, landing, or carrying such goods; and any person by whom or by whose orders or means such goods shall have been so re-landed or cleared, or so re-landed, landed, or carried, shall forfeit a sum equal to treble the value of such goods. — § 103.

*Drawback of Duties on Wine allowed for Officers in the Navy.* — A drawback of the whole of the duties of customs shall be allowed for wine intended for the consumption of officers of H. M.'s navy, on board such of H. M.'s ships in actual service as they shall serve in, not exceeding the quantities of wine, in any one year, for the use of such officers, herein-after respectively mentioned; viz.

	Gallons.		Gallons.
For every admiral	1,260	For every captain of an inferior rate	810
vice-admiral	1,050	lieutenant, and other commanding	105
rear-admiral	840	officer, and for every marine of	
captain of the first and second rates	650	score	
captain of the third, fourth, and fifth rates	420		

Provided always, that such wine be shipped only at one of the ports herein-after mentioned; viz. London, Liverpool, Rochester, Deal, Dover, Portsmouth, Plymouth, Yarmouth, Falmouth, Belfast, Dublin, Cork, Leith, or Glasgow. — § 104.

*Person entering such Wine for Drawback to declare the Name and Rank of Officer claiming the same.*

— The person entering such wine, and claiming the drawback for the same, shall state in the entry and declare on the debenture the name of the officer for whose use such wine is intended, and of the ship in which he serves; and such wine shall be delivered into the charge of the officers of customs at the port of shipment, to be secured in the Queen's warehouse until the same shall be shipped under their care; and such officers having certified upon the debenture the receipt of the wine into their charge, the debenture shall be computed and passed, and be delivered to the person entitled to receive the same. — § 105.

*Officers leaving the Service, &c., such Wine permitted to be transferred to others.* — If any such officer shall leave the service, or be removed to another ship, it shall be lawful for the officers of the customs, at any of the ports before mentioned, to permit the transfer of any such wine from one officer to another, as part of his proportion, whether on board the same ship or another, or the transhipment from one ship to another for the same officer, or the re-landing and warehousing for future re-shipment; and it shall also be lawful for the officers of customs at any port to receive back the duties for any of such wine, and deliver the same for home use: provided always, that if any of such wine be not laden on board the ship for which the same was intended, or be unladen from such ship without permission of the proper officer of the customs, the same shall be forfeited. — § 106.

*Purser of Her Majesty's Ships of War may ship Tobacco for Use of Crew, free of Duty on giving Bond.* — It shall be lawful for the purser of any of H. M.'s ships of war in actual service to enter and ship at the ports of Rochester, Portsmouth, or Plymouth, in the proportions herein-after mentioned, any tobacco there warehoused in his name, or transferred into his name, for the use of the ship in which he shall serve, provided such purser shall deliver to the collector or comptroller of such port a certificate from the captain of such ship, certifying the name of the purser and the number of men belonging to the ship, and shall also give bond, with sufficient surety, in treble the duties payable on the tobacco, that no part thereof shall be re-landed in the U. K. without leave of the officers of the customs, or be landed in either of the Islands of Guernsey, Jersey, Alderney, Sark, or Man. — § 107.

*Purser removed from One Ship to another may tranship tobacco, with Permission of Collector.* — If any purser shall be removed from one ship to another it shall be lawful for the collector and comptroller of the port where such ships shall be to permit the transhipment of the remains of any such tobacco for the use of such other ship, upon due entry of such tobacco by such purser, setting forth the time when and the port at which such tobacco was first shipped; and if any such ship shall be paid off it shall be lawful for the collector and comptroller of any port where such ship shall be paid off to permit the remains of any such tobacco to be landed, and to be entered by the purser of such ship, either for payment of duties or to be warehoused for the term of 6 months, for the supply of some other such ship, in like manner as any tobacco may be warehoused and supplied at either of the ports before mentioned, or for payment of all duties within such 6 months: provided always, that all tobacco warehoused for the purpose of so supplying H. M.'s ships of war shall be subject to the provisions of any act in force relating to the warehousing of tobacco generally, as far as the same are applicable, and are not expressly altered by any of the provisions herein particularly made. — § 108.

*Limiting the Quantity of Tobacco.*—No greater quantity of such tobacco shall be allowed of war than 2 pounds by the lunar month for each of the crew of such ship, nor shall any greater be shipped at any one time than sufficient to serve the crew of such ship for 6 months after such allowance; and the collector and comptroller of the port at or from which any such tobacco is applied to any such ship, or landed from any such ship, or transferred from one such ship to another, shall transmit a particular account thereof to the commissioners of customs, in order that a general may be kept of all the quantities supplied to and consumed on board each of such ships under such aces before granted.—§ 109.

*Times and Places for shipping Goods.*—No goods shall be put off from any wharf, quay, or pier, or shall be waterborne in order to be exported, but only on days not being Sundays or holidays, the daytime; (that is to say,) from the 1st day of September until the last day of March before the rising and sun-setting, and from the last day of March until the 1st day of September between the 7 of the clock in the morning and 4 of the clock in the afternoon; nor shall any such goods be put off or waterborne for exportation unless in the presence or with the authority of the proper customs, nor except from a legal quay appointed by H. M. or at some wharf, quay, or place by the commissioners of customs for shipping of such goods by sufferance.—§ 110.

*Penalty for exporting prohibited Goods.*—If any goods liable to forfeiture for being shipped for exportation shall be shipped and exported without discovery by the officers of the customs, then the persons who shall have caused such goods to be exported shall forfeit double the value of such goods.—§ 111.

#### PROHIBITIONS.

*Prohibitions and Restrictions, absolute or modified.*—The several sorts of goods enumerated in the table following (denominated "A Table of Prohibitions and Restrictions Outwards") either absolutely prohibited to be exported from the U. K., or shall be exported only under such restrictions mentioned in such table, according as the several sorts of such goods are respectively therein: viz.

##### *A Table of Prohibitions and Restrictions Outwards.*

Clocks and watches; viz. any outward or inward box, case, or dial plate, if any metal, without the movement in or with every such box, case, or dial plate, made up fit for use, with the clock or watch maker's name engraven thereon.

Lace; viz. any metal inferior to silver which shall be spun, mixed, wrought, or set upon silk, or which shall be gilt, or drawn into wire, or flattened into plate, and spun or woven, or wrought into or upon, or mixed with lace, fringe, cord, embroidery, tambour work, or buttons, made in the gold or silver lace manufactory, or set upon silk, or made into bullion, spangles, or pearl, or any other materials made in the gold or silver lace manufactory, or which shall imitate or be meant to imitate such lace, fringe, cord, embroidery, tambour work, or buttons; nor shall any person export any

copper, brass, or other metal which shall be drawn into wire, or flattened into plate, or made into bullion, spangles, or pearl, or any of the above, used in the gold or silver lace manufactory, or in the making of such lace, fringe, cord, embroidery, work, or buttons, or of any of the materials making the same, and which shall hold more than a greater proportion than 3 dwts. of fine metal to one avoirdupois of such copper, brass, or other metal; nor shall any metal inferior to silver, whether gilt, silver, or coloured, or otherwise, which shall be mixed with gold or silver in any lace, fringe, cord, embroidery, tambour work, or buttons.

*A List of Goods which may be prohibited to be exported by Proclamation or Order in Council.*  
Arms, ammunition, and gunpowder.  
Ashes, pot and pearl.  
Military stores and naval stores, and any articles (except copper) which H. M. shall judge capable of being converted into or made useful in increasing the military or naval stores.  
Provisions or any sort of victual which may be necessary for the use of the military or naval stores.

And if any goods shall be exported, or be waterborne to be exported, from the U. K., contrary to the prohibitions or restrictions mentioned in such table in respect of such goods, the same shall be forfeited.—§ 112.

The clauses from 113 to 126, both inclusive, relate to the COASTING TRADE, and are given in that article.

#### CONSTRUCTION IN GENERAL.

*Terms used in Acts.*—In order to avoid the frequent use of numerous terms and expressions in this act, and in other acts relating to the customs, and to prevent any misconstruction of the expressions used therein, be it enacted, that whenever the several terms or expressions following occur in this act, or in any other act relating to the customs or to trade and navigation, the same shall be construed respectively in the manner herein-after directed; (that is to say,) the term "ship" shall be construed to mean ship or vessel generally, unless such term shall be used to distinguish a sloop, brigantine, and other classes of vessels; that the term "master" of any ship shall be construed to mean the person having or taking the charge or command of such ship; that the term "owner" and the term "owner" of any ship shall be construed alike to mean one owner, if there be one and any or all the owners, if there be more than one; that the term "mate" of any ship shall be construed to mean the person next in command of such ship to the master thereof; that the term "seaman" shall be construed to mean alike seaman, mariner, sailor, or landsman, being a member of the crew of any ship; that the term "British possession" shall be construed to mean colony, island, territory, or settlement belonging to her Majesty; that the term "her Majesty's ship" shall be construed to mean her Majesty's ship, her heirs and successors; that the term "limits of the East India Company's charter" shall be construed to mean the Cape of Good Hope, and all places and seas thereof to the Straits of Magellan; that the terms "collector and comptroller" shall be construed to mean the collector and comptroller of the customs of the port intended in the sentence: that the mention is made of any public officer the officer mentioned shall be deemed to be such officer at the time being; that the term "warehouse" shall be construed to mean any place, whether wharf, yard, timber pond, or other place in which goods entered to be warehoused upon importation, lodged, kept, and secured without payment of duty, or although prohibited to be used in the Kingdom; that the term "Queen's warehouse" shall be construed to mean any place provided by the Crown for lodging goods therein for security of the customs.—§ 127.

*Malta deemed to be in Europe.*—The Island of Malta and its dependencies shall be deemed to be in Europe.—§ 128.

#### GENERAL REGULATIONS.

*Weights, Measures, &c.*—All duties, bounties, and drawbacks of customs shall be paid and levied in every part of the U. K. and of the Isle of Man in British currency, and according to Imperial measures; and in all cases where such duties, bounties, and drawbacks are imposed or allowed according to any specific quantity or any specific value, the same shall be deemed to apply in the same proportion to any greater or less quantity or value; and all such duties, bounties, and drawbacks shall be under the management of the commissioners of the customs.—§ 129.

*Collector to take Bonds in respect of Goods relating to the Customs.*—All bonds relating to the importation or exportation of goods or ships, except bonds given for securing the due exportation or payment of duty upon goods warehoused according to law, shall be taken by the collector or comptroller for the use of H. M.; and after the expiration of 3 years from the date thereof, or from

if any, limited therein for the performance of the condition thereof, every such bond upon which no prosecution or suit shall have been commenced shall be void, and may be cancelled and destroyed. — § 130.

*Bonds entered into with the Concurrence of Lords of the Treasury or Commissioners of the Customs for the due Performance of any thing relating to the Customs to be valid in Law.* — Whereas it frequently occurs that certain indulgences are granted to merchants and others, by directions of the lords of the treasury and the commissioners of customs, on bond being given for the security of the revenue; and, as doubts may arise whether such bonds would in law be valid, be it therefore enacted and declared, that in all cases where bonds shall be entered into, with the concurrence or by the direction of the lords of the treasury or the commissioners of customs, for the due performance of any order, matter, or thing relating to the customs, such bonds shall be valid in law, and upon breach of any of the conditions thereof may be sued and proceeded upon in like manner as any other bond entered into by virtue of any act relating to the customs. — § 131.

*Mode of ascertaining Strength of Foreign Spirits.* — The same instruments, and the same tables and scales of graduation, and the same rules and methods, as the officers of the excise shall by any law in force for the time being be directed to use, adopt, and employ in trying and ascertaining the strengths and quantities of spirits made within the U. K., for the purpose of computing and collecting the duties of excise payable thereon, shall be used, adopted, and employed by the officers of customs in trying and ascertaining the strengths and quantities of spirits imported into the U. K., for the purpose of computing and collecting the duties of customs payable thereon. — § 132.

*Vinegar or Acetous Acid to be charged with Duty according to Strength.* — To prevent vinegar or acetous acid of excessive strength being brought into consumption upon payment of duty as common vinegar or acetous acid, to the great injury of H. M.'s revenue, all such liquors as aforesaid, subject and liable to any duty of customs shall and may be tried and examined by any officer or officers of customs with such acetometer as shall and may be from time to time directed by the commissioners of customs, in order to ascertain the strength thereof; and whenever any such liquors shall upon any such trial be found by any officer or officers of customs to be above proof as denoted by such acetometer (proof of being such strength of acetous acid that 100 parts of the liquor by weight will saturate or neutralize 14½ parts by weight of crystallised sub-carbonate of soda), the number of gallons of such liquors of which such trial is made shall be deemed and computed by such officer or officers to be such number as could be made from or with such liquors if diluted by water to the strength of proof denoted as aforesaid, and shall be chargeable and taken account of and charged by such officer with duty accordingly. — § 133.

*Spirits, although mixed, to pay Duties as such.* — Spirits or strong waters imported into the U. K. mixed with any ingredient, and although thereby coming under some other denomination, shall nevertheless be deemed to be spirits or strong waters, and be subject to duty as such. — § 134.

*Officers of Customs to take Samples of Goods.* — It shall be lawful for the officers of the customs to take such samples of any goods as shall be necessary for ascertaining the amount of any duties payable on the same; and all such samples shall be disposed of and accounted for in such manner as the commissioners of customs shall direct. — § 135.

*Time of an Importation and of an Exportation defined.* — If upon the first levying or repealing of any duty, or upon the first granting or repealing of any drawback or bounty, or upon the first permitting or prohibiting of any importation or exportation, whether inwards, outwards, or coastwise, in the U. K. or in the Isle of Man, it shall become necessary to determine the precise time at which an importation or exportation of any goods made and completed shall be deemed to have had effect, such time, in respect of importation or exportation of any goods made and completed, shall be deemed to be the time at which the ship importing such goods had actually come within the limits of the port at which such ship shall in due course be reported, and such goods be discharged; and such time, in respect of exportation, shall be deemed to be the time at which the goods had been shipped on board the ship in which they had been exported; and if such question shall arise upon the arrival or departure of any ship, in respect of any charge or allowance upon such ship, exclusive of any cargo, the time of such arrival shall be deemed to be the time at which the report of such ship shall have been or ought to have been made; and the time of such departure shall be deemed to be the time of the last clearance of such ship with the collector and comptroller for the voyage upon which she departed. — § 136.

*Return of Duty overpaid.* — Although any duty of customs shall have been overpaid, or although after any duty of customs shall have been charged and paid, it shall appear or be judicially established that the same had been charged under an erroneous construction of the law, it shall not be lawful to return any such overcharge after the expiration of 3 years from the date of such payment. — § 137.

*Tonnage or Burden of Ships how ascertained.* — The tonnage or burden of every British ship within the meaning of this act shall be the tonnage set forth in the certificate of registry of such ship, and the tonnage or burden of every other ship shall, for the purposes of this act, be ascertained in the same manner as the tonnage of British ships is ascertained. — § 138.

*Ships, when not liable to Tonnage Rate under 4 & 5 W. 4. c. 32.* — Whereas by an act passed in the 4th and 5th years of the reign of H. M. King William IV., intituled, "An Act for reducing the Tonnage Rates payable in the Port of London," certain rates are imposed upon ships or other vessels entering inwards and clearing outwards in the port of London, and it is expedient to amend the same in respect of ships or other vessels reporting their cargoes for exportation, and ultimately leaving the port without breaking bulk; be it therefore enacted, that no tonnage rate shall be payable under the said act on ships or other vessels entering inwards or clearing outwards in the said port in cases where the cargoes are reported for exportation, and ultimately the ships or other vessels leave the port without breaking bulk, or taking in merchandise for the purpose of exportation. — § 139.

*Officers may refuse Master of British Ship unless endorsed on Register.* — It shall be lawful for the officers of the customs at any port under British dominion where there shall be a collector and comptroller of the customs to refuse to admit any person to do any act at such port as master of any British ship, unless his name shall be inserted in or have been endorsed upon the certificate of registry of such ship as being the master thereof, or until his name shall have been so endorsed by such collector and comptroller. — § 140.

*Falsifying Documents.* — If any person shall counterfeit or falsify, or wilfully use when counterfeited or falsified, any entry, warrant, cocket, or transire, or other document for the unloading, lading, entering, reporting, or clearing of any ship or vessel, or for the landing or shipping of any goods, stores, baggage, or article whatever, or shall by any false statement procure any writing or document to be made for any of such purposes, every person so offending shall for every such offence forfeit the sum of 200*l.*: provided always, that this penalty shall not attach to any particular offence for which any other penalty shall be expressly imposed by any law in force for the time being. — § 141.

*Authority of an Agent may be required.* — Whenever any person shall make any application to any officer of the customs to transact any business on behalf of any other person, it shall be lawful for such officer to require of the person so applying to produce a written authority from the person on whose behalf such application shall be made, and in default of the production of such authority to refuse to transact such business. — § 142.

*False Declaration.* — If any declaration required to be made by this act, or by any other act relating to the customs or to trade or navigation, (except declarations to the value of goods,) or if any declaration made for the consideration of the commissioners of customs on any application presented to them, be untrue in any particular, or if any person required by this act, or by any other act relating to the customs or to trade or navigation, to answer questions put to him by the officers touching certain matters, shall not truly answer such questions, the person making such declaration or answering such question,

to be made relating to the customs the averment that such offence was committed within the limits of any port shall be sufficient, without proof of such limits, unless the contrary be proved. — § 154.

*Commissioners may appoint Sufferance Wharfs.* — It shall be lawful for the commissioners of customs from time to time, by any order under their hands, to appoint places to be sufferance wharfs, for the lading and unlading of goods by sufferance, to be duly issued by them, or by the proper officers under their directions, in such manner and in such cases as they shall see fit. — § 155.

*No Ships engaged in the Carriage of Letters to import or export Goods.* — No ship or boat appointed and employed ordinarily for the carriage of letters shall import or export any goods without permission of the commissioners of customs, under the penalty of the forfeiture of 100*l.*, to be paid by the master of such ship or boat. — § 156.

*Fitters' Certificates.* — No ship shall be cleared from any port of the U. K., either for a coasting or a foreign voyage, laden with coals or coal, or culm or cinders, which had not been previously brought coastwise into such port, until the fitter or coal owner, or his agent, vending or shipping the same, shall have delivered to the collector or comptroller two certificates under his hand, expressing the total quantities of coals, culm, and cinders respectively shipped or intended to be shipped by him in such ship; and the collector or comptroller shall retain one of such certificates, and shall deliver the other, signed by him, to the master of the ship; and every fitter, coal owner, or agent who shall refuse to give such certificates, or shall give a false certificate, shall forfeit and pay the sum of 100*l.*; and the master of such ship shall keep such certificate, and produce the same to any officer of customs demanding such production, and shall before bulk be broken deliver such certificate to the collector or comptroller of any port in the U. K. to which such coals, culm, or cinders shall be carried in such ship. — § 157.

#### LICENSED AGENTS.

*Persons entering or clearing Ships, &c. as Agents, to be licensed, and give Bond.* — It shall not be lawful for any person to act as an agent for transacting business in the port of London which shall relate to the entry or clearance of any ship, or of any goods, or of any baggage, unless authorized so to do by licence of the commissioners of customs, who are hereby empowered to require bond to be given by every person to whom such licence shall be granted, with 1 sufficient surety, in the sum of 1000*l.*, for the faithful and incorrupt conduct of such person and of his clerks acting for him; provided always, that such bond shall not be required of any person who shall be 1 of the sworn brokers of the city of London; provided also, that all licences heretofore granted by the commissioners of customs to any persons to act as agents shall be valid and effectual, and all bonds taken for the faithful and incorrupt conduct of such persons shall be and are hereby declared to be and remain in full force and effect; and if any person shall act as such agent, not being so licensed, or if any person shall be in partnership in such agency with any person not so licensed, such person shall, in either case, for every such offence forfeit the sum of 100*l.* — § 158.

*Treasury may revoke Licence.* — It shall be lawful for the lords of the treasury, by any order under their hands, to revoke any such licence, or any licence heretofore granted by the commissioners of customs to any person to act as an agent for transacting such business at the custom-house in the port of London, and that after a copy of such order shall have been delivered to such person or to his clerk, or left at his usual place of abode or business, such licence shall be void. — § 159.

*Not to extend to Clerks or Servants of Individuals.* — Nothing herein contained shall extend to prevent the clerk or servant of any person or of any persons in copartnership from transacting any such business, on account of such person or persons, without such licence, provided such clerk or servant shall not transact any such business as clerk, servant, or agent to any other person. — § 160.

*Agent may appoint Clerks to act for him only.* — It shall be lawful for any such agent or agents in copartnership to appoint any person without licence to be his or their clerk in transacting such agency; provided always, that no person shall be admitted to be such clerk to more than 1 agent or copartnership of agents, nor until his name and residence and the date of his appointment shall have been endorsed on the licence of every such agent, and signed by him, and witnessed by the signature of the collector and comptroller of the customs, unless such person shall have been appointed with consent of the commissioners of customs before the commencement of this act. — § 161.

*Treasury may extend Regulations to other Ports.* — It shall be lawful for the lords of the treasury, by their warrant, to be published in the London or Dublin Gazette, to extend the regulations herein before made relating to agents in the port of London to agents at any other port in Great Britain, or at any port in Ireland. — § 162.

The commissioners of customs, agreeably to the powers given them to that effect by the foregoing statute, 8 & 9 Vict. c. 86. s. 12., have appointed the undermentioned places, within the several ports of the U. K., at which vessels coming into or departing out of such ports shall bring to, for the boarding or landing of customs' officers. Every master of a vessel failing to comply with the provisions of said act in this respect forfeits 100*l.* — § 149.

#### ENGLAND.

Ports.	Stations for bringing-to.
LONDON	- Gravesend Reach, below the Custom-house.
ABERTHAWT	- On the bar, or a little above the junction of the rivers Rhylod and Ystwith.
Aberdovey	- A little to the westward of the town, in the river Dery.
ALDBOROUGH	- Oxford haven, the entrance of the river Orv and Aids.
ARUNDEL	- The piles on the eastern side of the river, between the revenue watch-house and the Duke of Norfolk's Quay, in the harbour of Littlehampton.
BAINSTAPLE	- Skern and watch-house, Appledore.
BAUNHARDS	- Opposite the town, at Fryar's Roads.
Bideford	- Within the harbour.
Bosbury	- In the roadstead opposite the town.
Carmarvon	- In the bay off the town, opposite the Bell Tower, and at Abernethy.
Cardiff	- At the entrance of the harbour, by the Gimblet Rock.
Cardsmouth	- In the harbour.
Cardhead	- In the harbour.
CAWICK	- At the entrance of the harbour, near the pier head.
CHESFORD	- Skern and watch-house, Appledore.
CHRYSTON	- Hob Hole.
CHURCHWATER	- Between Botall Point, on the coast of the Bristol Channel, and Black Rock, about a mile within the mouth of the river Parrot.
CHURCHWATER	- The bay or harbour.

Ports.	Stations for bringing-to.
BRIDPORT	- The outer buoy, distant about 300 yards, abreast of the harbour.
Bristol	- Pill and Kingsroad.
CARDIFF	- Penrith Roads, a little to the eastward of the mouth of the river Taff.
CARDIGAN	- At Pwllcam, a little inside the bar or harbour's mouth.
CARLISLE	- Fisher's Cross.
CHERTON	- At the entrance of the river Wy.
CHERTON	- Downpool, 6 miles from Hoylake.
CHICHESTER	- Cockbush harbour.
CLAY	- Blackney and Clay Harbour.
COLCHESTER	- Cohn River, off Mersea Stone, Mersea Island.
COWES (EAST)	- Roadstead of Cowes, extending from east to west about 2½ miles.
DARTMOUTH	- Between the mouth of the harbour and Sandquay Point.
Salcombe	- At the mouth of the harbour and Snags Point.
DEAL	- In the Downs, in open roadstead.
DOVER	- The outer harbour.
Faldstone	- In the harbour.
EXETER	- At the Passage Way, Exmouth.
TRIGMOUTH	- At the Point.
FALMOUTH	- In the harbour, off Kilm Quay and watch-house.
FAVERHAM	- Between the mouth of Faverham Creek and the Horse Sand in the East Naze.
Milton	- At the mouth of Milton Creek in the Naze.
FOVEY	- Near the Custom-house, not far from the entrance of the harbour.

[illegible]

NEWRY	Warren Point Roads.	Killala	Killala Pool.
New Bedford	Ballinacorney Bay or Audley's Town Bay.	WATERFORD	Passage.
Sligo	Oyster Island.	New Ross	The harbour.
Killbegg	Anchorage of Killbegg.	WEXFORD	The anchorage ground at Annagh Head, in Clew Bay.
Ballinacorney	In the river, abreast of Ward Town-house.		South Bay, about 10 miles from Wexford.

IMPORTS AND EXPORTS, the articles imported into and exported from a country.

We have explained in another article (BALANCE OF TRADE) the mode in which the value of the imports and exports is officially determined by the Custom-house, and have shown the fallacy of the common notions as to the advantage of the exports exceeding the imports. The scale of prices according to which the official value of the imports and exports is determined having been fixed so far back as 1698, the account is of no use as showing their true value; but it is of material importance as showing the fluctuations in their quantity. We were anxious, had the means existed, to have given accounts of the quantities of the various articles imported and exported at different periods during the last century, that the comparative increase or diminution of the trade in each might have been exhibited in one general view. Unluckily, however, no means exist for completing such an account. The Tables published by Sir Charles Whitworth, Mr. Macpherson, and others, specify only the aggregate official value of the imports from and exports to particular countries, without specifying the articles or their values of which such imports and exports consisted. And on applying at the Custom-house, we found that the fire in 1814 had destroyed the records; so that there were no means of compiling any complete account of the value of the articles imported or exported previously to that period. We have, however, given, in the first of the following tables, as complete a view of the general trade of Great Britain with all parts of the world from 1760 down to 1842, both inclusive, as can be derived from existing materials. And the subsequent tables, and those dispersed through the work, give a view of that trade in detail, that is, in particular articles, and with particular countries.

During the first half of last century, and previously, woollen goods formed the principal article of native produce exported from Great Britain; and next to it were hardware and cutlery, leather manufactures, linen, tin, and lead, copper and brass manufactures, coal, earthenware, provisions, slops, &c. Corn formed a considerable article in the list of exports down to 1770; since which period the balance of the corn trade has been, with a few exceptions, very decidedly on the side of importation. Cotton did not begin to be of any importance as an article of export till after 1770; but since then the extension and improvement of the cotton manufacture has been so astonishingly great, that the exports of cotton stuffs and yarn amount, at this moment, to about a *half* of the entire exports of British produce and manufactures.

The principal articles of import during the last half century have consisted of sugar, tea, corn, timber and naval stores, cotton wool, sheep's wool, woods and drugs for dyeing, wine and spirits, tobacco, silk, tallow, hides and skins, coffee, spices, bullion, &c. Of the colonial and other foreign products imported into England, considerable quantities have always been re-exported.

Trade of Great Britain with Foreign Countries, since 1760.

N.B. — The account of the declared or real value of the exports was first taken in 1798, has introduced by the Convoy Act of that year.

*Decline in the Real Value of the Exports.* — The increase in the official, and the decline in value of the exports since 1815, has given rise to a great deal of irrelevant discussion. It has been upon as a proof that our commerce is daily becoming less prosperous, whereas, in point of fact, the rates according to which the official values of the exports are determined were fixed as 1696, so that they have long ceased to be of importance as affording any criterion of their own only use being to show the fluctuations in the quantities exported. To remedy this defect was formed in 1798 for keeping an account of the real value of the exports as ascertained by the declarations of the exporters. Those who believe that our trade is getting into a bad condition, and the great increase in the official value of the exports since 1815 shows that the quantity of exports has been proportionally augmented; while the fall in their real value shows that we export a larger quantity of produce for a smaller price, — a result which, they affirm, is most injurious to the circumstance of a manufacturer or merchant selling a large or a small quantity of produce at the same price, affords no criterion by which to judge as to the advantage or disadvantage of the same in consequence of improvements in the arts or otherwise, a particular article may now be produced at half the expense that its production cost 10 or 20 years ago. It is obvious that double the price may be afforded for the same price, without injury to the producers. Now this is the case with the most important articles exported from England. Cotton and cotton yarn form a full half of our entire exports; and since 1814 there has been an extraordinary fall in the price of these commodities, occasioned partly by cotton wool having fallen from about 1s. 6d. to about 3d. per lb., but more improvements in the manufacture. To such an extent have these causes operated, that yarn which cost, in 1812, 2s. 6d., cost, in 1843, 9d.; in 1812 No. 60 cost 3s. 6d., in 1843 it cost 1s. 8d., in 1812 No. 80 cost 4s. 4d., in 1843 it cost 1s. 4d., and so on; and in the weaving department the same is the case. Hence, while the official value of the cotton goods and yarn has increased from about 18,000,000, in 1814, to above 68,500,000, in 1842, their real or declared value only increased from about 20,000,000, in 1814, to 21,675,000, in 1842. This, however, is not a proof of increasing prosperity. It shows that an export and sell with a profit was such were the case, does any one suppose the exportation would continue to be more than 3 quantity of cotton goods we exported in 1814, for not much more than the same price. In so far as an abundant and cheap supply of cottons may be supposed to increase the comforts of life it is plain they must be about trebled, not in this country only, but in all those countries with trade.

Owing to the fall that has taken place in the prime cost, and consequently in the price, of most of the principal articles of import, we obtain, at this moment, a much larger quantity of the produce of other countries in exchange for the articles we send abroad, than at any former period. The fall has been particularly sensible in the great articles of cotton and sheep's wool, corn, sugar, indigo, pepper, &c. The imports of all sorts of foreign merchandise have been increasing rapidly since 1815; and it is material to bear in mind, that we had no gold coin in circulation at that epoch, and that besides the greater quantities of other articles, we have imported, in the intervening period, from 35,000,000, to 40,000,000, of gold and sil-

ver for currency only. The truth is, therefore, that the decline in the real value of our exports having degree prejudicial, it has been, in all respects, completely the reverse. It has insured for our country superiority in every market, while, as the cost of fallen in an equal degree, their production cost equally advantageous. It appears, too, that a small amount going on in other countries; so that while goods to the foreigner, we get back more of the value. Instead of being an evidence of decline, increased production and increased comforts are the most complete and least equivocal marks of commercial prosperity.

# IMPORTS AND EXPORTS.

713

Account of the real or declared Value of the various Articles of the Manufacture and Produce of the U. Kingdom exported to Foreign Countries during each of the 6 Years ending with 1847; specifying the Countries to which they were exported, and the Value of those Annually shipped for each; and showing also the Average Amount of Exports during the said 6 Years to each Country, and to each of the 5 great Divisions of the Globe; and the Average Proportion exported to each, supposing the whole Exports to be 1000.

Countries.	1842.	1843.	1844.	1845.	1846.	1847.	Average annual Amount of Exports. 1842-47.	Average annual Proportion exported to each Country, supposing the whole Exports to be 1000.

*Causes of the Magnitude of British Commerce.*—The immediate cause of the rapid increase and vast magnitude of the commerce of Great Britain, is doubtless to be found in the extraordinary improvement, and consequent extension, of our manufactures since 1770. The cotton manufacture may be said to have grown up during the intervening period. It must also be borne in mind, that the effect of an improvement in the production of any article in considerable demand is not confined to that particular article, but extends itself to others. Those who produce it according to the old plan are undersold, unless they adopt the same or similar improvements; and the improved article, by coming into competition with others for which it may be substituted, infuses new energy into their producers, and impels every one to put forth all his powers, that he may either preserve his old or acquire new advantages. The cotton manufacture may be said to be the result of the stupendous inventions and discoveries of Hargreaves, Arkwright, Crompton, and a few others; but we should greatly under-rate the importance of their inventions, if we supposed that their influence was limited to this single department. They imparted a powerful stimulus to every branch of industry. Their success, and that of Watt and Wedgwood, gave that confidence to genius so essential in all great undertakings. After machines had been invented for spinning and weaving cottons, whose fineness emulates the web of the gossamer, and steam-engines had been made "to engrave seals, and to lift a ship like a bauble in the air," every thing seemed possible—*nil arduum visum est*. And the unceasing efforts of new aspirants to wealth and distinction, and the intimate connection of the various arts and sciences, have extended and perpetuated the impulse given by the invention of the spinning-frame and the steam-engine.

The immense accumulation of capital that has taken place since the close of the American war has been at once a cause and a consequence of our increased trade and manufactures. Those who reflect on the advantages which an increase of capital

confers on its possessors can have no difficulty in perceiving how it operates to extend trade. It enables them to buy cheaper, because they buy larger quantities of goods, and pay ready money; and, on the other hand, it gives them a decided superiority in foreign markets, where capital is scarce, and credit an object of primary importance with the native dealers. To the manufacturer, an increase of capital is of equal importance, by giving him the means of constructing his works in the best manner, and of carrying on the business on such a scale as to admit of the most proper distribution of whatever has to be done among different individuals. These effects have been strikingly evinced in the commercial history of Great Britain during the last half century: and thus it is, that capital, originally accumulated by means of trade, gives it, in its turn, nourishment, vigour, and enlarged growth.

The improvement that has taken place in the mode of living during the last half century has been partly the effect, and partly the cause, of the improvement of manufactures, and the extension of commerce. Had we been contented with the same accommodations as our ancestors, exertion and ingenuity would long since have been at an end, and routine have usurped the place of invention. Happily, however, the desires of man vary with the circumstances under which he is placed, extending with every extension of the means of gratifying them, till, in highly civilised countries, they become all but illimitable. This endless craving of the human mind, its inability to rest satisfied with previous acquisitions, combined with the constant increase of population, renders the demand for new inventions and discoveries as intense at one period as at another, and provides for the continued advancement of society. What is a luxury in one age, becomes a necessary in the next. The fact of Queen Elizabeth having worn a pair of silk stockings was reckoned deserving of notice by contemporary historians; while, at present, no gentleman, how humble soever his circumstances, can go to dinner without them. The lower classes are continually pressing upon the middle; and these, again, upon the higher; so that invention is racked, as well to vary the modes of enjoyment, as to increase the amount of wealth. That this competition should be, in all respects, advantageous, is not to be supposed. Emulation in show, though the most powerful incentive to industry, may be carried to excess; and has certainly been ruinous to many individuals, obliged sometimes, perhaps, by their situation, or seduced by example, to incur expenses beyond their means. But the abuse, even when most extended, as it probably is in England, is, after all, confined within comparatively narrow limits; while the beneficial influence resulting from the general diffusion of a taste for improved accommodations adds to the science, industry, wealth, and enjoyments of the whole community.

We are also inclined to think that the increase of taxation, during the late war, contributed to the improvement of manufactures, and the extension of trade. The gradually increasing pressure of the public burdens stimulated the industrious portion of the community to make corresponding efforts to preserve their place in society; and produced a spirit of invention and economy that we should have in vain attempted to excite by any less powerful means. Had taxation been very oppressive, it would not have had this effect; but it was not so high as to produce either dejection or despair, though it was, at the same time, sufficiently heavy to render a considerable increase of exertion and parsimony necessary, to prevent it from encroaching on the fortunes of individuals, or, at all events, from diminishing the rate at which they were previously accumulating. To the excitement afforded by the desire of rising in the world, the fear of falling superadded an additional and powerful stimulus; and the two together produced results that could not have been produced by the unassisted operation of either. We do not think that any evidence has been, or can be, produced to show that the capital of the country would have been materially greater than it is, had the tranquillity of Europe been maintained uninterrupted from 1793 to the present moment.

We do not state these circumstances to extenuate the evils of war, or of oppressive taxation; but merely to show the real influence of taxation on industry, when gradually augmented and kept within reasonable bounds. Under such circumstances, it has the same influence over a nation that an increase of his family, or of his unavoidable expenses, has over a private individual.

But after every fair allowance has been made for the influence of the causes above stated, and of others of a similar description, still it is abundantly certain that a liberal system of government, affording full scope for the expansion and cultivation of every mental and bodily power, and securing all the advantages of superior talent and address to their possessors, is the grand *sine qua non* of commercial and manufacturing prosperity. Where oppression and tyranny prevail, the inhabitants, though surrounded by all the means of civilisation and wealth, are invariably poor and miserable. In respect of soil, climate, and situation, Spain is, perhaps, superior, or, at all events, but little inferior to Great Britain; and yet, what a miserable contrast does the former present, when compared with the latter! The despotism and intolerance of her rulers, and the want of good order and tranquillity, have extinguished every germ of improvement in the Pen-

insula, and sunk the inhabitants to the level of the Turks and Moors. Had a similar political system been established in England, we should have been equally depressed. Our superiority in science, arts, and arms, though promoted by subsidiary means, is, at bottom, the result of *freedom and security*—freedom to engage in every employment, and to pursue our own interest in our own way, coupled with an intimate conviction, derived from the nature of our institutions, and their opposition to every thing like arbitrary power, that acquisitions, when made, may be securely enjoyed or disposed of. These form the grand sources of our wealth and power. There have only been two countries—Holland and the United States—which have, in these respects, been placed under nearly the same circumstances as England; and, notwithstanding they inhabit a morass, defended only by artificial mounds from being deluged by the ocean, the Dutch have long been, and still continue to be, the most prosperous and opulent people of the Continent; while the Americans, whose situation is more favourable, are advancing in the career of improvement with a rapidity hitherto unknown. In Great Britain we have been exempted, for a lengthened period, from foreign aggression and intestine commotion; the pernicious influence of the feudal system has long been at an end; the same equal burdens have been laid on all classes; we have enjoyed the advantage of liberal institutions, without any material alloy of popular licentiousness or violence; our intercourse with foreign nations, though subjected to various restraints, has been comparatively free; full scope has been given to the competition of the home producers; the highest offices have been open to deserving individuals; and, on the whole, the natural order of things has been less disturbed amongst us by artificial restraints than in most other countries. But without security, no degree of freedom would have been of material importance. Happily, however, every man has felt satisfied, not only of the temporary, but of the permanent tranquillity of the country, and of the stability of its institutions. The plans and combinations of capitalists have not been affected by misgivings as to what might take place in future. Monied fortunes have not been amassed in preference to others, because they might be more easily sent abroad in periods of confusion and disorder; but all individuals have unhesitatingly engaged, whenever an opportunity offered, in undertakings of which a remote posterity was alone to reap the benefit. No one can look at the immense sums expended upon the permanent improvement of the land, on docks, warehouses, canals, &c., or reflect for a moment on the settlements of property in the funds, and the extent of our system of life insurance, without being deeply impressed with the vast importance of that confidence which the public have placed in the security of property and the good faith of government. Had this confidence been imperfect, industry and invention would have been paralysed; and much of that capital which feeds and clothes the industrious classes would never have existed. The preservation of this security entire, both *in fact and in opinion*, is essential to the public welfare. If it be anywise impaired, the colossal fabric of our prosperity will crumble into dust; and the commerce of London, Liverpool, and Glasgow, like that of Tyre, Carthage, and Palmyra, will, at no very remote period, be famous only in history. — (From the *Treatise on Commerce*, contributed by the author of this work to the Society for the Diffusion of Useful Knowledge.)

*Supposed Danger to our Trade from foreign Competition.*—A great many statements have been circulated of late years respecting the rapid progress of manufactures in foreign countries, and many sinister auguries have at the same time been indulged in as to the decay of the manufactures and trade of this country. But though all branches of industry, and especially those dependent on foreign supply and demand, are necessarily exposed to vicissitudes which it is impossible to estimate *a priori*, or even to foresee; still we think there are no good grounds on which to anticipate that we are at all likely, within any reasonable period, to be outstripped in the career of industry by others. We have, it is true, something to fear from the spread of combinations and agitation at home; but, supposing domestic security and tranquillity to be preserved, we have little to fear from foreign competition. The previous tables show that our exports to France, Germany, and Italy, the only countries, or the channels to the only countries, that are at all likely to become our competitors, have, of late years, been rapidly increasing. Indeed, our exports to France in 1842 were twice as great as they had been in 1837; and were it not for the extraordinary fluctuations in the quantity and value of the currency of the U. States, — fluctuations which every now and then overspread every part of the Union with bankruptcy, and entail heavy losses on those foreigners who have the misfortune to supply her markets with goods, — we have no doubt that our exports to America would have increased in nearly the same ratio they have done to France. Much, no doubt, has been said about the progress of the cotton manufacture in the U. States; but, in point of fact, they are unable to export any description of cotton stuffs, except those coarse fabrics the value of which chiefly consists of that of the raw material. It is, indeed, an absurdity to suppose that a country like the U. States, where profits and wages are both high, should be able to come into anything like suc-

cessful competition with a country like England, in the production of any description of articles requiring either a good deal of skill or of labour in their manufacture.

Although, however, we attach no weight to the statements that have been so long and so perseveringly circulated as to the decay of trade, we are not, certainly, of the number of those who think that no change should be made in the commercial policy of the country, or that it may not be very materially improved. Restrictive regulations and oppressive duties, though greatly diminished of late years, and especially by the tariff of 1842, still continue to exert a powerful and mischievous influence over many departments of industry; and are, indeed (supposing tranquillity to be preserved), the only thing from which it is at all reasonable to apprehend any serious injury. It is in all respects of the utmost importance that every practicable effort should be made for their modification and reduction. They not only diminish exportation, by diminishing the power to import or bring back equivalents, but inflict a grievous injury on the consumer, without producing any corresponding advantage to the producer or the revenue, to which, indeed they are decidedly hostile. Perhaps, however, their worst effect consists in the handle and pretence which they afford for all sorts of misrepresentation and abuse. This has been strikingly evinced in the more recent discussions as to the Corn Laws. All parties—manufacturers and agriculturists—seem generally to entertain the most erroneous notions as to the influence of these statutes. The truth is, that, in ordinary years, it is now (thanks to the spread of agricultural improvement) all but imperceptible. During the 14 years ending with 1842, the average price of wheat in Great Britain was 59s. 4d. a quarter; and we are bold to say, that not a tittle of evidence has been or can be produced, to show that this price would have been reduced 4s. a quarter had the ports been all the while open to unconditional importation from abroad under a fixed duty of only 5s. a quarter. Hence, were our manufactures really declining, or in a perilous state, which happily they are not, it is idle to suppose that this decline or danger could be obviated by the repeal of the Corn Laws. The influence of the latter is now little felt, except in unfavourable years, when the home crops are deficient; but then, certainly, it is extremely injurious. This arises not only from the restrictions which they lay on importation at the time, but also from the discouragement which they give to warehousing in ordinary years, and, consequently, forcing the required supply to be suddenly introduced, to the great derangement of the ordinary channels of trade and of the currency. Such a state of things should not be allowed to exist; and seeing that the agriculturists have really very little to fear from the opening of the ports, sound policy would suggest that foreign corn should be admitted at all times for home consumption, under a reasonable constant duty (5s. or 6s. on wheat, and other grain in proportion), such as the justice and exigencies of the case may seem to require. The exclusion of foreign sugar, and the regulations as to the timber trade, though the latter have been much modified, are productive of nothing but mischief, and have not, in fact, a single redeeming quality about them: they add very materially to the price of a most important necessary of life, and of our houses, ships, and machinery, and deprive the Treasury of at least 1,500,000*l.* a year of revenue. But were the corn laws and those relating to sugar and timber placed on a proper footing, and some of the more oppressive duties in our tariff, as those on tea, silks and gloves, brandy and hollands, adequately reduced, the foreign competition to which we might be exposed would be productive of nothing but advantage. Such competition is, in reality, the vivifying principle of industry, *curis acens mortalia corda*. It gives a new stimulus to the inventive powers, at the same time that it supplies new products and new modes of enjoyment to reward the labour of the industrious. It must ever be borne in mind, that the amount of the exports from a country always depends upon, and is, in fact, measured by, the amount of its imports; and while the magnitude of the latter continues to increase, and we freely open our ports to the products of all countries and climates, we may be sure that our exports will equally increase, and be found in every market.

IMPRESSMENT, the forcible taking away of seamen from their ordinary employment, and compelling them to serve, against their will, in her Majesty's ships.

1. *Regulations as to Impressment.*—This practice is not expressly sanctioned by any act of parliament; but it is so indirectly by the numerous statutes that have been passed, granting exemptions from it. According to Lord Mansfield, it is "a power founded upon immemorial usage," and is understood to make a part of the common law. All *sea-faring* men are liable to impressment, unless specially protected by custom or statute. Seamen executing particular services for government, not unfrequently get protections from the Admiralty, Navy Board, &c. Some are exempted by *local* custom; and *ferry-men* are every where privileged from impressment. The statutory exemptions are numerous.

1. *Every ship in the coal-trade has the following persons protected, viz. 2 able seamen (such as the master shall nominate) for every ship of 100 tons; and 1 for every 50 tons for every ship of 100 tons and upwards; and any officer who presumes to impress any of the above, shall forfeit, to the master or owner of such vessel, 10*l.* for every man so impressed; and such officer shall be incapable of holding any place, office, or employment in any of his Majesty's ships of war.—6 & 7 Will. 3. c. 18. sect. 19.)*<sup>a</sup>

2. *No parish apprentices shall be compelled or permitted to*

<sup>a</sup> In order that these men shall be thus protected, it is necessary for the master to *name* them, *before they are impressed*: this is to be done by going before the mayor or other chief magistrate of the place, who is to give the master a certificate, in which is contained the names of the particular men whom he thus nominates; and this certificate will be their protection.

enter into his Majesty's sea service till he arrives at the age of 18 years. — (3 & 4 Anne, c. 6, sect. 4.)

5. Persons voluntarily binding themselves apprentices to sea service, shall not be impressed for 5 years from the date of their indentures. But no person above 18 years of age shall have any exemption or protection from his Majesty's service, if they have been at sea before they became apprentices. — (3 & 4 Anne, c. 6, sect. 15; 4 Anne, c. 19, sect. 17; and 15 Geo. 2, c. 17, sect. 2.)

6. Apprentices. — The act 5 & 6 Will. 4, c. 19, enacts some new regulations with respect to the number of apprentices that ships must have on board according to their tonnage; and the act 4 Geo. 4, c. 25, grants protection to such apprentices till they have attained the age of 21 years.

7. Persons employed in the Fisheries. — The act 50 Geo. 3, c. 106, grants the following exemptions from impressment, viz.: —

1st, Masters of fishing vessels or boats, who, either themselves or their owners, have, or within 6 months before applying for a protection shall have had, 1 apprentice or more under 16 years of age, bound for 5 years, and employed in the business of fishing.

2dly, All such apprentices, not exceeding eight to every master or owner of any fishing vessel of 50 tons or upwards; not exceeding seven to every vessel or boat of 35 tons and under 50; not exceeding six to every vessel of 30 tons and under 35 tons; and not exceeding four to every vessel or boat under 30 tons burden, during the time of their apprenticeship, and till the age of 20 years; they continuing, for the time, in the business of fishing only.

3dly, One seaman, besides the master and apprentices, to every fishing vessel of 10 tons or upwards, employed on the season, during his continuance in that service.

5. Policy of Impressment. — This practice, so subversive of every principle of justice, is vindicated on the alleged ground of its being absolutely necessary to the manning of the fleet. But this position, notwithstanding the confidence with which it has been taken up, is not quite so tenable as has been supposed. The difficulties experienced in procuring sailors for the fleet at the breaking out of a war, are not natural but artificial, and might be got rid of by a very simple arrangement. During peace, not more than a fourth or a fifth part of the seamen are retained in his Majesty's service that are commonly required during war; and if peace continue for a few years, the total number of sailors in the king's and the merchant service is limited to that which is merely adequate to supply the reduced demand of the former and the ordinary demand of the latter. When, therefore, war is declared, and 30,000 or 40,000 additional seamen are wanted for the fleet, they cannot be obtained, unless by withdrawing them from the merchant service, which has not more than its proper complement of hands. But to do this by offering the seamen higher wages would be next to impossible; and would, supposing it were practicable, impose such a sacrifice upon the public as could hardly be borne. And hence, it is said, the necessity of impressment; a practice which every one admits can be justified on no other ground than that of its being absolutely essential to the public safety.

It is plain, however, that a necessity of this sort may be easily obviated. All, in fact, that is necessary for this purpose, is merely to keep such a number of sailors in his Majesty's service during peace as may suffice, with the ordinary proportion of landmen and boys, to man the fleet at the breaking out of a war. Were this done, there would not be a shadow of a pretence for resorting to impressment; and the practice, with the cruelty and injustice inseparable from it, might be entirely abolished.

But it is said that, though desirable in many respects, the expense of such a plan will always prevent it from being adopted. It admits, however, of demonstration, that instead of being dearer, this plan would be actually cheaper than that which is now followed. Not more than 1,000,000, or 1,300,000, a year would be required to be added to the navy estimates, and that would not be a real, but merely a nominal advance. The violence and injustice to which the practice of impressment exposes sailors, operates at all times to raise their wages, by creating a disinclination on the part of many young men to enter the sea service; and this disinclination is vastly increased during war, when wages usually rise to four or five times their previous amount, imposing a burden on the commerce of the country, exclusive of other equally mischievous consequences, many times greater than the tax that would be required to keep up the peace establishment of the navy to its proper level. It is really, therefore, a vulgar error to suppose that impressment has the recommendation of cheapness in its favour; and, though it had, no reasonable man would contend that it is the only, or even the principal, circumstance to be attended to. In point of fact, however, it is as costly as it is oppressive and unjust. — (The reader is referred for a fuller discussion of this interesting question, to the note on Impressment in the edition of the *Wealth of Nations*, by the author of this work.)

INDEMNITY, is where one person secures another from responsibility against any particular event; thus, a policy of insurance is a contract of indemnity against any particular loss. Where one person also becomes bail for another, a bond of indemnity is frequently executed; and where a bond or bill of exchange has been lost or mislaid, the acceptor or obligee would not act prudently in paying it, without being secured by a bond of indemnity.

INDIAN RUBBER. See CAOUTCHOUC.

INDIGO (Fr. *Indigo*; Ger. *Indigo*; Sans. *Nili*; Arab. *Neel*; Malay, *Teroom*), the drug which yields the beautiful blue dye known by that name. It is obtained by the maceration in water of certain tropical plants; but the indigo of commerce is almost entirely obtained from leguminous plants of the genus *Indigofera*; that cultivated in India being the *Indigofera tinctoria*; and that in America the *Indigofera anil*. The Indian plant has pinnate leaves and a slender ligneous stem; and when successfully cultivated, rises to the height of 3, 5, and even 6 feet.

It appears pretty certain that the culture of the indigo plant, and the preparation of the drug, have been practised in India from a very remote epoch. It has been questioned, indeed, whether the *indicum* mentioned by Pliny (*Hist. Nat. lib. xxxv. c. 6.*) was indigo, but, as it would seem, without any good reason. Pliny states that it was brought from India; that when diluted it produced an admirable mixture of blue and purple colours (*in diluendo misturam purpuree caeruleique mirabilem reddit*); and he gives tests by which the genuine drug might be discriminated with sufficient precision. It is true that Pliny is egregiously mistaken as to the mode in which the drug was pro-

4thly, Any landman above the age of 18, entering and employed on board such vessel, for 2 years from his first going to sea; and to the end of the voyage then engaged in, if he so long continues in such service.

An affidavit sworn before a Justice of the peace, containing the tonnage of such fishing vessel or boat, the part or place to which she belongs, the name and description of the master, the age of every apprentice, the names for which he is bound, and the date of his indenture, and the name, age, and description of every such mariner and landman respectively, and the time of such landman's first going to sea, is to be transmitted to the Admiralty; who, upon finding the facts correctly stated, grant a separate protection to every individual. In cases, however, "of an actual invasion of these kingdoms or imminent danger thereof," such protected persons may be impressed; but except upon such an emergency, no person, whose name is on the list, is to be impressed, and such persons shall respectively forfeit 50*l.* to the party impressed, if not an apprentice, or to his master if he be an apprentice. — Sects. 1, 3, 4.

6. General Exemptions. — All persons 65 years of age and upwards, and under 18 years. Every person being a foreigner, who shall serve in any merchant ship, or other trading vessel, or privateer, belonging to a subject of the crown of Great Britain; and all persons, of what age soever, who shall be on the sea; shall be protected for 2 years, to be computed from the time of their first going to. — (15 Geo. 2, c. 17.)

7. *Mariners*, the managers, or boat owners, engaged in the northern whale fishery, are also protected. — (23 Geo. 3, c. 50.)

8. *Mariners employed in the herring fishery* are exempted while actually employed. — (48 Geo. 3, c. 110.)

duced; but there are many examples in modern as well as ancient times, to prove that the possession of an article brought from a distance implies no accurate knowledge of its nature, or of the processes followed in its manufacture. Beckmann (*Hist. of Inventions*, vol. iv. art. *Indigo*) and Dr. Bancroft (*Permanent Colours*, vol. i. pp. 241–252.) have each investigated this subject with great learning and sagacity; and agree in the conclusion that the *indicum* of Pliny was real indigo, and not, as has been supposed, a drug prepared from the *isatis* or woad. At all events, there can be no question that indigo was imported into modern Europe, by way of Alexandria, previously to the discovery of the route to India by the Cape of Good Hope. When first introduced, it was customary to mix a little of it with woad to heighten and improve the colour of the latter; but, by degrees, the quantity of indigo was increased; and woad was, at last, entirely superseded. It is worth while, however, to remark, that indigo did not make its way into general use without encountering much opposition. The *growers of woad* prevailed on several governments to prohibit the use of indigo! In Germany, an Imperial edict was published in 1654, prohibiting the use of indigo, or “*devil’s dye*,” and directing great care to be taken to prevent its clandestine importation, “because,” says the edict, “the trade in woad is lessened, dyed articles injured, and money carried out of the country!” The magistrates of Nuremberg went further, and compelled the dyers of that city to take an oath once a year not to use indigo; which practice was continued down to a late period. In 1598, upon an urgent representation of the states of Languedoc, at the solicitation of the woad growers, the use of indigo was prohibited in that province; and it was not till 1737, that the dyers of France were left at liberty to dye with such articles, and in such a way, as they pleased. — (*Beckmann*, vol. iv. p. 142.) Let not those who may happen to throw their eyes over this paragraph, smile at the ignorance of our ancestors — *Mutato nomine, de te fabula narratur*. How much opposition is made at this moment to the importation of many important articles, for no better reasons than were alleged in the sixteenth century, against the importation of indigo!

Indigo is at present produced in Bengal, and the other provinces subject to the presidency of that name, from the 20th to the 30th degree of north latitude; in the province of Tinnevely, under the Madras government; in Java; in Luconia, the principal of the Philippine Islands; and in Guatemala, and the Caraccas, in Central America. Bengal is, however, the great mart for indigo; and the quantity produced in the other places is comparatively inconsiderable.

Raynal was of opinion that the culture of indigo had been introduced into America by the Spaniards; but this is undoubtedly an error. Several species of *indigofera* belong to the New World; and the Spaniards used it as a substitute for ink, very soon after the conquest. — (*Humboldt, Essai Politique sur la Nouvelle Espagne*, tom. iii. p. 34. 2d ed.)

For the first 30 years after the English became masters of Bengal, the culture and manufacture of indigo, now of such importance, was unknown as a branch of British industry; and the exports were but trifling. The European markets were, at this period, principally supplied from America. In 1783, however, the attention of the English began to be directed to this business; and though the processes pursued by them be nearly the same with those followed by the natives, their greater skill, intelligence, and capital give them immense advantages. In their hands, the growth and preparation of indigo has become the most important employment, at least in a commercial point of view, carried on in the country. The indigo made by the natives supplies the internal demand; but a portion of that which is raised by them, with all that is raised by Europeans, is exported.

In the Delta of the Ganges, where the best and largest quantity of indigo is produced, the plant lasts only for a single season, being destroyed by the periodical inundation; but in the dry central and western provinces, one or two *ratoon* crops are obtained: and owing to this circumstance, the latter are enabled to furnish a large supply of reed to the former.

During the 9 years which preceded the opening of the trade with India, in 1814, the annual average produce of indigo in Bengal, for exportation, was nearly 5,600,000 lbs. But since the ports were opened, the indigo produced for exportation has increased fully a *third*; the exports during the 16 years ending with 1829–30, being above 7,400,000 lbs. a year. The following statement shows the rate of this increase, taking the average produce of each 4 years:—

1814	Lbs.	1818	Lbs.	1822	Lbs.	1826	Lbs.
1815	- 7,040,000	1819	- 6,000,000	1823	- 8,000,000	1827	- 9,000,000
1816		1820		1824		1828	
1817		1821		1825		1829	

and it has continued about the same since, as is evident from the following

Statement of the Quantity and Value of the Indigo shipped from Calcutta in 1830–31, 1840–41, and 1841–42.

	1830–31.		1840–41.		1841–42.

It deserves to be remarked, that since the opening of the trade, Indian capitalists have betaken themselves to the manufacture of indigo on the European method, and that at present a considerable part of the whole annual produce is prepared by them.

The culture of indigo is very precarious, not only in so far as respects the growth of the plant from year to year, but also as regards the quantity and quality of the drug which the same amount of plant will afford even in the same season. Thus the produce of 1823-26 was 41,000 chests, while the produce of the following year was but 25,000 chests; the produce of 1827-28 was about 42,000 chests, and that of 1828-29 only 26,500 chests! The price of indigo in India increased, for a while, in a far greater ratio than the quantity. In 1813-14, the real value of that exported from Calcutta was 1,461,000*l.*; but in 1827-28, although the quantity had increased but 20 per cent., the value rose to 3,990,000*l.*, or was about doubled. There was no corresponding rise in the price in Europe, but, on the contrary, a decline; and the circumstance is to be accounted for by the restraints that were then placed on the investment of capital in the production of colonial articles suited to the European market, the consequent difficulty of making remittances from India, and an unnatural flow of capital to the only great article of Indian produce and export that was supposed capable of bearing its application.

The consumption of indigo has varied but little in this country during the last 10 years, having been, at an average of that period, about 2,500,000 lbs. a year. This stationary demand, notwithstanding the fall in the price of the drug and the increase of the population, is principally to be ascribed to the decreasing use of blue cloth, in the dyeing of which it is principally made use of. Its consumption in France is about as great as in Britain. Besides the exports to Great Britain, France, and the United States, a good deal of Bengal indigo is exported to the ports on the Persian Gulph, whence it finds its way to southern Russia. It is singular that it is not used by the Chinese, with whom blue is a favourite colour.

The indigo of Bengal is divided into two classes, called, in commercial language, *Bengal and Oude*; the first being the produce of the southern provinces of Bengal and Bahar, and the last that of their northern provinces and of Benares. The first is, in point of quality, much superior to the other. This arose at one time, in a considerable degree, from the practice which prevailed in the northern provinces, of the European planter purchasing the wet fecula from the Ryot or native manufacturer, and completing the processes of curing and drying the drug. This is at present in a great measure discontinued; and the Oude indigo has, in consequence, considerably improved in quality. Its inferiority is probably more the result of soil and climate, than of any difference in the skill with which the manufacture is conducted.

In 1839-40, the export of indigo from the port of Madras amounted to 1,333,808 lbs. Besides the exports from Madras, a small quantity is also exported from the French settlement of Pondicherry: of which, however, we have no detailed statement. In 1837, the export of indigo from Manilla amounted to about 350,000 lbs. and Ceylon; but it has not been nearly so great since; and we doubt whether the whole export from Guatemala and Central America exceeds at present 600,000 or 700,000 lbs. The export from Batavia in 1841 amounted to 913,693 lbs., and the production is rapidly increasing. According to the statement now given, the annual exports of Asiatic indigo are as follows:—Bengal, 9,000,000 lbs.; Madras, 1,334,000 lbs.; Manilla, 350,000 lbs.; Batavia, 950,000 lbs.; in all about 13,440,000 lbs.

According to M. Humboldt, the exportation of indigo from Guatemala, in 1825, amounted to 1,800,000 lbs. Indigo is also produced in some of the West India islands, but not in large quantities.

Good indigo is known by its lightness or small specific gravity, indicating the absence of earthy impurities; by the mass not readily parting with its colouring matter when tested by drawing a streak with it over a white surface; but above all, by the purity of the colour itself. The first quality, estimated by this last test, is called, in commercial language, *fine blue*; then follow *ordinary blue*, *fine purple*, *purple and violet*, *ordinary purple and violet*, *dull blue*, *inferior purple and violet*, *strong copper*, and *ordinary copper*. These distinctions refer to the Bengal indigo only, the Oude being distinguished only into *fine* and *ordinary*. The indigo of Madras, which is superior to that of Manilla, is about equal to ordinary Bengal indigo. The indigo of Java is superior to these.

We are indebted to Mr. Cook, than whom there can be no higher authority on such matters, for the following Table, which gives a very comprehensive view of the state of the crops of indigo in Bengal, and the imports, consumption, and prices of Bengal indigo, since 1811-12:—

Crops in Bengal.				Year.	Total Import from India into Great Britain	Total Duties for Export and Home Con.	Stock in Great Britain 31st of Dec.	Average Prices in London.

Of 7,894,497 lbs. of indigo imported into Great Britain in 1841, 7,456,617 lbs. were from India, 104,190 lbs. from the British West Indies, 178,727 lbs. from Guatemala, 68,304 lbs. from Colombia, &c. Of the total quantity imported, 2,780,863 lbs. were retained for consumption.

Indigo of British possessions, not deemed their produce unless imported from thence. — (7 Geo. 4 c. 48.) For further information as to indigo, see *Colebrooke's Husbandry of Bengal*, p. 154.; *Milburn's Oriental Com.*; *Wilkinson's Commerce of Bengal*; *Wilson's Review of do.*; evidence of Gillian Maclean, Esq., East India Committee, 1830-31, &c.

The fixed capital required in the manufacture of indigo consists of a few vats of common masonry for steeping the plant, and precipitating the colouring matter; a boiling and drying house; and a dwelling house for the planter. These, for a factory of 10 pair of vats, capable of producing, at an average, 12,500 lbs. of indigo, worth on the spot about 2,500*l.*, will not cost above 1,500*l.* sterling. The buildings and machinery necessary to produce an equal value in sugar and rum, would probably cost about 4,000*l.* This fact, therefore, without any reference to municipal regulations, affords a ready answer to the question which has been frequently put, why the British planters in India have seldom engaged in the manufacture of sugar.

INK (Du. *Ink*, *Inkt*; Fr. *Encre*; Ger. *Dinte*; It. *Inchiostro*; Lat. *Atramentum*; Rus. *Tschernilo*; Sp. *Tinta*; Sw. *Blak*.)

"Every liquor or pigment used for writing or printing is distinguished by the name of ink. Common practice knows only black and red. Of black ink there are three principal kinds: 1. Indian ink; 2. Printers' ink; and 3. Writing ink. The Indian ink is used in China for writing with a brush, and for painting upon the soft flexible paper of Chinese manufacture. It is ascertained, as well from experiment as from information, that the cakes of this ink are made of lampblack and size, or animal glue, with the addition of perfumes or other substances not essential to its quality as an ink. The fine soot from the flame of a lamp or candle received by holding a plate over it, mixed with clean size from shreds of parchment or glove-leather not dyed, will make an ink equal to that imported. Good printers' ink is a black paint, smooth, and uniform in its composition, of a firm black colour, and possesses a singular aptitude to adhere to paper and thoroughly impregnated with moisture.

"Common ink for writing is made by adding an infusion or decoction of the nut-gall to sulphate of Iron, dissolved in water. A very fine black precipitate is thrown down, the speedy subsidence of which is prevented by the addition of a proper quantity of gum Arabic. Lampblack is the common material to give the black colour, of which 24 ounces are sufficient for 16 ounces of the varnish. Vermilion is a good red. They are ground together on a stone with a muller, in the same manner as oil paints. Among the amusing experiments of the art of chemistry, the exhibition of sympathetic inks holds a distinguished place. With these the writing is invisible, until some reagent gives it opacity. These inks have been proposed as the instruments of secret correspondence. But they are of little use in this respect, because the properties change by a few days' remaining on the paper; most of them have more or less of a tinge when thoroughly dry; and none of them resist the test of heating the paper till it begins to be scorched." — (*Nicholson's Dictionary of Chemistry*.)

INKLE, a sort of broad linen tape, principally manufactured at Manchester and some other towns in Lancashire.

INSOLVENCY AND BANKRUPTCY. Insolvency is a term in mercantile law applied to designate the condition of all persons unable to pay their debts according to the ordinary usage of trade. A bankrupt is an insolvent; but persons may be in a state of insolvency without having committed any of the specific acts which bring them under the denomination of bankrupts.

We have, under the article *BANKRUPTCY*, explained the most important differences in the law as to insolvency and bankruptcy; and have also briefly stated in that article, and in the article *CREDIT*, some of the alterations which seem to be imperatively required to make these laws more in harmony, than they are at present, with the principles of justice, and more conducive to the interests of commerce and the public advantage. In the present article, therefore, we shall confine ourselves to a summary statement of the proceedings under the existing laws.

Under the bankrupt laws, the creditors have a compulsory authority to avail themselves of the entire possessions of their debtor; under the insolvent laws, the debtor himself may make a voluntary surrender of his property for the benefit of his creditors, or his creditors may, on his incarceration, secure his property. From this diversity in the initiative process results the greatest diversity in the ultimate operation of the bankrupt and insolvent acts. The proceedings under a commission of bankruptcy being instituted by the creditors, they lose all future power over the property and person of the debtor after he has obtained his certificate, except in some particular cases; but the proceedings under the Insolvent Act having been commenced, either by himself, as is generally the case, or by the creditors when the insolvent is in custody and enabled to take advantage of the insolvent laws, the insolvent's future property is liable at all times, his person alone being freed. There are exceptions even to the freedom of the insolvent's person from engagements contracted before his application for relief under the law. The modern law as applied to bankruptcy and insolvency has created no little confusion, and the distinction between the two systems seems objectionable, and should be the subject of legislation.

Until the passing of the act 5 & 6 Vict. c. 116., no one could claim the benefit of the laws passed for relief of insolvent debtors, unless he were at the time in gaol under execution. But by this act, where the debts of a party do not exceed 300*l.*, he may make a surrender of all his property, and claim protection against arrest; and this, whether he be a trader or not.

If a party owe a sum not exceeding 300*l.*, he may, on giving notice to one fourth in number and value of his creditors in the London Gazette, and in a local newspaper,

petition the Court of Bankruptcy if he have resided 12 months in the London district, or the country commissioner in whose district he may have resided 12 months, for his protection against arrest. The petition must set forth all his debts and credits and property, and any proposal he may have to make for payment; and a protection may be given to his person and property until the party shall appear in court to be finally protected against any process against his person and goods. On the presentation of the petition the property vests in the official assignee of the court, the commissioner in rotation appoints a certain day to examine the party on oath, and if satisfied with the allegations of the petitioner, may make a final order for his protection; provided the debts were not contracted by fraud or breach of trust, or in any action for the breach of the revenue laws, or other causes mentioned in the act. The commissioner may postpone the examination and renew the protection, may order an allowance for the support of the party until the final order, and may punish him for false statements. On the final order, all the estate, present and future, vests in 2 assignees, one of whom is to be chosen by the creditors, the other being the official assignee. The judges and commissioners were empowered to make rules to carry the act into execution, and rules have accordingly been published containing full directions to any party seeking the benefit of the act.

We will now refer to the proceedings under the act for relief of insolvent debtors who are unable to claim the benefit of the act spoken of.

1. *Proceedings under the existing Insolvent Act.*—A special tribunal, called the "Court for Relief of Insolvent Debtors," exists for the purpose of receiving the surrender of property and effects for the benefit of the creditors of insolvents. It consists of a chief and two other commissioners, appointed by the Crown, and is a court of record, with powers similar to those of the superior courts at Westminster, but it cannot award costs, unless in particular cases. The court sits in Portugal-street, or elsewhere as the court may think fit; no fees are taken, except those established by the court. The commissioners also severally make circuits 3 times a year; and attend at the towns and places appointed for insolvents in the country to appear: their judicial powers in the provincial towns are the same as those exercised in the metropolis.

The first step is the insolvent's petition. Any person detained within the walls of any prison upon any process, may, within 14 days after the arrest, petition for discharge. The petition must state the particulars of the first arrest and cause of detainer, and the amount of debts: the prisoner must give notice of his intention to the gaoler, and state that he is willing to vest all his property in the assignee of the court, and pray to be discharged from all demands.

Under this act, any creditor may get the property of a party in custody vested in the provisional assignee by petition, although the prisoner may not himself have applied.

At the time of the petition either by the prisoner or creditor, the court may order all the prisoner's property (except wearing apparel, &c. to the value of 20*l.*) to be vested in the provisional assignee, until his final discharge; and the court may, before the final hearing, discharge the prisoner on bail. Until discharge, the court may order an allowance for the prisoner for his support out of his estate.

The filing of a petition is an act of bankruptcy if issued within 3 months, and the bankruptcy shall divest the property from the provisional assignee; but a bankruptcy is not to prevent the court proceeding under this act so as to get his future property, if the prisoner should under the bankruptcy obtain his certificate.

The voluntary preference of a creditor, by conveyance of money, goods, bills, or other property, after the imprisonment of the petitioner, or before his imprisonment being in insolvent circumstances, is void, provided it were not 3 months before the imprisonment or with a view to petition. No warrant of attorney or execution to be enforced against property after imprisonment.

2. *The Assignees.*—Any time after the filing of the petition, the court appoints assignees from among the creditors, to whom, on their acceptance of the appointment, an assignment is made of the effects of the prisoner. In case of any real estate, the same, within the space of 6 months, must be sold by public auction, in such manner and place as the major part in value of the creditors approve; but when any part of the property is so circumstanced that the immediate sale of it would be prejudicial to the interests of the prisoner, the court may direct the management of such property till it can be properly sold; and if the debts can be paid by mortgage in lieu of sale, the court may give directions for that purpose, and a dividend is to be declared as soon as may be.

Goods in possession and disposal of the insolvent, whereof he is reputed owner, are deemed his property; but this does not affect the assignment of any ship or vessel, duly registered according to the 6 Geo. 4. c. 110.

An account upon oath before an officer of the court, or justice of peace, must be made up by the assignees within every 3 months at the furthest; and in case of a balance in hand, a dividend must be forthwith made, of which dividend 30 days' previous notice must be given; and every creditor is allowed to share in the dividend, unless objected to by the prisoner, assignees, or other creditors, in which case the court decides.

The assignees may execute powers which the insolvent might have executed, as the granting of leases, taking lives, transferring public stock or annuities; but they cannot nominate to a vacant ecclesiastical benefice.

The assignees, with the consent of one commissioner, and the major part of the creditors in value, may compound for any debt due to the prisoner; or may submit differences connected with the estate of the insolvent to arbitration.

Dividends payable to creditors, unclaimed for 12 months, are to be paid into court to the credit of the estate of the insolvent: in default of payment of the dividends by the assignees, their goods may be distrained; or, if no distress, they may be imprisoned.

The assignees, in case the insolvent is a beneficed clergyman or curate, are not entitled to the income of the benefice or curacy; but they may obtain a sequestration of the profits for the benefit of creditors. Neither are the assignees entitled to the pay, half-pay, pension, or other emolument of any person who is or has been in the army, navy, or civil service of the government or East India Company, but the court may order, subject to the approval of the heads of public offices, a portion of such pay, half-pay, pension, or emoluments to be set aside towards the liquidation of the debts of the insolvent.

The court may inquire into the conduct of the assignees, on the complaint of the insolvent or any of his creditors; and, in case of malversation, award costs against them.

Assignees who wilfully employ or retain any part of the proceeds of the insolvent's estate, may be charged with interest, at a rate not exceeding 20*l.* per cent. per annum.

3. *Discharge of the Insolvent.*—After the vesting order, the prisoner is within 14 days to prepare a

schedule of all his estate, effects, and debts, with great particularity, and of his past expenditure, and deposit all his books and papers; the court then appoints a time for hearing, and notice of the vesting order is given to all creditors whose debts amount to 5*l*. At the time of the hearing the schedule is examined, and the commissioners examine the prisoner on oath; and any creditor, having given 3 days' notice of intention to do so, may oppose or examine the prisoner: the hearing may be adjourned; affidavits may be made against his discharge in certain cases; the schedules and accounts may be referred for an investigation to an examiner, who may examine on oath; and the expenses may be paid out of insolvent's estate; the prisoner may be at once discharged from custody, or where no cause to the contrary, in not less than 6 months from the filing the petition; but in case of improper dealing with his creditors, or other maladeeds mentioned in the act, he may be detained 3 or 2 years, or the discharge may be conditional on the prisoner performing some engagement. If creditors improperly oppose, the court may make them pay the prisoner's costs. The adjudication is final, unless improperly obtained. Before the prisoner's discharge, he must execute a warrant of attorney to enable creditors to take any future property, and the act contains provisions for enforcing the warrant of attorney at the discretion of the court; so that all his future property may be made available; or if the insolvent become entitled to property not seizable under an execution, the assignees may obtain the assistance of the court to realise it.

The discharge extends to sums payable by annuity; the annuitants being admitted as creditors to the estate of the insolvent, at a fair valuation of their interest.

But the discharge does not extend to any debts due to the Crown, nor for any offence against the revenue laws; nor at suit of any sheriff or other public officer, upon any bail-bond entered into for any person prosecuted for such offence; unless the Treasury certify consent to the discharge.

Insolvents under writ of *capias* or extent, must apply to the Barons of the Exchequer to be discharged. When the prisoner is not discharged, the court may, on application for that purpose, order the creditor at whose suit he is detained to pay any sum not exceeding 4*s*. weekly; and in default of payment, the prisoner to be liberated.

4. *Future Liabilities of the Insolvent.*—No person, after judgment entered up, is liable to imprisonment for any debt comprised in the schedule, unless the insolvent had entered into any covenant before the insolvency to pay any sum not then capable of valuation.

An insolvent, after his discharge, may, on the application of an assignee to the court, be again examined touching the effects set forth in the schedule; and if he refuse to appear or answer questions, he may be recommitted.

No uncertificated bankrupt, nor any person having had the benefit of the Insolvent Act, can have it a second time within *five years*, unless 3-4ths in number and value of the creditors consent thereto, or unless it appear to the court that the insolvent, since his bankruptcy or discharge, has done his utmost to pay all just demands; and that the debts subsequently incurred have been unavoidable, from inability otherwise to acquire subsistence for himself and family.

Married women are entitled to the benefit of the insolvent act, and may petition the court on executing a special assignment.

The act 1st & 2nd Victoria, prohibits any proceedings under what is called the Lord's Act, 32 G. 2. c. 28.

Statement of the Number of Petitions filed in the Court for Relief of Insolvent Debtors, and of Adjudications made by that Court, during each of the Seven Years ending with 1840.

Years.	Petitions filed.			Adjudications made.			
	From the Prisoners in London, Middlesex, and Surrey.	From the other Prisons in England and Wales.	Total.	By the Court in London.	By Justices.	By Commissioners on Circuit.	Total.

1840	1,779	2,588	4,667	1,455	2	2,494	3,911

Our next object will be to present a brief exposition of the **BANKRUPT LAWS.**

**BANKRUPTCY.** — Blackstone defines a bankrupt — “A trader who secretes himself, or does certain other acts tending to defraud his creditors.” But an intention to defraud is not now held to be essential to constitute a bankrupt; who may be either simply an insolvent, or a person who is guilty of certain acts tending to defraud his creditors.

There are, as already observed, some important distinctions between the bankrupt and insolvent laws, not only in their application to different descriptions of individuals, but also in the powers they exercise over the estates of persons subsequently to their being brought under their adjudication. The benefits of the Insolvent Act extend without distinction to every class of persons actually in prison for debt, and in cases before noticed of a debtor not owing 300*l*. to persons not in custody, whereas the benefits of the Bankrupt Act extend to traders only. But persons relieved under a commission of bankruptcy for the first time are for ever discharged from all debts proveable against them, that is to say, from all debts capable of being valued, (though repeated instances have occurred where settlements have been made, or covenants entered into, from the effect of which a bankrupt is not discharged,) and their property from any future liability; whereas, if relieved under the Insolvent Act, their persons only are protected from arrest, while any property they may subsequently acquire continues liable to their creditors till the whole amount of their debts be paid in full. It follows that the Insolvent Act affords, more immediately, personal relief only; while the Bankrupt Act discharges both person and property at once, and even returns the bankrupt a certain allowance out of the produce of his assets, proportioned to good behaviour, and the amount of his dividend.

Having already treated of insolvency, we now proceed to describe the proceedings under a commission of bankruptcy, as regulated by the act 6 Geo. 4. c. 16., 1 & 2

W. 4. c. 56., 2 & 3 W. 4. c. 114., 5 & 6 W. 4. c. 29., 6 & 7 W. 4. c. 27., 1 & 2 Vict. c. 110., 2 & 3 Vict. c. 29., and 5 & 6 Vict. c. 122.; which are the last general acts on the subject, and by which former statutes have been consolidated, and several important improvements introduced; leaving, however, untouched, many radical defects inherent in this branch of the law. The chief points to be considered, are—1. The persons who may become bankrupt; 2. Acts constituting bankruptcy; 3. Proceedings of petitioning creditor; 4. Courts of Bankruptcy; 5. Debts proveable under the commission; 6. Official assignees; 7. Assignees chosen by creditors; 8. Property under bankruptcy; 9. Examination and liabilities of bankrupt; 10. Payment of a dividend; 11. Certificate and allowance to bankrupt.

1. *Who may become Bankrupt.*—Generally all persons in trade, capable of making binding contracts, whether natural-born subjects, aliens, or denizens, are within the jurisdiction of the bankruptcy laws; but the statute expressly includes builders, bankers, brokers, packers, carpenters, scriveners, ship insurers, warehousemen, wharfingers, shipwrights, victuallers; keeper of inns, taverns, hotels, and coffee-houses, dyers, printers, bleachers, fullers, calenderers, cattle or sheep salesmen, factors, agents, livery stable keepers, coach proprietors, carriers, shipowners, auctioneers, apothecaries, market gardeners, cowkeepers, brickmakers, alum makers, lime burners, millers, and all persons who use the trade of merchandise by bargaining, bartering, commission, consignment, and otherwise, and also all persons who seek their living by buying and selling, letting for hire, or by the manufacturing of goods and commodities. Persons who cannot become bankrupt, are graziers, farmers, workmen for hire, labourers, receivers general of taxes, and subscribers to any commercial or trading company established by charter or act of parliament.

A clergyman, unless a trader, cannot be made a bankrupt; nor an attorney, in the common course of his profession; nor an infant, nor a lunatic, nor a married woman, except in those cases where she may be sued and taken in execution for her debts. — (8 T. R. 545.)

A single act of buying or selling is not sufficient to make a trader; as a schoolmaster selling books to his scholars only, or a keeper of hounds buying dead horses and selling the skin and bones. — (6 Moore, 56.) But the quantity of dealing is immaterial, where an intention to deal generally may be inferred. — (1 Rose, 84.) A buyer or seller of land, or any interest in land, is not a trader within the act; and on this principle it has been decided, that a brickmaker selling bricks made in his own field, or the owner of a mine selling minerals from his own quarry, is not liable, because such business is carried on only as a mode of enjoying the profits of a real estate. — (2 Will. 169.)

Traders having privilege of parliament, are subject to the bankruptcy laws, and may be proceeded against as other traders; but such persons cannot be arrested or imprisoned, except in cases made felony by the statute.

2. *Acts constituting Bankruptcy.*—In general, any act which is intended to delay or defraud creditors, is an act of bankruptcy; such as a trader concealing himself from his creditors, leaving the country, causing himself to be arrested or his goods taken in execution, or making any fraudulent conveyance, gift, or delivery of his property. A trader keeping house commits an act of bankruptcy, if he give a general order to be denied. So is closing the door, and not admitting persons till ascertained who they are from window, though no actual denial. — (1 Bar. & Cras. 54.) But it is no act of bankruptcy if the denial be on Sunday, or at an unreasonable hour of the night, or to prevent interruption at dinner time.

Traders held in prison for any really subsisting debt for the period of 31 days, or who, being arrested, make their escape out of prison or custody, commit acts of bankruptcy. A penalty due to the Crown is a sufficient debt, and the time is computed from the first arrest, where the party lies in prison immediately, and the day of arrest is included, and the whole of the last day.

Filing a petition, in order to take the benefit of the Insolvent Act, is an act of bankruptcy, and a fiat may be issued any time before the petition is heard by the Insolvent Court, or within 2 calendar months.

A trader may make a declaration of his insolvency, signed and attested by an attorney or solicitor, and afterwards to be filed in the Bankrupt Office; and the secretary signing a memorandum thereof, is authority for advertising it in the *Gazette*. Upon this act of bankruptcy no commission can issue, if not within 2 calendar months after such advertisement, and unless such advertisement be within 8 days after filing declaration; and no docket can be struck till 4 days after advertisement, if the commission is to be executed in London, and 8 if in the country. Such declaration of insolvency being concerted between bankrupt and creditor, does not invalidate the commission. A party may subject himself to the bankrupt laws, by refusing to pay, compound, or give security for a debt when summoned, as will be afterwards noticed.

The execution by a trader of any conveyance by deed, of all his estate and effects for the benefit of all his creditors, is not an act of bankruptcy, unless a commission be sued out within 6 months after, provided the deed be attested by an attorney or solicitor, and executed within 15 days after, and notice thereof within 2 months be given in the *Gazette*, and 2 daily newspapers; or, if the trader reside more than 50 miles from London, notice may be given in the *Gazette*, and nearest country newspaper.

3. *Proceedings of Petitioning Creditors.*—A person being a trader, and having committed an act of bankruptcy, the next step in the proceeding is to petition the Lord Chancellor to issue his fiat. No fiat is issued, unless the petitioning creditor's debt, if 1 person or 1 firm, amount to 50*l.*, two creditors 70*l.*, and 3 or more creditors 100*l.*, and any person who has a security from a bankrupt for a sum not actually due, may, nevertheless, petition for a fiat. The petitioning creditor must make an affidavit before a Master in Chancery, of the truth of his debt, and give bond, if required by the Lord Chancellor, to prove his debt, the trading, and act of bankruptcy.

If a trader have committed no act of bankruptcy, a creditor may summon him before a commissioner in the manner pointed out by the act of 5 & 6 Victoria, cap 122., and compel him to admit the debt and pay or give security to defend an action, or in case of refusal the creditor may treat him as a bankrupt, and make this refusal a ground for a fiat; or if the trader sign an admission of the debt, and shall not within 14 days pay or give security, the same proceeding may be taken; or if a party disobey any order of any court of law or equity in bankruptcy or lunacy for payment of money, the refusal may be made the ground for a fiat. If the debt prove insufficient to support a fiat, the Lord Chancellor, upon the application of another creditor who has proved a sufficient debt, contracted posterior to that of the petitioning creditor, may order the bankruptcy to be proceeded in.

The petitioning creditor proceeds at his own cost until the choice of assignees, when his expenses are paid out of the first money received under the bankruptcy.

Creditors entitled to sue out a fiat against all the partners in a firm, may elect to petition only against 1 or more of such partners; and the commission may be superseded as to 1 or more partners, without affecting its validity as to the other partners.

Creditors who have sued out a fiat compounding with the bankrupt, or receiving more in the pound than other creditors, forfeit the whole of their debt, and whatever gratuity they received, for the benefit of the other creditors, and the Lord Chancellor may either order the commission to be proceeded in or superseded.

4. *Courts of Bankruptcy.*—The courts of bankruptcy now consist of a Court of Review in London, consisting of one judge only, who combines the duties of a vice chancellor in equity and a judge in bankruptcy. The Court of Review controls all the proceedings of minor courts, and adjudicates on all matters of bankruptcy. There is a court in London consisting of 8 commissioners, where the practical business of bankruptcy is performed; these commissioners conduct all the judicial business, and control all the operations of the bankruptcy from the time of the opening of the fiat to the winding up of the estate. Their district embraces London and the eastern and southern parts of England. There are 7 other commissioners having courts at Birmingham, Liverpool, Manchester, Leeds, Bristol, Exeter, and Newcastle upon Tyne, and these districts comprehend within the jurisdiction of the commissioners the greater part of the northern and western parts of England. The commissioners have official assignees and registrars attached to each district court.

Let us now proceed with the powers and duties of the commissioners.

Commissioners are empowered to summon persons, examine them on oath, and call for any deeds or documents, necessary to establish the trading and act of bankruptcy; and upon full proof thereof, to adjudge the debtor a bankrupt. Notice of such adjudication must be given in the *Gazette*, and 3 public meetings appointed for the bankrupt to surrender; the last of which meetings to be the 43d day after. A bankrupt refusing to attend at the appointed time may be apprehended; and on refusing to answer any question touching his business or property, may be committed to prison.

By warrant of the commissioners, persons may break open any house, premises, door, chest, or trunk of any bankrupt, and seize on his body or property; and if the bankrupt be in prison or custody, they may seize any property (necessary wearing apparel excepted) in the possession of such bankrupt, or any other person. Authorised by a justice's warrant, premises may be searched not belonging to the bankrupt, on suspicion of property being concealed there; and persons suspected to have any of the bankrupt's property in their possession, refusing to obey the summons of commissioners, or refusing to answer interrogatories, or to surrender documents, without lawful excuse, may be imprisoned. The wife of the bankrupt may be examined, or, on refusal, committed, and the person against whom a fiat is issued on proof of probable cause, for believing that he is about to leave England, may be arrested.

Persons summoned are entitled to their expenses; and those attending, whether summoned or not, to assist the commissioners in their inquiries, are protected from arrest on any civil suit.

6. *Debts payable under Commission.* At the 3d meetings appointed by the commissioners, and at every other meeting appointed by them for proof of debts, every creditor may prove his debt by affidavit or by his own oath; incorporated bodies by an agent authorised for the purpose; and one partner may prove on behalf of the firm. Persons living at a distance may prove by affidavit before a Master in Chancery, or if resident abroad, before a magistrate where residing, attested by a public notary, or British minister or consul.

Clerks and servants, to whom the bankrupt is indebted for wages, are entitled to be paid 3 months' wages, and not exceeding 30*l.*, and for the residue they may prove under the commission.

Indentures of apprenticeship are discharged by bankruptcy; but in case a premium has been received, the commissioners may direct a portion of it to be repaid for the use of the apprentice, proportioned to the term of apprenticeship unexpired.

Debts upon bill, bond, note, or other negotiable security, or where credit has been given upon valuable consideration, though not due at the time the act of bankruptcy was committed, are provable under the commission. Sureties, persons liable for the debts of, or bail for the bankrupt, may prove after having paid such debts, if they have contracted the liability without notice of any act of bankruptcy. Obligees in bottomry or respondentia bonds, and assured in policy of insurance, are admitted to claim; and after loss, to prove as if the loss or contingency had happened before commission had issued against the obligor or insurer. Annuity creditors may prove for the value of their annuities, regard being had to the original cost of such annuities. Persons having securities may have them valued, and prove for the difference. Plaintiffs in any action, having obtained judgment against the bankrupt, may prove for their costs.

When there are mutual debts between the bankrupt and a creditor, they may be set off against each other, and the balance, if in favour of the creditor, is provable against the bankrupt's estate.

Interest may be proved on all bills of exchange and promissory notes over-due at the time of issuing commission, up to the date of the commission.

Proving a debt under the commission bars the right to proceed against the bankrupt by action; and in case the bankrupt be in prison at the suit of a creditor, he cannot prove his debt without first discharging the bankrupt from confinement: but the creditor is not liable for the costs of the action so relinquished by him.

No debt barred by the statute of limitations is provable under the commission.

6. *Official Assignees.*—An important alteration introduced by Lord Brougham's act, particularly to commercial men, is the appointment of official assignees. They are 12 in number, merchants and traders, resident in the metropolis or vicinity, and there are 4 in each country district except at Exeter, where there are only 3, and at Newcastle upon Tyne 1, and are selected by the Lord Chancellor. They are to act with the assignees chosen by the creditors. All the real and personal estates of the bankrupt, all the monies, stock in the public funds, securities and proceeds of sale, are transferred and vested in the official assignees, subject to the rules, orders, and direction of the Lord Chancellor, or a member of the Court of Bankruptcy. The official assignee gives security for the trust reposed in him; and is required to deposit all monies, securities, &c. in the Bank of England.

The official assignee is neither remunerated by a percentage nor a fixed salary, but a sum is paid to him for his trouble, at the discretion of the commissioners, and proportioned to the estates of the bankrupt and the duties discharged.

7. *Appointment of Assignees by Creditors.*—The official assignee is empowered to act as the sole assignee of the bankrupt's estates and effects until others are chosen by creditors, which must be at the 3d meetings. Every creditor to the amount of 10*l.* who has proved his debt, is eligible to vote; persons may be authorised by letters of attorney to vote, and the choice is made by the major part in value of the creditors; but the commissioners may reject any person they deem unfit; upon which a new choice must be made.

When only 1 or more partners of a firm are bankrupt, a creditor to the whole firm is entitled to vote, and to assent or dissent from the certificate; but such creditor, unless a petitioning creditor, cannot receive any dividend out of the separate estate, until all the other creditors are paid in full.

Assignees may, with consent of creditors declared at any meeting duly summoned, compound or submit disputes to arbitration, and such reference be made a rule of the Court of Bankruptcy, or they may, with such consent of the creditors, commence suits in equity; but if 1-3d in value of creditors do not attend such meeting, the same powers are granted to assignees, with the consent, in writing, of commissioners.

Assignees to keep a book of account, where shall be entered a statement of all receipts and payments relating to bankrupt's estate, and which may be inspected by any creditor who has proved, and 14 days before any dividend shall be declared, the official assignee shall furnish a debtor and creditor account to the creditor's assignee. Commissioners may summon assignees, with their books and papers, before them; and if they refuse to attend, may cause them to be committed till they obey the summons, and the official assignee may be removed at any time by the Lord Chancellor.

An assignee retaining or employing the money of the bankrupt, to the amount of 100*l.* or upwards, for his own advantage, may be charged 30*l.* per cent. interest.

The court is authorised, at the sitting for the last examination, or whenever after it shall think fit, to audit the assignee's accounts, of which audit 31 days' notice must be given in the *Gazette*; which accounts must be delivered on oath, and the commissioners may examine the assignee touching the truth thereof.

8. *Property under Bankruptcy.* — The official assignee is vested with all the real and personal estate of the bankrupt, and with all such property as may be devised to him, or come into his possession, till the time he obtain his certificate. The commissioners may sell any real property of which the bankrupt is seised, or any estate tail in possession, reversion, or remainder; and the sale is good against the bankrupt, the issue of his body, and against all persons claiming under him after he became bankrupt, or whom he can cut off from any future interest. All property which the bankrupt has in right of his wife passes to the assignee, except such as is settled for her own sole benefit. Any property pledged, or securities deposited, may be redeemed for the benefit of the creditors.

If a bankrupt, being at the time insolvent, convey his land or goods to his children or others (except upon their marriage, or for a valuable consideration), or deliver securities, or transfer debts into other names, such transactions are void, but this does not extend to a *bona fide* sale or conveyance: a purchaser is there protected in a transaction with the bankrupt, if he have no notice of an act of bankruptcy.

A landlord after or out of bankruptcy cannot distrain for more than *one year's rent*; but he may prove under the commission for the residue.

The assignee may accept any lease to which the bankrupt is entitled, and his acceptance exonerates the bankrupt from any future liability for rent; or if the assignee decline the lease, and the bankrupt, within 14 days after, deliver the lease to the lessor, he is not liable for rent.

In general, all power which the bankrupt might lawfully execute in the sale and disposition of his property for the benefit of himself, may be executed by the assignee for the benefit of creditors, and the assignees are entitled to all or nearly all the benefits which the bankrupt could have; even a contract to employ a party has been held to pass to his assignees.

The circumstance of a commission appearing in the *Gazette*, and a fair presumption that the person to be affected thereby may have seen the same, is deemed sufficient legal notice of an act of bankruptcy having been committed.

9. *Examination and Liabilities of Bankrupt.* — A bankrupt having, after an act of bankruptcy or in contemplation of bankruptcy, obtained goods on credit on false pretences, is guilty of a misdemeanor, and a bankrupt not surrendering to the commissioners before 9 o'clock upon the 4th day after notice, or not making discovery of his estate and effects, not delivering up goods, books, papers, &c., or removing or embezzling to the value of 10*l.*, is guilty of *felony*, and liable to a discretionary punishment from imprisonment to transportation for life. The period for surrendering may be enlarged by the Lord Chancellor; and the commissioners, or assignees with approval of commissioners, may grant an allowance for support of the bankrupt and his family till he has passed his last examination. During his attendance on commissioners, the bankrupt is protected from arrest.

The bankrupt is required to deliver up his books of account to the assignees upon oath, and to attend them on reasonable notice; he may inspect his accounts, assisted by other persons, in presence of assignees. After certificate is allowed, he is required to attend assignees, in settling accounts, at 2*s.* per day; and may be committed for non-attendance.

A penalty of 100*l.* is imposed on persons concealing bankrupt's effects, and double the value of the property so concealed; and an allowance of 8*l.* per cent. to persons discovering such concealment, with such further reward as the major part of the creditors may think fit to grant.

The bankrupt, or any other person, wilfully swearing falsely, is liable to the penalties of perjury.

If the bankrupt shall not, if in the U. Kingdom at the time of adjudication, within 31 days after advertisement in the *Gazette*, or within 3 months after advertisement if in any other part of Europe at the date of the adjudication, or if elsewhere at this date, within 12 months after advertisement, dispute the fiat, the *gazette* to be conclusive.

At any meeting of creditors, after the last examination, the bankrupt or his friends may *tender a composition*; which, if accepted by 9-10ths in number and value of the creditors, at 2 separate meetings, the Lord Chancellor may supersede the commission. In deciding on such offer, creditors under 20*l.* are not entitled to vote; but their debts are computed in value. Persons residing out of England may vote by letter of attorney, properly attested; and the bankrupt may be required to make oath that no unfair means have been employed to obtain the assent of any creditor to such arrangement.

10. *Payment of a Dividend.* — The court, acting in the prosecution of any fiat, may declare a dividend at any time after the time for the last examination of the bankrupt, but 21 days' notice of the meeting to declare it must be regularly advertised; at which meeting, creditors who have not proved may prove their debts; and at such meeting commissioners may order the nett produce of bankrupt's estate to be shared among the creditors that have proved, in proportion to their debts; but no dividend to be declared unless the accounts of the assignees have been first audited and delivered in as before described.

If the estate is not wholly divided upon a first dividend, a second meeting must be called, not later than 18 months from the date of commission; and the dividend declared at such second meeting to be final, unless some suit at law be pending, or some part of bankrupt's property afterwards accrue to the assignees; in which case it must be shared among the creditors within 3 months after it is converted into money; but this may be controlled by the court.

Assignees having unclaimed dividends to the amount of 20*l.*, who do not within 3 calendar months from the expiration of a year from the order of payment of such dividends, either pay them to the creditors entitled thereto, or cause a certificate thereof to be filed in the Bankruptcy Office, with the names, &c. of the parties to whom due, shall be charged with legal interest from the time the certificate ought to have been filed, and such further sum, not exceeding 20*l.* per cent. per annum, as the commissioners think fit. The Lord Chancellor may order the investment of unclaimed dividends in the funds; and the unclaimed dividends now are resorted to for the payment of salaries and expenses of the court. Any creditor claiming dividends due to him may obtain them upon application; but unless the dividend be considerable, the expense of the application is too great to render the attempt to obtain it prudent.

No action can be brought against assignees for any dividend; the remedy being by petition to the Lord Chancellor.

11. *Certificate and Allowance to Bankrupt.* — The bankrupt who has surrendered, and conformed in all things to the provisions of the bankruptcy laws, is discharged by the certificate from all debts and demands proveable under the commission; but this does not discharge his partner, or one jointly bound, or in joint contract with him, nor does it debar a debt due to the Crown.

The creditors now do not sign the bankrupt's certificate; the mode of obtaining it is for the bankrupt to apply to the court acting in the fiat, to appoint a sitting for the allowance of the certificate, of which 21 days' notice shall be advertised in the *Gazette*, and at this sitting the creditors may be heard against the allowance; and the court, having regard to the conduct of the bankrupt before and after the bankruptcy, may either allow, or refuse, or suspend the allowance of the certificate. The allowance is to be of no force, if the court under hand and seal do not certify to the Court of Review that the bankrupt has conformed to the law, and made a full discovery of his estate and effects, and that there appears no reason to doubt the truth of such discovery, and unless the bankrupt swear that the certificate was obtained fairly, and unless the allowance be confirmed by the Court of Review.

A bankrupt, after obtaining his certificate, cannot be arrested for any debt proveable under the com-

misation; nor is he liable to satisfy any debt from which he is discharged, upon any promise, contract, or agreement, unless made in writing.

In case a person has been bankrupt before, or compounded with his creditors, or taken benefit of Insolvent Act, unless the estate produced 10s. In the pound, the certificate only protects the person of bankrupt from arrest; and any future property he acquires may be seized by assignees for benefit of creditors.

If the produce of bankrupt's estate does not amount to 10s. in the pound, he is only allowed out of the assets, so much as assignees think fit, not exceeding 3 per cent., or 300*l.* in the whole; if it produce 10*l.*, 5 per cent., not exceeding 400*l.*; if 12*l.* 6*d.* is paid in the pound, 7*l.* per cent., not exceeding 500*l.*; if 15*l.* in the pound and upwards, 10 per cent., not exceeding 600*l.* One partner may receive his allowance, if entitled, from the joint and his separate estate, though the others are not entitled.

A bankrupt is not entitled to certificate or allowance, if he has lost by gaming or wagering, in 1 day, 20*l.*; or within 1 year next preceding his bankruptcy, 200*l.*; or 200*l.* by stock-jobbing in the same period; or, in contemplation of bankruptcy, has destroyed or falsified his books, or concealed his property; or, if any person having proved a false debt under the commission, such bankrupt being privy thereto, or afterwards knowing the same, has not disclosed it to his assignees within 1 month after such knowledge.

Lastly, upon request by the bankrupt, the official assignee is required to declare to him how he has disposed of his property, and account to him for the surplus, if any; but before any surplus can be admitted, interest must be paid, first, on all debts proved that carry interest, at the rate payable thereon; and next, upon all other debts at the rate of 4*l.* per cent., to be calculated from the date of the commission.

Account of the Number and Description of Persons who became Bankrupt, in England and Wales, between the 1st of November, 1841, and the 1st of November, 1842.

Apothecaries, 3.	Confectioners, 3.	Ironkeepers, 16.	Ship brokers, 8.

Total bankrupts in England and Wales, 1373.

**INSURANCE**, a contract of indemnity, by which one party engages, for a stipulated sum, to insure another against a risk to which he is exposed. The party who takes upon him the risk, is called the *Insurer*, *Assurer*, or *Underwriter*; and the party protected by the insurance is called the *Insured*, or *Assured*; the sum paid is called the *Premium*; and the instrument containing the contract is called the *Policy*.

- II. INSURANCE (MARINE).
- III. INSURANCE (FIRE).
- IV. INSURANCE (LIFE).

#### I. INSURANCE (GENERAL PRINCIPLES OF).

It is the duty of government to assist, by every means in its power, the efforts of individuals to protect their property. Losses do not always arise from accidental circumstances, but are frequently occasioned by the crimes and misconduct of individuals; and there are no means so effectual for their prevention, when they arise from this source, as the establishment of a vigilant system of police, and of such an administration of the law as may be calculated to afford those who are injured a ready and cheap method of obtaining every practicable redress; and, as far as possible, of insuring the punishment of culprits. But, in despite of all that may be done by government, and of the utmost vigilance on the part of individuals, property must always be exposed to a variety of casualties from fire, shipwreck, and other unforeseen disasters. And hence the importance of inquiring how such unavoidable losses, when they do occur, may be rendered least injurious.

The loss of a ship, or the conflagration of a cotton mill, is a calamity that would press heavily even on the richest individual. But were it distributed among several individuals, each would feel it proportionally less; and provided the number of those among

whom it was distributed were very considerable, it would hardly occasion any sensible inconvenience to any one in particular. Hence the advantage of combining to lessen the injury arising from the accidental destruction of property: and it is the diffusion of the risk of loss over a wide surface, and its valuation, that forms the employment of those engaged in insurance.

Though it be impossible to trace the circumstances which occasion those events that are, on that account, termed accidental, they are, notwithstanding, found to obey certain laws. The number of births, marriages, and deaths; the proportions of male to female, and of legitimate to illegitimate births; the ships cast away; the houses burned; and a vast variety of other apparently accidental events; are yet, when our experience embraces a sufficiently wide field, found to be nearly equal in equal periods of time: and it is easy, from observations made upon them, to estimate the sum which an individual should pay, either to guarantee his property from risk, or to secure a certain sum for his heirs at his death.

It must, however, be carefully observed, that no confidence can be placed in such estimates, unless they are deduced from a very wide induction. Suppose, for example, it happens that during the present year one house is accidentally burned, in a town containing 1,000 houses; this would afford very little ground for presuming that the *average* probability of fire in that town was 1 to 1,000. For it might be found that not a single house had been burned during the previous 10 years, or that 10 were burned during each of these years. But supposing it were ascertained, that, at an average of 10 years, 1 house had been annually burned, the presumption that 1 to 1,000 was the real ratio of the probability of fire would be very much strengthened; and if it were found to obtain for 20 or 30 years together, it might be held, for all practical purposes at least, as indicating the precise degree of probability.

Besides its being necessary, in order to obtain the true measure of the probability of any event, that the series of events, of which it is one, should be observed for a rather lengthened period, it is necessary also that the events should be numerous, or of pretty frequent occurrence. Suppose it were found, by observing the births and deaths of 1,000,000 individuals taken indiscriminately from among the whole population, that the mean duration of human life was 40 years; we should have but very slender grounds for concluding that this ratio would hold in the case of the next 10, 20, or 50 individuals that are born. Such a number is so small as hardly to admit of the operation of what is called the *law of average*. When a large number of lives is taken, those that exceed the medium term are balanced by those that fall short of it; but when the number is small, there is comparatively little room for the principle of compensation, and the result cannot, therefore, be depended upon.

It is found, by the experience of all countries in which censuses of the population have been taken with considerable accuracy, that the number of male children born is to that of female children in the proportion nearly of 22 to 21. But unless the observations be made on a very large scale, this result will not be obtained. If we look at particular families, they sometimes consist wholly of boys, and sometimes wholly of girls; and it is not possible that the boys can be to the girls of a single family in the ratio of 22 to 21. But when, instead of confining our observations to particular families, or even parishes, we extend them so as to embrace a population of 500,000, these discrepancies disappear, and we find that there is invariably a small excess in the number of males born over the females.

The false inferences that have been drawn from the doctrine of chances, have uniformly, almost, proceeded from generalizing too rapidly, or from deducing a rate of probability from such a number of instances as do not give a fair average. But when the instances on which we found our conclusions are sufficiently numerous, it is seen that the most anomalous events, such as suicides, deaths by accidents, the number of letters put into the post-office without any address, &c., form pretty regular series, and consequently admit of being estimated *à priori*.

The business of insurance is founded upon the principles thus briefly stated. Suppose it has been remarked that of *forty* ships, of the ordinary degree of sea-worthiness, employed in a given trade, 1 is annually cast away, the probability of loss will plainly be equal to *one fortieth*. And if an individual wish to insure a ship, or the cargo on board a ship, engaged in this trade, he ought to pay a *premium* equal to the 1-40th part of the sum he insures, exclusive of such an additional sum as may be required to indemnify the insurer for his trouble, and to leave him a fair profit. If the premium exceed this sum, the insurer is overpaid; and if it fall below it, he is underpaid.

Insurances are effected sometimes by societies, and sometimes by individuals, the risk being in either case diffused amongst a number of persons. Companies formed for carrying on the business have generally a large subscribed capital, or such a number of proprietors as enables them to raise, without difficulty, whatever sums may at any time be required to make good losses. Societies of this sort do not limit their risks to small

sums; that is, they do not often refuse to insure a large sum upon a ship, a house, a life, &c. The magnitude of their capitals affords them the means of easily defraying a heavy loss; and their premiums being proportioned to their risks, their profit is, at an average, independent of such contingencies.

Individuals, it is plain, could not act in this way, unless they were possessed of very large capitals; and besides, the taking of large risks would render the business so hazardous, that few would be disposed to engage in it. Instead, therefore, of insuring a large sum, as 20,000*l.*, upon a single ship, a private underwriter or insurer may not, probably, in ordinary cases, take a greater risk than 200*l.* or 500*l.*; so that, though his engagements may, when added together, amount to 20,000*l.*, they will be diffused over from 40 to 100 ships; and supposing 1 or 2 ships to be lost, the loss would not impair his capital, and would only lessen his profits. Hence it is, that while one transaction only may be required in getting a ship insured by a company, 10 or 20 separate transactions may be required in getting the same thing done at Lloyd's, or by private individuals. When conducted in this cautious manner, the business of insurance is as safe a line of speculation as any in which individuals can engage.

To establish a policy of insurance on a fair foundation, or in such a way that the premiums paid by the insured shall exactly balance the risks incurred by the insurers, and the various necessary expenses to which they are put, including, of course, their profit, it is necessary, as previously remarked, that the experience of the risks should be pretty extensive. It is not, however, at all necessary, that either party should inquire into the circumstances that lead to those events that are most commonly made the subject of insurance. Such a research would, indeed, be entirely fruitless: we are, and must necessarily continue to be, wholly ignorant of the causes of their occurrence.

It appears, from the accounts given by Mr. Scoresby, in his valuable work on the Arctic Regions, that of 586 ships which sailed from the various ports of Great Britain for the northern whale fishery, during the 4 years ending with 1817, 8 were lost — (vol. ii. p. 131.), — being at the rate of about 1 ship out of every 73 of those employed. Now, supposing this to be about the average loss, it follows that the premium required to insure against it should be 1*l.* 7*s.* 4*d.* per cent., exclusive, as already observed, of the expenses and profits of the insurer. Both the insurer and the insured would gain by entering into a transaction founded on this fair principle. When the operations of the insurer are extensive, and his risks spread over a considerable number of ships, his profit does not depend upon chance, but is as steady, and may be as fairly calculated upon, as that of a manufacturer or a merchant; while, on the other hand, the individuals who have insured their property have exempted it from any chance of loss, and placed it, as it were, in a state of absolute security.

It is easy, from the brief statement now made, to perceive the immense advantage resulting to navigation and commerce from the practice of marine insurance. Without the aid that it affords, comparatively few individuals would be found disposed to expose their property to the risk of long and hazardous voyages; but by its means insecurity is changed for security, and the capital of the merchant, whose ships are dispersed over every sea, and exposed to all the perils of the ocean, is as secure as that of the agriculturist. He can combine his measures and arrange his plans as if they could no longer be affected by accident. The chances of shipwreck, or of loss by unforeseen occurrences, enter not into his calculations. He has purchased an exemption from the effects of such casualties; and applies himself to the prosecution of his business with that confidence and energy which nothing but a feeling of security can inspire. "*Les chances de la navigation entravaient le commerce. Le système des assurances a paru; il a consulté les saisons; il a porté ses regards sur la mer; il a interrogé ce terrible élément; il en a jugé l'inconstance; il en a pressenti les orages: il a épié la politique: il a reconnu les ports et les côtes des deux mondes; il a tout soumis à des calculs savans, à des théories approximatives; et il a dit au commerçant habile, au navigateur intrépide: certes, il y a des désastres sur lesquels l'humanité ne peut que gémir; mais quant à votre fortune, allez, franchissez les mers, déployez votre activité et votre industrie; je me charge de vos risques. Alors, Messieurs, s'il est permis de le dire, les quatre parties du monde se sont rapprochées.*" — (*Code de Commerce, Exposé des Motifs*, liv. ii.)

Besides insuring against the perils of the sea, and losses arising from accidents caused by the operation of natural causes, it is common to insure against enemies, pirates, thieves, and even the fraud, or, as it is technically termed, *barratry*, of the master. The risk arising from these sources of casualty being extremely fluctuating and various, it is not easy to estimate it with any considerable degree of accuracy; and nothing more than a rough average can, in most cases, be looked for. In time of war, the fluctuations in the rates of insurance are particularly great: and the intelligence that an enemy's squadron, or even a single privateer, is cruising in the course which the ships bound to or returning from any given port usually follow, causes an instantaneous rise in the premium. The appointment of convoys for the protection of trade during war, necessarily tends, by

lessening the chances of capture, to lessen the premium on insurance. Still, however, the risk in such periods is, in most cases, very considerable; and as it is liable to change very suddenly, great caution is required on the part of the underwriters.

Provision may also be made, by means of insurance, against loss by fire, and almost all the casualties to which property on land is subject.

But, notwithstanding what has now been stated, it must be admitted, that the advantages derived from the practice of insuring against losses by sea and land are not altogether unmixed with evil. The security which it affords tends to relax that vigilant attention to the protection of property which the fear of its loss is sure otherwise to excite. This, however, is not its worst effect. The records of our courts, and the experience of all who are largely engaged in the business of insurance, too clearly prove that ships have been repeatedly sunk, and houses burned, in order to defraud the insurers. In despite, however, of the temptation to inattention and fraud which is thus afforded, there can be no doubt that, on the whole, the practice is, in a public as well as private point of view, decidedly beneficial. The frauds that are occasionally committed raise, in some degree, the rate of insurance. Still it is exceedingly moderate; and it is most probable, that the precautions adopted by the insurance offices for the prevention of fire, especially in great towns, where it is most destructive, outweigh the chances of increased conflagration arising from the greater tendency to carelessness and crime.

The business of life insurance has been carried to a far greater extent in Great Britain than in any other country, and has been productive of the most beneficial effects. Life insurances are of various kinds. Individuals without any very near connections, and possessing only a limited fortune, are sometimes desirous, or are sometimes, from the necessity of their situation, obliged, annually to encroach on their capitals. But should the life of such persons be extended beyond the ordinary term of existence, they might be totally unprovided for in old age; and to secure themselves against this contingency, they pay to an insurance company the whole or a part of their capital, on condition of its guaranteeing them, as long as they live, a certain annuity, proportioned partly, of course, to the amount of the sum paid, and partly to their age when they buy the annuity.

But though sometimes serviceable to individuals, it may be questioned whether insurances of this sort are, in a public point of view, really advantageous. So far as their influence extends, its obvious tendency is to weaken the principle of accumulation; to stimulate individuals to consume their capitals during their own life, without thinking or caring about the interest of their successors. Were such a practice to become general, it would be productive of the most extensively ruinous consequences. The interest which most men take in the welfare of their families and friends affords, indeed, a pretty strong security against its becoming injuriously prevalent. There can, however, be little doubt that this selfish practice may be strengthened by adventitious means; such, for example, as the opening of government loans in the shape of life annuities, or in the still more objectionable form of tontines. But when no extrinsic stimulus of this sort is given to it, there do not seem to be any very good grounds for thinking that the sale of annuities by private individuals or associations can materially weaken the principle of accumulation.

Luckily, however, the species of insurance now referred to is but inconsiderable compared with that which has accumulation for its object. All professional persons, or those living on salaries or wages, such as lawyers, physicians, military and naval officers, clerks in public or private offices, &c., whose incomes must, of course, terminate with their lives, and a host of others, who are either not possessed of capital, or cannot dispose of their capital at pleasure, must naturally be desirous of providing, so far as they may be able, for the comfortable subsistence of their families in the event of their death. Take, for example, a physician or lawyer, without fortune, but making, perhaps, 1,000*l.* or 2,000*l.* a year by his business; and suppose that he marries and has a family: if this individual attain to the average duration of human life, he may accumulate such a fortune as will provide for the adequate support of his family at his death. But who can presume to say that such will be the case? — that he will not be one of the many exceptions to the general rule? — And suppose that he were hurried into an untimely grave, his family would necessarily be destitute. Now, it is against such calamitous contingencies that life insurance is intended chiefly to provide. An individual possessed of an income terminating at his death, agrees to pay a certain sum annually to an insurance office; and this office binds itself to pay to his family, at his death, a sum equivalent, under deduction of the expenses of management and the profits of the insurers, to what these annual contributions, accumulated at compound interest, would amount to, supposing the insured to reach the common and average term of human life. Though he were to die the day after the insurance has been effected, his family would be as amply provided for as it is likely they would be by his accumulations were his life of the ordinary duration. In all cases, indeed, in which those insured die before attaining to an average age, their gain is obvious. But even in those cases in which their lives

are prolonged beyond the ordinary term, they are not losers — they then merely pay for a security which they must otherwise have been without. During the whole period, from the time when they effect their insurances, down to the time when they arrive at the mean duration of human life, they are protected against the risk of dying without leaving their families sufficiently provided for; and the sum which they pay after having passed this mean term is nothing more than a fair compensation for the security they previously enjoyed. Of those who insure houses against fire, a very small proportion only have occasion to claim an indemnity for losses actually sustained; but the possession of a security against loss in the event of accident, is a sufficient motive to induce every prudent individual to insure his property. The case of life insurance is in no respect different. When established on a proper footing, the extra sums which those pay whose lives exceed the estimated duration is but the value of the previous security.

In order so to adjust the terms of an insurance that the party insuring may neither pay too much nor too little, it is necessary that the probability of his life failing in each subsequent year should be determined with as much accuracy as possible.

To ascertain this probability, various observations have been made in different countries and periods, showing, out of a given number of persons born in a particular country or place, how many complete each subsequent year and how many die in it, till the whole be extinct. The result of such observations, when collected and arranged in a tabular form, are called Tables of Mortality; being entitled, of course, to more or less confidence, according to the number and species of lives observed; the period when, and the care with which, the observations were made, &c. But, supposing these Tables to be formed with sufficient accuracy, the expectation of life at any age, or its mean duration after such age, may be readily learned from them; and hence, also, the value of an annuity, or an assurance on a life of any age. Thus, in the Table of Mortality for Carlisle, framed by Mr. Milne, of the Sun Life Office, and which is believed to represent the average law of mortality in England with very considerable accuracy, out of 10,000 persons, born together, 4,000 complete their 56th year; and it further appears, that the number of such persons who die in their 66th year is 124; so that the probability that a life now 56 years of age will terminate in the 10th year hence is  $\frac{124}{4,000}$ . But reckoning interest at 4 per cent., it appears (Table II. INTEREST AND ANNUITIES), that the present value of 100*l.* to be received 10 years hence is 67*·*556*l.*; consequently, if its receipt be made to depend upon the probability that a life now 56 years of age will fail in the 66th year, its present value will be reduced by that contingency to  $\frac{124 \times 67 \cdot 556}{4,000} = 2 \cdot 094*l.*$ , or 2*l.* 1*s.* 10*d.* The present value of 100*l.* receivable upon the life of a party now 56 years of age terminating in the 57th or any subsequent year of his life, up to its extreme limit (which, according to the Carlisle Table, is the 105th year), being calculated in this way, the sum of the whole will be the present value of 100*l.* receivable whenever the life may fail, that is, of 100*l.* insured upon it, supposing no additions were made to it for the profits and expenses of the insurers.

More compendious processes are resorted to for calculating Tables of insurances at all ages; but the above statement sufficiently illustrates the principle on which they all depend. In practice, a life insurance is seldom made by the payment of a single sum when it is effected, but almost always by the payment of an *annual premium* during its continuance, the first being paid down at the commencement of the insurance.\* If the Table of Mortality adopted by the insurers fairly represent the law of mortality prevailing among the insured, it follows that when a party insured does not attain to the average age according to the Table, the insurers will either lose by him, or realise less than their ordinary profit; and when, on the other hand, the life of an insured party is prolonged beyond the tabular average, the profits of the insurers are proportionally increased. But if their business be so extensive as to enable the law of average fully to apply, what they lose by premature death will be balanced by the payments received from those whose lives are prolonged beyond the mean duration of life for the ages at which they were respectively insured; so that the profits of the society will be wholly independent of chance.

The relief from anxiety afforded by life insurance very frequently contributes to prolong the life of the insured, at the same time that it materially augments the comfort and well-being of those dependent on him. It has, also, an obvious tendency to strengthen habits of accumulation. An individual who has insured a sum on his life, would forfeit all the advantages of the insurance, were he not to continue regularly to make his annual payments. It is not, therefore, optional with him to save a sum from his ordinary expenditure adequate for this purpose. He is compelled, under a heavy penalty, to do so; and having thus been led to contract a habit of saving to a certain extent, it is most probable that the habit will acquire additional strength, and that he will either insure an additional sum, or privately accumulate.

\* For the method of calculating these annual premiums, see *post*, INTEREST AND ANNUITIES.

The practice of marine insurance, no doubt from the extraordinary hazard to which property at sea is exposed, seems to have long preceded insurances against fire and upon lives. We are ignorant of the precise period when it began to be introduced; but it appears most probable that it dates from the end of the fourteenth or the beginning of the fifteenth century. It has, however, been contended by Loccenius (*De Jure Maritimo*, lib. ii. c. 1.), Puffendorff (*Droit de la Nature et des Gens*, lib. v. c. 9.), and others, that the practice of marine insurance is of much higher antiquity, and that traces of it may be found in the history of the Punic wars. Livy mentions, that during the second of these contests, the contractors employed by the Romans to transport ammunition and provisions to Spain, stipulated that government should indemnify them against such losses as might be occasioned by the enemy, or by tempests, in the course of the voyage. — (*Impetratum fuit, ut quæ navibus imponerentur ad exercitum Hispaniensem deferenda, ab hostium tempestatisque vi, publico periculo essent.* — Hist. lib. xxiii. c. 49.) Malynes (*Lex Mercatoria*, 3d ed. p. 105.), founding on a passage in Suetonius ascribes the first introduction of insurance to the emperor Claudius, who, in a period of scarcity at Rome, to encourage the importation of corn, took upon himself all the loss or damage it might sustain in the voyage thither by storms and tempests. — (*Negotiatoribus certa lucra proposuit, suscepto in se damno, si cui quid per tempestates accidisset, et naves mercaturæ causâ, fabricantibus, magna commoda constituit.* — c. 18.) It is curious to observe that this stipulation gave occasion to the commission of acts of fraud, similar to those so frequent in modern times. Shipwrecks were pretended to have happened, that never took place; old shattered vessels, freighted with articles of little value, were purposely sunk, and the crew saved in boats: large sums being then demanded as a recompence for the loss. Some years after, the fraud was discovered, and some of the contractors were prosecuted and punished. — (Lib. xxv. c. 3.) But none of these passages, nor a similar one in Cicero's letters — (*Ad Fam.* lib. ii. c. 17.), warrant the inferences that Loccenius, Malynes, and others have attempted to draw from them. Insurance is a contract between two parties; one of whom, on receiving a certain premium (*pretium periculi*), agrees to take upon himself the risk of any loss that may happen to the property of the other. In ancient no less than in modern times, every one must have been desirous to be exonerated from the chance of loss arising from the exposure of property to the perils of the sea. But though, in the cases referred to, the carriers were exempted from this chance, they were not exempted by a contract *propter aversionem periculi*, or by an insurance; but by their employers taking the risk upon themselves. And it is abundantly obvious that the object of the latter in doing this was not to profit, like an insurer, by dealing in risks, but to induce individuals the more readily to undertake the performance of an urgent public duty.

But with the exception of the instances now mentioned, nothing bearing the remotest resemblance to an insurance is to be met with till a comparatively recent period. If we might rely on a passage in one of the Flemish chroniclers, quoted by the learned M. Pardessus — (see his excellent work, *Collection des Loix Maritimes*, tome i. p. 356.), we should be warranted in concluding that insurances had been effected at Bruges so early as the end of the thirteenth century: for the chronicler states that, in 1311, the Earl of Flanders consented, on a requisition from the inhabitants, to establish a chamber of insurance at Bruges. M. Pardessus is not, however, inclined to think that this statement should be regarded as decisive. It is evident, from the manner in which the subject is mentioned, that the chronicler was not a contemporary; and no trace can be found, either in the archives of Bruges, or in any authentic publication, of any thing like the circumstance alluded to. The earliest extant Flemish law as to insurance is dated in 1537; and none of the early maritime codes of the North so much as alludes to this interesting subject.

Beckmann seems to have thought that the practice of insurance originated in Italy in the latter part of the fifteenth or the early part of the sixteenth century. — (*Hist. of Invent.* vol. i. art. *Insurance*.) But the learned Spanish antiquary, Don Antonio de Capmany, has given, in his very valuable publication on the History and Commerce of Barcelona (*Memorias Historicas sobre la Marina, &c. de Barcelona*, tomo ii. p. 383.), an ordinance relative to insurance, issued by the magistrates of that city in 1435; whereas the earliest Italian law on the subject is nearly a century later, being dated in 1523. It is, however, exceedingly unlikely, had insurance been as early practised in Italy as in Catalonia, that the former should have been so much behind the latter in subjecting it to any fixed rules; and it is still more unlikely that the practice should have escaped, as is the case, all mention by any previous Italian writer. We, therefore, agree entirely in Capmany's opinion, that, until some authentic evidence to the contrary be produced, Barcelona should be regarded as the birthplace of this most useful and beautiful application of the doctrine of chances. — (Tom. i. p. 237.)

A knowledge of the principles and practice of insurance was early brought into England. According to Malynes — (*Lex Mercat.* p. 105.), it was first practised amongst

us by the Lombards, who were established in London from a very remote epoch. It is probable it was introduced some time about the beginning of the sixteenth century; for it is mentioned in the statute 43 Eliz. c. 12., in which its utility is very clearly set forth, that it had been an *immemorial usage* among merchants, both English and foreign, when they made any great adventure, to procure insurance to be made on the ships or goods adventured. From this it may reasonably be supposed that insurance had been in use in England for at least a century previous. It appears from the same statute, that it had originally been usual to refer all disputes that arose with respect to insurances to the decision of "grave and discreet" merchants appointed by the Lord Mayor. But abuses having grown out of this practice, the statute authorised the Lord Chancellor to appoint a commission for the trial of insurance cases; and in the reign of Charles II. the powers of the commissioners were enlarged. But this court soon after fell into disuse; and, what is singular, no trace can now be discovered of any of its proceedings. — (*Marshall on Insurance*, Prelim. Disc. p. 26.)

Few questions as to insurance seem to have come before the courts at Westminster till after the middle of last century. The decisions of Lord Mansfield may, indeed, be said to have fixed, and in a considerable degree formed, the law upon this subject. His judgments were not bottomed on narrow views, or on the municipal regulations of England; but on those great principles of public justice and convenience which had been sanctioned and approved by universal experience. His deep and extensive information was acquired by consulting the most intelligent merchants, and the works of distinguished foreign jurists; and by carefully studying the famous French ordinance of 1681, the most admirably digested body of maritime law of which any country has ever had to boast. Hence the comprehensiveness and excellence of his Lordship's decisions, and the respect they have justly commanded in all countries.\* In his hands the law of insurance became, in a far greater degree than any other department of English law, a branch of that national or public law, of which Cicero has beautifully said, "*Non erit alia lex Romæ, alia Athenis, alia nunc, alia posthac, sed et omnes gentes et omni tempore una lex et sempiterna, et immortalis continebit, unusque erit communis quasi magister et imperator omnium Deus.*" — (*Fragm. lib. iii. de Republicâ*.)

Insurance against fire and upon lives is of much later origin than insurance against the perils of the sea. The former, however, has been known and carried on amongst us, to some extent at least, for nearly a century and a half. The Amicable Society, for insurance upon lives, was established by charter of Queen Anne, in 1706; the Royal Exchange and London Assurance Companies began to make insurances upon lives in the reign of George I.; and the Equitable Society was established in 1762. But the advantages of life insurance, and the principles on which the business should be conducted, were then very ill understood; and the practice can hardly be said to have obtained any firm footing amongst us, till the Equitable Society, by adopting the judicious suggestions of Dr. Price, began its career of prosperity about 1775. Notwithstanding the example of England, life insurance has made comparatively little progress on the Continent. It was, indeed, expressly forbidden by the French ordinance of 1681 (liv. iii. tit. 6. art. 10.); by the regulations as to insurance issued at Amsterdam in 1612 (art. 24.); and it is doubtful whether the practice be not inconsistent with the 334th art. of the *Code de Commerce*, though it be now extensively carried on in France. But we are inclined to think that the want of security, more than any positive regulations, has been the principal cause of the little progress of life insurance on the Continent. Of whatever disadvantages our large public debt may be productive, it is not to be doubted that the facilities it has afforded for making investments, and the punctuality with which the national engagements have been fulfilled, have been the principal causes of the extraordinary extent to which the business of life and even fire insurance has been carried in this country.

## II. INSURANCE (MARINE).

There are few persons who are not acquainted, in some degree, with fire and life insurances. The security which they afford to individuals and families is a luxury which nobody, in tolerably comfortable circumstances, is willing to be without. Hence the great increase, in our days, of companies professing to afford this security; and hence the knowledge, on the part of the public generally, of the nature and principles of the engagements into which these companies enter. But marine insurance is a subject which is of immediate interest only to merchants and ship owners; unless, indeed, we should refer to that small portion of the community, who have occasion to transport themselves beyond seas with capital and effects for purposes of colonisation, or to fill some official situation. Hence the comparative indifference, on the part of the public, as to this subject. The general principles, however, of all insurance are the same; and in treating of marine insurance, it will be necessary to notice little beyond such topics as are peculiar to that branch of the business.

*Individual Insurers or Underwriters.* — The first circumstance that cannot fail to strike the general inquirer into the practice of marine insurance in this country, is that, while all fire and life insurances are made at the risk of companies, which include within themselves the desirable requisites of security, wealth, and numbers, a large proportion of marine insurances is made at the risk of individuals.

*Prohibition of Companies.* — Till 1824, all firms and companies, with the exception of the 2 chartered

\* See Emerigon's famous *Traité des Assurances*, tome ii. p. 67.

companies, the Royal Exchange and London, were prohibited by law from taking marine insurances. Towards the latter end of that year, the prohibition was removed, and the business of marine insurance was placed on the same legal footing as other descriptions of business. While the restriction lasted, the 2 chartered companies did so little business, that marine insurance might, in fact, be said to be wholly in the hands of individuals. These companies were so much higher in their premiums, and so much more exclusive in the risks they were willing to undertake, than their individual competitors, that even those merchants and ship owners, who would cheerfully have paid some trifling consideration to obtain the greater security of a company, were obliged to resort to individuals. And it was only when the repeal of this absurd restriction was proposed, that the companies showed, by defending it, that they set any value upon their privilege. The underwriters at Lloyd's joined them in this opposition; and pamphlets were written and speeches made, to demonstrate how much merchants and ship owners would suffer, were the law to allow them the free use of their discretion in insuring their property; and how much more conducive to their interests it was, that they should be forced up to Lloyd's, to pay premiums to individuals rather than companies. But these pamphlets and speeches are forgotten; and we should be sorry to wound the feelings of their authors, or to trespass on the patience of our readers, by referring to them more particularly.

*Formation of Companies.* — There are at present 7 marine insurance companies in London; viz., the two old chartered companies, the *Royal Exchange and London*; two established immediately upon the passing of the act of the year 1824, the *Alliance* and the *Indemnity Mutual*; the *Marine*, established in 1836; and the *General Maritime and Neptune*, established in 1839. These companies number among their proprietors or shareholders some of the most eminent merchants and ship owners of the city of London, who have united for the double purpose of providing a more perfect security for their property, and of ascertaining whether the insurance business might not be made to yield a fair return to the capital employed in it.

It may be computed that these 7 companies draw to themselves more than half the marine insurance business effected in London; and as several similar companies have also been formed since 1834 in different parts of the kingdom, it may be inferred, when due allowance is made for the difficulties to be combated in breaking through established modes and habits of doing business, that the tendency in the public is practically to confirm what antecedent investigation would suggest, — that companies, while they must necessarily hold out better security, and greater liberality and punctuality in the settlement of claims, are capable of transacting a given amount of business with a saving both of labour and expense.

*Mode of conducting Business.* — We shall now give an account of the existing arrangements for conducting the business of marine insurance, as well by individuals as the companies in London.

*Lloyd's.* — The individual underwriters meet in a subscription room at Lloyd's. The joint affairs of the subscribers to these rooms are managed by a committee chosen by the subscribers. Agents (who are commonly styled Lloyd's agents) are appointed in all the principal ports of the world, who forward, regularly, to Lloyd's, accounts of the departures from and arrivals at their ports, as well as of losses and other casualties; and, in general, all such information as may be supposed of importance towards guiding the judgments of the underwriters. These accounts are regularly filed, and are accessible to all the subscribers. The principal arrivals and losses are, besides, posted in 2 books, placed in 2 conspicuous parts of the room; and also in another book, which is placed in an adjoining room, for the use of the public at large.

The rooms are open from 10 o'clock in the morning till 5 o'clock in the afternoon, but the most considerable part of the business is transacted between 1 and 4. Those merchants and ship owners who manage their own insurance business, procure blank policies at the government office, or of their stationers, which they fill up so as to meet the particular object in view, and submit them to those underwriters with whom they are connected; by whom they are subscribed or rejected. Each policy is handed about in this way until the amount required is complete. The form of the policy and of a subscription is subjoined to this article.

The premium is not paid to the underwriter in ready money, but is passed to account. Nor does the underwriter debit the account of the person to whom he subscribes a policy with the whole amount of the premium, but with the premium less 5 per cent. Whenever losses occur which more than absorb the premiums on any one account, the underwriter is called upon to pay the balance. But should the underwriter's account be what is called good, that is, should the premiums exceed the claims, he sends round, during the spring and summer, to collect from his various debtors either the balance of his last year's account, or money on account, according to his judgment; but, upon what he receives, he makes an allowance of 12 per cent. An underwriter, if prudent, therefore, before he consents to receive, will not only look to the goodness of his account, but to the probability of its continuing so.

*Insurance Brokers.* — Many merchants and shipowners do not transact their own insurance business. They give their orders for insurance to others, who undertake it for them, and are responsible for its proper management. These latter persons are called insurance brokers; and some of them manage the business of a number of principals. To them, likewise, are transmitted the orders for insurance from the outports and manufacturing towns. They charge the whole premium to their principals, and their profit consists in 5 per cent. upon the premium, 12 per cent. upon the money that they pay to the underwriters, and 1 per cent. that they deduct from all the claims which they recover from the underwriters. It is proper to remark, that this is the established or regular profit; but competition has occasioned numerous deviations from it by the brokers, many of whom consent to divide this profit with the principals who employ them. The insurance brokers are not frequently underwriters also; and as some insurances are considered far more lucrative than others to underwriters, and as the brokers have particular facilities, in some respects, of judging of the goodness of their own risks, so likewise have they an inducement to play into one another's hands, and they do so accordingly. — (See *BROKERS*.)

It will at once be seen, that the trouble of effecting insurances at Lloyd's is considerable; that a good deal of time must be consumed; and that merchants and ship owners, therefore, have great inducement to consign their insurance business to brokers. But where the business is transacted with a company, this inducement, if not destroyed altogether, is, at all events, very much diminished. Any party having property to insure, has merely to go to the manager of the company, and state the particulars of the risk to be insured; the premium being agreed upon, the manager writes out a memorandum for the policy, which the party signs, and he is thus effectually insured. The companies procure the stamp and write out the policy, which is ready for delivery in 4 or 5 days. The companies, like the underwriters, charge the premium less 5 per cent. In other respects they vary. They allow 12 per cent. upon the profitable balance of each year's premiums with credit till March or June; or 10 per cent. for prompt payment.

*Payment of Losses.* — Losses are paid at all the offices promptly, and without deduction. A month's credit is allowed to the underwriters; and another month, and sometimes 2 months, are given to the broker, to collect from the underwriters, and pay over to his principals.

*Clubs.* — Beside the individual underwriters and companies above noticed, there are clubs or associations formed by ship owners, who agree each entering his ships for a certain amount, to divide among themselves one another's losses. These clubs are institutions of long standing; but, since the alteration of the law in 1824, appear to be on the decline. Their formation originated in a twofold reason: 1st, that the underwriters charged premiums more than commensurate with the risk; and, 2dly, that they did not afford adequate protection. To avoid the first of these two evils, instead of paying a fixed premium, they pay among themselves the actual losses of their several members as they occur; and to avoid the second, they lay down certain principles of settlement in accordance with their views of indemnity. Each member of one of these clubs gives his power of attorney to the selected manager: and this manager

issues a policy for each ship, which policy is subscribed by him as attorney for all the members, the premium inserted in the policy being understood to be nominal. These clubs are open to the leading objections that apply to individual underwriters; for the members are not collectively, but only individually, liable to those of their number who happen to sustain a loss; and the delay of settlement is such, that more than 12 months have been known to elapse before the payment of a loss has been obtained from all the members.

**Rate of Premium.** — But little need be said upon the circumstances that influence the rate of premium demanded by the insurers. It must be self-evident that premiums will vary according to the seasons, the quality of the vessel, the known character of the captain, the nature of the commodity, and the state of our political relations. All these, of course, are matters upon which each individual must exercise his own discretion, partly from general experience, and partly from particular information; exaggeration of risk, and consequent exorbitance of premium for any length of time, being out of the question, where so many individual underwriters, in addition to the companies, are in competition with one another, and where the merchants have the means at hand of effecting their insurances abroad. We have already taken notice of the intelligence of which Lloyd's is the focus. In addition to this, there is a subscription register book for shipping maintained by the principal merchants, ship owners, and underwriters. This book professes to give an account of the tonnage, build, age, repairs, and quality of almost all the vessels that frequent our ports; and, although exceedingly defective in many respects, is a material assistance to the insurers, who have no means of ascertaining by their own observation the particulars of 1 in 100 of the ships they are called upon to insure.

#### CONTRACT OF INSURANCE.

Having thus given a general outline of the mode of transacting business between the insurers and insured, and the means used to enable both parties to come, as near as possible, to a due estimate of the risk to be insured against, our next step will be to explain the nature of the contract, and the bearing of its more important clauses.

It is unnecessary to state that the object of those who are engaged in commerce, or in moving articles of merchandise from one part of the world to another, is to *buy* at such a price that, after paying all the expenses of transport, the *sale* price may leave them a surplus in the shape of profit. If there were no such contrivance as insurance, merchants would be obliged to calculate upon the probability of the occasional loss of their property, and to regulate their transactions accordingly; but it must be obvious that enterprise, under such circumstances, would be very much crippled. Now, insurance, in as far as it approaches perfection in guaranteeing the merchant against all loss, except that of the market, substitutes a fixed charge for uncertain and contingent loss, and enables him to confine his attention exclusively to price and quality, and to charges of transport; in which latter, of course, the premium of insurance is included. As, however, in practice, insurance is by no means a perfect protection, either to the merchant or ship owner, against all loss that may occur *in transitu*, there is, even after insurance, some contingencies remaining to be taken into consideration: and we do not know that we can do better, by way of explaining the contract of insurance, than state, as briefly and succinctly as possible, what are the losses against which the merchant and ship owner are not protected by an insurance effected in this country.

1. **Acts of our own Government.** — All losses arising from the acts of our own government. Thus, if an embargo were laid on vessels about to sail for a particular quarter, and the merchant obliged to unload his goods; or if his goods were condemned to be destroyed in quarantine; or purposely destroyed at sea by some of our cruisers; no part of his loss would be made good by the insurer. The insurer in this country, although liable for the acts of foreign powers, is not liable for such acts directed against the property of their own subjects. Thus, if French property, insured in this country, were confiscated by the French government, the owner would have no remedy against his insurer.

2. **Acts of the Revenue Laws.** — All losses arising from a breach of the revenue laws. It may be observed, that if the owner of the ship, by his act, expose the goods of the merchant to loss, the merchant so injured, although he cannot recover from his insurers, may claim from him. It may also be observed, that if the captain of the vessel, by his act, to which neither the owner of the ship nor the merchant is a party, expose the ship and cargo to loss, the insurers, in such case, are bound to make good the loss; the insurers being liable for all damage arising from illegal acts of the captain and crew, supposing the owner of the ship not to be accessory. The illegal acts of the captain and crew, contrary to the instructions and without the consent of the owners, are termed "barratry" in the policy. — (See BARRATRY.)

3. **Breach of the Law of Nations.** — All losses arising from a breach of the law of nations. Thus, if any port is declared by a foreign power to be in a state of blockade, and such blockade is acknowledged by our government; and if a ship, in defiance of that notification, attempt to break the blockade, and is taken in the attempt; the insurer is not liable to the loss. It will often happen, when a port is under blockade, that the profit is so great upon goods introduced in defiance of the blockade, as to tempt adventurers to break it, and to enable them to afford a very high premium to insure against the risk. But as policies for such an object are not acknowledged in our courts of law, when effected, they are understood to be *policies of honour*. The same kind of policy is adopted by the underwriters, to protect foreign merchants who prefer insuring in this country against British capture.

4. **Consequences of Deviation.** — All losses subsequent to any deviation from the terms of the policy. Thus, if a merchant, in a policy on produce from the West Indies to London, warrant the ship to sail on or before the 1st of August, and the ship sail after that day and be lost, the insurer is exonerated. Or, if a merchant insure from London to Lisbon, and the ship call at Havre and is afterwards lost, the insurer is not liable. It will be understood, of course, that the owner of the ship is liable to the merchant for any breach of contract on his part, as well as that the insurer is liable for the barratry of the master; a deviation on the part of the master, not intended for the benefit of the owner, and contrary to his instructions, being considered barratry. Should the owner of the goods neglect to describe accurately the voyage for which he wishes to be insured, the loss would be a consequence of his own negligence.

There is a doctrine connected with barratry which it will here be proper to notice. A captain, owner or part owner of the ship in which he sails, cannot commit an act of barratry. In other words, the insurers are not, in such a case, liable for an act of his which would otherwise be barratrous. The equity of this doctrine, as far as regards the interests of the captain himself, cannot be called in question; but it is difficult to understand why the merchant who ships goods on board such a captain's vessel should not be permitted to insure, among other risks, against the captain's illegal acts. We have heard that a clause has occasionally been introduced into policies to protect merchants against captain-owners, and we do not suppose that our courts of law would refuse to enforce such a clause. Indeed, we cannot discover any reason why every party, saving the captain, should not have the power of insuring against the consequences of illegal acts of the captain. We believe, that among the life offices which protect themselves from loss by suicide and the hands of justice, there are some which make a distinction in favour of those who merely hold policies on the lives of others as a collateral security. The propriety of such a distinction must strike every body.

5. **Unseaworthiness.** — All losses arising from unseaworthiness. Unseaworthiness may be caused in various ways, such as want of repair, want of stores, want of provisions, want of nautical instruments, insufficiency of hands to navigate the vessel, or incompetency of the master. It might be supposed, at first sight, that insurance affords a much less perfect security than it really does, seeing on how many pleas it is possible for the insurer to dispute his liability; but when it is considered that the proof of unseaworthiness is thrown upon the defendant, and that the leaning of the courts is almost always in favour of the insured, it will be easy to suppose that no respectable insurers would ever plead unseaworthiness,

unless they could make out a case of more than ordinary strength and clearness. The degree of uneasiness felt by merchants and ship owners at their liability to be involved in loss by cases of unseaworthiness, may be guessed from the fact that although the Indemnity Assurance Company at one time precluded themselves from pleading unseaworthiness by a special clause in their policy, not only did they obtain no additional premium in consequence thereof, but they did not even obtain a preference over other companies and individuals at the same premium. At least, this fact must either be admitted as a proof of the absence of uneasiness on this head, or of that inveteracy of habit which seems to lend the great bulk of mankind always, if possible, to continue undeviatingly in those courses to which they are accustomed, even where the benefits to be derived from a deviation are undeniable.

6. *Protraction of the Voyage.*—All loss arising from unusual protraction of the voyage. Thus, if a ship meet with an accident in the Baltic, and the repairs detain the vessel till the close of the season, when the passage home is rendered impracticable by the ice till the opening of the ensuing season, no payment is made to the merchant, in mitigation of his loss from interest of money, loss of market (if the market fall), or deterioration in the quality of his goods (unless arising from actual sea damage); nor to the ship owner, in mitigation of his loss from the extra wages and maintenance of his crew. In most foreign countries the ship owner is remunerated by the insurers for the wages and maintenance of his crew while his ship is detained in consequence of any loss for the making good of which they are liable.

7. *Liability for doing Damage to other Vessels.*—All loss to which the ship owner is liable when his vessel does damage to others. According to our laws, the owner of every ship not in charge of a pilot, that does damage, by negligence of the master and crew, to any description of craft or vessel, is liable to make good the same to the extent of the value of his own ship and freight: for beyond this he is not liable. The common policy in use among the underwriters at Lloyd's and the companies does not protect the ship owner from this loss. But the clubs or associations before mentioned almost universally take this risk. Indeed, this is one of the purposes which gave rise to their formation. But even they limit their liability to the amount of the policy; so that if a ship insured with them were to run down another, and to sink herself in the concussion, the owner would only receive the value of his own vessel from the club, and still be liable to the owner of the other vessel. The Indemnity and Marine Companies, by a clause in their policies, make themselves liable for 3-4ths of the loss which the owner of the vessel insured with them may sustain from damage done by his vessel to those of others. If such a case as the one just supposed should occur under their policy, the insured would receive the value of his own vessel and 3-4ths of the loss to be made good by him to the owner of the other vessel. The policies of these Companies approach in this respect the nearest of any to perfect protection to the ship owner. But the loss from running down other vessels, although serious, may sometimes ruinous, seldom occurs; and many ship owners trust so confidently that it will never fall upon them, that they are as well satisfied to be without as with this protection.

8. *Average Clause.*—The next description of loss of which we shall treat, against which the insured are not protected, is described in the following clause of the policy:—"Corn, fish, salt, seed, flour, and fruit, are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins, are warranted free from average under 5 per cent., unless general, or the ship be stranded; and all other goods, also the ship and freight, are warranted free from average under 3 per cent., unless general, or the ship be stranded."

The language employed in this clause, being technical, requires explanation, to render it intelligible to the general reader. Average is a name applied to certain descriptions of loss, to which the merchant and ship owner are liable. There are two kinds of average, general and particular.

*General Average* comprehends all loss arising out of a voluntary sacrifice of a part of either vessel or cargo, made by the captain for the benefit of the whole. Thus, if a captain throw part of his cargo overboard, cut from an anchor and cable, or cut away his masts; the loss so sustained, being voluntarily submitted to for the benefit of the whole, is distributed over the value of the whole ship and cargo, and is called "general average."

*Particular Average* comprehends all loss occasioned to ship, freight, and cargo, which is not of so serious a nature as to debar them from reaching their port of destination, and when the damage to the ship is not so extensive as to render her unworthy of repair. Losses where the goods are saved, but in such a state as to be unfit to forward to their port of destination, and where the ship is rendered unfit to repair, are called "partial or salvage loss." The leading distinction, between particular average and salvage loss is, that, in the first, the property insured remains the property of the assured—the damage sustained, or part thereof, as the case may be, and as will be hereafter explained, being made good by the insurer; and in the second, the property insured is abandoned to the insurer, and the value insured claimed from him, he retaining the property so abandoned, or its value.

*Particular Average on Goods.*—A few cases illustrative of the method of stating a claim for particular average will best explain the nature of this description of loss, and will at the same time show the reader what the practical distinction is between particular average and salvage loss.

The property insured we shall suppose to be a *ton of hemp*, the cost of which at Petersburg is 30*l.*, for which sum it is insured from Petersburg to London, and that the duty, freight, and charges to which the merchant is subject on landing at London are 10*l.* We shall likewise suppose that the hemp, on its arrival, is so damaged as not to be worth more than half what it would have fetched had it been sound. The insurer would then be called upon to make good to the insured 15*l.* or 50 per cent. upon the sum insured. But it does not follow that this payment of 15*l.* would indemnify the merchant, or that it would not more than indemnify him, for the loss sustained.

		£ s.	£ s.			£ s.	£ s.
If the hemp upon arrival in this country would have fetched in a sound state	Less duty, freight, and charges	50 0		Whereas he receives from the insurer 15 <i>l.</i> Upon the principle of a salvage loss he would receive 30 <i>l.</i>	If the hemp would have fetched in a sound state	30 0	
		10 0				10 0	
			40 0		Less duty, freight, and charges		20 0
But in its damaged state is only worth		15 0			Less duty, freight, and charges	10 0	
Less duty, freight, and charges		10 0			But in its damaged state is only worth	15 0	
			15 0		Less duty, freight, and charges	10 0	
							5 0
The merchant's loss by the damage is			25 0		The merchant's loss by the damage is		25 0
Whereas he only receives from the insurer 15 <i>l.</i> Upon the principle of a salvage loss he would also receive 15 <i>l.</i>							
If the hemp would have fetched in a sound state	Less duty, freight, and charges	30 0		And he receives from the insurer 15 <i>l.</i> Upon the principle of a salvage loss he would receive 25 <i>l.</i>			
		10 0					
But in its damaged state is only worth		10 0					
Less duty, freight, and charges		10 0					
			10 0				
The merchant's loss by the damage is			20 0				

It will be observed that the merchant's loss by the damage of his goods varies with the state of the market. It may also be observed, that in general the merchant will not receive from the insurer the whole amount of the loss that he sustains. Whenever his market is a profitable one (and that it must usually be so will be obvious to every body), whenever, indeed, his market is not a decidedly losing one, his policy does not afford him a complete protection.

The argument in favour of this mode of settling claims for particular average—and it should be observed that the subject has been discussed, and the principle acknowledged in the courts of law—is, that the insurer's liability is to be guided by the amount upon which he has received a premium or consideration; that he is not to be affected by the rise or fall of markets; but that the *gross* market price of the *sound*, and the *gross* market price of the *damaged* goods, are to be the test by which the rate of damage upon the amount insured is to be adjusted; the insurer being liable, besides, for all the extra charges arising out of the damage.

In the first case stated, the merchant's loss by damage is 25% upon 40%., or 62½ per cent.; in the second, 10% upon 10%., or 100 per cent.; in the third, 15% upon 20%., or 75 per cent. If the duty, freight, and charges were diminished in proportion to the diminished value of the goods, the loss in each case would be 50 per cent. upon the net price, as it is 50 per cent. upon the gross price. As far as the duty is concerned, government, upon many articles, reduces it in proportion to the diminution in the value of the goods; and if the freight were reduced in a similar manner, the merchant would always be indemnified for his loss by the insurer. But the practice with regard to freight in this country admits of no such arrangement; freight being paid according to the quantity delivered.

To make the principle upon which claims for particular average are adjusted, and its bearing, still clearer, we shall illustrate it by a few more cases. Suppose two packages to be insured at cost price—a cask of rice and a cask of sugar—each weighing 10 cwt.; the cost of each at the port of shipment 10%., the freight of each 10% per cwt. at the port of delivery, both articles free from duty, and to arrive at a market where no more than the cost price is realised; assuming that both packages are damaged 50 per cent.—the rice by loss of quality, the sugar by loss of weight—the statement will be as follows:—

10 cwt. of rice, had it arrived sound, would have produced	£ s.	£ s.	10 cwt. of sugar, if sound, would have produced	£ s.	£ s.
Less freight on 10 cwt. at 10% per cwt.	15 0		Less freight on 10 cwt. at 10% per cwt.	15 0	
	5 0			5 0	
But being damaged, did only produce	7 10	10 0	The barrel, being damaged, did only weigh 5 cwt., and produce	7 10	
Less freight on 10 cwt. at 10% per cwt.	5 0		Less freight on 5 cwt. at 10% per cwt.	2 10	
		2 10			5 0
Merchant's loss		£7 10	Merchant's loss		£5 0

In each case the merchant is entitled to recover from his insurer 5%., or 50 per cent., upon 10%., the sum insured, which, although an indemnity to him for his loss on the sugar, is far from being so for his loss upon the rice. If the merchant would contrive so to shape his contract with the ship owner for freight, as to reduce the freight in proportion to the depreciation in the value of the damaged commodity, he would be completely protected. The ship owner might on his side protect himself by insurance from loss by reduction of quality, as he now does from loss by reduction of quantity. But we have already more than once adverted to the difficulty of breaking in upon established practices. The merchants go on from year to year complaining of the losses to which they are subjected from this awkward contrivance, while no steps are taken to improve it. To show that the principle is equitable as between the merchant and his insurer, we subjoin one more statement, where the damage is taken at 100 per cent.

10 cwt. of rice, if sound, would have produced	£ s.	£ s.	10 cwt. of sugar, if sound, would have produced	£ s.	£ s.
Less freight on 10 cwt. at 10% per cwt.	15 0		Less freight on 10 cwt. at 10% per cwt.	15 0	
	5 0	10 0		5 0	10 0
Being totally spoiled, did produce nothing.			The barrel being washed out produces nothing.		
The merchant being still liable for the freight		5 0	The merchant, however, not being liable to pay freight		
Making his loss		£15 0	His loss is only		£10 0
He receives 10% only from the insurer.			Which he recovers from the insurer.		

It will be observed, that in each case the insurer pays 10%., or the full sum upon which he receives the premium.

When whole cargoes, or parcels of goods of considerable value, are insured, the clause in the policy which protects the insurer from particular average under a certain percentage is often partially set aside. Thus, if a cargo of 500 hogheads of sugar, valued at 10,000*l.*, were damaged to the extent of 400*l.*, the merchant, supposing the protecting clause to remain in force, would recover nothing from the insurer, the loss not amounting to 5 per cent. The additional written clause, by which it is the practice to modify the printed clause, is as follows:—"Particular average, payable upon each 10 hds. sugar, 10 casks and 50 bags coffee, and 10 bags cotton, following numbers, and upon each package of manufactured goods, chest of indigo, bag of wool or silk, the same as if separately insured." Such clauses may be, and are, introduced *ad libitum* by mutual consent of insurer and insured, the premium or consideration being arranged accordingly.

The protecting clause is considered, on the other hand, by the insurers, exceedingly unsatisfactory in some respects; and they, as occasion requires, insist upon additional protection. Thus, saltpetre, hides, coconuts, and tin plates, are generally warranted free from particular average, unless the ship be stranded; and upon tobacco, it is customary for the insurers to make themselves liable only to such part of the particular average as exceeds 5 per cent., throwing 5 per cent. upon the merchant.

**Particular Average on Freight.**—The clause, as far as it affects "freight," calls for no particular comment. Particular average upon freight can only arise, according to prevailing practice, from loss of weight; and whenever the loss of weight amounts to 3 per cent. or upwards, the ship owner is entitled to recover from his insurer. The ship owner, upon the arrival of the ship at its port of destination, is entitled to hold the goods as security until the freight is paid. If the owner of the goods should prove insolvent, and the goods should be entirely spoiled by sea damage during the voyage, and the ship owner thus lose his freight, he has no claim upon the insurer; because, although his collateral security is destroyed by a peril of the sea, his right to receive freight remains unimpaired, and it is against the loss or impairing of this right that the insurer protects him.

**Particular Average on Ships.**—Particular average upon ships is a subject somewhat more beset with difficulties. There is scarcely a ship that makes a voyage of any length, that does not sustain some damage. The clause in the policy warranting the ship free from particular average under 3 per cent., unless stranded, protects the insurer from the constant recurrence of petty claims; but in addition to this, it is the practice to class the damage that a ship sustains in the prosecution of her voyage under two heads: ordinary damage, or wear and tear; and extraordinary damage, or particular average. The splitting of sails, the breaking of anchors and cables, the upsetting of windlasses, are losses that come under the first head. The carrying away of masts and bulwarks, damage to the copper sheathing and hull from striking on rocks, come under the second.

When a ship sustains damage, if she be on her first voyage, the whole expense of the repairs is made good by the insurers. But if she be not on her first voyage, it is the established custom that the insurer pays no more than 2-3*ds.* of the repairs, the owner of the vessel having, as it is thought, an equivalent for the 1-2*ds.* which falls upon him, in the substitution of new work for old. Where the nature of the damage is such as to require that the copper should be stripped off the ship's bottom, the insurer pays the difference between the price of the old and the new copper on the weight of the old copper stripped

off: the excess in weight of the new over the old copper is paid for by the ship owner; and the labour of stripping and replacing the copper is paid for on the principle already mentioned. In any general rule of this kind, it must be obvious that the ship owner will sometimes gain and sometimes lose by an accident. As soon as the ship owner, or his captain, learns that his vessel has met with an accident, or as soon after as possible, he summons regular surveyors to examine his vessel and report all defects, discriminating between those defects that have arisen from perils of the sea, and those from wear and tear. The first only are made good by the insurer, together with all charges, such as surveyors' fees, dock dues, &c., caused by the necessity of undergoing repair. It has been already observed, that when a ship is obliged, in the progress of her voyage, to put into port for the purpose of repair, although the owner of the ship be subjected to great expense for the wages and maintenance of his crew during the detention, he can recover no part of this expense from the insurer; the doctrine being, that the owner of the ship is bound to navigate his vessel, and that the insurer does not undertake to guarantee that the voyage shall be completed within any specific time. Such is the doctrine, at least, in this country, and the practice is founded upon it; but in all other countries the doctrine and practice are the reverse. For in them allowance is made to the ship owner for the wages and maintenance of the crew during the whole period that the ship is under repair. Where a vessel sustains damage and undergoes repair in the progress of her voyage, and is subsequently lost, the insurer is liable both for the particular average and a total loss. Or the owner of the ship may, if he please, insure the amount expended in repair; and then, in the event of subsequent loss, the insurer is liable for the total loss only; but in the event of subsequent safe arrival, the average is augmented by the charge of insurance.

The operation of the clause warranting the ship free from average under 3 per cent., unless general, or the ship be stranded, may now be clearly seen. If a ship be insured and valued at 10,000*l.*, and the repairs of the vessel do not, after all the deductions above referred to, amount to 3 per cent., there is no claim upon the insurer, unless the vessel shall have been stranded. — (See AVERAGE.)

*Stranding.*—The term stranded is not well chosen, admitting of more than one construction; and the clause of which it forms a part is imperfectly conceived. And in settlements of accounts, when differences arise, the parties who discuss them are more apt to strive for that interpretation of terms and clauses which is favourable to their interests, than for that which is best adapted for general purposes. It is commonly understood that merely striking the ground and coming off is not a stranding; it being necessary, in order to fall within that term, that the ship should remain on the ground or rock, as it may happen, and that efforts should be made to float her. Striking on an anchor and leaking dangerously is not a stranding. We shall only adduce two illustrations, for the purpose of showing how ill adapted this clause is as a means to an end. Corn and other such articles are warranted free from particular average, unless the ship be stranded, because the insurer, considering these articles to be peculiarly susceptible of damage, will not consent to take that risk, except on some extraordinary occasion. A ship, laden with corn, makes a very stormy passage from the Baltic to London, and damages the whole of her cargo. Upon arrival off our coast she is stranded, but got off without straining or sustaining any damage. The insurer is held to be liable for the damage to the corn, under the clause of the policy. On another occasion, after a very favourable passage to our coast, a ship strikes upon a shoal, but is not stranded, sustaining, however, so much damage that she arrives at London with 6 feet water in her hold, and her cargo almost wholly spoiled. The insurer is held not to be liable under the clause of the policy.

*General Average.*—The insurer is bound to make good all general average without exception, however trifling the account. General average is treated as though altogether unconnected with particular average; and damage to the goods not amounting to 3 per cent. is not payable by the insurer, although there may be also a general average, and the general and particular average together may amount to more than 3 or 5 per cent. General average is a charge which must be paid by the merchant and ship owner, even if uninsured; although, when insured, he transfers, as it were, in virtue of his insurance, the charge from himself to his insurer. All the elements that can by possibility enter into general average may be classed under four heads:—1. Sacrifice of part of the ship and stores; 2. Sacrifice of part of the cargo and freight; 3. Remuneration of services required for general preservation; 4. Expense of raising money to replace what has been sacrificed, and to remunerate services.

1. When any part of the ship is sacrificed for the general benefit, the owner is entitled to receive (deducting, of course, his share of contribution) the amount of his outlay in the replacing of such sacrifice, allowance being made, on the principle stated above, where old works and materials are replaced with new. The deduction of 1-3*d.*, however, does not invariably apply. For instance, 1-6*th* only is taken off the price of an iron cable that is slipped from for the general benefit, because iron cables are calculated to last for a great number of years; and no reduction is ever made from the price of anchors. The charge of replacing the loss may amount to considerably more than the value lost, computing the value at the place where the ship was originally fitted. Thus, the cost of replacing an anchor and cable slipped from in the Downs, is frequently double the value of the anchor and cable at London. But whatever the charge may be, such charge forms the basis of settlement.

2. Sacrifice of the cargo and freight takes place in jettison, or where part of the cargo is flung overboard to lighten the vessel. Upon arrival in port, after such jettison, the owner of the goods jettisoned is entitled to receive (deducting his share of contribution) what the goods would have produced nett to him, supposing them to have arrived sound; and the owner of the ship is entitled to receive (deducting his share of contribution) the freight to which he would have been entitled upon the safe delivery of the goods.

3. Remuneration of services and other charges. When a ship loses her anchors and cables, very large sums are frequently awarded to boatmen who venture off to her with new ones at the imminent hazard of their lives. A ship disabled at sea is towed into port by another, and remuneration for such service is awarded according to the value saved, the detention occasioned, and the loss sustained. The ship rendering the service may be laden with fish or fruit, that may be totally spoiled by the detention, or may be in ballast. A ship captured by the enemy may be re-captured by a man of war or armed merchant vessel; here, again, salvage is awarded according to the circumstances of the case. All these charges are general average; that is to say, must be distributed over ship, freight, and cargo. When a ship, with her cargo, is driven on shore, the expense of attempting to get her off is general average. If she cannot be got off without discharging, the expense of discharging is general average; but the expense of getting the ship off after the cargo has been taken out falls exclusively upon the ship. The warehousing of the cargo, and other expenses incurred for its preservation, are charges exclusively upon the cargo. The expense of reloading is borne by the freight. When a ship puts into port in distress, the pilotage towards is general average; the pilotage outwards is a charge upon the freight. This distribution of charges has settled into a tolerably well established practice; and upon this principle claims are settled at the offices, and at Lloyd's.

4. The money required to meet the above charges is sometimes attainable without expense. If the accident happen near home, and the ship owner be respectable, he advances the money and recovers from the various parties concerned so soon as the accounts can be made up: or if the accident happen in a foreign port, where the owner of the ship is well known, the captain's bill upon him will sometimes be received in payment of the charges incurred. But where such facilities do not exist, the captain is empowered to pledge his ship, freight, and cargo, as security to any one he may prevail upon to supply the necessary funds. This pledge is termed a bottomry bond. By it the captain admits the receipt of the money; consents to the payment of a premium (which varies with the distance of the port of destination, the risk of the voyage, the respectability of the owner, and the necessities of the captain); and assigns the ship, freight, and cargo, as security for the repayment of the money advanced and the stipulated

premium. Should the captain consider the bottomry premium demanded of him exorbitant, or should he deem it preferable in other respects, he may sell a portion of the cargo for the purpose of raising such money as he may stand in need of towards the prosecution of his voyage. The expense of raising the requisite funds, whether by commission, by bottomry premium, or by loss on the sale of the cargo, is charged to those parties for whose interest the money is required. Thus, if a ship, having struck upon a rock, puts into port in distress, and is obliged to unload to repair; supposing the particular average upon the ship to amount to 500*l.*; the general average, consisting of assistance into port and expense of unloading, 300*l.*; particular charges on freight, consisting of expense of reloading and pilotage outwards, 100*l.*; and particular charges on cargo, consisting of warehouse rent and repair of packages, 200*l.*; and the expense of raising money should be 20 per cent.; — these sums would be severally increased by this addition, and would be raised to 600*l.*, 340*l.*, 120*l.*, and 240*l.*. — (See *BOTTOMRY*.)

It still remains to be inquired in what proportion the general average is to be paid by the different owners of the cargo, and the owner of ship and freight. Almost all general averages are adjusted at the ship's port of destination, and the values of the ship and cargo are taken at what they would produce in their actual state upon arrival, and the freight according to what is actually receivable, less the wages of the captain and crew; the general average being distributed in proportion to these values. Should the cargo be altogether worthless, it cannot be made to contribute; and should the wages of the crew exceed the freight, then the freight is not liable to contribute. In case of jettison, the party whose property has been sacrificed for the general benefit receives indemnity on the same principle; the value to which he is entitled being what his property would have produced *scilicet*, supposing it to have been sold on the arrival of the vessel the same value serving for the basis of his proportion of contribution. Some few cases occur where the general average is adjusted at the port of departure. Thus, if a ship, outward bound to the British colonies, cut from an anchor and cable in the Downs, or incur other general average on our own coast, the insurances being principally effected in this country, it is the custom to adjust it on the spot, by which means both delay and expense are avoided. On these occasions, the values at the port of shipment are taken as the basis of contribution. A total loss, subsequently to a general average, does not exonerate the insurer from his prior liability; and although it is customary with the ship owner, or his agent, specifically to insure the money expended in average, for the purpose of protecting the insurer against any greater liability than 100 per cent., he is not absolutely obliged to do so. When the average funds are raised by bottomry, the party advancing them takes the ship, freight, and cargo, as security, and charges a premium to cover the risk of the ship's non-arrival at her port of destination. And thus, on such an occasion, a subsequent total loss relieves the insurer from all liability to average.

The laws and customs by which averages are adjusted vary in different countries; but the insurer in this country is only liable for the averages adjusted according to our laws. The merchant, however, whose goods arrive at a foreign port, is obliged to submit to the laws of that port. He may thus be a considerable loser; paying general average according to one law, and receiving from his insurer according to another. And he never can be a gainer, because, before he is entitled to recover from his insurer, he must prove that he has paid to the owner of the ship. This is one of the many inconveniences to which mercantile men are exposed, and which cannot be removed without what it may be hoped will gradually take place, an assimilation of the commercial laws of different countries.

**Proof of Loss.** — The policy of insurance is the instrument under which the merchant and ship owner claim indemnification for all losses that are not specially excepted. The proof that the loss has been sustained must also be exhibited; such as the title to the vessel and cargo, and the evidence of the captain and crew to establish the circumstances out of which the claim arises. If A. were to insure his vessel for the space of 12 months, and at the expiration of 6 months were to sell his ship to B.: A.'s interest in the vessel having ceased, so also does his insurer's liability; and B., if he wish to be protected, must make a new insurance. Proof of ownership, therefore, is an essential preliminary to the recovery of a claim. In general practice, no difficulty arises from this, because the fact of ownership is sufficiently notorious. The bill of lading is, in most cases, satisfactory proof that the cargo was on board, as well as of the amount of freight.

**Valued and open Policies.** — If an insurance for 2,000*l.* be effected upon 100 hhds. of sugar, valued at 20*l.* per hhd., the bill of lading, showing that the vessel had 100 hhds. on board, establishes the interest at 2,000*l.*, and the policy is termed a valued policy. But if an insurance for 2,000*l.* be effected on 100 hhds. of sugar, and nothing be expressed as to value, the bill of lading only establishes that 100 hhds. are on board, without establishing the amount of interest. The production of the invoice, showing the cost of the goods, is necessary to that end, the policy being termed an open one.

**Return of Premium for short Interest.** — In a valued policy, when the whole of the property insured does not appear to have been shipped, the difference between the quantity insured and the quantity shipped is termed short interest. Thus, if 2,000*l.* be insured upon 100 hhds. of sugar, valued at 20*l.* per hhd., and 80 hhds. only be shipped; as the insurer's liability does not extend beyond 1,600*l.*, so he is obliged to return the premium upon 400*l.* to which no risk attaches. This return of premium is called a return for short interest.

**For Over-Insurance.** — In an open policy, where the value shipped is not equal to the value insured, the difference is termed over-insurance. If a merchant, A., make an insurance for 5,000*l.* upon goods, without specifying any value, from Calcutta to London, the premium being 60*l.* and the stamp duty *be* per cent., the amount of interest that attaches to the policy is so fixed, that he is neither to gain nor lose by the transaction in the event of the vessel's loss, supposing his insurance to be sufficient. To entitle him to recover a profit, the profit to be insured must be stipulated in the policy. The expense of insurance upon 100*l.* being 3*l.* 6*s.*, it is clear that every 100*l.* insurance covers 96*l.* 15*s.* original cost; that is to say, protects the merchant from loss to that extent in case of the loss of the vessel. If, then, we assume the invoice of the goods shipped to be 40,000 rupees, or, at the exchange of 2*l.* per rupee, 4,000*l.*, the interest attaching to the policy is ascertained as follows: — If 96*l.* 15*s.* cost be insured by 100*l.* insurance, what will 4,000*l.* cost be insured by? Answer, 4,185*l.* Under such circumstances, although a policy exists for 5,000*l.*, the insured is not able to prove interest for more than 4,185*l.*; and consequently, the insured being entitled to recover no more than that sum in case of loss, the insurer is called upon to make a return of premium for over-insurance upon 865*l.*

Although we have treated separately of returns for short interest and over-insurance, we should observe that these terms in practice are used indiscriminately; and, indeed, we cannot say that we perceive much advantage in making the distinction, or preserving the distinctive appellations.

It sometimes happens that the property expected in a vessel is not all insured at one time or in one policy. But this makes no difference in the principle of settlement according to our law; although, according to the laws of most other countries, the policies take precedence of one another according to their dates, the whole short interest falling upon the policy or policies last effected. The foreign law, in this instance, appears to us the more equitable and reasonable of the two; and that our reason for thinking so may be intelligible, and thus gain assent or meet with refutation, we shall state a case of short interest upon a number of policies, such as not unfrequently appears. A merchant, A., orders his correspondent at Calcutta to ship for his account a quantity of sugar, not exceeding 1,000 tons, at a price not exceeding 20*l.* per ton. In due time he receives a letter from his correspondent acknowledging the receipt of his order, and expressing confident hopes of being able to purchase the quantity, or the greater part of it, at the limits prescribed, and promising to advise as he proceeds. A., on receipt of this letter, say on the 1st of January, makes a provisional insurance for 5,000*l.* upon sugar valued at 20*l.* per ton. Continuing without further advice, and fearing lest his correspondent's letter should have miscarried, and that he might have property at sea uninsured, on the 1st of February, 1st of March, and 1st of April, he effects similar

insurances, thus covering the whole 1,000 tons. He subsequently receives advice that his correspondent had not been able to purchase more than half the quantity ordered, at his limit, and he recovers from his insurers half the premium upon each policy. Now, it was not at all improbable that he might have received advice from his correspondent, as he expected, much sooner. And if he had received advice in the middle of February, of the shipment of 500 tons, and that the ship which contained them was totally lost in the river Hooghly, the insurers upon the two first policies would have been liable for a total loss. And it appears to us a defective arrangement, by which a party, who is at one time exposed to a total loss, should at another be compelled to return half his premium. It is true that the merchant may, if he please, insert in his policies a clause by which the policies shall be made to succeed one another; but we should say that the law, in insurance cases, as in the disposal of the property of deceased persons, ought to be the best general disposition, leaving to individuals the right of modification according to particular circumstances.

**Return for Double Insurance.**— Besides returns for short interest and over-insurance, there are returns for double insurance. They are, in fact, to all intents and purposes, the same thing. Double insurance exists where the party, through forgetfulness, makes an insurance upon his property twice over; or where the shippers and consignees of goods, when uncertain of one another's intentions, effect each an insurance upon them; or where the captain of a vessel in foreign parts, fearing lest his advances should not reach his owner, effects an insurance upon it, and the owner at the same time, acting with equal caution, effects one also. The observations already made upon returns for short interest, and upon the difference between our laws and those of other countries, apply with equal force here.

We have now gone over all the principal topics connected with marine insurance. Those who peruse this article with ordinary attention will, we hope, gain a tolerably clear insight into the principles and practice of the business. But a perfectly familiar acquaintance with it can only be acquired by those who are daily conversant with its details.

**Duty on Policies of Marine Insurance.**— This is regulated by the act of 1844, 7 Vict. c. 21.

For every policy of insurance or insurance, or other instrument, whereby any insurance shall be made upon any vessel, or upon goods, or other property on board any vessel, or upon the freight of any vessel, or upon any other interest relating to any vessel which may lawfully be insured for any voyage whatever, the following duties, where the sum insured shall not exceed 100*l.*, and where the whole sum insured shall exceed 100*l.*, then for every 100*l.*, and also for any fractional part of 100*l.*, whereof the same shall consist; viz.

Where the premium or consideration for such insurance shall not exceed the rate of 1 <i>l.</i> per cent on the sum insured	0	0	3
And where the same shall exceed 10 <i>l.</i> per cent. and not exceed 2 <i>l.</i>	0	0	6
2 <i>l.</i> and not exceeding 3 <i>l.</i>	0	1	0
3 <i>l.</i> and not exceeding 4 <i>l.</i>	0	1	0
4 <i>l.</i> and not exceeding 5 <i>l.</i>	0	3	0
5 <i>l.</i>	0	4	0

But if the separate interests of 3 or more persons be insured by one policy or instrument, upon the said respective duties, as the case may require, shall be charged thereon in respect of each fractional part of 100*l.*, as well as in respect of every full sum of 100*l.*, which shall be thereby insured upon any separate and distinct interest.

And for every policy of insurance or insurance, or other instrument whereby any such insurance shall be made for any certain term or period of time, the following rates for every 100*l.*, and also for any fractional part of 100*l.*, whereof the same shall consist, viz. —

Where any such insurance shall be made for any period not exceeding 6 calendar months	0	2	6
Exceeding 6 calendar months	0	4	0

And for every policy of insurance or insurance, or other instrument whereby any insurance, commonly called a *mutual insurance*, shall be made, or whereby divers persons shall insure or agree to insure one another without any premium or pecuniary consideration from any loss, damage, or misfortune that may happen to any vessel, or any goods, or property.

This duty was reduced in 1833, and again in 1844, and is now less than half what it was formerly. This reduction must, of course, be beneficial. But the tax is altogether wrong in principle, and should be repealed altogether. Its obvious tendency is to discourage the coasting trade, by imposing a duty on goods carried by sea, from which those carried by land and canals are exempted. But the influence of the tax on vessels engaged in the foreign or colonial trade is still more objectionable. It is immaterial to a merchant sending a ship to sea, whether he insure her in London, Amsterdam, or Hamburg; and as policies executed in the last two cities are either wholly exempted from duties, or subject to such as are merely nominal, the effect of the duty is to transfer to the Continent a considerable part of the business of marine insurance, that would otherwise be transacted in London. It is plain, therefore, that this duty operates to drive a valuable branch of business from amongst us; and though it had no such effect, still it is sufficiently clear that a tax on providence, or on the endeavour to guarantee the safety of property at sea, is not one that ought to exist in any country, and least of all in so commercial a country as England.\*

#### Form of a Policy of Insurance executed at Lloyd's.

S. G. In the Name of God, Amen. Charles Brown and Co. as well in their names as for and in the name and names of all and every other person or persons to whom the same doth, may, or shall appertain, in part or in all, doth make assurance, and cause themselves and them and every of them to be insured, lost or not lost, at and from Petersburg to any port or ports in the United Kingdom, upon any kind of goods and merchandises, and also upon the body, tackle, apparel, ordnance, munition, artillery, boat, and other furniture, of and in the good ship or vessel called the *Swift*, whereof is master, under God, for this present voyage, *Brighton*, or whoever else shall go for master in the said ship, or by whatsoever other name or names the said ship, or the master thereof, is or shall be named or called; beginning the adventure upon the said goods and

merchandises from the loading thereof on board the said ship upon the said ship, &c.

and so shall continue and endure during her abode there, upon the said ship, &c. and further, until the said ship, with all her ordnance, tackle, apparel, &c. and goods and merchandises whatsoever, shall be arrived at her last port of discharge (as above), upon the said ship, &c. until she hath made every thing in good safety; and upon the goods and merchandises, until the same be there discharged and safely landed. And so shall be insured the said ship, &c. in this voyage, to proceed and sail to, and touch and stay at any ports or places whatsoever, without prejudice to this insurance. The said ship, &c. goods and merchandises, &c. for so much as con-

\* This very valuable article (on Marine Insurance) has been, as the reader will easily perceive, furnished by a gentleman thoroughly conversant with the principles and details of the business.

comes the assured, by agreement between the assured and insurers in this policy, are and shall be valued at eight hundred pounds, being on the captain's one fourth share of said ship, said one fourth share valued at that sum. Touching the adventures and perils which we the insurers are contented to bear, and do take upon us in this voyage: they are of the seas, men-of-war, fire, enemies, pirates, rovers, thieves, jettisons, letters of mart and countermart, surprisals, takings at sea, arrests, restraints, and detentions of all kings, princes, and people, of what nation, condition, or quality soever; barratry of the master and mariners, and of all other perils, losses, and misfortunes, that have or shall come to the hurt, detriment, or damage of the said goods and merchandise in ship, &c. or any part thereof; offences against the revenue of the United Kingdom of Great Britain or Ireland excepted. And in case of any loss or misfortune, it shall be lawful for the assured, their factors, servants, and assigns, to sue, labour, and travel for, in, and about the defence, safeguard, and recovery of the said goods and merchandise in ship, &c. or any part thereof, without prejudice to this insurance; to the charges whereof we the insurers will contribute, each one according to the rate and quantity of his sum herein assured. And it is agreed by us, the insurers, that this writing, or policy of insurance,

shall be of as much force and effect as the surest writing or policy of insurance heretofore made in Lombard Street, or in the Royal Exchange, or elsewhere in London. And so we the insurers are contented, and do hereby promise and bind ourselves, each one for his own part, our heirs, executors, and goods to the assured, their executors, administrators, and assigns, for the true performance of the premises, confounding ourselves paid the consideration due unto us for this assurance by the assured, at and after the rate of five guineas per cent., to return one pound per cent. If the voyage end on the east coast of England.

In Witness whereof, we, the insurers, have subscribed our names and surnames as in and to the N.B. — Corn, fish, salt, fruit, flour, and seeds, are warranted free from average, unless general, or the ship be stranded.—Sugar, tobacco, hemp, flax, hides, and skins are warranted free from average under five pounds per cent.: and all other goods, also the ship and freight, are warranted free from average under three pounds per cent., unless general, or the ship be stranded.

£500. Joseph White, Five hundred pounds.  
1st of Sept. 1843.  
£300. Thomas Black or George Green, Three hundred pounds. 1st of Sept. 1843.

*Policy by the Indemnity Mutual Marine Assurance Company.  
Established 1834.*

**£5,000.**

WHEREAS William Grey hath represented to us whose hands and seals are hereunto subscribed and affixed, and who are two of the directors of the INDIGNITY MUTUAL MARINE ASSURANCE COMPANY, that he is interested in, or duly authorised as owner, agent, or otherwise, to make the assurance hereinafter mentioned and described, with the INDIGNITY MUTUAL MARINE ASSURANCE COMPANY and hath covenanted or otherwise obliged himself to pay forthwith for the use of the said Company, at the office of the said Company, the sum of sixty-two pounds ten shillings as a premium or consideration, and after the rate of twenty-five shillings per cent. for such assurance. NOW KNOW YE, THAT the said sum of sixty-two pounds ten shillings, We do, for ourselves and each of us, covenant and agree with the said William Grey, his executors, administrators, and assigns, that the capital stock and funds of the said Company, shall, according to the provisions of the deed of settlement of the said Company, and the resolutions entered into at two extraordinary general courts of the said Company held on the twenty-ninth day of August, and the twentieth day of September, one thousand eight hundred and twenty-seven, be subject and liable to pay and make good, and shall be applied to pay and make good all such losses and damages herein-after expressed as may happen to the subject matter of this policy, and may attach to this policy in respect of the sum of five thousand pounds hereby assured, which assurance is hereby declared to be upon

Stamp  
£6. 6s.

1/ 250. 250 hhds. of sugar valued at 20l. each, average payable upon each 10 hhds. following landing numbers, the same as if separately insured, laden or to be laden on board the ship or vessel called the Nelly, whereof Turner is at present master, or whoever shall go for master of the said ship or vessel, lost or not lost, at and from Grenada to London, including the risk of craft to and from the vessel, warranted to sail on or before the 1st of August, 1842. AND We do covenant and agree, that the assurance aforesaid shall commence upon the said ship, at and from Grenada, and until she hath moored at anchor twenty-four hours in good safety; and upon the freight and goods or merchandise on board thereof, from the loading of the said goods or merchandise on board the said ship or vessel at London, and until the said goods or merchandise be discharged and safely landed at. AND that it shall be lawful for the said ship or vessel to proceed and sail to, and touch, and stay at any ports or places whatsoever, in the course of her said voyage, for all necessary purposes, without prejudice to this assurance. AND touching the adventures and perils which the capital stock and funds of the said Company are made liable unto, or are intended to be made liable unto, by this assurance, they are, of the seas, men-of-war, fire, enemies, pirates, rovers, thieves, jettisons, letters of mart and countermart, surprisals, takings at sea, arrests, restraints, and detentions of all kings, princes, and people, of what nation, condition, or quality soever; barratry of the master and mariners, and of all other perils, losses, and misfortunes, that have or shall come to the hurt, detriment, or damage of the aforesaid subject matter of this assurance, or any part thereof. AND in case of any loss or misfortune, it shall be lawful to the assured, their factors, servants, and assigns, to sue, labour, and travel for, in, and about the defence, safeguard, and recovery of the aforesaid subject matter of this assurance, or any part thereof, without prejudice to this assurance, the charges whereof the capital stock and funds of the said Company shall bear in proportion to the sum hereby assured. AND it is declared and agreed, that corn, fish, salt, fruit, flour and seed, shall be and are warranted free from average unless general, or the ship be stranded; and that sugar, tobacco, hemp, flax, hides, and skins, shall be and are warranted free from average under five pounds per centum; that all other goods, also the ship and freight, shall be and are warranted free from average under three pounds per centum, unless general, or the ship be stranded. PROVIDED NEVERTHELESS, that the capital stock and funds of the said Company shall alone be liable, according to the provisions of the deed of settlement, and the resolutions above-mentioned, to answer and make good all claims and demands whatsoever, under or by virtue of this policy; and that no proprietor of the said Company, his or her heirs, executors or administrators, shall be in anywise subject or liable to any claims or demands, nor be in anywise charged by reason of this policy beyond the amount of his or her share or shares in the capital stock of the said Company, it being one of the original or fundamental principles of the said Company, that the responsibility of the individual proprietors shall, in all cases, be limited to their respective shares in the said capital stock.

In Witness whereof, We have hereunto set our hands and seals in London, the tenth day of January, 1843.

Sealed and delivered }

C. D. (L. S.)

## III. INSURANCE (FIRE).

Insurance against fire is a contract of indemnity, by which the insurer, in consideration of a certain premium received by him, either in a gross sum or by annual payments, undertakes to indemnify the insured against all loss or damage he may sustain in his houses or other buildings, stock, goods, and merchandise, by fire, during a specified period.

Insurances against fire are hardly ever made by individuals, but almost always by joint stock companies, of which there are several in all the considerable towns throughout the empire. Of these, the *Sun*, *Phoenix*, &c. insure at their own risk and for their own profit: but there are others, which are called mutual insurance offices, such as the Norwich Union, County, Westminster, &c., in which every person insuring becomes a member or proprietor, and participates in the profit or loss of the concern.

The conditions on which the different offices insure are contained in their *proposals*, which are printed on the back of every policy; and it is in most instances expressly conditioned, that they undertake to pay the loss, not exceeding the sum insured, "according to the exact tenor of their printed proposals."

Nothing can be recovered from the insurers, in the event of loss, unless the party insuring had an interest or property in the thing insured at the time when the insurance was effected, and when the loss happened. It often occurs that no one office will insure to the full amount required by an individual who has a large property; and in such a case the party, to cover his whole interest, is obliged to insure at different offices. But, in order to prevent the frauds that might be practised by insuring the full value in various offices, there is, in the proposals issued by all the companies, an article which declares, that persons insuring must give notice of any other insurance made elsewhere upon the same houses or goods, that the same may be specified and allowed by indorsement on the policy, in order that each office may bear its rateable proportion of any loss that may happen: and unless such notice be given of each insurance to the office where another insurance is made on the same effects, the insurance made without such notice will be void.

Any trustee, mortgagee, reversioner, factor, or agent, has sufficient interest in the goods under his custody, to effect a policy of insurance, provided the nature of such interest be distinctly specified at the time of executing such policy.

Most of the offices stipulate in their proposals against making good any loss occasioned by "invasion," "foreign enemy," "civil commotion," &c.; and under this condition the Sun Fire Office was exonerated from the loss occasioned by the disgraceful proceedings of the mob in 1780.

One of the principal conditions in the proposals has reference to the proof of loss. The Sun Fire Office — (see *post*), and most other offices, make it a condition, that the individual claiming shall "procure a certificate, under the hands of the minister and churchwardens, and some other respectable inhabitants of the parish or place, not concerned or interested in such loss, importing that they are well acquainted with the character and circumstances of the person or persons insured or claiming; and do know, or verily believe, that he, she, or they, really, and by misfortune, without any fraud or evil practice, have sustained by such fire the loss or damage, as his, her, or their loss, to the value therein mentioned." This condition has given rise to a great deal of discussion in the courts; but it has been finally decided, that the procuring of the certificate is a condition precedent to the payment of any loss, and that its being wrongfully refused will not excuse the want of it.

The risk commences in general from the signing of the policy, unless there be some other time specified. Policies of insurance may be annual, or for a term of years at an annual premium; and it is usual for the office, by way of indulgence, to allow fifteen days after each year for the payment of the premium for the next year in succession; and provided the premium be paid within that time, the insured is considered as within the protection of the office.

A policy of insurance is not in its nature assignable, nor can it be transferred without the express consent of the office. When, however, any person dies, his interest remains in his executors or administrators respectively, who succeed or become entitled to the property, provided such representatives respectively procure their right to be indorsed on the policy.

(For further details, see *Marshall on Insurance*, book iv.; *Park on Insurance*, c. 23.)

Insurances are generally divided into *common*, *hazardous*, and *doubtly hazardous*. The distinguishing characteristics of these may be learned from the subjoined proposals of the Sun Fire Office. The charge for insuring property of the first description is now usually 1s. 6d. per cent., the second 2s. 6d., and the third 4s. 6d. These charges are exclusive of the duty payable to government, of 1s. on the policy, and 2s. per cent. on the sum in the policy.

We subjoin a copy of a policy of insurance on a house valued at 1,000*l.*, and furniture, plate, books, &c. in the same, valued also at 1,000*l.*, executed by the Sun Fire Office, and of the proposals indorsed on the same. The latter correspond in most particulars with those issued by the other offices.

## SUN FIRE ASSURANCE OFFICE.

No. ———

WHEREAS A. B. Esq. of No. ——— Street, has paid the sum stated in the margin of this policy to the Society of the Sun Fire Office in London, and has agreed to pay, or cause to be paid to them, at their said office, the sum of one pound and three pence on the 29th of September yearly, during the continuance of this policy, for insurance from loss, or damage by fire, on his own household goods, wearing apparel, printed books, and plate in his now dwelling-house only, situate as aforesaid, brick, seven hundred and forty pounds; musical instruments therein only, forty pounds; pictures and prints therein only, sixty pounds; china and glass therein only, one hundred and ten pounds.

Now, KNOW YE, That from the date of these presents, and so long as the said assured shall duly pay, or cause to be paid, the said sum at the times and place aforesaid; and the trustees or acting members of the said Society for the time being, shall agree to accept the same; the stock and fund of the said Society shall be subject and liable to pay to the said assured, his executors, administrators, and assigns, all such damage and loss which the said assured shall suffer by fire, not exceeding upon each head of insurance, the sum or sums above-mentioned, amounting in the whole to no more than nine hundred and fifty pounds, according to the exact tenor of their printed proposals, endorsed on this policy, and of an act of parliament of the 54th of George the Third, for charging a duty on persons whose property shall be insured against loss by fire. IN WITNESS whereof, we (three of the trustees or acting members for the said Society) have hereunto set our hands and seals, the 1st day of November, 1843.

Signed and sealed (being stamped  
according to act of parliament)

**N. B.**—The interest in this policy may be transferred by indorsement, made and entered at the office if the trustees or acting members approve thereof, but not otherwise.

## (INDORSEMENT ON THE POLICY.)

## SUN FIRE OFFICE.

This office insures against loss or damage by fire, in Great Britain and Ireland, and also in foreign countries, all descriptions of buildings, including mills and manufactories, and goods, wares, and merchandise, in the same; ships in harbour, or in dock; craft on navigable rivers and canals, and the goods laden on the same; wagons travelling the roads, and their contents; and farming stock of all descriptions, upon the following terms and conditions:—

**Common Insurances.**

1. Buildings covered with slates, tiles, or metals, and built all sides with brick or stone, or separated by party-walls of brick or stone, and wherein no hazardous trade or manufacture is carried on, or hazardous goods deposited.

2. Goods in buildings as above described, such as household goods, plate, jewels in private use, apparel, and printed books; liquor in private use, merchandise, stock and utensils in trade, not hazardous.

At 1s. 6d. per cent. per annum, with certain exceptions.

**Hazardous Insurances.**

1. Buildings of timber or plaster, or not wholly separated by partition-walls of brick or stone, or not covered with slates, tiles, or metals, and thatched barns and out-houses having no chimney, nor adjoining to any building having a chimney; and buildings falling under any of the above descriptions of common insurance, but in which hazardous goods are deposited or some hazardous trade or manufacture is carried on.

2. Ships and craft, with their contents (line barges, with their contents, alone excepted).

At 2s. 6d. per cent. per annum, with certain exceptions.

**Doubly Hazardous Insurances.**

1. Buildings.—All thatched buildings having chimneys, or communicating with, or adjoining to, buildings having one, although no hazardous trade shall be carried on, nor hazardous goods deposited therein; and all hazardous buildings, in which hazardous goods are deposited, or hazardous trades carried on.

2. Goods.—All hazardous goods deposited in hazardous buildings, and in thatched buildings having no chimney, nor adjoining to any building having a chimney.

At 4s. 6d. per cent. per annum, with certain exceptions.

Agricultural produce, farming stock, and implements and utensils of husbandry, on any farm may be insured, without the average clause, at 2s. per cent. exempt from duty, provided it be insured to a fair average value. This office will not be subject to loss by explosion of any kind, nor for loss on goods or utensils damaged or destroyed whilst undergoing any process in which the application of fire-heat is necessary, nor will the office be liable for loss on hay, corn, seeds, or other property, occasioned by its own natural heating, but the loss of any property in consequence, (except that which, by its own natural heating, has been the cause of the fire,) will be made good; as well as losses from lightning, where the buildings, or other effects insured, have been actually set on fire thereby.

Insurances may also be made by special agreement on the following risks, and on others of a similar description, not mentioned under the 3d and 5th heads of insurance, viz. on mills of all kinds, and the stock and utensils in them; also on buildings, containing kiln, steam-engine, stove, or oven, used in the process of any manufacture, and the stock therein; sugar refineries, sea biscuit bakers, distillers, varnish makers, chemists' laboratories, theatres, coach painters, colour manufacturers, varnishers, musical instrument makers, refiners of saltpetre, spermaceti, wax, and oil, barge and boat builders, carpenters, cabinet makers, coach makers, coopers, cork burners, floor-cloth painters, japanners, lampblack makers, letter-press printers, machine makers, melters of tallow and of rough fat, candle makers, cart-grease makers, oilmen, soap-boilers, rope and sail makers, ship chandlers, hemp and flax dressers, oil leather dressers, medallers, curio-makers, pictures, prints, drawings, statuary work, spinners of cotton, flax, lint, and wool, throughout all the operations attending the manufacturing of these materials. From the raw state into thread for the weaver, and such other risks as, by reason of the nature of the trade, the narrowness of the situation, or other dangerous circumstances, may increase the hazard thereof: all which special hazards may be inserted in the policy, to render the same valid and in force.

**N. B.**—Gunpowder, and buildings in which it is made, cannot be insured on any terms; neither does this office insure writings of any kind, books of accounts, ready money, bonds, bills, or any other securities for money.

**N. B.**—By an act of the 55th of Geo. 3. a duty of 5s. per annum is to be levied on every 100*l.* of property insured against fire: but by an act of the 4th of Geo. 4. Agricultural produce, farming stock, and implements and utensils of husbandry, are exempt from duty.

**N. B.**—Persons may insure for more years than one, and in such cases there will be a discount allowed of 5 per cent. on the annual amount, compound interest, on the premium and duty for every year except the first.

**N. B.**—Rent may be insured by special agreement for a term

**Insurance of Mills, Factories, &c.**—The principal insurance offices agreed, in 1842, upon certain rates for the insurance of cotton, woollen, flax, and other mills and factories. We subjoin a table of the rates for cotton mills; but the others are too voluminous, and embrace too many particulars to be given in this place. The rates for woollen mills may, however, be considered as varying from 8s. to 7s. 6d. per cent.; and those for flax mills are not materially different.

not exceeding 1 year, the amount being specified in the policy. Persons insured in this office are not liable for any calls to make good losses.

**Conditions.**

**Art. I.**—Any person desirous of effecting insurances upon buildings or goods must furnish the office, or its agents, with a particular description thereof, and of the process of manufacture carried on therein; and if there be any omission or misrepresentation in describing the building or goods, or process of manufacture, whereby the same may be charged at a different rate of premium than they otherwise would be, the office will not be responsible in case of any loss or damage. And if any alteration be made in the state of the buildings or goods, or process of manufacture, after such insurance shall have been effected, then the insured shall be liable to make good thereof, in writing, to the office or its agents, or in default of such notice, such insurance shall become void, and no benefit be derived therefrom.

**Art. II.**—All policies shall be signed and sealed by three or more trustees or acting members; but no receipts are to be taken for any premiums of insurance, but such as are printed and issued from the office, and witnessed by one of its clerks or agents.

**Art. III.**—Houses, buildings, and goods in trust, and merchandise on commission (except as aforesaid), may be insured, provided the same are declared in the policy to be in trust or on commission, but not otherwise.

**Art. IV.**—On bespeaking policies, all persons shall pay the premium to the next quarter day, and from thence for one year more at least, or shall make a deposit for the same, and shall, as long as the managers agree to accept the same, make all future payments annually at the said office, within fifteen days after the day limited by their respective policies, upon forfeiture of the benefit thereof.

**Art. V.**—Any number of houses and out-houses, and household goods, printed books, wearing apparel, plate, prints, jewels and trinkets in private use, stock in trade, goods in trust, or on commission, may be insured in one policy.

**Art. VI.**—Persons insured by this office shall receive no benefit from their policies, if the same houses, or goods, &c. are insured in any other office, unless such insurance, and the amount thereof, be first specified and allowed by indorsement on the policy, in which case this office will pay its rateable proportion on any loss or damage.

**Art. VII.**—When any person dies, the policy and interest therein shall continue to the heir, executor, or administrator, respectively, to whom the right of the property insured shall belong, provided, before any new payment be made, such heir, executor, or administrator do procure his or her right to be indorsed on the policy at the said office, or the premium to be paid in the name of the said heir, executor, or administrator.

**Art. VIII.**—Persons changing their habitations or warehouses may preserve the benefit of their policies, if the nature and circumstance of such policy be not altered; but such insurance will be of no force till such removal or alteration is allowed at the office, by indorsement on the policy.

**Art. IX.**—No loss or damage will be paid on fire happening by any invasion, foreign enemy, civil commotion, or any military or usurped power whatever.

**Art. X.**—Persons insuring sustaining any loss or damage by fire are forthwith to give notice thereof at the office; and, as soon as possible afterwards, deliver in as particular an account of the loss or damage as the nature of the case will admit of, and make proof of the same by their oath or affirmation, according to the form practised in the said office, and by their books of accounts, or such other proper vouchers as shall be reasonably required, and procure a certificate under the hands of the minister and churchwardens, and some other respectable inhabitants of the parish or place, not concerned or interested in such loss, importing that they are well acquainted with the character and circumstances of the person or persons insured or claiming; and do know, or verily believe, that he, she, or they, really, and by misfortune, without any fraud or evil practice, have sustained by such fire the loss or damage, as his, her, or their loss, to the value therein mentioned. And till the affidavit and certificate of such the insured's loss shall be made and produced, the loss money shall not be payable. And, if there appear any fraud or false swearing, or if the fire shall have happened by the procurement, wilful act, means, or contrivance of the insured or claimants, he, she, or they shall be excluded from all benefit from their policies. And in any difference shall arise between the insured and the insured, touching any loss or damage, such difference shall be submitted to the judgment and determination of arbitrators indifferently chosen, whose award in writing shall be conclusive against all parties.

**N. B.**—In every case of loss the Company reserves the right of re-insatement in preference to the payment of claims, if it should judge the former course to be more expedient; but when the loss is settled and the money is paid, the insured shall receive immediate payment for the same, without any deduction or discount; and will not be liable to any covenants or calls for contribution to make good losses.

## Scale of Premiums for Cotton Mills.

Description of Mills.	Fire-proof.	Not Fire-proof.		
		Class 1.	Class 2.	Class 3.
	A separate sum on each floor, or subject to average.	Not spinning lower than 80%.	Not spinning lower than 35%.	Spinning lower than 35%.
<i>Cotton Mills conforming to the following Description, viz.</i>				
1. Built of brick or stone, and covered with slate, tile, or metal	-	-	-	-
2. In one tenure only	-	-	-	-
3. Heated by steam	-	-	-	-
4. The boiler and fire-place being outside the mill	-	-	-	-
5. Lighted by gas	-	-	-	-
6. No internal communication by hoists, spouts, well-holes, or otherwise through the floors	-	-	-	-
7. Working single time only	-	-	-	-
8. All the process previous to carding being performed in a building having an incombustible roof, which, whether detached from the mill or adjoining to it, shall not have any direct communication therewith, other than by an external fire-proof passage, of not less than 10 ft. in length, with a wrought-iron door at each end thereof, and by openings for the shaft and steam pipes (not exceeding 5 in. each in diameter). If detached, not having any opening in the wall of the blowing-house opposite to that of the mill, except the doorway before mentioned; and if adjoining, not having any windows in the mill overlooking the same, or any windows in the blowing-house walls so as to endanger the mill	10s. 6d.	12s.	14s.	16s.
9. Not spinning waste, other than that produced by the occupier of the mill	-	-	-	-
10. Not containing more than 6 floors in height, including basement and attics	-	-	-	-
* In fire-proof mills, the floors occupied for any process previous to spinning, or otherwise subject to extra charge, will be rated as mills of ordinary construction.				
<i>Mills not conforming to the above Description will be charged in addition to the above, viz.</i>				
As to No. 2. If in occupation of two tenants	-	3s.	4s.	5s.
As to No. 3. If heated otherwise than by steam	-	special	special	special
As to No. 4. If the boiler or fire place is within the mill	-	2s.	3s.	4s.
As to No. 5. If lighted otherwise than by gas	-	2s.	3s.	4s.
As to No. 6. If having therein any hoist, well-hole, spout, or other communication through the floors of the mill	-	2s.	2s.	2s.
As to No. 7. If working more than single time	-	2s.	4s.	6s.
As to No. 8. If any of the processes previous to carding be performed	-	-	-	-
In a fire-proof building adjoining to the mill, and communicating with it by a stone staircase, having wrought-iron doors only, set in stone or metal, and by aperture for shaft and steam-pipe as aforesaid	-	2s.	4s.	6s.
In a fire-proof building adjoining to the mill, and communicating by wrought-iron doors as above, and by apertures for shaft and steam pipe as aforesaid	-	3s.	6s.	7s.
In a fire-proof room within the mill, communicating by wrought-iron doors, and apertures for shaft and steam-pipe as aforesaid	-	3s.	6s.	7s.
Not according to one or other of the above descriptions	-	5s.	7s.	9s.
As to No. 9. If spinning bought flyings or strippings	-	1s.	special	special
If spinning other bought waste	-	special	special	special
As to No. 10. If containing more than 6 floors in height, including basement and attics	-	1s.	2s.	3s.

N.B.—In fire proof mills with a sum insured on each floor, the extra charge for height will only apply to the stories above six.

*Blowing-houses, &c.*—Buildings in which any process preparatory to carding is carried on, to be charged the maximum rate according to the number of bunks to the pound to be spun from the cotton prepared in them.

Mills are denominated fire-proof in the construction of which no timber is used, except in the roof. If any part of the mill has a wooden flooring, that story is to be charged at the rate of mill of ordinary construction.

Cotton mills having more than two tenants, or otherwise not included in the above several classifications, will be considered special.

The above rates are to be applied to all existing insurances as they become due, as well as to new orders.

And as it is the intention of the company not to exceed the sum of £ upon any one mill and its contents, col-

lectively, the agent will be careful not to exceed that sum, whether by one or more policies, without special authority.

To carry these regulations into effect with existing insurances, it will be expedient that, instead of renewing old policies, the agent should give timely notice that existing policies are not to be renewed, and that the 15 days' grace not stretch thereby, and he should send up instructions for new ones, in conformity herewith, receiving from the assured a proper declaration, to protect him in the mean time.

*Power-loom factories.*—Detached, brick-built and tiled or slated, heated by steam, in single tenure, 7s. 6d. per cent. per annum.

If adjoining to, but not communicating with, a cotton mill, it will be subject to three quarters of the rate of the adjoining mill.

If communicating with a cotton mill, it will be subject to the same rate as the mill.

*Amount of Property insured. Duty.*—Insurance against fire, though practised in France, Holland, and some other countries, is not general any where except in Great Britain. It has been known amongst us for a century and a half, and is now very widely extended. It appears from the official accounts, that the gross duty received on policies of insurance against fire in the United Kingdom, in 1842, amounted to £86,420, which, taking the duty, including hazardous insurances, at 3s. 6d. per cent., shows that the property insured was valued at the immense sum of £63,668,571. But notwithstanding the magnitude of this sum, it is still true that most buildings are not insured up to their full value; even in towns, many are not insured at all; and in the country it is far from being customary to insure farm buildings or barn-yards. It is difficult to imagine that this can be owing to anything other than the exorbitance of the duty. On common risks the duty is no less than 200 per cent. upon the premium; or, in other words, if a person pay to an insurance office 15s. for insuring 1,000l. worth of property, he must at the same time pay a duty of 30s. to government! On hazardous and doubly hazardous risks, the duty varies from about 120 to 75 and 80 per cent. upon the premium. Such a duty is in the last degree oppressive and impolitic. There cannot, in fact, be the slightest doubt that, were it reduced, as it ought to be, to one third its present amount, the business of insurance would be very much extended; and as it could not be extended without an increase of security and without lessening the injurious consequences arising from the casualties to which property is exposed, the reduction of the duty would be productive of the best consequences in a public point of view; while the increase of business would prevent the revenue from being materially diminished.

During the session of 1833, the duty on the insurance of farming stock was repealed. But the relief thence arising is immaterial; and the repeal is, besides, highly objectionable in point of principle, inasmuch as there is no ground whatever for exempting farming stock from duty in preference to any other description of stock. A duty on insurance is not, in itself, objectionable. We do not wish to see it repealed, but to have it effectually reduced. Were it fixed at 1s. per cent., it would hardly be felt as a burden; while the revenue would suffer little or nothing from the measure.

The Hope, Eagle, Albion, Beacon, British Commercial, Palladium, Surrey Sussex and Southwark, Brighton, Old Bath, Gloucestershire, Canterbury, Berks, Gloucester and Provincial, Hertford, Cambridge and Country, Salamander, Protector, North and South Shields, Newcastle and North of England, Bath Sun, Bristol, Bristol Crown, Metellus, Hibernian, Coventry and Warwickshire, Independent and West Middlesex, Glasgow, York and London, English and Scotch Law, and the British, (in all 40 offices, chiefly those lately established) have discontinued their fire insurance business.

#### IV. INSURANCE (LIFE).

That part of the business of life insurance which consists of granting annuities upon lives, is treated of under INTEREST AND ANNUITIES; so that we have only to treat, in this place, of the insurance of sums payable at the death of the insurers or their nominees.

Suppose an individual of a given age wishes to insure 100*l*. payable at his death, the single premium, or the series of annual premiums, he ought to pay an office for such insurance, must plainly depend on the expectation of life of such individual, and on the rate of interest or nett profit which the insurers may make by investing the premiums.

With respect to the first of these conditions, or the expectation of life, it is usual in estimating it to have recourse to Tables framed from the mortality observed to take place in particular cities or districts, as in Northampton, Carlisle, &c. — (See INTEREST AND ANNUITIES.) But though the actual decrement and expectation of life among an average population, at every year of their lives, were accurately

determined. It is doubted whether it would form a fair basis for an insurance office to proceed upon. The general opinion seems to be, that insured lives are decidedly above the average; for insurance offices invariably profess to act on the principle of rejecting bad lives or of making them pay a proportional increase of premium; and it may, besides, it is said, be fairly presumed that persons insuring their lives are of a superior class, and are not, generally speaking, engaged in those manual and laborious occupations that are esteemed most injurious to health. But, on the other hand, the friends of parties whose lives are supposed to be bad, and the parties themselves, are most anxious they should be insured. It is also far from being an uncommon practice, for certain individuals to prevail on persons whom they happen to know, or believe to be bad lives, to insure; and then to get a legal assignment of the policy in their favour, on their giving the "men of straw" a bonus for their share in the fraud. At all events, there can be no question that large numbers of such lives are perpetually offered for insurance; and every individual conversant with the business knows that, in despite of all precautions, policies are very frequently effected upon them. Mr. Milne, on whose judgment every reliance may be placed, states distinctly that "all the caution and selection which the offices in general can exercise, is necessary to keep the lives insured up to the average goodness of the bulk of the population."—(*Ency. Brit. new ed. art. Assurance.*) Since the competition among the different offices became so very keen as it has been of late years, there are but few lives so bad that they will not be taken by one office or another; and we doubt, were the results of their experience made public, whether it would be found that there is much foundation for the opinion as to the superiority of insured lives.

With respect to the second condition in valuing an insurance, or the rate at which the interest of money may be estimated, it is impossible to arrive at anything like accurate conclusions. At an average, perhaps, transactions in life insurance may extend over a period of 30 years from the time when they are entered into; and in such a lengthened term the greatest changes may take place in the rate of profit and the rate of interest. Mr. Finlaison, of the National Debt Office, appears to think that  $\frac{1}{4}$  per cent. may be taken as the true average rate in this country; and that  $\frac{1}{4}$  is a rate at which no loss need be apprehended.—(*Parl. Paper No. 284. Sess. 1829.*) But this is not a point on which (as Mr. Finlaison seems to suppose) previous experience can be safely depended upon in forming engagements for the future; and were this the proper place for entering upon such discussions, we think we could assign pretty solid grounds for concluding that no institution, intended to last for the next half century, would be warranted in reckoning upon realising more than 3 per cent. upon its investments. We should look upon this as the *maximum*, and of course could expect nothing but ruin to fall upon any institution founded upon the hypothesis of realising  $\frac{1}{4}$  per cent. of interest. At the same time, we would not be understood as laying any undue stress upon this opinion; and are ready to admit that there must always be more of conjecture than of certainty in such conclusions.

Security being the principal object to be aimed at by every insurance office established on sound principles, they would not act wisely, if they did not calculate their premiums considerably higher than they appear necessary to those who look only at what has taken place during the last 30 or 40 years. Societies contracting prospective engagements that may extend for half a century or more, are exposed to innumerable unforeseen contingencies; and they would be highly censurable, and altogether unworthy of the public confidence, were they so to conduct their affairs, that they might be liable to serious embarrassments from fluctuations in the rate of interest, or an increase of sickness, or any other cause. The success that has hitherto attended the Equitable, and some of the long-established offices, must not be taken as any criterion of what may befall them and others during the next 100 years. Mr. Morgan, the late able actuary of the Equitable, in his account of the rise and progress of that institution, published in 1828, has satisfactorily shown that its peculiar prosperity has been in a very great degree owing to circumstances which cannot possibly occur again. The premium, for example, charged by the Society, so late as 1771, for insuring 100*l.* on the life of a person aged 30, was 4*l.* 1*s.* 3*d.*, whereas it is now only 2*l.* 13*s.* 4*d.*; and there was a corresponding difference in the premiums for the other ages.—(*p. 36.*) But the excessive magnitude of the premiums was not the only extraordinary source of profit enjoyed by this Society in the earlier part of its career. We learn from the same unquestionable authority, that *half the insurances made during the first twenty-five years of the Society's existence were abandoned by the insurers*, in many cases, after the premiums upon them had been paid for a considerable number of years, *without any valuable consideration being given for them by the Society*!—(*p. 38.*) So copious a source of profit was alone adequate to enrich any society; but such things rarely occur now.—people are become too familiar with life insurance, and sales of policies are of too frequent occurrence, to allow any office to realise any thing considerable in this way. Now, we ask, can any one who takes these facts into view, and couples them with the frugal and cautious management which has hitherto always distinguished the Equitable Society, be surprised at its success? and can any thing be more absurd than to appeal to its experience in casting the horoscope of the societies that have sprung into existence within the last few years? But, independently of these considerations, there are other circumstances sufficient to account for the great success of some of the old offices. Since the close of the American war, a very decided diminution has taken place in the rate of mortality; the public tranquillity has neither been disturbed by foreign invasion nor intestine commotion; we have not been once visited by any epidemic disorder; and the investments in the funds, during the war made at from 50 to 60, may now be realised at from 80 to 90. We do not presume to say that circumstances may not be even more advantageous for the insurance offices during the next half century; but we should not, certainly, think very highly of the prudence of those who proceeded to insure on such an assumption. Security, we take leave again to repeat, is, in life insurance, the paramount consideration. It is, we believe, admitted on all hands, that the premiums were at one time too high; but we doubt whether the tendency at present be not to sink them too low. A great relation is taken place, even in the most respectable offices, as to the selection of lives. And the advertisements daily appearing in the newspapers, and the practices known to be resorted to in different quarters to procure business, ought to make every prudent individual consider well what he is about before he decides upon the office with which he is to insure. Attractive statements, unless where they emanate from individuals of unquestionable character and science, ought not to go for much. Life insurance is one of the most deceptive of businesses; and offices may for a long time have all the appearance of prosperity, which are, notwithstanding, established on a very insecure foundation. If a man insure a house or a ship with a society, or an individual, of whose credit he gets doubtful, he will forthwith insure somewhere else. But life insurance is quite a different affair. The bargain is one that is not to be finally concluded for, perhaps, 50 years; and any inability on the part of an establishment in extensive business to make good its engagements, would be productive of a degree of misery not easy to be imagined.

Life insurance companies are divided into three classes. The first class consists of joint stock companies, who undertake to pay fixed sums upon the death of the individuals insuring with them; the profits made by such companies being wholly divided among the proprietors. Of this class are the Royal Exchange, Globe, &c. The second class are also joint stock companies, with proprietary bodies; but instead of undertaking, like the former, to pay certain specified sums upon the death of the insured, they allow the latter to participate to a certain extent, along with the proprietors, in the profits made by the business. The mode in which this sort of mixed companies allot the profits granted to the insured is not the same in all; and in some, the principle on which the allotment is made is not disclosed. The Rock, Sun, Alliance, Guardian, Atlas, &c. belong to this mixed class. The third species of company is that which is formed on the basis of mutual insurance. In this sort of company there is no proprietary body distinct from the insured; the latter share among themselves the whole profits of the concern, after

deducting the expenses of management. The Equitable Society, the Amicable, the Norwich Life, &c. belong to this class.

The advantage to a person insuring in any one office as compared with another, must plainly depend on a comparison between the premiums demanded, the conditions of the policy, and, above all, the security which it holds out. It may appear, on a superficial view, as if the mutual insurance companies would be in all respects the most eligible to deal with, inasmuch as they have no proprietors to draw away any share of the profits from the insured. It is doubtful, however, whether this advantage be not more than balanced by disadvantages incident to such establishments. Every one being a partner in the concern, has not only his own life insured, but is part insurer of the lives of all the other members; and may, in this capacity, should the affairs of the society get into disorder, incur some very serious responsibilities. The management, too, of such societies, is very apt to get into the hands of a junto; and to be conducted without the greater number of those interested knowing any thing of the matter. There is, also, considerable difficulty, in constituting such societies, in distinguishing clearly between the rights of old and new members; for supposing a society to be prosperous, it is but reasonable that those who have belonged to it while it has accumulated a large fund, should object to new entrants participating in this advantage. But the affairs of a society conducted in this way, or making distinctions in the rights of the members during a long series of years, could hardly fail of becoming at last exceedingly complicated: nor is it, indeed, at all improbable that the conflicting claims of the parties in some of the societies of this sort now in existence, may ultimately have to be adjusted in the courts of law, or by an act of the legislature.

Supposing the premiums demanded by the societies which retain the whole profits to themselves, to be fairly proportioned to the values insured, we should be inclined to think that they are, on the whole, the most advisable to insure in. The subscribed capital of such associations as the Royal Exchange, Sun, Globe, Scottish Union, &c. and the wealth of the partners (which is all liable, except in the case of the chartered companies, to the claims of the insured), afford unquestionable security. Individuals dealing with them know exactly what they are about. They know the precise premiums they will have to pay, and the exact amount of the sums that will be paid to their assignees in the event of their death. They incur no responsibility of any kind whatever. For, unless some very unprecedented and unlooked-for change should take place in the condition of the country, they may reckon with certainty on the terms of the policy being fulfilled to the letter.

But, as already observed, every thing depends, in matters of this sort, on a comparison of the premium with the advantages to be realised. And where the premiums are believed, either through carelessness, or intentionally, in order to provide for the safety of the establishment, to be a little too high, it may be more expedient, perhaps, to deal with a mixed company. The subscribed capital and fortunes of the proprietary body afford a guarantee on which the public may depend in dealing with any respectable company of this sort; while by receiving a share of the profits, the insured gain by the flourishing condition of the association, and it is of less consequence to them though the premiums should be too high.

It should, however, be borne in mind, that an individual insuring with a mixed company, on condition of his getting a proportion of the profits, becomes a *partner of such company*; and being so, incurs responsibilities. In dealing with such associations as the Alliance, the Rock, and a few others, this responsibility can hardly be said to amount to any thing. But there are companies of this class in the field, and holding out very tempting baits to the unwary, those insured in which may find, at some future period, that this responsibility is by no means a light matter.

A highly respectable company of this mixed class, with a large subscribed capital, — the Guardian, — inserts in all its policies the following condition, viz. — "That the responsibility of the individual members shall, in all cases, be limited to their respective shares." It may be doubted whether this condition be good in law; but if it be, it materially affects the security afforded by the company, which otherwise would justly claim a place in the very first class of offices. As no one attempts to secure himself against a contingency which he is satisfied cannot happen, the existence of a condition of this sort implies a doubt, on the part of the proprietary body, of the perfect solidity of the establishment. Such a doubt may be, and we believe really is, founded; but the public will most likely, be inclined to think that the proprietors ought to know better than any one else. The Albion Fire and Life Insurance Company also inserts in its policies a condition to the same effect.

The allotment of profit to the insured made by the mixed companies, is sometimes effected by a diminution of the premiums, and sometimes by increasing the sum in the policy; and individuals should, in dealing with such societies, select, other things being equal, the association with which to insure, according as they wish to insure a larger sum, or to get the premiums reduced.

We subjoin, from Mr. Babbage's work on *Life Assurance*\*, the following statement of the terms of the various mixed companies, as to the division of profits with the insured. They are, for the most part, exceedingly vague. We also subjoin an account of the conditions, in respect of profits, under which new entrants are admitted into the Equitable.

**Albion.** — At the periods of participation of the Company in the profits of its concerns, every policy for the whole term of life, which shall have paid 5 entire annual premiums, shall, if the allowance be made in reduction of annual premium, be entitled to such reduction from the original charge as shall then, and from time to time, be declared; but if the allowance be in addition to the amount assured, that addition shall also be continually declared from time to time.

Persons assuming their own lives have the option of declaring, at the time of effecting the assurance, whether they will participate in the profits by an addition to their policy, or by a reduction of premium.

**Atlas.** — Persons assuring for the whole term of life for 100l. and upwards, in Great Britain and Ireland respectively, will be entitled, at the end of every 7th year, to participate in the surplus premiums, to be then ascertained by actual valuation. **Anyman.** — The directors have power to divide such portion of the profits quinquennially as may not imprudently check the growth of the funds intended for the benefit of the assured.

**Pross.** — Two thirds of such profits as shall periodically be declared divisible, will be apportioned amongst assurers for the whole term of life, and may be applied to the reduction of the future annual premiums, or to the increase of the sum assured, as may be desired.

**Economic.** — At present 5-16th of the savings and profits divided amongst the assured entitled to participate therein, by additions to their policies, proportioned to their respective contributions, and in order to afford them the immediate benefit of such additions, interest thereon applied annually in reduction of their premiums.

**Equitable.** — That in case any prospective addition shall hereafter be ordered to be made to the claims upon policies of assurance in this Society, such order shall not take effect with

respect to any policy granted after the 31st of December, 1816, until the assurances existing in the Society prior in number and date to such policy, and if of the same date, prior in the number thereof, shall be reduced to 5,000; but as soon as such reduction shall have been ascertained, in manner hereinafter mentioned, the said policy shall be within the effect and operation of the order for such addition, as to the payments made thereon subsequent to such ascertained reduction; so that if such order should be made to take effect generally from the 1st of January, 1820, for the space of 10 years then next following, a policy effected in the year 1817 shall not be within the operation of such order, until the assurances existing prior to the number and date of the policy, as aforesaid, shall have been reduced to 5,000; but such policy shall be within the operation thereof from the time when the reduction shall have been ascertained, in manner hereinafter mentioned, as to the payments made thereon subsequent to such ascertained reduction. And the like as to other cases. And this by-law shall be considered as a part of every such order, and shall be virtually incorporated therein, although the same may not be thereby expressly referred to.

That in case any retrospective addition shall hereafter be ordered to be made to claims upon policies of assurance in this Society, such order shall not take effect with respect to any policy granted after the 31st of December, 1816, until the assurances existing in the Society prior in number and date, and if of the same date, prior in the number thereof, shall be reduced to 5,000; but when the said reduction shall have been ascertained in manner hereinafter mentioned, such policy shall be within the effect and operation, and entitled to the benefit of such order, with respect to every payment made thereon subsequent to such ascertained reduction; so that if such order shall be made to take effect generally as to payments made before the 1st of January, 1820, a policy effected in the year

\* This work of Mr. Babbage contains a good deal of useful information, intermixed, however, with not a few errors and mis-statements. It was most ably reviewed in the 90th Number of the *Edinburgh Review*.

1817 shall not be within the effect and operation thereof, unless the life assured shall exist, and the payments continuing to be made, until the assurances existing in the Society prior to the number and date of the policy, as aforesaid, shall be reduced to 5,000; but as soon as such reduction shall have been ascertained, in the manner hereinbefore mentioned, such policy shall be within the effect and operation of such order for the several payments made thereon as aforesaid. And the like as to other cases. And this by-law shall be considered as a part of every such order, and be virtually incorporated therein, although the same may not be thereby expressly referred to.

That an inquiry be made on the 1st of April in every year, in order to ascertain the number of assurances made and existing in the Society, and when it shall have been ascertained by such inquiry that the assurances existing prior to the 1st of January, 1817, were, on the 31st of December immediately preceding such inquiry, reduced below the number of 5,000, the actuary do report the same to the court of directors, who shall communicate such report to the quarterly general court, to be held in the June following; and that as many of such policies as had been made subsequent to the 31st of December, 1816, and which were existing in the Society on the 31st of December immediately preceding such inquiry, be added, according to the priority in their dates and numbers, and if of the same date, according to the priority in their numbers, to those above mentioned, until the number to be added shall be the number to 5,000; and that the persons holding the policies so added shall be considered thenceforward as entitled to such additions as shall be thereafter made in respect of all the payments made subsequent to such ascertained reduction, and under the same restrictions, to the same privileges of attending at the general courts, and of being eligible to the office of director.

That after the vacant numbers in the assurances existing in the Society on the 1st of January, 1817, shall have been filled up agreeably to the foregoing order, the actuary, on the 1st of April in every succeeding year, do ascertain the vacancies which have taken place in the policies that shall be required for constituting the 5,000 mentioned in the 5th resolution, and report the same to the court of directors, who shall communicate such report to the quarterly general court in the month of June following; and the persons holding the policies shall be added, according to the priority of their dates and numbers, and if of the same date, according to the priority in their numbers, as shall be sufficient to complete the number to 5,000; and that the persons holding the policies shall be considered as entitled to such additions as shall be thereafter made in respect of all payments made subsequent to the 31st of the preceding December, and, under the same restrictions, to the same privileges of attending the general courts, and being eligible to the office of director.

Provided that nothing hereby ordered shall be construed to authorise an addition to the sum assured by any policy, upon which policy the number of payments required in that respect by the present by-laws of the Society shall not have been made.

**N.B.**—Those by-laws require that 6 annual payments at the least shall have been made before any addition to a claim can take place; and when such payments shall have been made, the party will be entitled to be received, in his turn, into the number of persons qualified to receive as aforesaid.

**Europeans.**—The profits derived by this Company are distributed amongst the several persons connected with the establishment, according to the contingency or certainty of their contract.

**Life Insurers derive an immediate benefit** by the reduction of the premiums generally taken, with the prospect of a liberal addition to their policies, or a further reduction of the premium, in 10 years.

**Guardians.**—Persons assured for the whole term of life will be entitled at the end of every 7 years to participate in the profits of the Company, after a deduction of such sum per annum, for the guaranty of the capital, as the directors may think reasonable to the extent of which life, however, limited by the deed of settlement.

The share of the profits to be so allowed to the insured may either be added to the amount of their respective policies, or the value thereof be applied in reduction of the premiums hereafter to be payable on such policies, provided such option be declared in writing within 3 calendar months next after the dividend shall have been declared; but if such option be not

In order to hinder the growth of gambling transactions upon life insurance, it was judiciously enacted, by stat. 14 Geo. 3. c. 48., that

No insurance shall be made by any person or persons, bodies politic or corporate, on the life or lives of any person or persons, or any other event or events whatsoever, where the person or persons, for whose use or benefit, or on whose account, such policy or policies shall be made, shall have no interest, or by way of gaining or wagering; and that every insurance made contrary to the true intent and meaning of this act, shall be null and void to all intents and purposes whatsoever.—Sect. 1.

It shall not be lawful to make any policy or policies on the

A creditor has an insurable interest in the life of his debtor; but it was decided, in a case which arose out of a policy on the life of the late Mr. Pitt, that if, after the death of a debtor whose life is insured by a creditor, and before any action is brought on the policy, the debt be paid, no action will lie.

All insurance offices either insert in their policies a declaration, signed by the insured, setting forth his age, or the age of the party upon whom he is making an insurance, whether he has or has not had the small-pox, gout, &c.; "that he is not afflicted with any disorder that tends to the shortening of life;" that this declaration is to be the basis of the contract between him and the society; and that, if there be any untrue averment in it, all the monies paid to the society upon account of the insurance shall be forfeited to them.—(See Form, post.)

The condition as to the party not being afflicted with any disorder that tends to the shortening of life is vague, and has given rise to a good deal of discussion. But it is now settled that this condition is sufficiently complied with, if the insured be in a reasonably good state of health; and although he may be afflicted with some disease, yet if it can be shown that this disease does not tend to shorten life, and was not, in fact, the cause of the party's death, the insurer will not be exonerated: "Such a warranty," said Lord Mansfield, "can never mean, that a man has not in him the seeds of some disorder. We are all born with the seeds of mortality in us. The only question is, whether the insured was in a reasonably

declared, such share of profits will be added to the amount or Policies.

**Hope.**—Every person effecting a policy of assurance at this office, is entitled to a participation in the profits equally with the proprietors of the Company, after a moderate deduction for the guaranty and the expenses of management.

**Interest.**—Upon every policy effected for the whole term of life, the assured will participate in the profits of the Company, by having periodical additions made to the sums insured to the amount of 1-3d parts of such clear gains and profits.

**Low Life.**—At stated periods, the surplus of the fund arising from the premiums of assurance, and their accumulation beyond what may be thought necessary to answer the expected claims upon the Society, will be contained; and as large a portion of the savings as may be deemed consistent with the security of the institution, will be divided between the proprietors and the assured in the following manner:—1-5th will be transferred to the proprietors' guaranty fund; and reversionary sums, equivalent to the remaining 4-5ths, will be added to the policies of those who shall have been 3 years assured for the whole term of life.

**London Life Association.**—The distinguishing principle of this Society is, that the benefits resulting from its transactions shall be enjoyed by the members during life, so as to render life assurance as easy to the assured, as a due regard to security would admit.

**Medical and Clerical.**—Persons assured for the whole term of life will be entitled to share with the original proprietors the general profits of the business, in proportion to the amount of their respective assurances.

**Norwich Union.**—The whole of the surplus premiums is added at stated periods to the policies of the members, in proportion to the sums they have respectively contributed.

**Parliamentary Assurance.**—A portion of the profits of the Society is to take place every 7th year, when 4-5ths of the declared profit of the life department will be appropriated by way of bonus or addition, to be placed to the credit of the policy, in the form of a reversionary sum, upon the most equitable principles of division.

**Rock.**—That the said bonus shall be short of the actual surplus profits at the time of making the same, by the sum of 3d parts.

That the bonus so declared shall be divided into 3 equal parts.

That one of the said parts shall be added to and consolidated with the subscription capital stock. (This is the proprietors' fund.)

That the remaining 2-3ds be allotted to the policies in the manner described in the deed.

**United Empire.**—Persons effecting assurances for the whole term of life will be entitled to share with the Company any such distribution, shall be paid by the Company without interest, at the time when the sum assured by the policy shall become payable, and not before.

**Union.**—Those who assure with this Company will participate with the proprietors in the profits of the establishment, which will be added every 7 years to the respective policies.

**United Empire.**—Persons effecting assurances for the whole term of life will, at the end of the first 5 years, and of every subsequent 5 years, be entitled to participate in whatever net surplus profits it may be declared by the directors expedient to divide.

Two-fifths of the aforesaid profits will be divided amongst the said assured, in proportion to the premiums they may respectively have paid, and will, at their option, be either added to the amount of their policies, or applied in reduction of their future premiums.

**Universality.**—As it is intended that the capital advanced shall be repaid to the shareholder, with a bonus of 100% per cent. 10th of the profits, when ascertained by a valuation of all existing risks, will every 5 years be applied to form a fund for that purpose.

The remaining 9-10ths of the profits to be divided between the shareholders and the assured, in the proportion of 5 parts to the former and 1 to the latter.

The profit or bonus to the assured to be given either by a diminution of the rate of premium, or by an increase of the amount of policy, at the option of the party.

**Westminster.**—By a regulation taking effect from the 5th of May, 1832, this Society makes a positive addition of 10 per cent. every 10th year to all sums insured on single lives, for the whole term of life, by policies issued after that date.

life or lives of any person or persons, or other event or events, without inserting in such policy or policies, the name or names of the person or persons interested therein, or for what use, benefit, or on whose account, such policy is so made or underwritten.—Sect. 1.

In all cases where the insured has an interest in such life or lives, event or events, no greater sum shall be received or received from the insurer or insurers, than the amount or value of the interest of the insured in such life or lives, or other event or events.—Sect. 3.

good state of health, and such a life as ought to be insured on common terms." — (See *Marshall on Insurance*, book iii.; *Park on Insurance*, c. 22.)

Policies of life insurance must be on stamped paper, the duty being as follows:— viz.,  
When the sum in the policy does not exceed 50*l.* the duty is 2*s.* 6*d.* When it does not exceed 100*l.* the duty is 5*s.*

We subjoin a statement of the terms and conditions on which the Sun Life Assurance and Equitable Societies transact business, and a copy of one of the policies of the former upon the life of a person aged 30, insuring his own life for 1,000*l.* The conditions of most of the other societies are similar, and may be learned by any one, on applying either at the head offices in town, or at their agents' in the country. The premiums demanded by the principal offices are exhibited in the Table, page 730.

**Sun Life.**—An assurance for a term of years, or for the whole continuance of life, is a contract on the part of the office to continue the assurance during that term, on the payment of a certain annual premium, but the assured may drop it, whenever the end is answered for which the assurance was made.

The person whose life is proposed for assurance, is required to appear either before the managers at the office in London, or before an agent in the country; in default of which the non-appearance fine must be paid when the assurance is effected; which, when the term is 1 year, is 10*s.* for every 100*l.* assured. When the term exceeds 1 year, but does not exceed 7 years, it is 1*s.* for every 100*l.* And when the term exceeds 7 years, the fine is 1 per cent.

Reference to be made to 2 persons of repute, to ascertain the identity of the person appearing.  
Any premium remaining unpaid more than 15 days after the time stipulated in the policy, such policy becomes void; but the defaulter producing satisfactory proof to the managers, of the health of the person on whose life the assurance was made, and paying the said premium within 3 calendar months, together with the additional sum of 10*s.* upon every 100*l.* assured by such policy, then such policy is revived, and continues in force.

#### Conditions of Assurance made by Persons on their own Lives.

The assurance to be void, if the person whose life is assured shall depart beyond the limits of Europe; shall die upon the seas except (not being a seafaring person by occupation) in passing during peace from any part of Europe to any other part of Europe; or shall enter into or engage in any military or naval service whatsoever, without the previous consent of the Society; or shall not be, at the time the assurance is made, in good health; or shall die by suicide, duelling, or the hands of justice, so far as respects such person, but shall remain in force so far as any other person or persons shall then have a *bona fide* interest therein, acquired three months previously to such decease by assignment or legal or equitable lien, upon due proof of the extent of such interest being made to the satisfaction of the managers; and if any person assured upon his own life, and who shall have been so for at least five years, shall die by his own hands, and not *de se*, the managers shall be at liberty, if they shall think proper, to pay for the benefit of his family, any sum not exceeding what the society would have paid for the purchase of his interest in the policy if it had been surrendered to the society the day previous to his decease, provided the interest in such assurance shall then be in the assured, or in any trustee or trustees for him, or for his wife, or children.

**N. B.**—The above conditions apply equally to all policies of the society now in force.

#### Conditions of Assurance made by Persons on the Lives of others.

The party on whose behalf the assurance is made, must be interested in the life of the other to the full amount assured thereon.

The assurance to be void, if the person whose life is assured shall depart beyond the limits of Europe; shall die upon the seas except (not being a seafaring person by occupation) in passing during peace from any part of Europe to any other part of Europe; or shall enter into or engage in any military or naval service whatsoever, without the previous consent of the Society; or shall not be, at the time the assurance is made, in good health.

All claims are paid within 3 months after certificates (according to the required forms) of the death and burial of the deceased are approved by the managers.

No assurance can take place until the first payment is made.

#### Form of a Proposal for Assurance.

Form of Declaration to be made and signed by or on behalf of a

Person making an Assurance on his or her own Life.

I  
born in the parish of  
in the county of  
on the \_\_\_\_\_ day of \_\_\_\_\_  
and now residing at  
in the county of \_\_\_\_\_  
being desirous of assuring with the Sun Life Assurance  
Society, the sum of £ \_\_\_\_\_

Do hereby declare, that my age does  
not exceed \_\_\_\_\_ years; that I have \_\_\_\_\_ had the \_\_\_\_\_  
rupture, nor any fit or fits, and that I am not afflicted  
with any disorder which tends to the shortening of  
life; and this declaration is to be the basis of the contract be-  
tween me and the Society; and if any untrue avowment is  
contained in this declaration, in setting forth my age, state of  
health, profession, occupation, or circumstances, then all mon-  
ies which shall have been paid to the said Society, upon ac-  
count of the assurance made in consequence thereof shall be  
forfeited. Dated the \_\_\_\_\_ day of \_\_\_\_\_ 18 \_\_\_\_

Form of Declaration to be made and signed by or on behalf of a  
Person who proposes to make an Assurance on the Life of  
another.

I  
now resident at  
in the county of \_\_\_\_\_ being  
desirous of assuring with the Sun Life Assurance Society,  
the sum of £ \_\_\_\_\_ for the term of \_\_\_\_\_ years  
on the life of \_\_\_\_\_ born in the parish of \_\_\_\_\_  
in the county of \_\_\_\_\_ in the year \_\_\_\_\_  
and now resident at \_\_\_\_\_ in the county of \_\_\_\_\_  
Do declare, that I have an interest in the life of the said  
£ \_\_\_\_\_ to the full amount of the said sum of  
£ \_\_\_\_\_; that to the best of my knowledge and  
belief the age of the said \_\_\_\_\_ does not exceed  
\_\_\_\_\_ years; that he has had the \_\_\_\_\_ that  
he \_\_\_\_\_ had the \_\_\_\_\_, \_\_\_\_\_ asthma, \_\_\_\_\_ rupture  
nor any fit or fits, and that he is not afflicted with any  
disorder tending to shorten life; and this declaration is to be  
the basis of the contract between me and the said Society; and  
if there be any untrue avowment therein, all monies which  
shall have been paid to the Society upon account of the assur-  
ance made in consequence thereof shall be forfeited. Dated  
the \_\_\_\_\_ day of \_\_\_\_\_ 18 \_\_\_\_

\* Insert small-pox or cow-pox, as the case may require.

**Policy by the Sun Life Assurance Society for 1,000*l.* on the Life of A. B., aged Thirty, insuring his own Life.**

No. —

#### SUN LIFE ASSURANCE SOCIETY.

**THIS POLICY OF ASSURANCE WITNESSETH**, that, whereas A. B. Esq. of — Square, London, being desirous of making an assurance upon his own life for the whole duration thereof, and having subscribed, or caused to be subscribed, and delivered into this office, a declaration setting forth his ordinary and present state of health, wherein it is declared that the age of the said A. B. did not then exceed 30 years; and having paid to the managers for the Sun Life Assurance Society, at their office in Cornhill, in the city of London, the sum of twenty-four pounds eleven shillings and eight-pence sterling, as a consideration for the assurance of the sum under-mentioned for one year, from the twentieth day of January, 1843.

**NOW KNOW ALL MEN BY THESE PRESENTS**, that in case the said assured shall happen to die at any time within the term of one year, as above set forth, the stock and funds of this Society shall be subject and liable to pay and make good to the executors, administrators, or assigns of the said assured, within three months after the demise of the said assured shall have been duly certified to the managers aforesaid, at their said office, the sum of one thousand pounds sterling, of lawful money of Great Britain.

It is hereby agreed, that this policy may continue in force from year to year, until the expiration of the term first above-mentioned, provided that the said assured shall duly pay, or cause to be paid, to the managers, at their said office, on or before the nineteenth day of October next ensuing, the sum of twenty-four pounds eleven shillings and eight-pence sterling, and the like sum annually, on or before the day aforesaid; which annual payments shall be accepted, at every such period, as a full consideration for such assurance.

And it is hereby further agreed, that the assurance by this policy shall be extended during peace, to the risk of the above-named A. B. Esq. dying upon the sea in passing between any one part of Europe to any other part of Europe.

PROVIDED NEVERTHELESS, that should the said assured depart beyond the limits of Europe, die upon the seas (except as above stated), or engage in any military or naval service whatsoever, within the term for which this policy is granted; or should the assurance have been obtained through any misrepresentation of the age, state of health, or description of the said assured; or should the said assured die by duelling, suicide, or the hands of justice; then this policy, and every thing appertaining thereto, shall cease, be void, and of none effect, so far as respects the said assured, but in case the said assured die by suicide, duelling, or the hands of justice, this policy shall remain in force so far as any other person or persons shall then have a *bona fide* interest therein, acquired three months previously to such decease by assignment, or by legal or equitable lien, upon due proof of the extent of such interest being made to the satisfaction of the managers. And if the said assured shall have been so for at least five years, and shall die by his own hands, and not *scilicet de se*, the managers shall be at liberty, if they shall think proper, to pay for the benefit of his family, any sum not exceeding what the society would have paid for the purchase of his interest in the policy if it had been surrendered to the society the day previous to his decease, provided such interest shall then be in the assured, or in any trustee or trustees for him.

IN WITNESS WHEREOF, we, three of the managers for the said Society, have hereunto set our hands and seals, this twentieth day of January, 1843.

Signed, sealed, and delivered,  
being first duly stamped.

J. K.

C. D. (L. S.)

From the specimens of premiums in the two preceding Tables, the reader will easily judge of the proportional premiums for any combination of two ages not inserted in them.

Instead of a gross sum payable at the decease of A. provided B. be then living, a reversionary annuity on the remainder of the life of B. after the decease of A. may be insured by the payment of an annual premium during the joint continuance of the two lives; which annual premium may be learnt by application at the office.

## TABLE OF PREMIUMS.

The following tabular statement shows the premiums demanded by the principal Life Insurance Societies for insuring 100*l*. at every different age from 15 to 60, for the whole term of life.

**Equitable Assurance Society.**—The following is the

*Declaration required to be made and signed in the Office, by or on the Behalf of a Person who proposes to make an Assurance on his or her own Life.*

I, being desirous of becoming a member of the Society for Equitable Assurances on Lives and Survivorships, and intending to make assurance in the Sum of \_\_\_\_\_ upon and for the continuance of my own life, and having perused and considered that \* clause of the deed of settlement of the said Society which requires a declaration in writing of the age, state of health, and

other circumstances attending the person whose life shall be proposed to be assured, do hereby declare and set forth, That my age does not exceed \_\_\_\_\_; that I have \_\_\_\_\_ and have \_\_\_\_\_

had the gout; and that I am not afflicted with any disorder which tends to the shortening of life; and I do hereby agree that this declaration be the basis of the contract between the said Society and me, and that if any untrue statement is contained in this declaration, all monies which shall have been paid to the Society upon account of the assurance made in consequence thereof, shall be forfeited. Dated the \_\_\_\_\_ day of \_\_\_\_\_ in the year of our Lord \_\_\_\_\_

\* The Clause which is referred to in the Declaration.

That every person desirous of making assurance with the Society, shall sign or execute a declaration in writing (in the presence of one credible witness, who shall attest the same), setting forth the age, state of health, profession, occupation, and other circumstances attending the person or persons whose life or lives shall be proposed to be assured; which declaration shall be the basis of the contract between the said Society and the person desiring to make assurance with them; in which declaration if any artful, false, or fraudulent representation shall be used, and the same shall at any time hereafter be discovered, from thenceforth the sums which shall have been paid to the Society on account of any assurance so fraudulently obtained, shall be forfeited to the use of the Society; and all claims to be made on that behalf shall cease, determine, and be void, to all intents and purposes whatsoever.

Form of a Proposal to be presented to a Weekly Court of Directors.

Name and profession of the life to be assured.

Place and date of birth.

Place of residence.

Age.

Sum.

Term.

By whom made.

To give reference to two persons of good repute, (one, if possible, of the medical profession), to ascertain the present and general state of health of the life to be assured.

If had the small-pox.

If vaccinated.

If afflicted with the gout.

If ever ruptured.

† Parties who do not appear before the Court of Directors are required to give a reference to 3 persons for an account of the present and general state of their health.

A Table of Annual Premiums payable during the Continuance of Two Joint Lives for assuring One Hundred Pounds, to be paid when either of the Lives shall drop.

	30	3 17 6		60	7 10 2		55	6 15 5						

An addition of 22 per cent., computed upon the premium, is charged upon military persons; and an addition of eleven per cent. on officers on half-pay, officers in the militia, fencibles, and the like levies; also on persons not having had the small-pox, or having had the gout.

Persons preferring the payment of a gross sum or single premium upon an assurance for any certain term, are chargeable in a due proportion to the annual premium for such term.

Every person making any assurance with the Society, pays 5s. in the name of entrance money; and if the sum assured exceeds 100*l.*, the entrance money is charged after the rate of 5s. for every 100*l.*. But if the person upon whose life an assurance is proposed, does not appear before the directors, the entrance money is charged after the rate of 1*l.* for every 100*l.*

The following are the premiums demanded by the Equitable Society for insuring 100*l.*, or an equivalent annuity on the contingency of one life's surviving the other:—

Ages.		Premium.	Annuity equivalent to 100 <i>l.</i> to be paid from the Death of the Life assured, during the Remainder of the other Life.		Ages.		Premium.	Annuity equivalent to 100 <i>l.</i> to be paid from the Death of the Life assured, during the Remainder of the other Life.

It is stated by Mr. Morgan, in his Account of the Equitable Society already referred to, that the number of insurances in that institution for terms of years does not much exceed the *one hundredth part* of those for the whole period of life; and that the business of the office at present is almost wholly confined to the assurance of persons on *their own lives*—those on the lives of *others*, whether for terms or for continuance, being, in consequence of the commission money allowed to agents and attorneys, engrossed by the new offices. — (*Account of the Equitable Society*, p. 58.)

**INTEREST AND ANNUITIES.** Interest is the sum paid by the borrower of a sum of money, or of any sort of valuable produce, to the lender, for its use.

The rate of interest, supposing the security for and facility of re-possessing the principal, or sum lent, to be equal, must obviously depend on what may be made by the employment of capital in industrious undertakings, or on the rate of profit. Where profits are high, as in the United States, interest is also high; and where they are comparatively low, as in Holland and England, interest is proportionally low. In fact, the rate of interest is nothing more than the *nett* profit on capital: whatever returns are obtained by the borrower, beyond the interest he has agreed to pay, really accrue to him on account of risk, trouble, or skill, or of advantages of situation and connection.

But besides fluctuations in the rate of interest caused by the varying productiveness of industry, the rate of interest on each particular loan must, of course, vary according to the supposed solvency of the borrowers, or the degree of risk supposed to be incurred by the lender, of either not recovering payment at all, or not recovering it at the stipulated term. No person of sound mind would lend on the personal security of an individual of doubtful character and solvency, and on mortgage over a valuable estate, at the same rate of interest. Wherever there is risk, it must be compensated to the lender by a higher premium or interest.

And yet, obvious as this principle may appear, all governments have interfered with the adjustment of the terms of loans: some to prohibit interest altogether, and others to fix certain rates which it should be deemed legal to charge, and illegal to exceed. The prejudice against taking interest seems to have principally originated in a mistaken view of some enactments of the Mosical law — (see *Michaelis on the Laws of Moses*, vol. ii. pp. 327—353. Eng. ed.), and a statement of Aristotle, to the effect that, as money did not produce money, no return could be equitably claimed by the lender! But whatever may have been the origin of this prejudice, it was formerly universal in Christendom; and is still supported by law in all Mohammedan countries. The famous reformer, Calvin, was one of the first who saw and exposed the absurdity of such notions — (see an extract from one of his epistles in *Principles of Political Economy*, by the author of this work, 3d ed. p. 520.); and the abuses caused by the prohibition, and the growing conviction of its impolicy, soon after led to its relaxation. In 1554, a statute was passed authorising lenders to charge 10 per cent. interest. In 1624, the legal rate was reduced to 8 per cent.; and in the reign of Queen Anne it was further reduced to 5 per cent., at which it still continues. It is enacted, by the statute (12 Ann. c. 16.) making this reduction, that “all persons who shall receive, by means of any corrupt bargain, loan, exchange, chevizance, or interest of any wares, merchandise, or other thing whatever, or by any deceitful way or means, or by any covin, engine, or deceitful conveyance for the forbearing or giving day of payment, for one whole year for their money or other thing, above the sum of 5*l.* for 100*l.* for a year, shall forfeit for every such offence, the *treble* value of the monies, or other things, so lent, bargained,” &c.

It is needless to waste the reader's time by entering into any lengthened arguments to show the inexpediency and mischievous effect of such interferences. This has been done over and over again. It is plainly in no respect more desirable to limit the rate of interest, than it would be to limit the rate of insurance, or the prices of commodities. And though it were desirable, it cannot be accomplished. The real effect of all legislative enactments having such an object in view, is to increase, not diminish, the rate of interest. When the rate fixed by law is less than the market or customary rate, lenders and borrowers are obliged to resort to circuitous devices to evade the law; and as these devices are always attended with more or less trouble and risk, the rate of interest is proportionally enhanced. During the late war it was not uncommon for a person to be paying 10 or 12 per cent. for a loan, which, had there been no usury laws, he might have got for 6 or 7 per cent. Neither was it by any means uncommon, when the rate fixed by law was more than the market rate, for borrowers to be obliged to pay more than they really stipulated for. It is singular that an enactment which contradicted the most obvious principles, and had been repeatedly condemned by committees of the legislature, should have been allowed to preserve a place in the statute book, for so long a period; but at length it was substantially repealed by the act 2 & 3 Victoria, c. 37., which exempts bills of exchange not having more than 12 months to run, and contracts for loans of money above 10*l.* from its operation.

*Distinction of Simple and Compound Interest.* — When a loan is made, it is usual to stipulate that the interest upon it should be regularly paid at the end of every year, half year, &c. A loan of this sort is said to be at simple interest. It is of the essence of such loan, that no part of the interest accruing upon it should be added to the principal to form a new principal; and though payment of the interest were not made when it becomes due, the lender would not be entitled to charge interest upon such unpaid interest. Thus, suppose 100*l.* were lent at simple interest at 5 per cent., payable at the end of each year;

the lender would, at the end of 3 or 4 years, supposing him to have received no previous payments, be entitled to 15*l*. or 20*l*., and no more.

Sometimes, however, money or capital is invested so that the interest is not paid at the periods when it becomes due, but is progressively added to the principal; so that at every term a new principal is formed, consisting of the original principal, and the successive accumulations of interest upon interest. Money invested in this way is said to be placed at *compound interest*.

It appears not unreasonable, that when a borrower does not pay the interest he has contracted for, at the period when it is due, he should pay interest upon such interest. This, however, is not allowed by the law of England; nor is it allowed to make a loan at compound interest. But this rule is often evaded, by taking a new obligation for the principal with the interest included, when the latter becomes due. Investments at compound interest are also very frequent. Thus, if an individual buy into the funds, and regularly buy fresh stock with the dividends, the capital will increase at compound interest; and so in any similar case.

**Calculation of Interest.**—Interest is estimated at so much per cent. per annum, or by dividing the principal into 100 equal parts, and specifying how many of these parts are paid yearly for its use. Thus, 5 per cent., or 5 parts out of 100, means that 5*l*. are paid for the use of 100*l*. for a year, 10*l*. for the use of 200*l*., and 2*l*. 10*s*. for the use of 50*l*. for the same period, and so on.

Suppose, now, that it is required to find the interest of 210*l*. 13*s*. for 3½ years at 4 per cent. simple interest. In this case we must first divide the principal, 210*l*. 13*s*. into 100 parts, 4 of which will be the interest for 1 year; and this being multiplied by 3½ will give the interest for 3½ years. But instead of first dividing by 100, and then multiplying by 4, the result will be the same, and the process more expeditious, if we first multiply by 4, and then divide by 100. Thus,—

	£	s	d	principal	rate per cent.	
	210	13	4			
1,000	8,42	20	12	(	4	1 year's interest.
	8,52				25 5 68	5 years' interest.
		12			4 4 5	½ a year's interest.
	6,54				29 9 9½	3½ years' interest.
		96				

It is almost superfluous to observe, that the same result would have been obtained by multiplying the product of the principal and rate by the number of years, and then dividing by 100.

Hence, to find the interest of any sum at any rate per cent. for a year, multiply the sum by the rate per cent., and divide the product by 100.

To find the interest of any sum for a number of years, multiply its interest for one year by the number of years; or, without calculating its interest for one year, multiply the principal by the rate per cent. and that product by the number of years, and divide the last product by 100.

When the interest of any sum is required for a number of days, they must be treated as fractional parts of a year; that is, we must multiply the interest of a year by them, and divide by 365.

Suppose that it is required to find the interest of 210*l*. for 4 years 7 months and 25 days, at 4½ per cent.—

Principal	-	£210	Interest for 4 years	=	£37-5000
Rate per cent.	-	4½	6 months = ½ of 1 year	=	4-7250
		810	1 month = ⅙ of 6 months	=	7-875
		105	25 days = ⅙ of 6 months	=	6-472

Interest for 1 year 69-45 × 4 = £37-80 do. for 4 years. 413-9597 = £45 19*s*. 2½*d*.

The interest for 25 days is  $\frac{9-45 \times 25}{365} = 6-472$ ; that is, it is equal to the interest for a year multiplied by the fraction  $\frac{25}{365}$ .

Division by 100 is performed by cutting off two figures to the right.

Many attempts have been made to contrive more expeditious processes than the above for calculating interest. The following is the best.

Suppose it were required to find the interest upon 172*l*. for 107 days at 5 per cent.

This forms what is called in arithmetical books a double rule of three question, and would be stated as follows:—

£ Days. £ Days.  
100 × 365 : 5 :: 172 × 107 : 2*l*. 10*s*. 4½*d*., the interest required.

Hence, to find the interest of any sum for any number of days at any rate per cent., multiply the sum by the number of days, and the product by the rate, and divide by 36,500 (365 × 100); the quotient is the interest required.

When the rate is 5 per cent., or 1-20th of the principal, all that is required is to divide the product of the sum multiplied by the days by 7,300 (365, the days in a year, multiplied by 20).

Five per cent. interest being found by this extremely simple process, it is usual in practice to calculate 4 per cent. interest by deducting 1-5th; 3 per cent. by deducting 2-5ths; 2½ per cent. by dividing by 2; 2 per cent. by taking the half of 4, and so on.

In calculating interest upon accounts current, it is requisite to state the number of days between each receipt, or payment, and the date (commonly the 31st of December) to which the account current is made up.

Thus, 172*l*. paid on the 15th of September, bearing interest to the 31st of December, 107 days. The amount of such interest may, then, be calculated as now explained, or by the aid of Tables. The reader will find, in the article BOOKKEEPING (p. 155.) an example of interest on an account current computed as above, without referring to Tables.

The 30th of June is, after the 31st of December, the most usual date to which accounts current are made up, and interest calculated. In West India houses, the 30th of April is the common date, because at that season the old crop of produce is generally sold off, and the new begins to arrive.

It is of great importance, in calculating interest on accounts current, to be able readily to find the number of days from any day in any one month to any day in any other month. This may be done with the utmost ease by means of the annexed Table. (See next page.)

By this Table may be readily ascertained the number of days from any given day in the year to another. For instance, from the 1st of January to the 14th of August (first and last days included), there are 236 days.

To find the number, look down the column headed January, to Number 14, and then look along in a parallel line to the column headed August, you find 236, the number required.

To find the number of days between any other two given days, when they are both after the 1st of January, the number opposite the 1st day must, of course, be deducted from that opposite to the second. Thus, to find the number of days between the 13th of March and the 19th of August, deduct from 331, the number in the Table opposite to 19 and under August, 72, the number opposite to 13 and under March, and the remainder, 159, is the number required, last day included.

In leap years, one must be added to the number after the 28th of February.

For the mode of calculating discount, or of finding the present values of sums due at some future date, at simple interest, see DISCOUNT.

In counting-houses, Interest Tables are very frequently made use of. Such publications have, in consequence, become very numerous. Most of them have some peculiar recommendation; and are selected according to the object in view.

When interest, instead of being simple, is compound, the first year's or term's interest must be found,

added to the original principal, makes the principal upon which interest is to be calculated for the second year or term; and the second year's or term's interest being added to this last principal, makes the principal upon which interest is to be calculated for the third year or term; and so on for any number of years.

When the number of years is considerable, this process becomes exceedingly cumbersome and tedious, and to facilitate it Tables have been constructed, which are subjoined to this article.

Table No. I. represents the amount of 1*l.* accumulating at compound interest, at 3, 4, and 5 per cent. every year, from 1 year to 70 years, in pounds and decimals of a pound. Now, that we wish to know how much 500*l.* will amount to in 7 years at 4 per cent. In the column headed 4 per cent. and opposite to 7 years, we find 1·315,932*l.*, which shows that 1*l.* will, if invested at 4 per cent. compound interest amount to 1·315,932 in 7 years; and consequently, 500*l.* will, in the same time, at the same rate, amount to  $500 \times 1\cdot315,932$  or 657·966*l.*; that is 657*l.* 19*s.* 4*d.*

For the same purpose of facilitating calculation, the present value of 1*l.* due any number of years exceeding 70, at 3, 3½, 4, 4½, and 5 per cent. compound interest, is given in the subjoined Table. The use of this Table is precisely similar to the one below. Let it, for example, be required to find the present worth of 500*l.* due 7 years hence, reckoning compound interest at 4 per cent. Opposite to 7 years and under 4 per cent., we find ·75291,781*l.*, the present worth of 1*l.* due at the end of 7 years; and multiplying this sum by 500*l.*, the product, being 376·45589*l.*, or 376*l.* 19*s.* 2*d.*, is the answer required.

Table for ascertaining the Number of Days from any one Day in the Year to any other Day.

## ANNUITIES.

*Annuities certain.*—When a sum of money is to be paid yearly for a certain number of years, it is called an annuity. The annuities usually met with are either for a certain number of years, which are called *annuities certain*; or they are to be paid so long as one or more individuals shall live, and are thence called *contingent annuities*.

The amount of an annuity at any given time, is meant the sum to which it will amount, supposing it to have been regularly improved at compound interest during the intervening period.

The present value of an annuity for any given period, is the sum of the present values of the payments of that annuity.

Tables III. and IV. of the subjoined Tables represent the amount and present value of an annuity of 1*l.* at compound interest at 3, 3½, 4, 4½, 5, and 6 per cent. from 1 year to 70. They, as well as Tables I. and II., are taken from "Tables of Interest, Discount, and Annuities, by John Smart, Gent. 4to. 1726." They are carried to 8 decimal places, and enjoy the highest character, both here and on the continent, for accuracy and completeness. The original work is now become very scarce.

Tables of these Tables are numerous; and they are easily applied. Suppose, for example, it were required to tell the amount of an annuity of 50*l.* a year for 17 years at 4 per cent. compound interest.

Looking in Table III. in the column of years, and under 4 per cent., is 23·69751,239, being the amount of an annuity of 1*l.* for the given time at the given rate per cent.; and this multiplied by 50 gives 1183·37756, 17*s.* 6*d.*, the amount required.

Now, that it is required what sum one must pay down to receive an annuity of 50*l.* to continue for 17 years, compound interest at 4 per cent.?

Looking in Table IV. and under 4 per cent. is 12·16566,886, the present value of an annuity of 1*l.* for the given time and at the given rate per cent.; and this multiplied by 50 gives 608·288443, or 608*l.* 28*s.* 8443, the present value required.

It is required to find the time which must elapse, in order that a given sum improved at a specified rate of compound interest may increase to some other given sum, divide the latter sum by the former, for the quotient, or the number nearest to it, in Table No. I. under the given rate per cent., and opposite to it are the answer.—Thus,

1087·2794, &c. by 523*l.* 5*s.* 7*d.* at 5 per cent. compound interest?

The quotient will be 2·0789, &c., which under 5 per cent. in Table I. is 15 years, the time required.

It has been required to find the time in which a given annuity, improved at a certain rate of compound interest, would have increased to some given sum, the question would have been answered by Table I. as above, the given sum by the annuity; and looking for the quotient (not in Table No. I., but in Table No. III., under the given rate per cent., it would be found on a line with the time required.

Suppose a man has 1,000*l.* and resolves to appropriate 10*l.* a year of his income to its discharge: in what time will the annuity be extinguished, reckoning compound interest at 4 per cent.?

1,000 divided by 10 gives 100, the number in Table No. III. under 4 per cent., and nearest to 99 8265, &c. opposite to 41 years, the required time. Had the rate of interest been 5 per cent. would have been discharged in somewhat less than 37 years. This example is given by *De Moivre's*, 6th ed. vol. ii. p. 389.; and on this principle the whole fabric of the sinking fund was constructed. Of the abstract truth of the principle there cannot, indeed, be a doubt. But every thing dependent on increasing sums annually produced being immediately invested on the same terms; and the sum is large, and the period long, is altogether impracticable.

Let it next be required to find an annuity which, being increased at a given rate of compound interest during a given time, will amount to a specified sum: in this case we divide the specified sum by the sum of 1. for the time and rate given, as found in Table III., and the quotient is the answer.

What annuity will amount to 1,087*l.* 5*s.* 7*d.* in 15 years at 5 per cent. compound interest? Opposite to 15 years in Table III., and under 5 per cent., is 21·5785, &c., the amount of 1*l.* time and rate; and dividing 1087·2794, &c. by this sum, the quotient 50·387, &c., or 50*l.* 7*s.* 9*d.* annuity required.

*Deferred Annuities* are those which do not commence till after a certain number of years. *Reversionary annuities*, such as depend upon the occurrence of some uncertain event, as the death of a person, &c. &c.

The present value of a deferred annuity is found by deducting, from the value of an annuity for the whole period, the value of an annuity to the term at which the reversionary annuity is to commence.

— Thus, What is the present value of an annuity of 50*l.* to continue for 25 years, commencing at the present time, interest at 4 per cent.?

According to Table No. IV., the value of an annuity of 1*l.* for 25 years at 4 per cent. is 15·674; that of 1*l.* for 7 years is 6·00205,467, which being deducted from the other, leaves 9·67205,528; multiplied by 50 gives 483·602, the answer required.

Supposing the annuity, instead of being for 25 years, had been a perpetuity, it would have been 1,250*l.*, from which deducting 300*l.* 2*s.*, the value of an annuity for 7 years at 4 per cent., leaves 949*l.* 18*s.*, the value of the reversion.

For a selection of problems that may be solved by Tables of annuities certain, see *Smarts's* 92—100.

2. *Life Annuities.* — After what has been stated in the article on *INSURANCE* (see *GENERAL PRINCIPLES OF*), respecting Tables of mortality, it will be easy to see how the present value of a life annuity is calculated. Supposing — to revert to the example given in the article (p. 710.) — that it were required to find the present value of 1*l.*, the receipt of which is dependent on the contingency of a person, now 56 years of age, being alive at the end of 48 years; hence, taking the Carlisle Table of mortality, and interest at 4 per cent.: Noting to that Table, of 10,000 persons born together, 4,000 attain to 56, and 2,894 to 66 years of age. The probability that a person, now 56 years, will be alive 10 years hence, is, consequently,  $\frac{2,894}{4,000}$ ; and the present value of 1*l.*, to be received certain at the end of 10 years, is, consequently,  $\frac{2,894}{4,000} \times 0.6755641$ , it follows, that if its receipt be made to depend on the contingency of a person, now 56 years of age, being alive at the end of 48 years, its value will be reduced by that contingency, so that the present value of 1*l.* will be  $\frac{2,894}{4,000} \times 0.6755641 = 0.488771$ , or 9*s.* 9½*d.* If, then, we had to find the present value of an annuity of 1*l.* secured on the life of a person now 56, we should calculate the present value of each of the 48 payments, which, according to the Carlisle Table, he might receive, and their sum would, of course, be the present value of the annuity.

This statement is enough to show the principle on which all calculations of life annuities depend; and this also was, in fact, the method according to which the present value of life annuities was calculated, till Mr. Simpson and M. Euler invented a shorter and easier principle, by deriving from the value of an annuity at any age, that of an annuity at the next age. There is a considerable discrepancy in the sums at which different authorities calculate the present value of life annuities payable for a certain number of years, or of the same age. This does not arise from any difference in the mode of calculating the annuities, but from differences in the Tables of mortality employed. These Tables are accurate when they are deduced from multiplied and careful observations made over a long series of years, on a large body of persons; or when the average number of deaths of the whole population, and of the deaths at every age, for a lengthened period, have been ascertained with the necessary care. It is to be regretted, that governments, which have the means of ascertaining the rate of mortality by observations made on a sufficiently large scale, have been singularly inattentive to their duty in this respect, until a very few years since, when Mr. Finlaison was employed to calculate the present value of annuities from the ages of the nominees in public tontines, and of persons on whose lives government had granted annuities, all that had been done in this respect was to lay a solid foundation on which to construct the vast fabric of life insurance, the work of a few private persons, who had, of course, but a limited number of observations to work upon.

The celebrated mathematician, Dr. Halley, was the first who calculated the present value of life annuities, which he deduced from observations made at Breslaw, in Silesia. M. De Moivre published the first edition of his tract on *Annuities on Lives*. He assumed the calculation of their values, M. De Moivre assumed the annuities to be equal; that is, he supposed that out of 86 (the utmost limit of his hypothesis) persons born together, one would die every year till the last was extinct. This assumption agreed pretty well with the true values between

years of age, as given in Dr. Halley's Table; but was very remote from the truth in the earlier and later periods. Mr. Thomas Simpson, in his work on *Annuities and Reversions*, originally published in 1742, gave a Table of mortality deduced from the London bills, and Tables founded upon it of the values of annuities. But at the period when this Table was calculated, the mortality in London was so much higher than in the rest of the country, that the values of the annuities given in it were far too small for general use. In 1746, M. Deparcieux published, in his *Essai sur les Probabilités de la Durée de la Vie Humaine*—a work distinguished by its perspicuity and neatness—Tables of mortality deduced from observations made on the mortuary registers of several religious houses, and on lists of the nominees in several tontines. In this work, separate Tables were first constructed for males and females, and the greater longevity of the latter rendered apparent. M. Deparcieux's Tables were a very great acquisition to the science; and are decidedly superior to some that are still extensively used. Dr. Price's famous work on *Annuities*, the first edition of which was published in 1770, contributed powerfully to direct the public attention to inquiries of this sort; and was, in this respect, of very great utility. Of the more recent works, the best are those of Mr. Baily and Mr. Milne, which, indeed, are both excellent. The latter, besides all that was previously known as to the history, theory, or practice of the science, contains much new and valuable matter; and to it we beg to refer such of our readers as wish to enter fully into the subject.

The Table on which Dr. Price laid the greatest stress, was calculated from the burial registers kept in the parish of All Saints in Northampton, containing little more than half the population of the town. There can be no doubt, however, as well from original defects in the construction of the Table, as from the improvement that has since taken place in the healthiness of the public, that the mortality represented in the Northampton Table is, and has long been, decidedly above the average rate of mortality in England. Mr. Morgan, indeed, the late learned actuary of the Equitable Society, contended that this is not the case, and that the Society's experience shows that the Northampton Table is still remarkably accurate. But the facts Mr. Morgan disclosed in his *View of the Rise and Progress of the Equitable Society* (p. 42.), published in 1828, are quite at variance with this opinion: for he there states, that the deaths of persons insured in the Equitable Society, from 50 to 60 years of age, during the 12 years previously to 1828, were 339; whereas, according to the Northampton Table, they should have been 545! And Mr. Milne has endeavoured to show (Art. *Annuities*, new ed. of *Ency. Brit.*) that the discrepancy is really much greater.

The only other Table used to any extent in England for the calculation of life annuities, is that framed by Mr. Milne from observations made by Dr. Heysham on the rate of mortality at Carlisle. It gives a decidedly lower rate of mortality than the Northampton Table; and there are good grounds for thinking that the mortality which it represents is not very different from the actual rate throughout most parts of England; though it cannot be supposed that a Table founded on so narrow a basis should give a perfectly fair view of the average mortality of the entire kingdom.

In life insurance, the first annual premium is always paid at the commencement of the assurance, and the others at the termination of each year so long as the party assured survives. Hence, at the beginning of the assurance, the whole of the annual premiums payable for it exceed the value of an equal annuity on the life by one year's purchase. And, therefore, when the value of an assurance in present money is given, to find the equivalent annual premium during the life, the whole present value must be divided by the number of years' purchase an annuity on the life is worth, increased by 1. Thus, for an assurance of 100*l.* on a life 40 years of age, an office, calculating by the Carlisle Table of mortality, and at 4 per cent. interest, requires 53·446*l.* in present money. Now, according to that Table and rate of interest, an annuity on a life just 40 years of age is worth 15·074 years' purchase, so that the equivalent annual premium is  $\frac{53 \cdot 446}{15 \cdot 074 + 1} = 3 \cdot 325*l.*$

or 3*l.* 6*s.* 8*d.* The annual premium may, however, be derived directly from the value of an annuity on the life, without first calculating the total present value of the assurance.—(See Mr. Milne's *Treatise on Annuities*, or the art. *Annuities* in the new edition of the *Ency. Britannica*.)

In order to exhibit the foundations on which Tables of life annuities and insurance have been founded in this and other countries, we have given, in No. V. of the following Tables, the rate of mortality that has been observed to take place among 1,000 children born together, or the numbers alive at the end of each year, till the whole become extinct, in England, France, Sweden, &c., according to the most celebrated authorities.\* The rate of mortality at Carlisle, represented in this Table, is less than that observed any

\* The greater part of this Table was originally published by Dr. Hutton in his *Mathematical Dictionary*, art. *Life Annuities*. Mr. Baily inserted it with additions in his work on *Annuities*; and it was published, with the column for Carlisle added, in the *Report of the Committee of the House of Commons on Friendly Societies*.

where else: the rates which approach nearest to it are those deduced from the observations already referred to, of M. Deparcieux, and those of M. Kerseboom, on the nominal life annuities in Holland.

In order to calculate from this Table the chance which a person of any given age of attaining to any higher age, we have only to divide the number of persons at such higher age, given in that column of the Table selected to decide the question, by the number of persons alive at the given age, and the fraction resulting is the chance required.

We have added, by way of supplement to this Table, Mr. Finlaison's Table (No. IX.) of the rate of mortality among 1,000 children born together, according to the duration of life observed to take place among the nominees in government tontines and annuities in this country, distinguishing males from females. The rate of mortality which this Table exhibits is decidedly less than that given in the Carlisle Table; the lives in the latter are the average of the population, while those in the former are picked. The nominees in tontines are uniformly chosen among the healthiest individuals; and none but those who consider their lives as good ever buy an annuity. Still, however, the Table is very curious; and it sets the superiority of female lives in a very striking point of view.

Tables VII. and VIII. give the *expectation of life*, according to the mortality observed at Northampton and Carlisle; the former by Dr. Price, and the latter by Mr. Milne.

The next Table, No. IX., extracted from the *Second Report of the Committee of the House of Commons on Friendly Societies*, gives a comparative view of the results of some of the most celebrated Tables of mortality, in relation to the rate of mortality, the expectation of life, the value of an annuity, &c. The coincidence between the results deduced from M. Deparcieux's Table, and that for Carlisle, is very striking.

To render the information on these subjects laid before the reader as complete as the nature of this work will admit, we have given Tables (Nos. X.—XV.) of the value of an annuity of 1*l.* on a single life, at every age, and at 3, 4, 5, 6, 7, and 8 per cent., according to the Northampton and Carlisle Tables; we have also given Tables of the value of an annuity of 1*l.* on 2 equal lives, and 2 lives differing by 5 years, at 3, 4, 5, and 6 per cent., according to the same Tables. It is but seldom, therefore, that our readers will be obliged to resort to any other work for the means of solving the questions that usually occur in practice with regard to annuities; and there are not many works in which they will find so good a collection of Tables. — We subjoin one or two examples of the mode of using the Tables of life annuities.

Suppose it were required, what ought a person, aged 45, to give, to secure an annuity of 50*l.* a year for life, interest at 4 per cent., according to the Carlisle Table?

In Table No. XI., under 4 per cent., and opposite 45, is 14.104, the value of an annuity of 1*l.*, which being multiplied by 50, gives 705.2, or 705*l.* 4*s.*, the value required. According to the Northampton Table, the annuity would only have been worth 614*l.* 3*s.*

The value of an annuity on 2 lives of the same age, or on 2 lives differing by 5 years, may be found in precisely the same way.

Some questions in *reversionary* life annuities admit of an equally easy solution. Suppose it is required to find the present value of A.'s interest in an estate worth 100*l.* a year, falling to him at the death of B., aged 40, interest 4 per cent. according to the Carlisle Table?

The value of the perpetuity of 100*l.* a year, interest 4 per cent., is 2,500*l.*; the value of an annuity of 100*l.* on a person aged 40, interest at 4 per cent., is 1,500*l.*, which deducted from 2,500*l.* leaves 992*l.* 12*s.*, the present value required.

A person, aged 30, wishes to purchase an annuity of 50*l.* for his wife, aged 45, provided she survive him; what ought he to pay for it, interest at 4 per cent. according to the Carlisle Table?

The value of an annuity of 1*l.* on a life aged 30 is 16.852*l.*; from which subtract the value of an annuity of 1*l.* on 2 joint lives of 25 and 30, 14.339, the difference is 2.513  $\times$  50 = 125.650, or 125*l.* 13*s.*, the sum required.

For the solution of the more complex cases of survivorship, which do not often occur in practice, recourse may be had to the directions in Mr. Milne's *Treatise on Annuities* and other works of that description. To attempt explaining them here would involve details quite inconsistent with the objects of this work.

TABLES OF INTEREST AND ANNUITIES.

I. Table showing the AMOUNT of £1 Improved at Compound Interest, at 2½, 3, 3½, 4, 4½, 5, and 6 per Cent., at the End of every Year, from 1 to 70.

IX. Table giving a COMPARATIVE VIEW of the Results of the undermentioned Tables of Mortality, in relation to the following Particulars.

	By Dr. Price's Table, founded on the Register of Births and Deaths at Northampton.	By the First Swedish Table, as published by Dr. Price; for both Sexes.	By Mr. De-porcien's Table, founded on the Mortality in the French Tontines, prior to 1745.	By Mr. Milne's Table, founded on the Mortality observed at Carlisle.	By Mr. Griffith Davies's Table, founded on the Experience of the Equitable Life Insurance Office.	By Mr. Finlason's Table, founded on the Experience of the Government Life Annuities.
					According to his First Investigation, as mentioned in his Evidence in 1825.	According to his Second Investigation, as mentioned in his Evidence in 1827.
					Mean of both Scores.	Mean of both Scores.
Of 100,000 persons aged 25 there would be alive at the age of 65 - -	34,286	43,137	51,033	51,335	49,330	53,470
Of 100,000 persons aged 65, there would be alive at the age of 80 - -	28,738	23,704	29,837	31,577	37,267	38,555
Expectation of life at the age of 25 - years	30.85	34.58	37.17	37.86	37.45	38.35
Expectation of life at the age of 65 - years	10.88	10.10	11.25	11.79	12.35	12.81
Value of an annuity on a life aged 25, interest being at 4 per cent. -	£15.438	£16.839	£17.420	£17.645	£17.494	£17.534
Value of an annuity on a life aged 65, interest being at 4 per cent. -	£7.761	£7.328	£8.039	£8.307	£8.635	£8.896
Value of a deferred annuity commencing at 65, to a life now aged 25, interest at 4 per cent. -	£0.55424	£0.65842	£0.85452	£0.88823	£0.88723	£0.99078
						£0.98334

Note. — In all the Tables above mentioned, it is to be observed that the mortality is deduced from an equal, or nearly equal, number of each sex; with the single exception of Mr. Davies's Table, founded on the experience of the Equitable, in which office, from the practical objects of life insurance, it is evident the male sex must have composed the vast majority of lives subjected to mortality. But as it is agreed on all hands that the duration of life among females exceeds that of males, it follows that the results of Mr. Davies's Table fall materially short of what they would have been, if the facts on which he has reasoned had comprehended an equal number of each sex. The Tables have not, in all cases, been computed at 4½ per cent., the rate allowed by government.

The Northampton Table (No. VII.), by under-rating the duration of life, was a very advantageous guide for the insurance offices to go by in insuring lives; but to whatever extent it might be beneficial to them in this respect, it became equally injurious when they adopted it as a guide in selling annuities. And yet, singular as it may seem, some of the insurance offices granted annuities on the same terms that they insured lives, not perceiving that, if they gained by the latter transaction, they must obviously lose by the former. Government also continued for a lengthened period to sell annuities according to the Northampton Tables, and without making any distinction between male and female lives! A glance at the Tables of M. Deparcieux ought to have satisfied them that they were proceeding on entirely false principles. But, in despite even of the admonitions of some of the most skillful mathematicians, this system was persevered in till within these few years! We understand that the loss thence arising to the public may be moderately estimated at 2,000,000*l.* sterling. Nor will this appear a large sum to those who recollect that, supposing interest to be 4 per cent., there is a difference of no less than 91*l.* in the value of an annuity of 50*l.* for life, to a person aged 45, between the Northampton and Carlisle Tables.

E, an account of goods or merchandise sent by merchants to their cor-  
at home or abroad, in which the peculiar marks of each package, with other  
are set forth. — (See example, *anté*, p. 143.)

ISLANDS, the name given to the islands of Corfu, Paxo, Santa Maura,  
Alonia, Zante, Cerigo, and their dependent islets. With the exception of  
h lies opposite to the south-eastern extremity of the Morea, the rest lie pretty  
along the western coasts of Epirus and Greece; the most northerly point of  
in lat.  $39^{\circ} 48' 15''$  N., and the most southerly point of Zante (Cape Kieri,  
ere is a light-house) being in lat.  $37^{\circ} 38' 35''$  N. Kapali, the port of  
lat.  $36^{\circ} 7' 30''$  N., lon.  $23^{\circ}$  E.  
and population of the different islands may be estimated as follows: —

Islands.	Area in Square Miles 15 to a degree.	Population in 1836.
-	10-76	65,067
-	16-90	65,197
-	6-80	35,548
-	4-35	17,185
Calamos	3-32	9,644
Cerigotto	4-50	8,707
Antipazo	1-90	5,064
Totals	47-12*	304,212

\* This is equal to 1001-3 English square miles of  $69-15$  to the degree.

acter. — These are very various — Zante is the most fruitful. It consists principally of an  
a, occupied by plantations of currants, and having an air of luxuriant fertility and richness.  
comparatively equal and fine, but it is very subject to earthquakes. Corfu and Cephalonia  
ed and less fruitful than Zante; and the former, from its vicinity to the snowy mountains of  
e latter from the Black Mountain (the Mount *Ænos* of antiquity) in its interior, are exposed  
eat and sudden variations of temperature. In January, 1833, the cold was more rigorous  
frost damaging to a great extent the oranges and vines of these islands and those of Santa  
latter is, in the hot season, exceedingly unhealthy, — a consequence of the vapours arising  
hes and the shallow seas to the N. E. Cerigo is rocky and sterile; it is subject to continued  
currents seldom permit its waters to remain unruined.

overnment, &c. — These islands have undergone many vicissitudes. Corfu, the ancient Corus  
in antiquity for its naval power, and for the contest between it and its mother state Corinth,  
ally terminated in the Peloponnesian war. Ithaca, the kingdom of Ulysses; Cephalonia,  
ied Dulchium from the name of one of its cities; Zante, or Zacynthus; Santa Maura,  
ancients by the names of Leucas or Leucadia, celebrated for its promontory, surmounted  
Apollo, whence Sappho precipitated herself into the ocean; and Cerigo, or Cythera, the  
Helen, and sacred to Venus; — have all acquired an immortality of renown. But, on com-  
resent with their former state, we may well exclaim, —

*Hæc quantum hæc Niobe, Niobe distabat ab illa!*

table revolutions, they fell, about 350 years ago, under the dominion of Venice. Since the  
at republic, they have had several protectors, or rather masters, being successively under  
of the Russians, the French, and the English. By the treaty of Paris, in 1815, they were  
sort of semi-independent state. They enjoy an internal government of their own, under  
of Great Britain; a Lord High Commissioner, appointed by the king of England, having  
foreign relations, and of the internal, maritime, and sanitary police. His Majesty's com-  
melf has the custody of the fortresses, and the disposal of the forces. It is stipulated in the  
a, that the islands may be called upon for the pay and subsistence of 3,000 men, as well as for  
their fortresses occupied by the British troops. The executive government is vested in a  
minated by the commissioner, and a senate of 8 members (1 for each of the larger islands of  
Alonia, Zante, and Santa Maura, and 1 representing collectively the smaller ones of Ithaca,  
Paxo, by each of which he is elected in rotation). The senators are elected at the com-  
f every quinquennial parliament (subject to a negative from the commissioner) from a  
amber of 40 members, themselves elected by the constituencies of the different islands.  
The senate and legislative assembly, together with the commissioner, are thus the supreme  
ey are, when united, termed the Parliament, and, as such, pass, amend, and repeal laws, in  
scribed by the constitution of 1817. Besides the general government, there is in each island  
atration, composed of a regent, named by the senate, and from 2 to 5 municipal officers elected  
w citizens.

Society in these islands is far from being good, and was formerly the most depraved im-  
pe people, when they were placed under the ægis of England, were at once lazy, ignorant,  
cowardly, and bloodthirsty. Their vices may, we believe, be, in a great degree, ascribed to  
ant and religion established amongst them. The latter consisted of little more than a series  
sterile observances; while the former was both weak and corrupt. The Venetians appointed  
of power and emolument belonged mostly to noble but decayed families, and looked upon  
nerely as means by which they might repair their shattered fortunes. Hence the grossest  
rvaried every department. There was no crime for which impunity might not be purchased.  
ct, was openly bought and sold; and suits were decided, not according to the principles of  
but by the irresistible influence of faction or of gold. In consequence, the islands became  
the vices that afflict and degrade a corrupt and semi-barbarous society. Sandy, one of the  
travellers who ever visited the Levant, having touched at Zante in 1610, expresses himself  
to the inhabitants as follows: — "In habits they imitate the Italians, but transcend them in  
es, and infinitely less civil. They will threaten to kill a merchant that will not buy their  
es, and make more conscience to break a fast than commit a murder. He is weary of his life  
fference with any of them, and will walk abroad after daylight. But cowardice is joined  
ueltie, who dare do nothing but soddainly upon advantage; and are ever privately armed.  
ouraged to villainies by the remissness of their laws. The labourers do go into the fields with  
artizans, as if in an enemy's country; bringing home their oils and wines in hogskins, the  
out." — (p. 7. ed. 1637.)

otities did not deteriorate during the next 3 centuries, which, indeed, was hardly pos-  
ertainly did not improve. Dr. Holland, by whom they were visited in 1812, tells us that  
sure authority, that the number of assassinations in Zante has been more than 1 for  
he year, though the population was only 40,000! — (*Travels in the Ionian Isles*, &c. 4to ed.

Matters were, if not quite so bad, very little better in the other islands. In Cephalonia, the inhabitants were divided into factions, entertaining the most implacable animosities, and waging a war of extermination against each other. A little vigour on the part of their rulers would have served to suppress their murderous contests. But this was not an object they wished to attain: on the contrary, their selfish and crooked policy made them seek to strengthen their own power by fomenting the dissensions that prevailed amongst their subjects. — (*Bellini, Description du Golfe de Venise*, p. 165.) Considering the state of society at home, we need not wonder that the Cephalonians, who were distinguished among the islanders for activity and enterprise, were much addicted to emigration. The Venetians attempted to check its prevalence; but, as they neglected the only means by which it could be prevented, — the establishment of security and good order at home, — their efforts were wholly unsuccessful.

The islanders did not, however, satisfy themselves with attempting to stan and prey upon each other. They were much addicted to piracy, particularly the inhabitants of Santa Maura and Cerigo; and it has been alleged that the Venetian government participated in the profits of this public robbery, which, at all events, they took little pains to suppress.

A long series of years will be required to eradicate vices so deeply rooted, and to effect that thorough change in the habits and morals of the people that is so indispensable. The power and influence of the British government has already, however, had a very decided effect: assassination has become comparatively unknown; piracy has been suppressed; and a spirit of industry, sincerity, and fair dealing is beginning to manifest itself. The present generation of nobles possess a superior degree of information, and a knowledge of the true interests of their country, which, if not all that could be wished, was, at least, unknown to their fathers. It is not easy to exaggerate the difficulties with which Sir Thomas Maitland had to struggle during the first years of the British government. He was opposed by every means that feudal rancour, corruption, and duplicity could throw in his way. Those accustomed to the treachery, shuffling, and jobbing of the Venetian and Russo-Turkish governments, and the intrigues of the French, could neither appreciate nor understand the plain, straightforward course natural to British officers. These difficulties have, however, materially diminished; and it is to be hoped that the influence of our example, and of that education now pretty generally diffused, will gradually accomplish the regeneration of the islanders.

*Manufactures, &c.* — These islands possess few manufactures properly so termed. The wives of the villani, or peasants, spin and weave a coarse kind of woollen cloth, sufficient in great part for the use of their families. A little soap is made at Corfu and Zante. The latter manufactures a considerable quantity of silk gros-de-Naples and handkerchiefs; the art of dyeing is, however, too little studied, and the establishments are on too small a scale. The peasantry, in general, are lazy, vain, delighting in display, and very superstitious. Those of Zante and Cephalonia are more industrious than the Corfiotes; in the first, particularly, their superior condition is probably to be ascribed, in part at least, to the nobles residing more on their estates in the country, and contributing, by their example, to stimulate industry. In Corfu, the taste for the city life, which prevailed in the time of the Venetian government, still operates to a great degree. The Corfiote proprietor resides but little in his villa; his land is neglected, while he continues in the practice of his forefathers, who preferred watching opportunities at the seat of a corrupt government, to improving their fortunes by the more legitimate means of honourable exertion and attention to their patrimony. In this respect, however, a material change for the better has taken place during the last 20 years.

*Imports of Grain, &c.* — Great part of the land is held under short tenures, on the *metayer* system, the tenant paying half the produce to the landlord. Owing to the nature of the soil, and the superior attention given to the culture of olives and currants, the staple products of the islands, most part of the grain and cattle required for their consumption is imported. The hard wheat of Odessa is preferred, and large sums are annually sent to the Black Sea in payment. The parliament, in March, 1832, repealed the duties on the introduction of corn; and the grain monopoly of Corfu, which had been established in favour of government, in order to provide against the possibility of a general or partial scarcity, was then also suffered to expire. These 2 sources of revenue, while they existed, did not probably produce less than 20,000*l.* annually.

*Cattle.* — They are similarly dependent upon Greece and Turkey for supplies of butcher's meat; a small number only of sheep and goats being bred in the islands. Oxen, whether for agriculture or the slaughter-house, are principally brought from Turkey. The beef eaten by the troops is 6 weeks or 3 months walking down from the Danube, and the provinces that skirt it, to the shores of Epirus, where they remain in pasture until fit for the table.

*Exports.* — The staple exports from these islands are oil, currants, valonia, wine, soap, and salt. The first is produced in great abundance in Corfu and Paxos, and in a less quantity in Zante, Santa Maura, and Cephalonia. Corfu has, in fact, the appearance of a continuous olive wood; a consequence, partly, of the extraordinary encouragement formerly given to the culture of the plant by the Venetians. Although there is a harvest every year, the great crop is properly biennial; the tree generally reposing for a year after its effort. (In France and Piedmont the period of inactivity is of 2 and 3 years.) During 5 or 6 months, from October till April, the country, particularly in Corfu, presents an animated appearance, persons of all ages being busily employed in picking up the fruit. The average price may be about 1*l.* 11*s.* per barrel. Under the old Venetian system, the oil could only be carried to Trieste. It is charged with an *ad valorem* duty of 19*½* per cent., payable on the export. The quality might be much improved by a little more care in the manufacture, the trees being generally finer than in any other country.

*Currants.* originally introduced from the Morea, are grown in Zante, Cephalonia, and Ithaca, but principally in the first. The plant is a vine of small size and delicate nature, the cultivation of which requires much care. Six or 7 years elapse after a plantation has been made, before it yields a crop. In the beginning of October, the earth about the roots of the plant is loosened, and gathered up in small heaps, away from the vine, which is pruned in March; after which the ground is again laid down smooth around the plant, which grows low, and is supported by sticks. The crops are liable to injury in spring from the blight called the "brina," and rainy weather in harvest produces great mischief. The currants are gathered towards September, and after being carefully picked, are thrown singly upon a stone floor, exposed to the sun in the open air. The drying process may occupy a fortnight or longer, if the weather be not favourable. A heavy shower or thunder storm (no unfrequency occurrence at that season) not only interrupts it, but sometimes causes fermentation. The fruit is then only fit to be given to animals. Should it escape these risks, it is deposited in magazines called "*seraglio*," until a purchaser casts up. The "*seraglio*," or warehouse keeper, delivers to the depositor a paper acknowledging the receipt of the quantity delivered, which passes currently in exchange from hand to hand till the time of export. Under the old Venetian government, the liberty of traffic in this produce was exceedingly restricted. In Zante 5 persons chosen out of the council of nobles assembled in presence of the *proveditore*, regulated what should be the price; and those who wished to purchase were under the necessity of describing to the government the quantity they desired. This system was called the "*collegetto*." The export duties consisted of an original duty of 3 per cent. *ad valorem*; a *dazio fiso*, or fixed duty of about 4*s.* 4*d.* per cwt.; and afterwards of a *movissimo*, or most recent duty, of 2*s.* 2*d.* per cwt. This latter was remitted in favour of vessels bringing salt fish, &c. from the northern ports (chiefly English, Danes, and Dutch): it was afterwards relaxed in favour of Russian vessels from Odessa, and abandoned altogether as vexatious and unproductive. The *proveditore* received in addition 2 per cent., and each of his 2 Venetian councillors 1 per cent.; so that the fruit, the original cost of which was about 9*s.* the cwt., stood the exporter in little less than 18*s.* or 19*s.* Even under British protection, the fruit, which some years before had fetched as much as 30*s.* and 32*s.* the cwt., but had declined in 1832 to 8*s.* the cwt., was burdened with the *dazio fiso* of 4*s.* 4*d.*

and a duty of 6 per cent. *ad valorem*, being equivalent together, *at that price*, to an *ad valorem* duty of nearly 60 per cent. 1 In the mean time the British parliament had, in 1829, raised the import duties payable in England to the enormous amount of 44s. 4d. the cwt., which, at the same low price, made an *ad valorem* duty of 500 per cent. The consequences were rapidly visible; a decline took place in the culture of the plant, as well as in the circumstances and in the *affections* of the proprietors, whose staple export and means of existence were almost annihilated. As the prices fell, and the distress became greater, the necessitous grower was obliged to borrow money at ruinous interest from foreign merchants, or from the Jews, who were, consequently, able to dictate the price at which they would take his produce. A legislative enactment was at a scale commensurate with the duties which it had to grapple with, was a mere act of liberation, and was, accordingly, adopted by the 4th parliament in the year of 1835. By the whole of the duties upon currants were commuted for an *ad valorem* tax of 19½ per cent., being the same as that laid upon oil. The same act increased, in a small degree, the duties previously paid on the importation of coffee, tea, and sugar, and upon foreign wines, silks, and gloves, articles which, being chiefly consumed by the affluent, were more appropriately subjected to an increase of duty, to supply in part the serious defalcation of revenue consequent to the reduction of the current duty. The duties thus increased upon objects of luxury may now amount to from 30 to 25 per cent., which is far from exorbitant. The good effects of this enactment were manifested by an almost instantaneous rise in the price of the fruit which had remained on hand of the crop of 1832. The average export of currants during the 3 years ending with 1835, has been 17,747,000 lbs. a year. The duty on currants imported into England was reduced in 1834 to 22s. 3d. a cwt.

*Salt* may be obtained in considerable quantities in Corfu, Zante, and Santa Maura, for exportation: the latter island alone produced it until the late act of parliament, which provided that government should let the salt pans in all the islands to those bidders who should offer, by sealed tenders, to supply it at the lowest rate to the consumer, paying at the same time the highest price to government. No export duty is charged upon it.

It is apparent from these statements, that heavy duties are levied upon the exportation of the staple products of the islands,—an objectionable system, and one which, if it is to be excused at all, can only be so by the peculiar circumstances under which they are placed. There is no land tax or impost on property in the Ionian Islands, such as exists in many other rude countries : and, supposing it were desirable to introduce such a tax, the complicated state of property in them, the feudal tenures under which it is held, and the variety of usages with respect to it, oppose all but invincible obstacles to its imposition on fair and equal principles. At the same time, too, a large amount of revenue is required to meet the expenses of the general and local government, to maintain an efficient force to prevent smuggling and piracy. His most excellent thinking, that some very material retrenchments might be made from the expenditure ; and it is to this source, more, perhaps, than to any other, that the inhabitants must look for any real or effectual relief from their burdens.

Account of the Quantities and Values of the Exports from the Ionian Islands, in 1837, 1838, and 1839.

**Ports.**—The principal ports in the Ionian republic are Corfu and Zante, in the islands of the same name, and Argostoli in Cephalonia. The city and port of Corfu lie on the east side of the island, on the canal or channel between it and the opposite continent, which is here about 3 miles wide. The citadel, which projects into the sea, is furnished with a light-house, 240 feet high; the latter being in lat. 39° 27' N., lon. 19° 56' E. The town is but indifferently built. Population about 17,000, exclusive of the military. The fortifications are very strong, both towards the sea and the land. The canal has deep water throughout; its navigation, which is a little difficult, has been much facilitated by the erection of a light-house on the rock of Tigroso in the northern entrance, where the channel is less than a mile in width; and by the mooring of a floating light off Point Leschimo, in the southern entrance. Ships anchor between the small but well fortified island of Vido and the city, in from 12 to 17 fathoms water.

The port, or rather gulph, of Argostoli in Cephalonia, lies on the south-west side of the island. Cape Aji, forming its south-western extremity, is in lat 38° 8' 40" N., lon. 20° 32' 30" E. Cape San Nicola, forming the other extremity, is about 4½ miles from Cape Aji; and between them, within about 1½ mile of the latter, is the small inlet of Guardiani, on which is a light-house. From this island the gulph stretches N. & W. from 7 to 8 miles inland. The town of Argostoli lies on the west side of a haven on the east side of the gulph formed by Point Statura. The situation is low and rather unhealthy. When visited by Dr. Holland, its population did not exceed 4,000. Its appearance and police, particularly the latter, have been much improved since its occupation by the English. There is deep water and good anchorage ground in most parts of the gulph. The best entrance is between Cape San Nicola and Guardiani, keeping rather more than a mile to the eastward of the latter, on account of a reef that extends N.E. and S.W. from it nearly that distance.

The port and city of Zante are situated on the eastern side of the island, in lat. 37° 47' N. lon. 20° 54' 42" E. The city, the largest in the Ionian Islands, extends along the shore for nearly 1½ mile, but it is no where above 300 yards in breadth, except where it ascends the hill on which the citadel is erected. The style of building is chiefly Italian; and the interior of the city displays every where great neatness, and even a certain degree of magnificence. Population estimated by Dr. Burgess at about 20,000. It has a mole or jetty of considerable utility, at the extremity of which a light-house is erected; and a lazaretto, situated a little to the south-west. The harbour is capacious. Ships anchor opposite the town at from 800 to 1,000 yards' distance, in from 12 to 15 fathoms, availing themselves of the protection of the mole when the wind is from the N.E. When our troops took possession of Zante, in 1810, the fortifications were found to be in very bad repair; but immense sums have since been expended upon their improvement and extension.

**Trade with England.**—This is but of very limited extent. During the year 1840 we imported from the Ionian Islands 133,343 cwt. currants, 56,319 gallons olive oil, 2,000 cwt. valonia, and 1,177 gallons wax. The real or declared value of the articles of British produce and manufacture exported to them during the same year, amounted to only 87,204l.

The total value of the imports from all countries in 1839 is estimated at 611,756l. and that of the exports at 338,915l. But a considerable part of the imports is not destined for the consumption of the islands, but is sent thither merely as to a convenient entrepôt, being intended for the supply of the contiguous provinces of Greece and Turkey. The amount of exports depends materially on the circumstance whether the year be one in which there is, or is not, a crop of olives.

**Money.**—Accounts are kept in sterling money, or in Spanish dollars and oboli, 100 oboli being = 1 doll. = 4s. 4d. = a doubloon = 1 dollar. — (*Their's Compend.*)

**Weights.**—English weights and measure are sometimes made use of, though with Italian denominations; but the following are most generally used.

The pound *peso grosso*, or great weight of 12 os. = 7,384 grains Troy; 94·8 lbs. = 100 lbs. avoirdupois.

The pound *peso sottile*, or small weight used for precious metals and drugs, is 1-3d lighter than the foregoing; 12 os. *peso sottile* corresponding to 8 os. *peso grosso*.

The ole, used in the southern islands, weighs about 15,809 grains Troy, or 27/10 lbs. avoirdupois. The Levant center, or quintal, should contain 44 cwt.

The *medjago* (1,000 lbs.), for currants, in Zante, is 1 per cent. lighter than for other articles.

**Measure of Length.**—

The Venetian foot of 12 onad = 13½ inches English.

Paso = 3 Venetian feet.

Braccio, for cloths, &c. = 27 3/16 inches English.

Do. for silks = 25 3/8

Land is measured by the *misura* or 1/6 of a *mezzajo*, or back :

400 square pasc being 1 misura, or bacile, about 3/10 of an acre English.  
Vineyards are measured by the *sappade*; 3 *sappade* (a computed day's work) being 1 misura.  
Fire-wood is measured by the square *paseo*, usually, however, only 2 feet thick, this depending on the quality of the wood. *Paseo* is measured by the *paseo cubo*.

**Measures of Capacity.**—*Corn*.—*Corfu* and *Pazo*: Moggio of 8 misure, about 5 Winchester bushels.  
*Cephalonia*: Bacile should contain 80 lbs. *paseo grosso*, best quality wheat.

*Santa Maura*: Cado, of 8 crivelli, 4 = 3 mog.; 1 cado = 3½ bushels English.

*Ithaca*: 5 *Pegole* = 1 moggio.

*Corfu*: Chilo, the measure of Constantinople, = 1 bushel English.

*Wine*.—*Corfu* and *Pazo*: 58 quartucci = 1 jar, and 4 jars = 1 barrel = 18 English wine gallons.

*Cephalonia* and *Ithaca*: 2 quartucci = 1 boccale; 12 boccali = 1 secchio; 6 secchio = 1 barrel = 18 English wine gallons.

*Zante*: 13 1/3 quartucci = 1 litre; 40 quartucci = 1 jar; 5 jars = 1 barrel = 17 5/8 English wine gallons.

*Santa Maura*: 22 quartucci = 1 stamno; 6 stamni = 1 barrel = 18 English wine gallons.

*Corfu*: 2 agosten = 1 boccia; 30 boccie = 1 barrel = 18 English wine gallons.

*Oct.*—*Corfu* and *Pazo*: 4 quartucci = 1 mitro; 6 mitri = 1 jar; 4 jars = 1 barrel = 18 English wine gallons.

*Cephalonia*: 9 pagliazzi = 1 barrel = 18 Eng. wine galls.

*Zante*: 9 lire, or 3 jars of 46 qu. each = 1 barrel = 17 5/8 English wine gallons.

*Santa Maura*: 7 stamni = 1 barrel = 18 Eng. wine galls.

*Ithaca*: 13 pagliazzi = 1 — = 18 —

*Corfu*: 24 bocce = 1 — = 18 0/5 —

*Salt*.—*Centinajo*, about 4,000 lbs. Venetian *paseo grosso*.

*Lime*.—*Corfu*, measure of 4 English cubic feet.

In compiling this article, we have consulted, besides the works referred to above, the *Voyage Historique, Géographique, &c.*, by Saint Saverus, a diffuse but valuable work. The account of *Zante*, in the last volume (tome iii. pp. 101—278), is particularly good. We have also looked into the *Voyage en Grèce* of Sandetti, 3 tomes, Paris, 1801; the *Archives de Commerce*; the *Papiers* laid before the *Finance Committee*, &c. But the most important part of the information we have been able to lay before the reader was derived from manuscript notes kindly communicated by Earl Lovelace, who (when Lord Kinross) was secretary to the British government in these islands.

**IPÉCACUANHA** (Fr. *Ipecacuanha*; Ger. *Amerikanische brechwurzel*; It. *Ipecocanna*; Port. *Cipo de camaras, Ipecacuanha*; Sp. *Ipecacuana, Raiz de oro*), the root of a perennial plant (*Cephaelis ipecacuanha*) growing in Brazil and other parts of South America. It is, from its colour, usually denominated *white, grey, or ash-coloured, and brown*. Little of the first variety is found in the shops. The grey and brown varieties are brought to this country in bales from Rio Janeiro. Both are in short, wrinkled, variously bent and contorted pieces, which break with a resinous fracture. The grey is about the thickness of a small quill, full of knots and deep circular fissures, that nearly reach down to a white, woody, vascular cord that runs through the heart of each piece; the external part is compact, brittle, and looks smooth: the brown is smaller, more wrinkled, of a blackish brown colour on the outside, and whitish within: the white is woody, and has no wrinkles. The entire root is inodorous; but the powder has a faint disagreeable odour. The taste is bitter, sub-acrid, and extremely nauseous. In choosing ipecacuanha, the larger roots, which are compact and break with a resinous fracture, having a whitish grey, somewhat semi-transparent, appearance in the outside of the cortical part, with a pale straw-coloured medullary fibre, are to be preferred. When pounded, ipecacuanha forms the mildest and safest emetic in the whole materia medica. Though probably employed in America from time immemorial, it was not introduced into Europe till the time of Louis XIV., when one Grenier, a French merchant, brought 150 lbs. of it from Spain, with which trials were made at the Hôtel Dieu. Helvetius first made known its use in dysentery, for which Louis XIV. munificently rewarded him by a douceur of 1,000*l.* sterling.—(*Thomson's Dispensatory*; *Thomson's Chemistry*.)

**IRON** (Dan. *Jern*; Du. *Yzer*; Fr. *Fer*; Ger. *Eisen*; It. *Ferro*; Lat. *Ferrum, Mars*; Pol. *Zelazo*; Por. *Ferro*; Rus. *Scheleso*; Sp. *Hierro*; Sw. *Jern*; Gr. *Σίδηρος*; Sans. *Loha*; Arab. *Hedjed*; Pers. *Ahun*), the most abundant and most useful of all the metals. It is of a bluish white colour; and, when polished, has a great deal of brilliancy. It has a styptic taste, and emits a smell when rubbed. Its hardness exceeds that of most other metals; and it may be rendered harder than most bodies by being converted into steel. Its specific gravity varies from 7·6 to 7·8. It is attracted by the magnet or loadstone, and is itself the substance which constitutes the loadstone. But when iron is perfectly pure, it retains the magnetic virtue for a very short time. It is malleable in every temperature, and its malleability increases in proportion as the temperature augments; but it cannot be hammered out nearly as thin as gold or silver, or even as copper. Its ductility is, however, more perfect; for it may be drawn out into wire as fine at least as a human hair. Its tenacity is such, that an iron wire 0·078 of an inch in diameter, is capable of supporting 549·25 lbs. avoirdupois without breaking.

**Historical Notice.**—Iron, though the most common, is the most difficult of all the metals to obtain in a state fit for use; and the discovery of the method of working it seems to have been posterior to the use of gold, silver, and copper. We are wholly ignorant of the steps by which men were led to practise the processes required to fuse it and render it malleable. It is certain, however, that it was prepared in ancient Egypt, and some other countries, at a very remote epoch; but it was very little used in Greece till after the Trojan war.—(See the admirable work of *M. Guget* on the *Origin of Laws, Arts, &c.*, vol. i. p. 140.)

**Species of Iron.**—There are many varieties of iron, which artists distinguish by particular names; but all of them may be reduced under one or other of the 3 following classes: *cast or pig iron, wrought or soft iron, and steel*.

1. *Cast or pig iron* is the name given to this metal when first extracted from its ores. The ores from which iron is usually obtained are composed of oxide of iron and clay. The object of the manufacturer is to reduce the oxide to the metallic state, and to separate all the clay with which it is combined. This is effected by a peculiar process; and the iron, being exposed to a strong heat in furnaces, and melted, runs out into moulds prepared for its reception, and obtains the name of *cast or pig iron*.

The cast iron thus obtained is distinguished by manufacturers into different varieties, from its colour and other qualities. Of these the following are the most remarkable:—

a. *White cast iron*, which is extremely hard and brittle, and appears to be composed of a congeries of small crystals. It can neither be filed, bored, nor bent, and is very apt to break when suddenly heated or cooled.

b. *Grey or mottled cast iron*, so called from the inequality of its colour. Its texture is much softer and less brittle than the last variety; and may be cut, bored, and turned. Cannons are made of it.

c. *Black cast iron* is the most unequal in its texture, the most fusible, and least three.

2. Wrought or soft iron is prepared from cast iron by a process termed a refinement wrought iron manufactured in Sweden is reckoned the finest in the world.

3. Steel consists of pieces of wrought iron hardened by a peculiar process. The Sweden into this country is mostly used in the manufacture of steel. — (See STRAIN.) — (Thomson.)

*Uses of Iron.* — To enumerate the various uses of iron would require a lengthened one who reflects for a moment on the subject, can doubt that its discovery and employment of tools and engines has been of the utmost importance to man; and has done more, perhaps, to accelerate his advance in the career of improvement. Locke has the following observations on this subject: — "Of what consequence the discovery of one natural property, may be to human life, the whole great continent of America is a convincing ignorance in useful arts, and want of the greatest part of the conveniences of life, it abounded with all sorts of natural plenty, I think may be attributed to their ignorance be found in a very ordinary despicable stone — I mean the mineral of iron. And what our parts or improvements in this part of the world, where knowledge and plenty are each other, yet, to any one that will seriously reflect upon it, I suppose it will appear were the use of iron lost among us, we should in a few ages be unavoidably reduced to ignorance of the ancient savage Americans, whose natural endowments and provisions of those of the most flourishing and polite nations; so that he who first made use of the temple mineral, may be truly styled the father of arts and author of plenty." — (Essays standing, book iv. c. 12.)

*Manufacture of Iron in Great Britain.* — We are ignorant of the period when iron was first made in England, but there is authentic evidence to show that iron was established by the Romans in the Forest of Dean, in Gloucestershire, and in the kingdom. — (Pennant's *Wales*, ed. 1810, vol. i. p. 89.) They were also an early period, in Kent and Sussex; these counties being well supplied with iron ore, but (which was at the time of still more importance) with timber and fuel that was then used in the furnaces. It is to this latter circumstance an increase in the production of iron in England, during a lengthened period, is due. Complaints were very early made of the destruction of timber by the iron works of Elizabeth, when an unusual demand for timber for the navy, and for the navy also, took place, the decrease of timber excited a great deal of attention. In 1581, an act was passed prohibiting the manufacturers of iron from using wood, and from establishing any new works any where within 22 miles of London, and 14 miles of the river Thames, and in several parts of Sussex in the act. Soon after this, Edward, Lord Dudley, invented a process for smelting iron ore with pit-coal instead of timber; and it is difficult to point out more than that have been so advantageous. The patent which his lordship obtained was exempted from the operation of the act of 1623 (21 James I. c. 23.) monopolies; but though, in its consequences, it has proved of immense benefit to the country, the works of the inventor were destroyed by an ignorant rabble well nigh ruined by his efforts to introduce and perfect his process. — (A *Mittet of House of Commons on Patents*, p. 168, &c.) The invention seems, it is to have been for many years almost forgotten. The complaints of the timber continued; so much so, that, in 1637, the exportation of iron was prohibited, and fresh restrictions were laid on the felling of timber. The destruction of timber by the iron works became more prevalent than the total suppression began to be contemplated as a lesser evil than the continuing of the stock of timber. At this period more than two thirds of the iron was imported, and the condition of the manufacture was most unprosperous growing scarcity and high price of timber, coupled with the increasing demand at last succeeded in drawing the attention of some ingenious persons to the process; and, about 1740, iron was made at Colebrook Dale, and one or two by means of pit-coal, of about as good a quality as that made with timber. The business steadily increased; at first, however, its progress was slow, and the furnaces of Kent and Sussex were not wholly relinquished 30 years after iron began to be largely produced by means of pit-coal. The demand for iron occasioned by the late war, and the obstacles which it threw of supplies from abroad, gave the first extraordinary stimulus to the manufacture has now become of vast importance and great value. In 1740 the quantity made in England and Wales amounted to about 17,000 tons, produced by 122 furnaces; in 1788, 68,000 tons, produced by 85 furnaces; in 1796, 125,000 tons, produced by 121 furnaces; in 1806, 250,000 tons, produced by 169 furnaces; about 400,000 tons, were produced, but their is no account of the number. From extensive inquiries made by government and others connected with the trade, the following statements have been deduced, which exhibit the distribution of iron made, the number of furnaces, and the total quantity produced in 1840.

Account of the Number of Furnaces, and of the Quantities of Iron produced, in 1825, 1830, and 1840.

The increase of production, as shown in this table, is to be matched only by the progress of the cotton manufacture, after the inventions of Arkwright and others; and, extraordinary as it may appear, the increase in the course of the 6 years ending with 1846 has been little, if at all, inferior. The make of iron in Scotland, in July, last year (1846), was ascertained to be at the rate of 529,500 tons a-year; and sundry new furnaces being then in the course of being erected, the make of this year (1847), will not be under, if it do not exceed, 600,000 tons! Estimating the make in England at 1,150,000 tons, the total make in the United Kingdom, in 1847, will be 1,750,000 tons!

This astonishing increase has been owing to a great variety of causes, among the more prominent of which may be specified the greater cheapness of iron, and its consequent application to a great many purposes, including the construction of various descriptions of agricultural implements, pipes for the conveyance of water, and even the building of ships, for which it was not formerly supposed to be applicable. Unquestionably, however, the unprecedented demand for iron for railways in this country, and in the United States and the Continent, has, within the last three or four years, given the most powerful stimulus to the manufacture; and, if only half the railway projects now (1847) on foot be executed, the production of iron, vast as it at present is, will be quite inadequate to supply the demand.

It will, however, readily occur to the reader that a demand for iron for railways, depending as the formation of the latter does on so many varying circumstances, must necessarily be both capricious and fluctuating; and hence it is not really possible to infer from the state of the iron trade at any given period what may be its state a few months after. Even so late as 1842 and 1843 the price of pig iron had sunk to from 2*l.* to 3*l.* per ton, and the manufacturers in the least favoured districts were involved in the greatest difficulties. But within the last three years the price of iron has doubled or trebled; and larger fortunes have been made in this than in any other department of industry. Similar mutations will, doubtless, take place in future. On the whole, however, the fair presumption seems to be that the manufacture will go on increasing for an indefinite period. The uses to which iron may be applied seem to be all but infinite; and every fall of its price always introduces it into new channels. Most probably, indeed, the works situated in the least favoured districts, or those where iron is produced at the greatest expense, will, in the course of time, have to be abandoned. This, however, is merely a local and accidental grievance, and can in no wise affect the general well-being of the business.

The employment of the hot-blast, or of air heated to a high temperature, instead of common atmospheric air, in the working of furnaces, has been one of the greatest improvements in the manufacture, and has at once reduced the cost of iron and increased its quantity. It was first used in Lanarkshire, in Scotland, and has been one of the principal causes of the extraordinary extension of the trade in that part of the empire, where it is now universally made use of.

Taking the annual produce of pig-iron in the United Kingdom at 1,750,000 tons, and supposing that about 3½ tons of coal are required for the production of each ton of iron, the consumption of coal in this branch of the iron trade will, on this hypothesis, amount to 6,125,000 tons a-year; and adding to this quantity 3,000,000 tons for the coal required for the conversion of pig-iron into bar-iron, it follows that a supply of no fewer than 9,125,000 tons of coal will be annually required in this single department of industry! And hence, also, the fact that the consumption of coal in the production of iron is about three times as great as its consumption in the metropolis!

About three-tenths of the total quantity of iron produced is used in the state of pig, or cast iron, and is consumed principally in Great Britain and Ireland; the exports of pig-iron amount, however, to nearly 80,000 tons, sent principally to the United States, Holland, and France. The other seven-tenths are converted into wrought-iron, being

formed into bars, bolts, rods, &c. The exports of bar-iron amounted, in 1845, to nearly 154,000 tons, and the exports of all sorts of iron are probably at present (1847), not under 400,000 tons; which, at 10*l.* a-ton, would be worth 4,000,000*l.* Their declared value did in fact amount, in 1845, to 3,501,895*l.*, and, in 1846, to 4,174,558*l.*

Supposing the total quantity of pig-iron produced in Great Britain to amount to 1,750,000 tons a year, and to be worth at an average, 6*l.* a ton, its total value will be 10,500,000*l.*; and the additional labour expended in forming the pig-iron into bar-iron, that is, into bars, bolts, rods, &c., may, probably, add about 3,500,000*l.* more to its value; making it worth in all about 14,000,000*l.* And if we recollect that wrought-iron is to the hardware manufacture what malt is to the manufacture of beer, or leather to that of shoes, we shall be satisfied alike of its paramount importance in the arts, and as a most prolific source of employment and of public wealth.

Previously to 1845, the imports of foreign iron usually varied from 20,000 to 25,000 tons a year. But at that epoch the duties on foreign iron (amounting to 20*s.* a ton on iron in bars) were repealed; and there has since been a considerable increase in the imports of Swedish bar-iron, which is especially well fitted for being made into steel. The imports of all sorts of foreign iron amounted, in 1845, to above 40,000 tons.

N. B. — Quarters of a cwt. and lbs. are omitted in this table, but they are allowed for in the summing up.  
Total quantity of iron exported in 1846, 351,978 tons.

Perhaps in nothing has the fall of price, consequent to the diminution of the cost of production, that has taken place since the peace of 1815, been more conspicuous than

in hardware. At an average, articles of hardware are at present (1847) full 50 per cent. lower than in 1820. And it may be safely affirmed that there are very few descriptions of articles in which a fall of price would have been so advantageous.

We still import a small quantity, from 15,000 to 18,000 tons, of Swedish iron, for conversion into steel, for which purpose it is better fitted than British iron.

**IRON-WOOD** (Ger. *Eisenholz*; Du. *Yserhout*; Fr. *Bois de fer*; It. *Legno di ferro*; Sp. *Plo hierro*; Lat. *Sideroxylon*, *Lignum ferreum*), a species of wood of a reddish cast, so called on account of its corroding as that metal does, and its being remarkably hard and ponderous, — even more so than ebony. The tree which produces it grows principally in the West India islands, and is likewise very common in South America, and in some parts of Asia, especially about Siam.

**ISINGLASS** (Ger. *Hausenblase*, *Hausblase*; Fr. *Colle de poisson*, *Carlock*; It. *Cola di pesce*; Rus. *Klei riübii*, *Karluk*), one of the purest and finest of the animal glues. It is a product the preparation of which is almost peculiar to Russia. It is made of the air-bladders and sounds of different kinds of fish which are found in the large rivers that fall into the North Sea and the Caspian. That prepared from the sturgeon is generally esteemed the best; next to that, the beluga; but isinglass is also prepared from sterlets, shad, and barbel, though not so good. The best is usually rolled in little ringlets; the second sort is laid together like the leaves of a book; and the common sort is dried without any care. When fine, it is of a white colour, semi-transparent, and dry. It dissolves readily in boiling water, and is used extensively in cookery. It is also used for stiffening silk, making sticking plaster, &c. The duty of 47s. 6d. a cwt. on isinglass produced, in 1840, 3,722l. showing that 1,567½ cwt. had been entered for consumption. The price varies from 5s. to 14s. 6d. per lb. — (See *Thomson's Chemistry*; *Tooke's View of Russia*, 2d ed. iii. 343, &c.)

**ISLE OF MAN.** See **MAN**, **ISLE OF**.

**JUICE OF LEMONS, LIMES, OR ORANGES.** The 9th section of the act 6 Geo. 4. c. 111. is as follows: — "For ascertaining the degrees of specific gravity or strength, according to which the duty on the juice of lemons, limes, and oranges shall be paid, it is enacted, that the degrees of such specific gravity or strength shall be ascertained by a glass citrometer, which shall be graduated in degrees in such manner, that distilled water being assumed as unity at the temperature of 60° by Fahrenheit's thermometer, every degree of the scale of such citrometer shall be denoted by a variation of  $\frac{1}{1000}$  parts of the specific gravity of such water."

**JUNIPER BERRIES.** See **BERRIES**.

**IVORY**, the name given to the teeth or tusks of the elephant, and of the walrus or sea-horse. Each male elephant come to maturity has 2 tusks. These are hollow at the root, tapering, and of various sizes, depending principally on the age of the animal. Colour externally yellowish, brownish, and sometimes dark, internally white. The best are large, straight, and light-coloured, without flaws; not very hollow in the stump, but solid and thick. The most esteemed come from Africa, being of a closer texture, and less liable to turn yellow, than those from the East Indies.

The trade in London thus divide them: —

First sort, weighing 70 lbs. or upwards; second sort, weighing 56 lbs. to 60 lbs.; third sort, weighing 38 lbs. to 56 lbs.; fourth sort, weighing 28 lbs. to 37 lbs.; fifth sort, weighing 18 lbs. to 27 lbs.

All under 18 lbs. are called *scrivellers*, and are of the least value. In purchasing elephants' teeth, those that are very crooked, hollow, and broken at the ends, or cracked and decayed in the inside, should be rejected; and care taken that lead or any other substance has not been poured into the hollow. The freight is rated at 16 cwt. to the ton. — (*Milburn's Orient. Com.*)

*Supply of Ivory.* — The imports of elephants' teeth, in 1840 and 1841, were, at an average, 5556 cwt., of which 4520 cwt. were retained for consumption. The medium weight of a tusk may be taken at about 60 lbs.; so that the yearly imports of 1840 and 1841 may be taken at 10,372 tusks; a fact which supposes the destruction of at least 5186 male elephants! But, supposing the tusks could only be obtained by killing the animal, the destruction would really be a good deal greater, and would most probably, indeed, amount to about 7,000 elephants. Occasionally, however, tusks are accidentally broken, one lost in this way being replaced by a new one; and a good many are, also, obtained from elephants that have died in the natural way. Still it is sufficiently obvious, that the supply from the sources now alluded to cannot be very large; and if to the quantity of ivory required for Great Britain, we add that required for the other countries of Europe, America, and Asia, the slaughter of elephants must, after every reasonable deduction is made, appear immense; and it may well excite surprise, that the breed of this noble animal has not been more diminished. The western and eastern coasts of Africa, the Cape of Good Hope, Ceylon, India, and the countries to the eastward of the Straits of Malacca, are the great marts whence supplies of ivory are derived. The imports from Western Africa into Great Britain, in 1840, amounted to 1,933 cwt.; the Cape furnished only 97 cwt. The imports during the same year from India, Ceylon, and other Eastern countries, were 2,418 cwt.

The Chinese market is principally supplied with ivory from Malacca, Siam, and Sumatra.

The chief consumption of ivory in England is in the manufacture of knives; but it is also extensively used in the manufacture of musical instruments, chess-men, billiard-balls, plates for miniatures, toys, &c. are said to be manufactured to a greater extent, and with better success, in any other place in Europe. But the preparation of this beautiful material is better understood by the Chinese than by any other people. No European hitherto succeeded in cutting concentric balls after the manner of the Chinese boxes, chess-men, and other ivory articles, are all far superior to any that with any where else.

*Historical Notice.* — It is a curious fact, that the people of all Asia, in which the elephant is found, have always had the art of taming the animal to it to useful purposes, but that no such art has ever been possessed by any nation. Is this owing to any difference between the Asiatic and African to the inferior sagacity of the African people? We incline to think that the true hypothesis. Alexander the Great is believed to have been the first who employed elephants in war. It appears pretty certain, that the elephants of by the Carthaginians were mostly, if not wholly, brought from India, and were managed by Indian leaders. Some of the latter were captured by the great victory gained by Metellus over Asdrubal. — (See, on this curious subject, the very learned and valuable notes in the *Ancient Universal History*, 8vo. ed. v. and p. 549. *Buffon's Article on the Elephant* is a splendid piece of composition.)

The price per cwt., duty (1*l.* per cwt.) included, of elephants' teeth in the London market, 1843, was —

## K.

**KELP.** A substance composed of different materials, of which the following are the chief, alkali, or, as it is commonly termed, soda, is the chief. This ingredient enters into the composition of soap, in the manufacture of alum, and in the formation of glass and bottle glass. It is formed of marine plants, which, being cut from the shore, are collected and dried on the beach to a certain extent; they are then put into kilns prepared for the purpose, the heat of which is sufficient to reduce the plants into a state of semi-fusion. They are then strongly stirred with iron rods, when cool, condense into a dark blue or whitish mass, very hard and brittle, and about 3 years old yield the largest quantity of kelp. The best kelp has a greenish taste, a sulphurous odour, is compact, and of a dark blue greenish color, and about 5 per cent. of its weight of soda. — (*Barry's Orkney Islands*, p. 37.)

The manufacture of kelp is, or rather was, principally carried on in the Western Isles, and the western shores of Scotland, where it was introduced from Ireland, about the middle of the 18th century. Towards the end of the late war, the kelp shores of the island of North Uist let for 7,000*l.* a year; and it has been calculated that the quantity of kelp annually manufactured in the Hebrides only, in the mainland, and of the Orkney and Shetland isles, amounted, at the period referred to, to 100,000 tons a year; and that the total quantity made in Scotland and its adjacent isles amounted to 1,000,000 tons. At some periods during the war, it sold for 20*l.* a ton; but at an average of the 23 years ending 1843 the price was 10*l.* 9*s.* 7*d.* — (Art. *Scotland*, *Edinburgh Encyclopedia*.)

Unluckily, however, the foundations on which this manufacture rested were altogether insecure, and its existence depended on the maintenance of the high duties on barilla and salt. Inasmuch as kelp could not be substituted, without undergoing a very expensive process, for barilla, the departments of industry in which the use of mineral alkali is indispensable, it became necessary to reduce the high duty laid on barilla during the war. The ruin of the kelp manufacture ascribed to this reduction; but though barilla had been altogether excluded from our markets, it could not have been done without great injury to many most important manufactures, which have been perfectly the same, in so far as kelp is concerned, unless the high duty on salt had been maintained. It was the repeal of the latter that gave the kelp manufacture the coup de grace. The purification of kelp, so as to render it fit for soap-making, is a much more troublesome process than the decomposition of salt; and the greatest quantity of alkali used, is now obtained by the latter method. Had the duty on salt not been repealed, kelp might still have been maintained, notwithstanding the reduction of duty on barilla.

The manufacture is now almost extinct. Shores that formerly yielded the proprietors 500*l.* a year, are now worth next to nothing. The price of kelp since 1822 has not risen above 4*l.* a ton; and the article will, most probably, soon cease to be produced.

This result, though injurious to the proprietors of kelp shores, and productive of temporary distress to the labourers employed in the manufacture, is not to be regretted. It could not have been otherwise, had the government not been obliged to lay high duties on it and on salt, in order to obstruct the supply of barilla, forced government to lay high duties on it and on salt, had not the vestige of a ground for considering that such a state of things would be productive of right in profiting by it while it lasted; but they could not expect that government would continue to enjoy an accidental advantage.

KENTLEDGE, the name sometimes given to the iron pigs cast in a particular form for ballasting ships, and employed for that purpose.

KERMES (Ger. *Scharlachbeeren*; Du. *Grein Scharlakenbessen*; It. *Grana, Chermes, Cremese, Cocchi*; Sp. *Grana Kermes, Grana de la coseja*), an insect (*Coccus ilicis* Lin.) of the same species as the true Mexican cochineal, found upon the *quercus ilicx*, a species of oak growing in Spain, France, the Levant, &c. Before the discovery of America, kermes was the most esteemed drug for dyeing scarlet, and had been used for that purpose from a very remote period. Beckmann inclines to think that it was employed by the Phœnicians, and that it excelled even the famous Tyrian purple. — *Hist. of Invent.* vol. ii. p. 197. Eng. ed.) From the name of *coccum* or *coccus*, cloth dyed with kermes was called *coccinum*, and persons wearing this cloth were said by the Romans to be *coccinati*. — (*Mart. lib. i. epig. 97. lin. 6.*) It is singular, however, notwithstanding its extensive use in antiquity, that the ancients had the most incorrect notions with respect to the nature of kermes; many of them supposing that it was the grains (*grana*) or fruit of the *ilicx*. This was Pliny's opinion: others, after him, considered it in the same light, or as an excrescence formed by the puncture of a particular kind of fly, like the gall nut. It was not till the early part of last century that it was finally and satisfactorily established that the kermes is really nothing but an insect, assuming the appearance of a berry in the process of drying. The term kermes is of Persian origin. The Arabians had been acquainted with this production from the earliest periods in Africa; and having found it in Spain, they cultivated it extensively as an article of commerce, as well as a dye drug for their own use. But since the introduction of cochineal, it has become an object of comparatively trifling importance. It is still, however, prepared in some parts of Spain. Cloths dyed with kermes are of a deep red colour; and though much inferior in brilliancy to the scarlet cloths dyed with real Mexican cochineal, they retain the colour better, and are less liable to stain. The old tapestries of Brussels, and other places in Flanders, which have scarcely lost any thing of their original vivacity, though 200 years old, were all dyed with kermes. The history of this production has been treated with great learning by Beckmann (*Hist. of Invent.* vol. i. pp. 171—191. 1st ed. trans.); and by Dr. Bancroft (*Permanent Colours*, vol. i. pp. 393—409.)

KINO (Fr. *Gomme de Kino*; Ger. *Kinoharz*; It. *Chino*), a gum, the produce of trees that grow in the East and West Indies, Africa, Botany Bay, &c. The kino now found in the shops is said by Dr. A. T. Thomson to come from India, and to be the produce of the *nauclea gambir*. The branches and twigs are bruised and boiled in water. The decoction is then evaporated until it acquires the consistence of an extract, which is kino. It is imported in chests containing from 1 to 2 cwt.; and on the inside of the lid of each chest is a paper, inscribed with the name of John Brown, the month and year of its importation, and stating that it is the produce of Amboyna. It is inodorous, very rough, and slightly bitter when first taken into the mouth; but it afterwards impresses a degree of sweetness on the palate. It is in small, uniform, deep brown, shining, brittle fragments, which appear like portions of a dried extract broken down; being perfectly uniform in their appearance. It is easily pulverised, affording a powder of a lighter brown colour than the fragments. But it may be doubted whether the inspissated juice of the *nauclea gambir* ought to be considered as kino. Dr. Ainslie says that Botany Bay kino is the only kind he had seen in an Indian bazaar. The tree which yields it grows to a great height: it flows from incisions made into the wood of the trunk. — (*Thomson's Dispensatory; Ainslie's Materia Indica.*)

KNIVES. (Ger. *Messer*; Du. *Messen*; Fr. *Couteaux*; It. *Coltelli*; Sp. *Cuchillos*; Rus. *Noshi*) well known utensils made of iron and steel, and employed to cut with: they are principally manufactured in London and Sheffield. Knives are made for a variety of purposes, as their different denominations imply; such as table knives, pen-knives, oyster knives, pruning knives, &c. Although England at present excels every part of the world in the manufacture of knives, as in most branches of cutlery, the finer kinds were imported until the reign of Elizabeth. It is stated by Mr. Macpherson (*Annals of Com., Anno 1563*), that knives were not made for use in England till 1563; but there can be no doubt that this is an error. They had been made, though probably of a rude and clumsy pattern, for centuries before, in the district called Hallamshire, of which Sheffield is the centre; and the cutlers of London were formed into a corporation in 1417. — (*Manufactures in Metal*, vol. ii. c. 1., in *Lardner's Cyclopædia.*)

KÖNIGSBERG, the capital of East Prussia, in lat. 54° 42' 11" N., lon. 20° 29' 15" E. Population, in 1838, 68,000.

Port, &c. — Königsberg is situated on the Pregel, which flows into the Frische Haff, or Fresh Bay, a large lake having from 10 to 14 feet water. The bar at the mouth of the Pregel has only from 5 to 6 feet water, so that none but flat-bottomed boats can ascend to the city. Pillau, in lat. 54° 32' 39" N., lon. 19° 52' 30" E., on the north side of the entrance from the Baltic to the Frische Haff, is properly the port of Königsberg. Within these few years, a light-house has been erected on a rising ground, a little to the

south of Pillau, the lantern of which is elevated 103 feet above the level of the sea. The light is fixed and brilliant. The entrance to the harbour is marked by buoys; those on the larboard side being surmounted by small flags. A Gothic building, 120 feet above the level of the sea, has been erected to serve for a land-mark; at a distance it looks like a three-masted ship under sail. There is usually from 15 to 16 feet water between the buoys on entering the harbour; but particular winds occasion material differences in this respect.

*Trade of Königsberg.*—Being situated on a navigable river of considerable importance, Königsberg has a large command of internal navigation, and is the principal emporium of a large extent of country. Wheat, rye, and other species of grain are the chief articles of export. The wheat is somewhat similar to that of Dantzic, but of inferior quality, being larger in the berry, and thicker skinned. The rye is thin, and also the barley, with few exceptions, and light. Peas are of a remarkably large quality. Oats are common feed, with a slight admixture of tares; but as these last answer in some degree the purpose of beans, the value of the oats is rather enhanced than otherwise by the circumstance. More tares are shipped here than from any other port in the Baltic. The prices of all sorts of grain are usually lower at Königsberg than at the neighbouring Prussian ports. Linseed, hemp, flax, lemons, bristles, and oil cake are largely exported; with smaller quantities of bones, mats, ashes, feathers, wax, hides and skins, &c. The bristles are the best in the Baltic. Timber, deals, and staves are as good as at Memel, but are rather scarce. The imports are coffee, sugar, herrings, iron and steel, wines, tin and tin plates, dye woods, spices, coals, &c. Salt is a government monopoly; any person being allowed to import it, but he must either sell it to government at a price fixed by them, or export it again.

*Money, Weights, and Measures,* same as at DANTZIC; which see.

## L.

LAC, or GUM LAC (Ger. *Lack*, *Gummilack*; Fr. *Lacque*, *Gomme lacque*; It. *Lacca*, *Gommalacca*; Sp. *Goma laca*; Rus. *Laka*, *Gummilak*; Arab. *Laak*; Hind. *Lak'h*; Sans. *Lākshā*), a substance, which has been improperly called a gum, produced in Bengal, Assam, Pegu, Siam, &c. on the leaves and branches of certain trees, by an insect (*chermes lacca*). The trees selected by the insect on which to deposit its eggs are known by the names of the bihar tree (*Croton lacciferum* Lin.), the pepel (*Butea frondosa*), bott, and coosim trees, &c. After being deposited, the egg is covered by the insect with a quantity of this peculiar substance, or lac, evidently intended to serve, in the economy of nature, as a nidus and protection to the ovum and insect in its first stage, and as food for the maggot in its more advanced stage. It is formed into cells, finished with as much art as a honeycomb, but differently arranged. Lac yields a fine red dye, which, though not so bright as the true Mexican cochineal, is said to be more permanent; and the resinous part is extensively used in the manufacture of sealing wax and hats, and as a varnish.

Lac, when in its natural state, encrusting leaves and twigs, is called *stick lac*: it is collected twice a year; and the only trouble in procuring it is in breaking down the leaves and branches, and carrying them to market. When the twigs or sticks are large, or only partially covered, the lac is frequently separated from them, as it always ought to be when shipped for Europe, to lessen the expense of freight. The best stick lac is of a deep red colour. When held against the light, it should look bright, and when broken should appear in diamond-like points. If it be not gathered till the insects have left their cells, it becomes pale, and pierced at the top; and is of little use as a dye, though probably better for a varnish.

*Lac dye, lac lake, or cake lac*, consists of the colouring matter extracted from the stick lac. Various processes have been adopted for this purpose. It is formed into small square cakes or pieces, like those of indigo. It should, when broken, look dark-coloured, shining, smooth, and compact; when scraped or powdered, it should be of a bright red colour, approaching to that of carmine. That which is sandy, light-coloured, and spongy, and which, when scraped, is of a dull brickdust colour, should be rejected.

Notwithstanding the continued fall in the price of cochineal, the use of lac dye has been extending in this country. The annual consumption may at present amount to about 700,000 lbs., having more than trebled since 1818. The finest qualities of lac dye are seldom met with for sale in Calcutta, being generally manufactured under contract for the European market.

When stick lac has been separated from the twigs to which it naturally adheres, and coarsely pounded, the native silk and cotton dyers extract the colour as far as it conveniently can be done by water. The yellowish, hard, resinous powder which remains, having somewhat of the appearance of mustard seed, is called *seed lac*. When liquefied by fire, it is formed into cakes, and denominated *lump lac*. The natives use the latter in making bangles, or ornaments in the form of rings, for the arms of the lower class of females; the best *shellac* being used in manufacturing these ornaments for the superior classes.

*Shellac* is produced from seed lac, by putting the latter into bags of cotton cloth, and holding it over a charcoal fire, when the lac melts, and being strained through the bag, the resinous part, which is the most liquefiable, is obtained in a considerable degree of purity; it is formed into thin sheets or plates. Thin, transparent, or amber-coloured shellac is best; avoid that which is thick, dark, or speckled; it should always, when broken, be amber-coloured on the edge; that which has a dark brown fracture, however thin, should be rejected. When laid on a hot iron, shellac, if pure, will instantly catch fire, and burn with a strong but not disagreeable smell. It used to be principally employed in this country in the manufacture of sealing wax, and as a varnish; but it is now very extensively used in the manufacture of hats: the entries for consumption in 1842 amounted to 1,082,370 lbs.

In Bengal, lac is chiefly produced in the forests of Sylhet and Burdwan. The finest dye is said to be obtained from the stick lac of Siam and Pegu; but the shellac or resinous part obtained from the latter is inferior to that produced from Sylhet stick lac. It may be obtained in almost any quantity.

Account of the Quantities of Lac Dye and of Shellac Imported into the U. Kingdom from the East India Company's Territories and Ceylon, and of the Quantities entered for home Consumption during each of the Twelve Years ending with 1842.

The finest lac dye is distinguished by the mark D. I., the 2d by D. T., the 3d by J. Mc. R., C. E., &c. In July 1842 and 1843, the prices of the different species of lac in bond in the London market were as follows:—

		July, 1842.			July, 1843.		
		s.	d.	q.	s.	d.	q.
Lac dye, diamond, I.	per lb.	1	8	1	9	2	4

Shellac, River, per cwt.		2	6	0	2	15	0

Shellac, block — per cwt. 1  
— orange — 2  
— black — 3

In 1823, D. T. lac dye was as high as 2 lb. The duties used to be 5 per cent. stick lac; and 20 per cent. on shellac about to charge shellac, which, as from the refuse of lac dye, with four times the latter. This ridiculous distinction some years at an end. In 1842, the duties were:—(Hancroft on Permanent Colonisation's Nat. Med.; Millburn's Origin.)

**LACE** (Du. *Kanten*; Fr. *Dentelle*; Ger. *Spitzen*; It. *Merletti*, *Pi shewo*; Sp. *Encajes*), a plain or ornamented net-work, tastefully composed of threads of gold, silver, silk, flax, or cotton, interwoven, from *Lacinia* (the hem or fringe of a garment).

The origin of this delicate and beautiful fabric is involved in considerable doubt, but there is no doubt it lays claim to high antiquity. In Mr. Hope's *Ancients*, many beautiful lace patterns are portrayed on the borders of Grecian females; and from the derivation of the word "*lace*," it is not unknown to the Romans. It is supposed that Mary de' Medici was brought lace into France, from Venice, where, and in the neighbouring countries, it is understood to have been long previously worn; but we find that in England, as late as 1483, "laces of thread, and laces of gold, and silk and gold," were enumerated as articles prohibited to be imported. — (1 *Rich.* 3. c. 10.) It is then presumed that this manufacture had begun in England prior to that period. Many subsequent acts were passed — (19 *Hen.* 7. c. 21.; 5 *Eliz.* c. 7.; c. 13.; 4 & 5 *W. & M.* c. 10., &c.) — for the encouragement and promotion of the lace manufacture; but it may equally be concluded, that as *pins* (which were indispensable in the process of lace making) were not used in England till 1569, the manufacture of lace must have been vulgar in fabric, and circumscribed in its nature. The *Encyclopædia Britannica* says that the lace manufacture was introduced into this country by a Flemish settler, who settled at or near Cranfield, now a scattered village of Bedfordshire, and adjoining Bucks; but there is no certain evidence as to the date of its introduction. It is debited to the Flemings for the introduction of this beautiful art, though it is not clear that they were the first to introduce it. It is said to have been introduced to them most part of our manufactures of articles of dress; we have many of their lace fabrics, and greatly improved our manufacture, by the superior taste which they have displayed in the production of this article. Henry Borlase founded and endowed the free school at Great Marlow, Bucks, to read, write, and cast accounts; and for 24 girls, to knit, spin, and make lace. (See *Lewie's Topography*); so that there is reason to suppose that at this time the lace manufacture had commenced in Buckinghamshire, which by degrees extended to the counties of Bedford and Northampton. In 1640, the lace trade was a flourish in Buckinghamshire — (*Fuller's Worthies*, and different *Itineraries*); and it advanced in England, that by a royal ordinance in France, passed in 1663, was established upon the thread lace imported from this country and from upon the point lace from Genoa, Venice, and other foreign countries, to secure payment of the customs duties. — (*Universal Dictionary*.)

**Pillow Lace** — the original manufacture — is worked upon a hard stuff of silk, flax, or cotton threads, according to a parchment pattern placed upon pins, bobbins, and spindles, which are placed and displaced, twisting, and separating the threads, so as to imitate the pattern designed. This manufacture has been introduced in almost every town and village in the midland counties, particularly in Buckinghamshire, Bedfordshire, and Northamptonshire, besides at Honiton, in Devonshire, and various other places in the west of England. The principal places where it is made in the Netherlands are Antwerp, Brussels, Mechlin, Louvain, Ghent, Valenciennes, &c. It is also made at Chantilly near Paris (celebrated for veils), Chantilly, Le Compté de Bourgoigne, Liege, Dieppe, Havre, Harfleur, Pont l'Évêque, Fecamp, Caen, Arras, Bapaume, &c. in France; and at various places in Portugal, and Italy. In England and Ireland, besides the laws passed at different times to encourage and protect the manufacture, associations were formed in various parts of the country, for the view of exciting a spirit of emulation and improvement, by holding exhibitions for the production of the best pieces of bone lace; and although smuggling of lace was carried on to a great extent, (in 1772, 72,000 ells of French lace were seized at the port of Leigh, and lodged in the king's warehouse there, besides many others,) the British manufacture advanced in an unparalleled degree. (*Mag.* 1751, vol. xxi. p. 520.; vol. xlii. p. 434.) It is imagined that the lace made in this country was of the sort called *Brussels point*, the net-work being worked on the pillow, and the pattern and sprigs worked with the

appears to have been the kind worn by the nobility and people of high rank, as is evident by the different portraits now in existence, painted by Vandyke, in the time of Charles I., and afterwards by Sir Peter Lely and Sir Godfrey Kneller, in the succeeding reigns of Charles II., Queen Anne, and George I. About a century since, the *grounds* in use were the old Mechlin, and what the trade termed the *wire ground*, which was very similar, if not identical, with the *modern* Mechlin, the principal article in the present French manufacture. The laces made in these grounds were singularly rich and durable; the designs of the *old Mechlin* resembled the figures commonly introduced in ornamental carving. Between 70 and 80 years ago, a great deterioration was occasioned by the introduction of the *Trotty ground*, which was exceedingly coarse and vulgar, the figures angular, and altogether in the worst taste conceivable. An improvement, however, took place about the year 1770, when the ground, which is probably the most ancient known, was re-introduced; this was no other than the one still in partial use, and denominated the *old French ground*. About 1777, or 1778, quite a *new ground* was attempted by the inhabitants of Buckingham and its neighbourhood, which quickly superseded all the others; this was the *point ground*, which had (as is supposed) been imported from the Netherlands. From the first appearance of this ground may be dated the origin of the modern pillow lace trade; but it was not until the beginning of the present century that the most striking improvements were made; for during the last quarter of the eighteenth century, the article, though certainly much more light and elegant from the construction of the ground, was miserably poor and spiritless in the design. Soon after the year 1800, a freer and bolder style was adopted; and from that time to 1812, the improvement and consequent success were astonishing and unprecedented. At Honiton, in Devon, the manufacture had arrived at that perfection, was so tasteful in the design, and so delicate and beautiful in the workmanship, as not to be excelled even by the best specimens of Brussels lace. During the late war, veils of this lace were sold in London at from 20 to 100 guineas; they are now sold from 8 to 15 guineas. The effects of the competition of machinery, however, were about this time felt; and in 1815, the broad laces began to be superseded by the new manufacture. The pillow lace trade has since been gradually dwindling into insignificance, compared with its condition 30 years back. It is difficult to form an estimate of the number of persons employed in pillow lace making during its prosperity; but in a petition from the makers in Buckingham and the neighbourhood, presented to her present Majesty in 1830, it was stated that 120,000 persons were dependent on the trade; but this number has since been very greatly diminished.

*Nottingham Lace.* — A frame-work knitter of Nottingham, named Hammond, about the year 1768, was the first who made lace by machinery. Dissipated in habits, and destitute of money, employment, or credit, the idea struck him, while looking at the broad lace on his wife's cap, that he could fabricate a similar article by means of his stocking frame. — (*Gravener Henson on Hosiery, Lace, &c.* p. 295.) He tried, and succeeded. The first machine ostensibly for lace (introduced at Nottingham about the same period, by A. Else and Harvey of London) was called a pin machine, for making single press *point net* in imitation of the Brussels ground. This machine, although lost here, is still used in France in manufacturing the net called *tulle*. This was the age of experiments; and workmen at their leisure hours employed themselves in forming new meshes on the hand, in the hope of perfecting a complete hexagon, which had hitherto eluded all their efforts to discover. In 1782, the warp frame was introduced, which is still in use for making *warp lace*; and in 1799 it was first attempted to make *bobbin net* by machinery; but this was not found to answer. During the succeeding 10 years many alterations were made in the construction of the machines, with no better success, until at length, in 1809, Mr. Heathcoat of Tiverton succeeded in discovering the correct principle of the bobbin net frame, and obtained a patent for 14 years for his invention.\* Steam power was first introduced by Mr. John Lindley, in 1815-16; but did not come into active operation till 1820. It became general in 1822-23; and a great stimulus was at this period given to the trade, owing to the expiration of Mr. Heathcoat's patent, the increased application of power, and the perfection to which the different hand frames had by this time been brought. A temporary prosperity shone on the trade; and numerous individuals — clergymen, lawyers, doctors, and others — readily embarked capital in so tempting a speculation. Prices fell in

\* Since this article was printed in our first edition, Mr. Heathcoat was pointed out to us as the original inventor of the bobbin net machine, and that, prior to his patent being obtained, bobbin net by machinery was unknown, although numerous attempts had been made to produce it by its means. Mr. Brunel, engineer, who was examined, as a witness, in the action *Boville v. Moore*, tried before Sir Vicary Gibbs, in March, 1816, stated, in reference to this machine, that when Mr. Heathcoat had separated one half of the threads, and placed them on a beam as warp threads, and made the bobbin which carried the other half of the threads act between those warp threads, so as to produce Buckinghamshire or pillow lace, *the lace machine was invented*. Relying upon the authenticity of this statement, we feel it due to Mr. Heathcoat to give this explanation.

proportion as production increased; but the demand was immense; and the lace frame became the organ of general supply, — rivalling and supplanting the most finished productions of France and the Netherlands.

The contrast is so remarkable between the production of former times and of the present day, through the employment of machinery, in spinning and yarn, and in the fabrication of the net itself, that it presents a subject of note. In 1812, the price of No. 200, yarn was 40s. per lb.; in 1835, it was only a square yard of middle quality bobbin net, which in 1812 sold for about 4s. could be purchased in 1835 at 10d. A pillow lace maker even of the (1843) can only fabricate from 4 to 5 meshes per minute: the earliest accomplished 1,000 meshes per minute; but at present not less than 30,000 meshes are made by the machines!

Since the publication of our last edition, this trade has experienced great fluctuations. Nottingham, who has devoted great attention to the statistics of the manufacture, and is known as the author of different periodical statements respecting it, estimated that in 1835 produced was 23,400,000 square yards, worth 1,891,875*l.*; in 1833, 30,771,000 square yards, worth 2,240,674*l.*; and in 1836, 28,740,674 square yards, value 1,369,938*l.* At present (1843) the whole number of the bobbin net trade is about 3,200, and of these about 2,600 are in full work (1,400 plain hand machines), and others which have been discontinued are coming into employment. These machines are situated in Nottingham and the neighbourhood, and the remainder in the shire, Derbyshire, the west of England, and the Isle of Wight. It is considered that this branch of trade for 1842 may be estimated thus —

Weight of raw silk used, 128,000 lbs.; weight when prepared, 100,000 lbs., value	-	-	-
Weight of Sea Island cotton, costing 140,000 <i>l.</i> , 2,200,000 lbs.; weight when prepared, 1,400,000 lbs., value	-	-	-

Total value of material	-	-	-
-------------------------	---	---	---

This amount of yarn is calculated to have produced —

Plain quillings and Brussels nets	-	-	-
Fancy and platt nets	-	-	-
Silk ditto	-	-	-

Value of embroidery	-	-	-
Interest of capital, rent, wages, profits, &c.	-	-	-

Total value of bobbin net trade, which may be divided into plain finished goods, 750,000*l.* and fancy and embroidered articles, 1,640,000*l.*; of which sum not less than 1,100,000*l.* has been paid for labour, divided amongst 73,000 men, women, and children —

The business is in the hands of about 100 establishments.

Warp lace trade (a separate branch), employing about 800 machines, almost entirely worked by hand, is estimated thus —

Weight of raw silk used, 40,000 lbs.; when prepared, 30,000 lbs.	-	-	£40,000
Weight of cotton wool, cost 25,000 <i>l.</i> , 600,000 lbs.; when prepared, 450,000 lbs.	-	-	65,000

Total value of material	-	-	£105,000
-------------------------	---	---	----------

Calculated to have produced — Silk lace, value	-	-	150,000
Cotton lace, value	-	-	200,000

This branch is estimated to employ 4,000 hands, receiving 165,000*l.* in wages; and produce is disposed of by about 15 houses in Nottingham and the neighbourhood.

Estimated total value of bobbin net and warp lace trade	-	-	-
---	---	---	---

It is believed that more than half this amount is used for home consumption, of which is sold by London houses: the remainder is exported chiefly to Hamburg, the Netherlands, Antwerp and the rest of Belgium, France (contraband), Italy, Sicily, North and South America, and to our colonies in the East and West Indies and Australia.

This manufacture would now seem to be recovering from the depression which it has undergone in recent years past. Its improvement has been chiefly effected by the adaptation of machinery to the lace in imitation of the best specimens of the pillow lace of former times. This has been effected by means of the "Jacquard" apparatus being successfully applied to the machines under various forms (for which patents have been taken by Mr. Fisher, Mr. Vickers, Mr. Heathcoat and others) and by the introduction of patterns, either of cloth work, or open work, or a combination of both, which has produced a perfection have these improvements in machinery arrived, that the lace now produced bears so close a resemblance to the ancient and most elaborate of the foreign grounds, viz. Valenciennes, Mechlin, and Brussels, as to deceive even a practised eye; and so remarkable a difference in value become to the trade itself, that while a single yard of 12-4ths plain net for one shilling, platt lace of first-rate design in pattern may bring even from 5*l.* to 10*l.* per yard, the former, the cost of a machine might amount to 250*l.*, while the improvement required to produce the latter, would incur an outlay of perhaps 1,000*l.* By the application of the "Jacquard" to the bobbin net frame (by far the most intricate, delicate, and expensive of all the lace machines) a triumph of the most important kind has been achieved for the English manufacture, known in the trade, when confined to the production of plain nets alone; the character of the lace has been elevated, and this has been further promoted by the establishment of government schools of design, where youths are assiduously studying the art of pattern-drawing, and the taste and the higher classes has again been attracted to this most delicate of all our fabrics. The greater width and speed have superseded the narrow frames formerly used; while new machines have acquired an enhanced value by their adaptation to the modern improvements. The greater skill required in working the Jacquard mountings, as well as greater power in working wider frames, now being introduced, has called for a larger amount of adult labour than the narrow machines, and has materially improved the condition of the workmen from that of wages. On the other hand, not less than 250 small owners of machines have disappeared from the list of manufacturers since 1835-36; (at least 500 of the narrow machines formerly in use as old iron;) and the number of embroiderers, formerly employed to a great extent on

now chiefly engaged on the most tasteful description of work, may have been reduced from 100,000 women and children, in 1833, to perhaps 50,000 at present, and even these, unless in the highest branches, only derive a precarious employment.

The condition of the workpeople is generally improving (except in the case of those engaged on plain common goods); their net wages may vary from 12s. to 60s. a week, or may average 20s. Women, 5s. to 12s. or average 7s., and children, 1s. to 5s., or average, 2s. 6d. In the superior departments of the trade employment is on the increase. But the working of machinery by night, and the long hours in which women and children are engaged in labour, deserve the most serious attention, and should, if possible, be restricted. It is right, however, to state that the health of the power machine workman is on the whole understood to be good; the factories are neither hot nor confined; and the hands have only to superintend, not work the machines. Hand machine labour is much heavier, but as it is the custom to work by "shifts" the men are seldom more than 6 hours a day at the frame. The embroidery frame is perhaps the most injurious to health; the workers in general commence at a tender age, and from constantly leaning over the frame while their bodies remain in a state of inactivity, they are frequently distorted in their persons, and become the victims of pulmonary disease. Notwithstanding the sedentary habits of the pillow lace workers, their general health is understood to be better than that of the lace embroiderers, but in both these employments, the hours of labour are much too long for children. They are, however, purely domestic employments under the superintendence of parents; and as the existence of the latter depends in a great measure on the quantity of labour they can bring into operation, their necessities too frequently overbalance their affections, and it is not easy for the legislature to interfere in such cases.

A considerable increase within the last few years has also taken place in bobbin net machinery on the Continent, particularly at Calais, where, in 1823, there were not 35 machines, and perhaps not 100 on the Continent altogether. Mr Felkin stated the number of frames employed there in 1833, as under —

Calais	-	600	8-4ths 11 point hand circular quillings.
Do.	-	60	7-4ths 11 point hand levers.
Do.	-	45	various widths; old machines, pusher, traverse, &c.
Boulogne	-	30	hand circular; chiefly 8-4ths quillings.
St. Omer	-	30	hand machines; plain nets.
Douay	-	145	part power, part hand machines; plain net.
Lille	-	120	chiefly 8-4ths, 10-4ths, and 12-4ths, power; plain net.
Ghent	-	55	power, 12-4ths.
St. Quentin	-	90	chiefly hand; plain nets.
Do.	-	80	8-4ths, 10 4ths, and 12-4ths, power; plain nets chiefly.

Caen	-	35	hand; quillings chiefly.
Paris	-	10	hand machines chiefly.
Lyon	-	50	do. do.
Villages in the north of France	-	540	do. do.
Switzerland	-	50	nearly all hand machines.
Saxony	-	70	do. do.
Austria	-	60	power and hand do.
Russia and Prussia	-	20	probably; both hand and power.
Total	-	1,830	

N. B. — The last mentioned countries, judging from their efforts to obtain model machines, were preparing to manufacture very extensively.

The produce of these machines was estimated at 9,824,000 square yards of net of the value of 570,250*l.*; but they have since increased perhaps 1,000 in number. It was stated in an address presented to the Chamber of Deputies, in March 1833, that bobbin net to the value of 1,000,000*l.* sterling was annually used in France, formed of equal moieties of French and English manufacture. Since that period, the machines have increased from 1,650 to about 2,600, at least 100 having been imported hence since 1836, besides about 200 additional "*insides*," which are the most difficult in construction. Any important improvements which have been made in the machinery have been wholly effected by English mechanics; but these improvements have been speedily copied, and applied on the Continent. Notwithstanding the advantages derived by the lace manufacturer from the acquisition of English machines, a movement is at this time making in France to prevent the importation of English machinery. It is, however, an important fact in reference to the lace trade, that the bobbin net now produced on the Continent, is fully as large as in England. Hitherto the French manufacturers have confined themselves to medium qualities and prices; but they have acquired some advantage over us by the greater taste they display in getting up the goods for the market; and the effects of this competition, which we are now feeling, in the American and other markets, will, no doubt, put our manufacturers on the alert to meet it. French lace is said to be smuggled into this country at from 5 to 10 per cent.; but so superior is the French Custom-house superintendence, that for several years past the smugglers' charge on English lace has been not less than 50 per cent. premium.

The most celebrated foreign laces are —

1. *Brussels*, the most valuable. There are 2 kinds: *Brussels ground*, having a hexagon mesh, formed by plaiting and twisting 4 threads of flax to a perpendicular line of mesh; *Brussels wire ground*, made of silk — meshes partly straight and partly arched. The pattern is worked separately, and set on by the needle.
2. *Mechlin*; a hexagon mesh formed of 3 flax threads twisted and plaited to a perpendicular line or pillar. The pattern is worked in the net.
3. *Valenciennes*; an irregular hexagonal formed of 2 threads, partly twisted and plaited at the top of the mesh. The pattern is worked in the net similar to Mechlin lace.
4. *Lale*; a diamond mesh, formed of 2 threads plaited to a pillar.
5. *Atracou* (called blond); hexagon of 2 threads, twisted similar to Buckingham lace; considered the most inferior of any made on the cushion.
6. *Atracou Point*; formed of 2 threads to a pillar, with octagon and square meshes alternately.

The French nets made by machinery are —

1. *Single Presspoint*, called, when not ornamented, *tulle* and when ornamented, *dentelle*; made of silk; is an inferior net, but is attractive from the beautiful manner in which it is stiffened.
2. *Trice Berlin*; so called from being invented at Berlin, and the stitch being removed 3 needles from its place of looping; is fanciful and ornamented in appearance, but not in demand in England.
3. *Fleur de Tulle*, made from the warp lace machine; mesh of 2 descriptions, which gives a shaded appearance to the net.
4. *Tulle Anglaise* is double pressed point lace.
5. *Bobbin net*, principally made by English emigrants, who
6. *Warp net*, } have settled in France.

\* \* \* We are indebted for this learned and very excellent article to Mr. Robert Slater, of Fore Street, London.

LACK, a word used in the East Indies to denote the sum of 100,000 rupees, which, supposing them standards, or siccas, at 2*s.* 6*d.*, amounts to 12,500*l.* sterling.

LADING, BILL OF. See BILL OF LADING.

LAGAN. See FLOTSAM.

LA GUAYRA, the principal sea-port of the republic of Venezuela, in the province of Caracas, on the Caribbean Sea, lat. 10° 36' 19" N., lon. 67° 6' 45" W. Population 8,000? In 1810, the population is believed to have amounted to 13,000; the reduction being a consequence of the loss of life caused by the tremendous earthquake of 1812, and the massacres and proscriptions incident to the revolutionary war. The population of the city of Caracas, of which La Guayra may be considered as the port, fell off, from the same causes, from 43,000 in 1810, to 23,000 in 1830; but they are now both increasing.

**Port.** — There is neither quay nor mole at La Guayra. Ships moor E. N. E. and W. S. W., with their heads to the north, at from  $\frac{1}{4}$  to  $\frac{1}{2}$  of a mile from the land, in from 9 to 18 fathoms. The holding ground is good; and notwithstanding the openness of the road, vessels properly found in anchors and cables run very little risk of being driven from their moorings.

**Trade.** — The principal articles of export are coffee, cocoa, indigo, hides, sarsaparilla, &c. La Guayra shares the trade of Venezuela with the ports of Cumana, Puerto Cabello, Maracaybo, &c., having about a half of its entire amount. The imports and exports of Venezuela in 1833-34 were as follows: —

Imports.			Exports.		
		Value.			Value.
		Dollars.		Lbs.	Dollars.
Cotton goods -	-	1,063,537	Coffee -	-	11,602,634
Linon ditto -	-	615,270	Cacao -	-	5,384,916
Woolen ditto -	-	75,437	Indigo -	-	421,802
Silk -	-	96,912	Dye-woods -	-	17,667,455
Flour -	-	140,770	Tobacco, cinchona bark, guano, hides, &c. -	-	-
Wool -	-	123,447			
Other imports -	-	1,181,048			
Total -	-	3,296,411	Total -	-	3,394,805

We subjoin a statement of the principal exports from La Guayra during each of the 5 years ending the 5th October, 1847.

Years ending 5th October.	Coffee.	Cocoa.	Cotton.	Sugar.	Indigo.	Hides.
	Quintals.	Panegas.	Quintals.	Quintals.	Quintals.	Number.
1843	147,174	28,624	510	3,268	1,074	31,026
1844	139,086	38,739	535	8,508	708	48,922
1845	122,912	29,418	767	5,153	489	44,523
1846	151,975	32,476	240	4,562	517	28,669
1847	126,912	37,876	1,129	7,040	621	48,773

Duties received at Custom-House, La Guayra, 1842-3, 831,848 doll.; 1843-44, 732,115 do.; 1844-45, 795,651 do.; 1845-46, 891,502 do.

	National.	Foreign (not privileged).		National.	Foreign (not privileged).
	£	cts.		£	cts.
Tonnage duty -	37	50	Municipal bill of health -	2	0
Entrance fee -	4	0	Permit to load and stamp -	1	12½
Anchorage -	12	0	Certificate of sea-worthiness from captain of port, prior to loading, and stamp -	2	0
Captain of port's fee -	3	0			
Interpreter's fee and translating manifest -	2	0			
Permit to discharge and stamp -	1	12½			
Health officer's fee -	4	0			
Municipal charge for water -	40	0			
			Value in sterling money -	£17	15 10
					£32 25

**N.B.** — A ship introducing a cargo, and sailing in ballast, would be liable to all the above charges, with the exception of the last two.

The charge for water is levied without regard to tonnage; viz. sloops and schooners, 20 dollars each, brigs 30, and ships 40.

**Port Regulations.** — On casting anchor, a visit is paid by the collector of customs, or his agent, accompanied by other officers, who take from the master his register, manifest, and muster-roll, and an officer is left on board until the cargo is discharged. The master must swear to his manifest within 24 hours after his arrival, when the permit to discharge is granted, and within 3 days all invoices must be presented. The discharge completed, the same officers repair on board to examine the vessel, and all being found in order, the officer is withdrawn. The clearing of a vessel outwards (that has entered with cargo) in ballast is then completed by paying the port charges; proof whereof being produced, the permission to sail is signed by the governor and harbour master. If the vessel take cargo on board, then the same formality, as to visiting, is pursued, as on the entry of a vessel.

**Credit.** — Goods imported are almost invariably sold upon credit; those exported are, on the other hand, always sold for ready money. The terms of credit vary from 2 to 6 months, or more. Bankruptcy is very rare.

**Commission, Brokerage, &c.** — Any one who pleases may undertake the functions of broker, factor, or merchant in Venezuela. The only obligation is the paying the patent or licence, that must be taken out by every one exercising such trades. This varies, according to the business, from about 14 lbs. 4d. to 66l. 18s. 4d. a year, and falls on natives as well as foreigners. The rates of commission are as follows: —

On sales of goods imported -	-	5 per cent.	But when monies are collected, and remittance is ordered in bills of exchange, including guarantee of the same -	-	2½ per cent.
Guaranteeing the same without regard to time -	-	2½	Negotiating and indorsing bills -	-	2½
On sales of produce -	-	2½	On money remitted as return for goods sold -	-	1
On shipping produce, as returns for goods imported, or upon orders where cash is provided for the purchase -	-	2½	On bills remitted as return for goods sold, including guarantee thereof, as may be agreed -	-	1 to 2½
But upon orders where the amount has to be drawn for, or when provision is made in bills of exchange -	-	5	Advancing money upon letters of credit and drawing for the same -	-	2½
Collecting monies, and remitting the same -	-	1	Collecting or procuring freight for vessels -	-	5

**Insurance.** — There are no establishments for conducting the business of insurance in Venezuela.

**Money, Weights, and Measures.** — The currency of the country consists of silver money, known by the name of *macupena*, divided into dollars of 8 reals,  $\frac{1}{2}$  do. of 4 reals, besides reals,  $\frac{1}{2}$  reals, and quatriles or  $\frac{1}{4}$  reals. This money is of very unequal weight and purity, the coins issued since the commencement of the revolutionary war having been often a good deal defaced. The real should be worth 3d. sterling.

Weights and measures same as those of Spain.

**Tarcs.** — Real tare is taken both at the Custom-house and by the merchant.

**Commercial Prospects.** — The commerce and industry of Venezuela suffered severely from the revolutionary struggle of which she was the theatre. But the country has been for some time past comparatively tranquil. As the riches of Venezuela consist entirely of the products of her agriculture, the legiti-

lature has wisely exerted itself to give it encouragement, by abolishing tithes, the tobacco monopoly, &c. But the want of a supply of efficient labour, arising out of the measures in progress for the abolition of slavery, is the grand obstacle to the progress of industry. The English consul at Puerto Cabello, in advertising to the deficiency of labour, in a communication dated June, 1843, says that an able-bodied man can earn enough by a day's labour to keep himself for a week; and such being the case, can any one expect industry to flourish, unless some sort of system for the supply of compulsory labour be resorted to? Indeed, the consul, though a warm advocate for the abolition of slavery, is, though not very consistently, alive to the necessity of what he calls "a mild compulsory system!" The truth is, that in countries like this, freedom and idleness are synonymous.

We have derived these details partly from *Consular Returns*, and partly from *private information*.

LAMAR, formerly COBIZA, a sea-port of the republic of Bolivia, the ci-devant Upper Peru, on the west coast of South America, lat. 22° 39' 30" S., long. 70° 12' W. Population, 5,000. ?

In 1833 Lamar was declared a free port, and in it centres almost the whole foreign trade of the republic. Its situation is, however, very unfavourable. It labours under a great want of fresh water; and is obliged to import all its provisions by sea, either from Valparaiso, on the one hand, or from Arica on the other. The desert of Atacama lies between it and the internal and populous part of the country, where the towns of Potosi, Cochabamba, Charcas, &c. are situated. The produce imported at Lamar is conveyed across the desert on the backs of mules to the interior; the gold and silver of the mines being brought in the same way to the port to be shipped. These, with copper, saltpetre, chinchilla skins, and wool, form the principal articles of export. Saltpetre is found in large quantities in the desert; the copper is found near the coast, and, owing to the scarcity of fuel, most part of it is exported in the shape of ore.

Peru possesses a long narrow slip of land, stretching along the coast of the Pacific from Arequipa to the Bay of Pisco, which ought naturally to belong to Bolivia, being, in fact, the *littoral* of the latter. The Bolivian government has set on foot various negotiations to obtain the cession of this tract, which, besides greatly improving the frontier of the republic, would, at the same time, render her mistress of Arica, which is, in all respects, much better fitted than Lamar for becoming the entrepôt of her trade. Hitherto, however, these negotiations have proved abortive, so that, as already stated, Lamar at present engrosses most part of the foreign trade of the state.

We subjoin the decree constituting Lamar a free port:—

1. From and after the 1st of July of this present year, 1833, Port Lamar shall be absolutely free and open.

2. Vessels of every nation may enter this port and remain as long as they please, without being subjected to any tax whatever, either on entrance, or during their stay, or on their departure.

3. They shall be free from all duties of anchorage, tonnage, shifting, unloading, or reloading of cargo, deposit, storage, or any other of whatever denomination.

4. Goods may be deposited in private warehouses, without any intervention on the part of the government.

5. The Custom-house of Port Lamar is suppressed. In its stead will be a commissioner's office, for the purpose of distributing permits for the transportation of goods into the interior.

6. Whenever goods are to be sent into the interior, they must first be submitted to the commissioner, together with the invoice corresponding.

7. The commissioner will register them in a book, together with their valuation made by two merchants of the place, and the names of their owners, of the person to whom, and the place where they are to be sent. This is to be signed by the person entering the goods, who at the same time binds himself to have them transported direct to the Custom-house for which they are destined, without opening any of the cases, bags, or other envelopes, each of which shall be sealed, marked, and numbered before departure. These points are to be expressed in the permit.

8. The commissioner shall by the earliest post send a notice to the collector of the Custom-house for which any merchandise is destined, specifying the numbers, characters, quantities, and qualities of the several articles.

9. The goods must not be carried by any unaccustomed roads, but only through Calana and the public thoroughfares; and whenever they pass through any place at which a guard or commissioner is stationed, the permits must be exhibited, in order that their arrival with their seals unbroken may be ascertained.

10. Merchants, either in person or by a representative, must produce to the commissioner of the port a certificate of the delivery of the goods at the Custom-house for which they are destined within 6 months from the day of their entry; in case they do not, they must at the end of that period pay the whole of the duties on them.

11. From and after the 1st of July, 1833, all goods entered at Port Lamar shall pay a duty of only 5 per cent. over and above that of half per cent. to the consular.

12. The duty of 5 per cent. shall be paid thus: at the port, 2 per cent. on the valuation made as aforesaid; and the other 3 at the Custom-house in the interior for which the goods are destined. In each case one half at the end of 3, the other half at the end of 5 months.

13. All goods carried from Port Lamar by land to any of the adjoining republics shall only pay a transit duty of 2 per cent.

14. A duty of 2 per cent. shall be paid on three fourths of all gold and silver money entered at any of the custom-houses in the interior for exportation through Port Lamar.

15. It is absolutely prohibited to export gold or silver, in bullion or plate, except in small quantities for the use of the person carrying it out. It will be seized wherever it is found on this side the districts of San Antonio, San Vincenzo, Atoca, Agua, de Castilla, Leguapete, or the line of the canal.

16. All hardware for agriculture and mining, machinery, instruments of science or the arts, iron, steel, quicksilver, and moral books, may be introduced free of duty into the republic, and productions of Bolivia may be exported likewise free.

17. A premium of 2 per cent. on their value shall be allowed on the exportation through Port Lamar, of cascarilla, wool, tina, cocoa, and coffee, in the shape of remission from duties to the amount on goods carried into the interior from the same port.

The remaining articles of the Decree are of a purely local nature.

Account of the Quantity and Value free on board of the Bolivian, Peruvian, and Argentine Products, exported from Lamar, in 1840.

Products.	Quantity.	Price per Weight or Quantity.	Value in		Country of Production.
			Dollars.	£ sterling.	
Barb. Calana	quintals.	\$ ct. & s. d.			
Copper	4,420	40 0 = 8 0 0	5,600 0	720 0	Bolivia.
Cashed money	-	1 6 = 0 7 0	7,735 0	1,547 0	Bolivia (mines of Lamar or Cobiza).
Ditto	-	-	1,533,485 6	306,697 3	Bolivia (Potosi).
	marcs oz.	-	57,200 0	11,440 0	Argentine Republic.
Fine silver	3,300 6	8 0 = 1 12 0	25,606 0	5,121 4	Bolivian and Peruvian Republics.
Wool, Vicuña	quint. lbs.	12 0 = 2 8 0	715 2	143 1	Bolivian province of Chichas.
Wool, sheep's	348 16	10 0 = 2 0 0	3,481 0	696 4	Ditto.
Total	-	-	1,631,232 0	326,364 12	

N.B.—As this return has been prepared from one published by the Bolivian authorities, we have not altered the prices; but it must be observed that the average value of fine silver free on board in a port of Bolivia, Peru, or Chili, is \$9 4 = 17. 18s., and bar silver \$10 0 = 2l. a marc; and the price of Vicuña wool is about 6 rials = 3s. the pound, or \$75 = 15l. the quintal.

Inasmuch, however, as the greater part of the foreign products for the consumption of Bolivia are imported *via* Arica, we subjoin an

Account of the Value of the Principal Foreign Articles imported into the Peruvian Ports in Transit for Bolivia, in 1840, specifying the Countries under whose Flags the Articles were imported, and the Quantity imported under each: Exchange, 4s. per dollar.

Articles.	Flags under which the Articles were imported.									Total Value.		Amount in Dollars.

Note. — Quicksilver, bar iron, scientific instruments, books, and other articles, the importation of which is forbidden by the laws of the country. — (Consular Returns and private information from Peru.)

**LAMB-SKINS** (Ger. *Lammfelle*; Fr. *Peaux d'agneaux*; It. *Pelli agnole*; Sp. *Pielles de corderos*). The value of lamb-skins varies according to the fineness and colour of the wool. Black lamb-skins are more generally esteemed than any other colour. English lamb-skins are seldom to be met with perfectly since the introduction of Merino sheep into this country, many of the white fleeces in point of quality, arrived at a pitch of perfection which justly entitles them to rank with some of the best fleeces in Spain. The importation of lamb-skins is almost entirely from the Kingdom of Castile. Eight tenths of the whole quantity are supplied by Italy. They are used in the glove manufacture.

**LAMP** (Ger. *Lampe*; Fr. *Lampe*; It. *Lucerna*; Sp. *Lampara*; Rus. *Свѣтъ*). An instrument used for the combustion of liquid inflammable bodies, for the purpose of producing artificial light.

It is unnecessary to give any description of instruments that are so well known. We may remark that the discovery of Sir H. Davy, who, by covering the flame with wire gauze, producing a lamp that may be securely used in coal mines charged with inflammable gas, is the most ingenious and valuable that has ever been made. The following extracts from a copy of the late Mr. Buddle, an able and well-informed coal engineer, evince the great improvement of Humphry Davy's invention.

"Besides the facilities afforded by this invention to the working of coal mines abounding with gas, it has enabled the directors and superintendents to ascertain, with the utmost precision and both the presence, the quantity, and correct situation of the gas. Instead of creeping with a candle, as is usual, along the galleries of a mine suspected to contain fire damp, in order to ascertain its presence, we walk firmly on with the safe lamps, and, with the utmost confidence, prosecute the work of the mine. By observing attentively the several appearances upon the flame of the lamp, the examination of this kind, the cause of accidents which happened to the most experienced miners is completely developed; and this has hitherto been in a great measure matter of conjecture.

"It is not necessary that I should enlarge upon the national advantages which must necessarily result from an invention calculated to prolong our supply of mineral coal, because I think there is every reflecting mind; but I cannot conclude without expressing my highest sentiments of respect for those talents which have developed the properties, and controlled the power, of one of the most dangerous elements which human enterprise has hitherto had to encounter."

**LAMP-BLACK** (Ger. *Kienruss*; Fr. *Noir de fumée*; Nero di fumo; Negro de humo). "The finest lamp-black is produced by collecting the smoke from a lamp with a long wick, which supplies more oil than can be perfectly consumed, or by suffering the flame to play against a metalline cover, which impedes the combustion, not only by conducting off part of the heat, but by obstructing the current of air. Lamp-black, however, is prepared in a much cheaper way for the demands of the trade. The dregs which remain after the eliquation of pitch, or else small pieces of fire burned in furnaces of a peculiar construction, the smoke of which is made to pass through a long horizontal flue, terminating in a close boarded chamber. The soot which is deposited in this chamber is made of coarse cloth, through which the current of air escapes, and the soot remains." — (*Ure's Dictionary of Chemistry*.)

**LAND-WAITER**, an officer of the Custom-house, whose duty it is, upon the importation of any merchandise, to taste, weigh, measure, or otherwise examine the various articles, and to take an account of the same. They are likewise styled searchers, and attend, and join with, the patent searchers, in execution of all coquets for the goods to be exported to foreign parts; and, in cases where drawbacks are allowed, they are to be paid to the merchant on the exportation of any goods, they, as well as the patent searchers, are to certify the shipping thereof on the debentures.

**LAPIS LAZULI**. See **ULTRAMARINE**.

**LAST**, an uncertain quantity, varying in different countries, and with respect to different articles. Generally, however, a last is estimated at 4,000 lbs.; but it varies in different countries.

The following quantities of different articles make a last, viz. — 14 barrels of pitch, tar, or 12 dozen of hides or skins; 12 barrels of cod-fish, potash, or meal; 20 cades, each of 1,000 herrings; 1,000 ten hundred, and every 100 five score; 10½ quarters of cole-seed; 10 quarters of corn or

In some parts of England, 21 quarters of corn go to a last; 12 sacks of wool; 20 dickers (every dicker 12 skins) of leather; 18 barrels of unpacked herrings; 10,000 pilchards; 24 barrels (each barrel containing 100 lbs.) of gunpowder; 1,700 lbs. of feathers or flax.

*Last* is sometimes used to signify the burden or lade of a ship.

**LATH, LATHS** (Du. *Latten*; Fr. *Lattes*; Ger. *Latten*; It. *Correnti*; Rus. *Slegü*), long, thin, and narrow slips of wood, nailed to the rafters of a roof or ceiling, in order to sustain the covering. Laths are distinguished into various sorts, according to the different kinds of wood of which they are made, and the different purposes to which they are to be applied. They are also distinguished, according to their length, into 5, 4, and 3 feet laths. Their ordinary breadth is about an inch, and their thickness  $\frac{1}{4}$  of an inch. Laths are sold by the bundle, which is generally called a hundred: but 7 score, or 140, are computed in the hundred for 3 feet laths; 6 score, or 120, in such as are 4 feet; and for those which are denominated 5 feet the common hundred, or 5 score.

**LATTEN**, a name sometimes given to tin plates; that is, to thin plates of iron, tinned over. — (See **TIN**.)

**LAWN** (Ger. and Fr. *Linon*; It. *Linone*, *Rensa*; Sp. *Cambray clarin*), a sort of clear or open worked cambric, which, till of late years, was exclusively manufactured in France and Flanders. At present, the lawn manufacture is established in Scotland, and in the north of Ireland, where articles of this kind are brought to such a degree of perfection, as nearly to rival the productions of the French and Flemish manufactories. In the manufacture of lawns, finer flaxen thread is used than in that of cambric.

**LAZARETTO**. See **QUARANTINE**.

**LEAD** (Ger. *Bley*, *Blei*; Du. *Lood*, *Loot*; Fr. *Plomb*; It. *Piombo*; Sp. *Plomo*; Rus. *Swinetz*; Pol. *Ołow*; Lat. *Plumbum*; Arab. *Anuk*; Hind. *Sisa*; Pers. *Surb*), one of the most useful metals. It is of a bluish white colour, and when newly melted is very bright, but it soon becomes tarnished by exposure to the air. It has scarcely any taste, but emits, on friction, a peculiar smell. It stains paper or the fingers of a bluish colour. When taken internally, it acts as a poison. It is one of the softest of the metals; its specific gravity is 11.35. It is very malleable, and may be reduced to thin plates by the hammer; it may also be drawn out into wire, but its ductility is not very great. Its tenacity is so small, that a lead wire  $\frac{1}{16}$  inch diameter is capable of supporting only 18.4 lbs. without breaking. It melts at 612°. — (*Thomson's Chemistry*.)

Lead is a metal of much importance, as, from its durability, it is extensively used in the construction of water-pipes and cisterns, as a covering for flat surfaces or tops of buildings, &c. &c. Its salts, which are poisonous, are used in medicine to form sedative external applications; and frequently not a little, by the disreputable wine merchant, to stop the progress of acetous fermentation. Wine thus poisoned may, however, be readily distinguished; a small quantity of the bicarbonate of potass producing a white precipitate, and sulphureted hydrogen a black one. Pure wine will not be affected by either of these tests. "The oxide of lead enters into the composition of white glass, which it renders clearer and more fusible: it is also used in glazing common earthen vessels; hence the reason that pickles kept in common red pans become poisonous. Lead, with tin, and a small quantity of some of the other metals, forms pewter; with antimony, it forms the alloy of which printing types are made." — *Joyce's Chem. (Mineralogy)*.

Mines of this valuable mineral have been wrought in England from the æra of the Romans. It does not, however, appear that it was obtained any where except in Derbyshire, till 1289, when it was discovered in Wales: and the fact that silver was found intermixed with the Welsh ores having transpired, gave a new stimulus to the business; but in other respects the discovery of silver was of no use; the quantity obtained being insufficient to defray the cost of its separation from the lead. At present, the most productive English lead mines are situated in Allendale, and other western parts of Northumberland; at Aldstone Moor, &c., in Cumberland; in the western parts of Durham; in Swaledale, Arkendale, and other parts of Yorkshire; in the hundred of High Peak in Derbyshire, in Salop, and in Cornwall. The Welsh mines are principally situated in the counties of Flint, Cardigan, and Montgomery; those of Scotland in Ayr, Kirkcubright, and Lanark; and those of Ireland, in Wicklow, Waterford, and Down. Lead mines are also wrought to considerable advantage in the Isle of Man. We subjoin an abstract deduced from the accounts furnished by the Museum of Economical Geology, of the

Quantities of Lead Ore and Lead produced in the U. Kingdom in 1847.

					Lead Ore.	Lead.
England	-	-	-	Tons	59,614½	59,507½
Wales	-	-	-	-	18,147½	12,294
Ireland	-	-	-	-	2,251	1,350
Scotland	-	-	-	-	1,159	822½
Isle of Man	-	-	-	-	2,575	1,699
Totals					83,747	55,703

The foreign lead imported is mostly all re-exported; so that the supply obtained from our own mines is adequate, not only to furnish an annual export of from 16,000 to 25,000 tons a year, but to supply the

home consumption. The price of lead declined considerably after 1820, a result principally to be ascribed to the increased supplies of lead from Adra and other mines in Granada, and to the comparatively cheap rate at which they were furnished. Latterly, however, the supplies from the Spanish mines have fallen off, and prices have again risen; pig lead, which in 1820 was worth only 13s. 10s. a ton, being now (1848) worth 16s. per do. A considerable quantity of silver is now obtained from lead; the expense of its extraction having been materially diminished by the invention of improved processes. It is believed that of 55,000 tons of lead raised in Great Britain, about 25,000 yield 8 oz. per ton of silver. Supposing this estimate to be correct, the entire produce of silver will be 200,000 oz.; which, at 5s. per oz., will be 50,000*l.* a year.

An Account of British Lead and Lead Ore exported from the United Kingdom from the 5th of January, 1842, to the 5th of January, 1843; distinguishing the Countries to which it was sent.—(Quarters and Pounds omitted in the Columns, but allowed for in the summing up.)

The consumption of lead in France is rapidly increasing. It is nearly all imported; and the importations have increased from 6,211,500 kilogrammes, at an average of the 4 years ending with 1822 to 15,742,192 kilogrammes, at an average of the 3 years ending with 1830. The imports are almost entirely from Spain; and their increase is, no doubt, principally a consequence of the fall of prices.—(*Journal des Mines, Troisième Série*, iii. 517.)

*Lead Mines of the United States.*—These have recently become of very considerable value and importance. They are principally situated in Illinois and the Wisconsin territory on the Upper Mississippi. We subjoin an account, derived from an authentic source, of the produce of these mines in 1841 and 1842.

Statement of Lead shipped from Galena, Illinois, including Dubuque in Wisconsin, and all other Points on the Upper Mississippi, in 1841 and 1842.

LEAGUE, a measure of length, containing more or fewer geometrical paces, according to the customs of different countries.—(See WEIGHTS AND MEASURES.)

LEAKAGE, in commerce, an allowance in the customs, granted to importers of

wine, for the waste and damage the goods are supposed to receive by keeping. — (See *Warehousing Act*, in art. *WAREHOUSING SYSTEM*.)

**LEATHER** (Ger. *Leder*; Du. *Leder*, *Leër*; Da. *Læder*; Sw. *Lüder*; Fr. *Cuir*; It. *Cuojo*; Sp. *Cuero*; Rus. *Kosha*; Lat. *Corium*), the skins of various quadrupeds, dressed in a particular manner for the use of manufacturers, whose business it is to make them up, according to their different employments.

The leather manufacture of Great Britain is of very great importance, and ranks either third or fourth on the list; being inferior only in point of value and extent to those of cotton, wool, and iron, if it be not superior to the latter. Sir F. M. Eden, in his work on *Insurance*, estimated the value of the different articles manufactured of leather, in 1803, at 12,000,000*l.*; and there is reason to think that this statement was not very wide of the mark. The total quantity of all sorts of leather tanned, tawed, dressed, and carried, in Great Britain, may at present be estimated at about 60,000,000 lbs.; which, at 1*s.* 6*d.* per lb., gives 4,500,000*l.* as the value of the leather only. Now, supposing, as is sometimes done, the value of the leather to amount to *one third* part of the value of the finished articles produced from it, that would show the value of the manufacture to be about 13,500,000*l.*: but if, as others contend, the value of the leather does not exceed *one fourth* part of the value of the finished articles, then the value of the manufacture must exceed 18,000,000*l.* We, however, are inclined to think that we shall be nearer the truth, if we take the smaller sum, and estimate the value of the manufacture at 13,500,000*l.* To get the number of persons employed, we have first to deduct from this sum, 4,500,000*l.* for the material, which leaves 9,000,000*l.* as the aggregate amount of profits, wages, &c. And setting aside 25 per cent. as profit, rent of workshops, compensation for capital wasted, &c., we have a sum of 6,750,000*l.* remaining as wages: and supposing those employed as shoemakers, saddlers, glovers, &c. to make at an average 30*l.* a year each, the entire number of such persons will amount to 225,000.

This, however, does not give the total number of persons employed in the leather trade, inasmuch as it excludes the tanners, curriers, &c. employed in dressing and preparing the leather. But if, from the value of the prepared leather, 4,500,000*l.*, we deduct 1,500,000*l.* for the value of the hides, and 2,000,000*l.* for tanners' and curriers' profits, including the expense of lime, bark, pits, &c., we shall have 1,000,000*l.* left as wages. Now, as the wages of tanners, curriers, leather dressers, &c. may, we believe, be taken at 35*l.* a year at an average, we shall have 28,300 as the number employed in these departments. And adding these to the persons employed in manufacturing the leather, we have a grand total of 253,300 persons employed in the various departments of the business.

Those who may be inclined to suspect these estimates of exaggeration, would do well to reflect on the value of the shoes annually manufactured. It is generally supposed that the expenditure upon shoes may be taken, at an average of the whole population, at 10*s.* each individual, young and old; which, supposing the population to amount to 18,500,000*l.* would give 9,250,000*l.* for the value of shoes only; but taking the value of the shoes at only 8*s.* each individual, it gives 7,400,000*l.* for the amount. Mr. Stevenson (art. *England*, *Edin. Ency.*) supposes that the value of the saddlery, harness, gloves, &c. may be assumed to be at least equal to that of the shoes; but we believe this is too high, and have taken it at 1,300,000*l.* below the value of the shoes. In estimating the value of the entire manufacture at 13,500,000*l.*, we incline to think that we are as near the mark as it is easy to come in such investigations.

In speaking of the leather manufacture, Dr. Campbell has the following striking observations: — "If we look abroad on the instruments of husbandry, on the implements used in most mechanic trades, on the structure of a multitude of engines and machines; or if we contemplate at home the necessary parts of our clothing — breeches, shoes, boots, gloves — or the furniture of our houses, the books on our shelves, the harness of our horses, and even the substance of our carriages; what do we see but instances of human industry exerted upon leather? What an aptitude has this single material in a variety of circumstances for the relief of our necessities, and supplying conveniences in every state and stage of life? Without it, or even without it in the plenty we have it, to what difficulties should we be exposed?" — (*Political State of Great Britain*, vol. ii. p. 176.)

Leather was long subject to a duty: the manufacture being, in consequence, necessarily conducted under the *surveillance* of the excise. In 1812, the duty, which had previously amounted to 1*½d.* per lb., was doubled; and continued at 3*d.* per lb. till July, 1822, when it was again reduced to 1*½d.* per lb. The reduced duty produced a nett revenue of about 360,000*l.* It is clear, however, that either the duty ought not to have been reduced in 1822, or that it ought to have been totally repealed. The continuance of any part of the duty rendered it necessary to continue all the vexatious regulations required to insure the collection of the revenue, while the reduction of 1*½d.* in the cost of preparing a pound of leather was so trifling as hardly to be sensible. It is, however, unnecessary to enter into any discussion to show the extreme inexpediency of laying any duty on an article so indispensable to the labouring class, and to the prosecution of many branches of industry, as leather; and still less to show the inexpediency of subjecting so very important and valuable a manufacture to a vexatious system of revenue laws, for the sake of only 360,000*l.* a year. Luckily, however, these have become matters of history. The leather duties were totally abolished in 1830; and as the manufacture has since been relieved from every sort of trammel and re-

straint, it has rapidly increased. It is to be hoped that no future necessity may arise to occasion the reimposition of the leather duty.

Account of the Number of Pounds' Weight of Leather charged with Duties of Excise in England, in 1824—1829.

1824	-	53,429,539	1826	-	44,927,216	1828	-	50,231,689
1825	-	52,274,957	1827	-	47,616,316	1829	-	46,200,843

The quantity annually charged with duty in Scotland during the same period was, at an average, about 6,000,000 lbs.

The quantity of wrought and unwrought leather exported in 1840, amounted to 2,404,067 lbs., of the declared value of 320,912*l*. The value of the saddlery and harness exported during the same year was 96,162*l*. Above two thirds of the leather exported is sent, principally in the shape of shoes, to the British West Indian, North American, and Australian colonies.

LEDGER, the principal book of accounts kept by merchants and tradesmen, wherein every person's account is placed by itself, after being extracted from the Journal. — (See BOOK-KEEPING.)

LEECH FISHERY. The demand for the medicinal leech (*Hirudo medicinalis*) is so great as to afford employment to a considerable number of persons in catching and selling the animal. It is common throughout Europe, America, and India, inhabiting lakes and pools. Norfolk supplies the greater part of the leeches brought to the London market; but some are taken in Kent, Suffolk, Essex, and Wales; and large quantities are imported from Bordeaux and Lisbon. They are caught in spring and autumn, by people who wade into the pools and allow them to fasten on their limbs; or more generally the catchers beat, as they wade in, the surface of the water with poles, which sets the leeches in motion, and brings them to the surface; when they are taken with the hand and put into bags. As they come to the surface just before a thunder storm, this is regarded a good time for collecting them. — (*Thomson's Dispensatory*.)

We extract from the *Gazette des Hôpitaux* the following interesting account of the fishery of leeches at La Brenne, in France:—

"The country about La Brenne is, perhaps, the most uninteresting in France. The people are miserable looking, the cattle wretched, the fish just as bad—but the leeches are admirable.

"If ever you pass through La Brenne, you will see a man, pale and straight haired, with a woollen cap on his head, and his legs and arms naked; he walks along the borders of a marsh, among the spots left dry by the surrounding waters, but particularly wherever the vegetation seems to preserve the subjacent soil undisturbed: this man is a leech fisher. To see him from a distance,—his woe-begone aspect—his hollow eyes—his livid lips—his singular gestures,—you would take him for a patient who had left his sick bed in a fit of delirium. If you observe him every now and then raising his legs, and examining them one after the other, you might suppose him a fool; but he is an intelligent leech fisher. The leeches attach themselves to his legs and feet as he moves among their haunts; he feels their presence from their bite, and gathers them as they cluster about the roots of the bullrushes and sea weeds, or beneath the stones covered with green and glaucous moss. Some repose on the mud, while others swim about; but so slowly, that they are easily gathered with the hand. In a favourable season, it is possible, in the course of 3 or 4 hours, to stow 10 or 12 dozen of them in the little bag which the gatherer carries on his shoulder. Sometimes you will see the leech fisher armed with a kind of spear or harpoon; with this he deposits pieces of decayed animal matter in places frequented by the leeches; they soon gather round the prey, and are presently themselves gathered into a little vessel half full of water. Such is the leech fishery in spring.

"In summer, the leech retires into deep water; and the fishers have then to strip themselves naked, and walk immersed up to the chin. Some of them have little rafts to go upon; these rafts are made of twigs and rushes, and it is no easy matter to propel them among the weeds and aquatic plants. At this season, too, the supply in the pools is scanty; the fisher can only take the few that swim within his reach, or those that get entangled in the structure of his raft.

"It is a horrid trade, in whatever way it is carried on. The leech gatherer is constantly more or less in the water, breathing fog and mist and fetid odours from the marsh; he is often attacked with ague, catarrhs, and rheumatism. Some indulge in strong liquors, to keep off the noxious influence, but they pay for it in the end by disorders of other kinds. But, with all its forbidding peculiarities, the leech fishery gives employment to many hands: if it be pernicious, it is also lucrative. Besides supplying all the neighbouring *pharmacies*, great quantities are exported, and there are regular traders engaged for the purpose. Henri Chartier is one of those persons; and an important personage he is when he comes to Meobecq, or its vicinity; his arrival makes quite a fête—all are eager to greet him.

"Among the interesting particulars which I gathered in La Brenne relative to the leech trade, I may mention the following:—One of the traders—what with his own fishing and that of his children, and what with his acquisitions from the carriers, who sell quantities *second-hand*—was enabled to hoard up 17,500 leeches in the course of a few months; he kept them deposited in a place where, in one night, they all became frozen *en masse*. But the frost does not immediately kill them; they may generally be thawed into life again. They easily, indeed, bear very hard usage. I am told by one of the carriers, that he can pack them as closely as he pleases in the moist sack which he ties behind his saddle; and sometimes he stows his cloak and boots on top of the sack. The trader buys his leeches *pièce wildlife*, big and little, green and black—all the same; but he afterwards sorts them for the market. Those are generally accounted the best which are of a green ground, with yellow stripes along the body."

LEGHORN, a city and sea-port of Italy, in Tuscany, lat. 43° 33' 5" N., lon. 10° 16' E. Population, in 1836, 76,397.

*Harbour, Road, &c.*—Leghorn has an outer harbour, protected by a fine mole, running in a N.N.W. direction upwards of  $\frac{1}{2}$  a mile into the sea, and a small inner harbour or basin. The water in the harbour is rather shallow, varying from 8 feet in the inner basin to 18 or 19 feet at the end of the mole. The rise of the tides is about 14 inches. Ships lie within the mole with their sterns made fast to it by a cable, and an anchor out ahead. The light-house is built on a rock a little to the S.W. of the mole. It is a conspicuous object, being about 170 feet above the level of the sea. The roadstead lies W.N.W. of the harbour, between it and the Melora bank. The latter is a sand, lying N. and S., 4 miles in length by 2 in breadth, the side nearest the shore being about 4 miles from it. It consists, for the most part, of sand and mud, and has from 3 fathoms to  $\frac{1}{2}$  do. water over it; but towards its southern extremity it is rocky; and there, on some of the points which project above the water, the Melora tower has been constructed to serve as a sea-mark; it bears from the light-house W.  $\frac{1}{4}$  N., distant about 4 miles. The best course for

entering the roads is to keep to the northward of the Melora bank at about a mile from it, and then, having doubled it, to stand on for the light-house about  $\frac{3}{4}$  miles, anchoring in from 7 to 9 fathoms, the light-house bearing S.S.E.  $\frac{1}{2}$  E. 4 miles off. The entrance by the channel to the south of the Melora bank is also quite safe; but it is not so suitable for large ships as that by the north. During southerly winds there is sometimes a heavy sea in the roads, but the holding ground is good; and with sufficient anchors and cables, and ordinary precaution, there is no danger. The lazaretto lies to the south, about 1 mile from the tower, and is said to be one of the best in Europe.

**Trade, &c.** — The comparative security and freedom which foreigners have long enjoyed in Tuscany, still more than its advantageous situation, render Leghorn the greatest commercial city of Italy. Its exports are similar to those from the other Italian ports; consisting principally of raw and manufactured silks, olive oil, borax, fruits, shumac, valonia, wines, rags, brimstone, cheese, marble, argol, anchovies, manna, juniper berries, hemp, skins, cork, &c. Leghorn platting for straw hats is the finest in the world; and large quantities are imported into Britain. — (See HATS, STRAW.) Besides the above, all sorts of articles the produce of the Levant may be had at Leghorn. Recently, however, this trade has fallen off; the English and other nations who used to import Levant produce at second hand from Italy, preferring now, at least for the most part, to bring it direct from Smyrna, Alexandria, &c. The imports are exceedingly numerous and valuable, comprising all sorts of commodities, with the exception of those produced by Italy. Sugar, coffee, and all sorts of colonial produce; cotton stuffs, yarn, and wool; corn, woollen stuffs, spices, dried fish, indigo, dye woods, rice, iron, tin, hides, &c.; are among the most prominent articles. Ships with corn on board may unload within the limits of the lazaretto, without being detained to perform quarantine; a circumstance which has contributed to make Leghorn one of the principal *depts* for the wheat of the Black Sea. Hard wheat, particularly from Taganrog, is in high estimation here and in the other Italian ports. It is particularly well fitted for making vermicelli, macaroni, &c. The government do not publish any official account of the imports and exports of Leghorn; and no mercantile circulars that we have been fortunate enough to fall in with, supply the deficiency.

**Money.** — Down to 1837 accounts were principally kept in *pezza* *da otto real* (or dollars of 8 real), the *pezza* being divided into 90 soldi or 240 denari; but this money has been discontinued since the above date, and accounts are now kept in *lire*. **Pezzes.** The lira of 100 centesimi is worth 7-8 $\frac{1}{2}$ d., so that the par of exchange with London is 30-69 lire per  $\text{£}$  1. The lira is divided in 20 soldi di lire each of 5 centesimi. — (*Tale's Compend.* p. 37.)

**Weights and Measures.** — The pound by which gold and silver and all sorts of merchandise are weighed is divided into 12 ounces, 96 drachmas, 288 grains, and 6,912 grani. It is = 539-542 French grammes, or 5,940 English grains. Hence 100 lbs. of Leghorn = 74,864 lbs. avoirdupois; but in mercantile calculations it is usual to reckon 100 lbs. of Leghorn = 77 lbs. avoirdupois: this, perhaps, has arisen from taking the tare and other allowances, as to which there is a good deal of uncertainty, into account. Thus it is found that the English cwt. seldom renders more than 140 or 142 lbs. at Leghorn, though it is = 150 lbs.; in the instances of logwood, tobacco, and a few others, it does not render more than 155 lbs. The quintal, or *centinajo* = 100 lbs. The cantaro is generally 150 lbs.; but a cantaro of sugar = 151 lbs.; that of oil = 88 lbs.; of brandy = 120 lbs.; of stock-fish, and some other articles = 160 lbs. The *rotolo* is 5 lbs.

Corn is sold by the sacco or sack, = 2-0730 Winchester bushels; hence 4 sacks = 1 Imperial quarter very nearly.

The liquid measures are —

3 Mezette = 1 Bocciale.

2 Bocciali = 1 Fiasco.

90 Fiaschi = 1 Bartie = 12 English wine gallons.

The barile of oil is 16 fiaschi, of two bocciali each; = 8-43 wine gallons; it weighs about 66 lbs. avoirdupois. A large jar of oil contains 30 gallons; a small one 15; and a box with 30 bottles = 4 gallons.

The long measure is the braccio, which is divided into 20 soldi, 40 quattrini, or 240 denari; it contains 29-98 English inches. 155 bracci = 100 English yards. The canna of 4 bracci = 94 English inches.

**Credit, Charges, &c.** — Goods in general are bought and sold for silver money; between which, and the money in which bills of exchange are bought, there is a difference of 7 per cent. (agio) against silver; i. e. 107 dollars in silver are equal to 100 in gold.

On goods bought or sold (unless it be in effective money, when there is no discount) there is generally a discount of 3 per cent.; on all cotton manufactures, 4 per cent.

Charges on sales, including commission, are generally from 6 to 8 per cent.; on fish, 8 or 10 per cent.

In 1836 a joint-stock bank was established in Leghorn, with a capital of 2,000,000 lire (66,666 $\frac{2}{3}$  sterling, taking the lira at 8d.) in shares of 1,000 lire each. The whole of the capital is paid up, and the responsibility is limited to the capital. The managers have the power of issuing promissory notes to the extent of 6,000,000 lire. These notes, though received by the government, are not legal tender. The operations of the Bank are confined to the discounting bills of exchange not having more than four months to run, and to the purchase and sale of foreign coins. The rate of discount is fixed at 5 per cent. The superintendence is vested in a director and eight regents, nominated by the shareholders; and the government appoints a commissary and 3 censors (from among the shareholders), who exercise the highest authority, to secure obedience to the statutes. An annual report and balance sheet is produced, and is accessible to all shareholders. The maximum amount for which notes are issued is 2,000 lire = 66 $\frac{2}{3}$  13s. 4d. sterling, the lowest, 200 lire = 6l. 13s. 4d. sterling. It is a profitable establishment; its shares are at a considerable premium, and it has every prospect of success.

Account of the Imports of some of the leading Articles into Leghorn during each of the Seven Years ending with 1842.

Port Charges are the same on native and foreign ships. The anchorage dues on a vessel of 300 tons amount to 112 current lire, or to 3*l.* 1*s.* 4*d.* sterling; besides which, she must have a bill of health, which costs 7*s.* 2*d.* sterling. These, if she clear out in ballast, are the only charges to which she is subject; but if she clear out loaded, the bill of health will cost about 9*s.* sterling, and there is besides a charge of about 2*d.* sterling for each bill of lading. There are no other port charges whatever. Good water may be

had at about 11d. sterling per tun; and beef, bread, and fuel are all reasonably cheap. Companies for the insurance of ships, but not of lives or houses. — We have gleaned these from *Kelly's Cambist*; *Nelkenbrecher, Manuel Universel*; *Circular Statement of Great Britain*, 3d of January, 1843; *Macgregor's Italian Tariff*, &c. A plan of the road of Leghorn taken from Smyth's *General Chart of the Mediterranean*.

**LEMONS** (Ger. *Limonen*; Du. *Limoenen*; Fr. *Lemons, Citrons*; It. *Limonis*; Port. *Limões*; Rus. *Limonü*; Arab. *Lémōn*), the fruit of the (*Citrus medica*, var. *B. C.*) It is a native of Assyria and Persia, whence it came into Europe; first to Greece, and afterwards to Italy. It is now cultivated in Portugal, and France, and is not uncommon in our greenhouses. Lemon juice is sent to England from Spain, Portugal, and the Azores, packed in chests, each containing 100 lemons, separately rolled in paper. The Spanish lemons are most esteemed. — (For the mode of the imports, see **ORANGES**.)

**LEMON JUICE**, or **CITRIC ACID** (Ger. *Zitronensaft*; Fr. *Juice de Citron*; Sp. *Jugo de limón*), the liquor contained in the lemon, which may be preserved in bottles for a considerable time by covering it with a thin layer of oil. Thus secured, great quantities of the juice are exported from Italy to different parts of the world; from Turkey, also, where abundance of lemons are grown, it is an important article of export, particularly to Odessa. The discovery of the influence of lemon juice is one of the most valuable that has ever been made. Scurvy, formerly so fatal in ships making long voyages, is now almost wholly prevented by a result that is entirely to be ascribed to the regular allowance of lemon juice to the men. The juice is also frequently administered as a medicine, and is used in the manufacture of punch.

**LEMON PEEL** (Ger. *Zitronenschalen*, *Limonschellen*; Fr. *Lames d'écorce*; It. *Scorza de limone*; Sp. *Courtezas de citra*). The outward rind of lemons, which is aromatic, and slightly bitter, — qualities depending on the essential oil it contains. It is turned to many uses; and when well candied, constitutes a very good preserve. *Barbadoes*, a liqueur, known under the name of *Eau de Barbade*, is made from the lemon peel, which the inhabitants have the art of preserving in a manner that renders themselves. Both the liqueur and the conserve used to be in high reputation in France.

**LETTER.** (See **POST OFFICE**.)

**LETTER OF CREDIT**, a letter written by one merchant or corporation to another, requesting him to credit the bearer with a certain sum of money. Letters by post should always follow the granting of a letter of credit; a draft accompanying such advice. It is prudent, also, in giving advice, to send the bearer of the letter, with as many particulars as possible, lest it fall into the hands of other hands.

**LETTERS OF MARQUE AND REPRISAL**, "are grantable by the sovereign of nations, whenever the subjects of one state are oppressed and injured by the subjects of another, and justice is denied by that state to which the oppressor belongs." — *Chittenden*, vol. iii. p. 604.) Before granting letters of marque, government is directed by Hen. 5. c. 7., to require that satisfaction be made to the party aggrieved. If the event of such satisfaction not being made within a reasonable period, letters of marque and reprisal may be issued, authorising the aggrieved party to attack and capture the property of the aggressor nation, without hazard of being condemned as a robber. Such letters are now only issued to the owners or captains of privateers during war. When war has been determined upon. They may be revoked at the pleasure of the sovereign; and when hostilities terminate, they cease to have any effect.

**LICENCES**, in commercial navigation. The rules and regulations in the granting of licences to ships are embodied in the act 8 & 9 Vict. c. 61. as follows: —

*Vessels requiring a Licence.* — All vessels belonging in the whole or in part to H. M. S. being square-rigged or propelled by steam, and all vessels belonging as aforesaid, whether steam or otherwise, being of the burden of 170 tons or less, of which the length is to be in greater proportion than 3 feet 6 inches to 1 foot, and all such last-mentioned vessels of resistance, and all vessels of the burden of 170 tons or more, belonging as aforesaid, and having more than 2 carriage guns of a calibre exceeding 4 lbs., and with more than 2 muskets for every 100 tons, belonging as aforesaid, which shall be found within 100 leagues of the coast of any foreign country, shall be deemed to be without licence, unless the owners thereof shall have obtained a licence from the commissioners in the manner hereinafter described. — § 16.

*Manning of Vessels and Boats.* — Every vessel or boat belonging in the whole or in part to H. M. S., or whereof one half of the persons on board shall be subjects of H. M. S. (not being at the time fitted and rigged as such,) which shall be navigated by a greater number of men and boys included than in the following proportions, viz. if of 30 tons or under, and 4 men; if of 50 tons or under, and above 30 tons, 5 men; if of 80 tons or under, and above 50 tons, 6 men; if of 100 tons or under, and above 80 tons, 7 men; and above that tonnage, 1 man for every 10 tons of such additional tonnage; or if a lugger, then in the following proportions, viz. if of 50 tons or under, and above 30 tons, 9 men; if of 60 tons or under, and above 50 tons, 10 men; if of 80 tons or under, and above 60 tons, 11 men; if of 100 tons or under, and above 80 tons, 12 men; and if above 100 tons, 1 man for every 10 tons of such additional tonnage.

be found within 100 leagues of the coast of the United Kingdom, shall be forfeited, unless such vessel, boat, or lugger shall be especially licensed for that purpose by the commissioners of customs. — § 17.

*Certain Particulars to be inserted in Licences.* — Every licence granted by the commissioners of customs for any vessel or boat requiring licence under this Act shall contain the proper description of such vessel or boat, the name or names of the owner or owners, with his or their place or places of abode, and the manner and the limits in which the same is to be employed, and, if armed, the numbers and descriptions of arms, and the quantity of ammunition, together with any other particulars which the said commissioners may require and direct, and that it shall be lawful for the said commissioners to restrict the granting of a licence for any vessel or boat in any way that they may deem expedient for the security of the revenue. — § 18.

*The Owner to give Security by Bond.* — Before any such licence shall be issued or delivered, or shall have effect for the use of such vessel or boat, the owner or owners of every such vessel or boat shall give security by bond in the single value of such vessel or boat, with condition as follows; viz. that the vessel or boat shall not be employed in the importation, landing, or removing of any prohibited or uncustomed goods contrary to the true intent and meaning of this Act, or any other Act relating to the customs or excise, nor in the exportation of any goods which are or may be prohibited to be exported, nor in the re-landing of any goods contrary to law, nor shall receive or take on board or be found at sea or in port with any goods subject to forfeiture, nor shall do any act contrary to this Act, or any Act hereafter to be made relating to the customs or excise, or for the protection of the trade and commerce of the U. K., nor shall be employed otherwise than mentioned in the licence, and within the limits therein mentioned; and in case of loss, breaking up, or disposal of the vessel or boat, that the licence shall be delivered up within 6 months from the date of such loss, breaking up, or disposal of such vessel or boat to the collector or principal officer of customs at the port at which such vessel or boat shall belong, and that no such bond given in respect of any boat shall be liable to any stamp duty. — § 19.

*Penalty of Bond not to exceed 1000*l*.* — Nothing herein contained shall authorize the requiring any bond in any higher sum than 1000*l*, although the single value of the vessel or boat for which such licence is to be issued may be more than 1000*l*. — § 20.

*Licence Bonds given by Minors to be valid.* — All bonds given by persons under the age of 21 years, in pursuance of the directions herein contained, shall be valid and effectual to all intents and purposes, any thing in any Act, or any law or custom to the contrary in anywise notwithstanding. — § 21.

*Vessels not to be used in any manner not mentioned in the Licence.* — When any vessel or boat shall be found or discovered to have been used or employed in any manner or in any limits other than such as shall be specified in the licence hereby required, or if such licence shall not be on board such vessel or boat, or shall not at any time be produced and delivered for examination to any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise demanding the same, then and in every such case such vessel or boat, and all the goods laden on board, shall be forfeited. — § 22.

*Certain Vessels, Boats, and Luggers not required to be licensed.* — Nothing herein contained shall extend, or be deemed or taken to extend, to any vessel, boat, or lugger belonging to any of the royal family, or being in the service of the navy, victualling, ordnance, customs, excise, or post-office, nor to any whale-boat or boat solely employed in the fisheries, nor to any boat belonging to any square-rigged vessel in the merchant service, nor to any life-boat, nor to any tow-boat belonging to any licensed pilots used in towing vessels, nor to any boat used solely in rivers or inland navigation, nor to any boats solely used in fishing on the coast of Ireland or Scotland. — § 23.

*Penalty for falsifying Licences.* — If any person or persons shall counterfeit, erase, alter, or falsify, or cause to be counterfeited, erased, altered, or falsified, any licence so to be granted as aforesaid, or shall knowingly make use of any licence so counterfeited, erased, altered, or falsified, such person or persons shall for every such offence forfeit the sum of 500*l*. — § 24.

*How long Bonds are to be in force.* — No bond given on account of the licence of any vessel or boat under this or any other Act for the prevention of smuggling shall be cancelled until the space of 12 months after the licence for which such bond had been entered into shall have been delivered up to the proper officer of the customs; and such bond shall remain in full force and effect for 12 months after the delivering up of the licence as aforesaid. — § 25.

*Licences and Bonds granted previous to this Act to continue valid.* — § 26.

*Provisions as to Licences to extend to Guernsey, Jersey, Alderney, Sark, and Man.* — § 27.

**LICENCES**, in the excise, are required in order that individuals may engage in certain businesses. — Subjoined is

An Account of the Businesses that cannot be carried on in Great Britain without Excise Licences; of the Sums charged for such Licences; of the Number of Licences granted for carrying on each Business. in the Year ended the 5th of January, 1843; and of the total Amount of Revenue derived therefrom. — (Obtained from the Excise.)

**LIGHT-HOUSE**, a tower situated on a promontory, or headland, on the sea coast, or on rocks or buildings in the sea, for the reception of a light for the guidance of ships at night.\* There are also floating lights, or lights placed on board vessels moored in certain stations, and intended for the same purposes as those on shore.

**Historical Notices.** — The lighting of fires for the direction of ships at night is of such obvious utility, that we need not wonder at the practice having originated at a very remote era. The early history of light-houses is, however, involved in much obscurity; but it is reasonable to suppose that no long period would elapse after fires were lighted for the premonition and guidance of mariners, till towers would begin to be constructed for their reception. The most celebrated of all the ancient light-houses was that erected by Ptolemy Soter, on the small island of Pharos, opposite to Alexandria, — *nocturnis ignibus cursum navium regens*. — (Plin. lib. v. cap. 31.) It was of great height, and is said to have cost 800 talents.† Its celebrity was such, that Pharos rapidly became, and still continues to be in many countries, a generic term equivalent to light-house. In the ancient world, there were light-houses at Ostia, Ravenna, Puteoli, Caprea, Rhodes, on the Thracian Bosphorus, &c. — (See *Suetonii Opera*, ed. Pitisci, tom. i. p. 755; and the *Ancient Universal History*, ix. 366. 8vo ed.)

The *Tour de Cordouan*, at the entrance of the Gironde, the Eddystone light-house, opposite to Plymouth Sound, and that more recently constructed on the Bell Rock, opposite to the Frith of Tay, are the most celebrated modern light-houses. The *Tour de Cordouan* was begun in 1584, by order of Henry IV., and was completed in 1611. It was at first 169 feet (Fr.) high; but in 1727 it was enlarged, by the addition of an iron lantern, to the height of 175 French, or 186½ English feet. It used to be lighted by a coal fire, but it is now a revolving dioptric light of the first order. It is altogether a splendid structure; and is, besides, remarkable for being the first light-house on which a revolving light was exhibited. — (See BORDEAUX.)

The first light-house erected on the Eddystone rocks only stood about 7 years, having been blown down in the dreadful storm of the 27th of November, 1703; a second, erected in 1708, was burnt down in 1755. The present light-house, constructed by the celebrated engineer Smeaton, was completed in 1759. It is regarded as a masterpiece of its kind; and bids fair to be little less lasting than the rocks on which it stands.

\* *Usus ejus, nocturno navium cursu ignes ostendere, ad prænuuntianda vada, portusque introitus.* — (Plin. *Hist. Nat.* lib. xxxvi. cap. 13.)

† Dr. Gillies tells us (*Hist. of Alexander's Successors*, vol. ii. p. 138. 8vo ed.) that the tower was 450 feet in height; that each side of its square base measured 600 feet, and that its "beaming summit" was seen at the distance of 100 miles! It is almost needless to add, that there is no authority for such statements which, indeed, carry absurdity on their face.

The Bell Rock light-house was built by Mr. Stevenson on the model of the Eddystone. Numerous light-houses, marking the most dangerous points and the entrance to the principal harbours, are now erected in most civilised maritime countries. They are particularly abundant in the Baltic and in the Sound, and have contributed, in no ordinary degree, to render their navigation comparatively safe. Within these few years several new ones have been erected on the British coasts, and on those of France, the United States, &c.

*Precautions as to Light-houses.*—Many fatal accidents have arisen from ships mistaking one light for another; and hence the importance of those on the same coast being made to differ distinctly from each other, and of their position and appearance being accurately laid down and described. The modern inventions of revolving, intermitting, and coloured lights, afford facilities for varying the appearance of each light unknown to our ancestors, and have been, in that respect, of the greatest importance.

*Chart of Light-houses, &c.*—A good descriptive work on light-houses, beacons, &c. is a desideratum. That of Couller, *Guide des Marins pendant la Navigation nocturne*, Paris, 1829, is perhaps the best. It must not be judged by its preface, which is as bad as possible; consisting of scraps from the most fantastical parts of Bryant's Mythology, and of attacks on us for our conduct in relation to Parga, and the alleged ill-treatment of the crew of a vessel wrecked on the island of Alderney! The book is really pretty good, which could not certainly be anticipated from such a commencement. The reader will find the existing English and Irish light-houses, and the greater number of those belonging to Scotland, laid down in the chart attached to the article CAVALAS in this work. Its accuracy may be depended upon, as it has been copied from the chart of the light-houses on the British and contiguous coasts recently published by the Trinity House; the corporation having readily and obligingly granted permission to that effect.

*Law as to British Light-houses.*—The 8 Ellis. c. 13. empowers the corporation of the Trinity House to erect beacons, &c. to prevent accidents to ships; and though the act does not expressly mention light-houses, it has been held to extend to them; and on its authority, and the privileges attached to the office of buoyage and beaconage conferred on the Trinity House in 1494, the corporation erects light-houses. The tolls for their maintenance are generally collected under the authority of letters patent from the Crown; those for the support of the Eddystone light, and some others in different parts of the kingdom, being, however, established by act of parliament. The first light-house erected by the Trinity Corporation was in 1675; but several had been previously erected by private parties in virtue of letters patent. Customs' officers are prohibited from making out any cockpit or other discharge, or taking any report outwards for any ship, until the light duties are paid, and the master shall have produced a light-bill testifying the receipt thereof. It is lawful for persons authorised by the Trinity House to go on board any British or foreign ship to receive the duties, and for non-payment to distrain the tackle of the ship; and in case of delay of payment for 3 days after distress, the collectors of the said duties may cause the same to be appraised by two persons, and proceed to sell the distress. (6 & 7 Will. 4. c. 79. § 3.) All the light-houses, floating lights, &c. exclusive of harbour lights, (from the Fen Islands, on the coast of Northumberland, round by Beachy Head and the Land's End, to the coast of Lancashire, have always belonged to the Trinity House, with the exception of about a dozen lights, viz. Tynemouth, Spurn (shore), Winterton and Orford, Harwich, Dungeness, Skerries, &c. These lights have been partly public and partly private property; but they have latterly been all acquired by the Trinity House.—(See below.) The duties on their account have been, for the most part, always payable to the Trinity collectors.

*Trinity Lights.*—The rules and regulations as to lights may be altered by the Trinity House, with consent of the privy council. We subjoin a copy of the existing instructions issued by the Corporation to their collectors.

#### TRINITY HOUSE, LONDON.

Instructions to  
creeks and members thereunto belonging. for the collection of light duties, &c. at the port of \_\_\_\_\_ and the \_\_\_\_\_

In the fulfilment of your duty as collector of light duties payable to this corporation, to the commissioners for northern lights, Edinburgh, and to the corporation for improving the port of Dublin, your particular attention is directed to the respective tables of duties with which you are herewith furnished, to the observance of the regulations therein set forth, under which the same are leviable as they respectively apply to British overseas traders and foreign privileged vessels, to foreign vessels not privileged, and to vessels in the coasting trade; also of the following in addition thereto, viz. —

1st. You are to demand and receive from the master, owner, or agent of every vessel (not being vessels *bona fide* belonging to her Majesty, or otherwise exempt) the amount of tolls or duties, according to the rate per ton, and per vessel, specified in the said tables, for the particular voyage on which the vessel shall be destined, or from which she may have arrived, subject to the regulation contained in article 5. Loaded vessels bound to or coming from ports overseas, but immediately touching at any port in the U. Kingdom, are to be charged with the rates in the overseas table, for any lights which they may pass, over and above those in the direct course from her first port of departure, or last of arrival, unless such deviation shall be occasioned by stress of weather.

2d. You are to take care to rate all vessels belonging to the U. Kingdom, of every class or description, to the full amount of their registered tonnage; and foreign vessels are to be charged to the full amount of their tonnage, as ascertained by the proper officer of her Majesty's customs.

3d. You are to observe, that neither vessels belonging to the U. Kingdom, nor foreign vessels, are to be charged with the duties on account of a voyage which may have taken place, or may be thereafter contemplated, being from one foreign port to another foreign port, unless, in the prosecution of such voyages, they shall have arrived, or touch at a port or roadstead in the U. Kingdom.

4th. On receipt of any light duties, you are to give a certificate of payment, signed by yourself, to the master, owner, or agent of every ship or vessel for which payment is made, expressing plainly and fully the name of the vessel, the master's name, and the place to which she belongs, her voyage and tonnage, the amount paid, and other particulars specified in the forms provided for your use. Books, containing forms of these certificates, will be regularly supplied to you when re-

quired. Each form of certificate is furnished with a counterpart, the blanks whereof are to be filled up with great accuracy, and the counterparts carefully preserved in order to their transmission to this house, with your other accounts, at the periods hereinafter prescribed; and when any circumstance requires variation from the full charge laid down in the tables, you are to note the cause of such variation, both on the certificate and on its counterpart. In numbering the receipts and counterparts, you are to commence each quarter with No. 1., numbering continuously to its termination; and you are to prefix to the entry in your account the number of the certificate and counterpart to which the charge refers. At the termination of each quarter you are to make a return on the quarterly abstracts (afterwards mentioned) of the number of certificates sent to you, expended, and remaining on hand. You are further to take special care that none of the blank certificates fall into improper hands, or are wasted, as a complete register of the number sent from this house is kept, and you are considered answerable for each. In the event of the duties being of such an amount as to require a stamped receipt, you are to affix one to the light certificate, expressing therein that the amount of light duties, &c., is for annexed certificate, and charge the cost of the stamp to the account of this corporation.

5th. In order the more effectually to secure payment of the duties, and to prevent evasion thereof, you are to have the attention of the proper officer of customs at your port to the provisions of the act 6 & 7 Will. 4. c. 79. s. 53., and require him, in conformity therewith, not to receive any entry or reports, or cockpit, or other discharge, or clearance in trade or outwards, for any vessel liable to any of the duties specified in the tables before referred to, until the owner, master, or agent of such vessel, shall show to such officer of the customs, the certificate of payment thereof duly signed by yourself, or by some other, from which she may have arrived, or on which she may be about to depart; observing, nevertheless, that the duties for vessels in the coasting trade (including colliers coastways) are to be paid at the port at which they deliver their cargoes, and not at the port of loading; and that the duties on all British vessels overseas, and foreign vessels, are to be received previously to clearing outwards for an outward voyage, and inwards for a homeward voyage. In the course of the voyage, you are to observe, that your duty, as collector, extends to all

the crews, members, and roads within the limits of your port, and you are to take all possible means to secure payment of the duties for vessels subject thereto, although not liable to take custom house clearance.

6th. You are to keep true and correct accounts of your collection of light duties on the forms supplied you for that purpose, numbered 1, 2, and 3, setting forth therein, the numbers of the certificate, and dates of payment, the vessels and masters' names, to what port (if British) or country (if foreign) belonging, the voyage, tonnage, rate per ton and per vessel, and the amount received; distinguishing the tonnage of foreign vessels from that of vessels belonging to the U. Kingdom; and also setting forth at what port the duties were last paid, with such other remarks as you may consider needful. The accounts of your collection on the forms before referred to, made up quarterly, to the 31st March, 30th September, and 31st December, inclusive, in each year, are to be regularly transmitted to the secretary at this house, at any time not exceeding 31 days from the termination of each quarter, together with abstract statements of accounts current, on the printed forms with which you will be from time to time furnished. The general statement is to be verified by declaration before a magistrate, and in the printed form annexed thereto. You are to give due advice by letter to the secretary, of the transmission of these accounts, enclosing in such letter a remittance for the balance due thereon.

In the application of the tables of duties to foreign vessels, you are to observe, that vessels belonging to the following states are to be considered and treated as British vessels, until further orders, subject, nevertheless, to the limitations expressed in the note at the foot hereof: viz. America (U. States), Austria, Belgium, Denmark, Germany, Denmark, France, Frankfurt, Hamburg, Hanover, Lubek, Mecklenburg, Mexico, Netherlands, Norway, Oldenburg, Greece, Venezuela, Monte Video, Portugal, Prussia, Rio de la Plata, Russia, Sweden, Sardinia, Peru, Bolivian Confederacy, Uruguay.

For your services in collecting these duties, you will be allowed a commission of 5 per cent., besides the necessary expenses which you may incur in making the collection; and you are authorised to take credit for these allowances, in your quarterly accounts.

By command of the Corporation of Trinity House.  
(Signed) J. HEADERT, Secretary.

*Fees on account of Light-houses.*—A wish to keep the charges on native ships as low as possible, and to insure them a preference, seems to have given rise to the practice that has long existed, of exacting comparatively high duties from the foreign shipping entering our ports. But whatever may have been the motives for making this distinction, its policy seems more than questionable. It is quite right that the foreign ships coming to our shores for commercial purposes should be made to pay the same light and harbour duties as British vessels; but the imposition of comparatively high duties on them is decidedly injurious, inasmuch as it provokes retaliatory measures on the part of other states, obstructs the resort of foreigners to our markets, and, consequently, checks the growth of commerce.

This system was very properly condemned in a report by a committee of the House of Commons, in 1822. There is, in the evidence annexed to that report, some well-authenticated instances of foreign ships having been totally lost, from the disinclination of the captains to enter a British port, while it was in their power, on account of the heavy charges to which they would have been exposed for lights, &c. Down, indeed, to 1835, all ships, whether native or foreign, coming into any British port by *stress of weather*, were charged with full light duties; but this inhospitable regulation was repealed by an order in council of the 7th of February that year, issued on the recommendation of the Trinity House, which exempts such vessels from all charge on account of lights. Our whole policy as to light duties, port charges, &c. has, within these few years, been materially improved, and is now the very reverse of illiberal. It is true that the discriminating duties on foreign ships are still kept up; but in consequence of the general establishment of reciprocity treaties, the distinction has become nominal rather than real, and affects comparatively few of the ships using our seas.

We are glad, also, to have to announce, that very large deductions have been, in most instances, made from the light-house duties. It is, indeed, quite essential to their utility that these should be moderate. They have the same influence upon the intercourse carried on by sea, that tolls have upon that carried on by land; and it is needless to add, that oppressive tolls are amongst the most effectual of all the engines by which rapacious ignorance has contrived to injure a country.\*

*Charges on account of Collection, &c.*—The charges under this head for the lights under the control of the Trinity House amounted, in 1840, to 7,844*l.*, the *expenses of maintenance* (including payments on account of works at different lights, about 35,000*l.*) for the same year being 118,594*l.*, leaving a *net surplus* of 57,705*l.* It is plain, therefore, that the light-house revenue is, at this moment, very much greater than is necessary for keeping the establishment in the most perfect state of efficiency. The surplus revenue is, we believe, in so far at least as the Trinity House is concerned, very judiciously expended in maintaining decayed seamen, and other useful purposes. But, considering the vast importance of low shipping charges, it is probable, perhaps, that such persons might be provided for in some less onerous way, and that the light duties might be still further reduced. It has been proposed to reduce them to such a rate of charge as may be required to keep the lights in the most perfect state. Originally they seem to have been imposed only in this view; but circumstances are now so very different, that it might be inexpedient or impracticable to reduce them to that level, though no one can doubt the advantage of their being reduced to the lowest point, all things considered, that the exigencies of the public service will admit. Instead of reducing the charges generally on all lights, it has been proposed to make some of the more important lights duty free, as by this means the expense of collection would be saved, and business materially facilitated. This, however, would in effect impose a proportionally heavy charge on the ships belonging to the less frequented ports; so that, on the whole, the general reduction of the rates would seem to be the better plan.

*Form of Declaration to be made in verification of your Quarterly Abstract Statement.*

I [or we] do solemnly and sincerely declare that the prefixed is a just and true account of my [or our] collection of light duties, for the period within mentioned. And that who is surety [or are sureties] for me [or us] as collector of these duties, is [or are] alive, and to the best of my [or our] knowledge and belief, is [or are] in good and solvent circumstances; and I [or we] make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an act made and passed in the fifth and sixth year of the reign of His late Majesty, intitled "An Act to repeal an Act of the present Session of Parliament, intitled 'An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the Civil Service, and to substitute Declarations in lieu thereof, and for the more concise Suppression of voluntary and extra-judicial Oaths and Affidavits;' and to make other Provisions for the Abolition of unnecessary Oaths."

Declared before me this day of 18 .

Collector [or Collectors].

*Limitations above referred to.*

Vessels belonging to Oldenburg, by order in council, 15th October, 1814; those of Mecklenburg, by order in council, 14th June, 1815, and those of Columbia and Mexico, by order in council, 3d September, 1817, are privileged inwards, only when coming direct from ports in their respective countries; outwards, under all circumstances.

Vessels belonging to Rio de la Plata, by order in council, 3d September, 1817; under 120 tons, are not privileged.

Vessels belonging to France, by order in council, 26th January, 1826, and those of the Netherlands, by order in council, 11th December, 1837, are privileged only when coming from, or departing for ports in their respective countries laden; but if in ballast, they are privileged under any circumstances.

\* There is nothing new in this statement:—"Avara manus portus clauditi; et cum digitis contrahat, navium sinu vela concluditi; merito enim illa mercatorum cuncti refugiumque sibi dependia ruc cognoscunt."—(Cassiodorus, lib. vii. cap. varia, 9.)

Account specifying the various Light-houses and Floating Lights under the Management of the Corporation of the Trinity House of Deptford Strand; the Rates of Charge on the British and Foreign Ships passing such Lights; with the Amount of Duties collected on account of each Light, during 1841. — (Furnished by Trinity House.)

-------------------------------------	--------------------------------------	--------------------------------------

\* Revenue from 1st September, 1841.

† Revenue from 1st of October, 1841.

‡ Revenue from 1st of October, 1841.

**Private Light-houses.** — Private individuals erecting light-houses have generally obtained a lease of the same from the Crown for a definite number of years, with authority to charge certain fees on shipping. Owing to the great increase of navigation, some of these light-houses became very valuable properties. The most valuable were—

**The Skerries,** on a small islet or rock, to the north-west of the Island of Anglesey was granted to the ancestor of its late proprietor, to be for ever holden by him, his heirs and assigns, by the act 3 Geo. 2 c. 36., which also gave the proprietor power to charge certain rates on all vessels passing the light. Previously to its purchase by the Trinity House, this light produced a nett revenue of about 20,000*l.* a year.

**Harwich Lights,** were held by General Rebou, under lease from the Crown, for 22 years from the 5th of January, 1827, paying to the Crown 3-5ths of the nett duty collected.

**Dungeness Light,** was held under lease from the Crown by the Earl of Leicester for 20 years from Midsummer, 1829. Nett produce of the duties equally divided between the Crown and the leasee. The duties were reduced at the renewal of the lease from 1*d.* to 4*d.* per ton; and it was provided, that at its termination the light-houses and buildings connected therewith, and the ground on which they are erected, should become the property of the Crown.

**Winterston and Orfordness Lights,** were held by Lord Braybrooke under a lease from the Crown, which would have expired on the 1st of June, 1840. Nett produce of the duties equally divided between the Crown and his lordship. The duties were reduced at the last renewal of the lease in 1828, from 1*d.* to 4*d.* per ton. At the expiration of the lease, the light-houses, grounds, &c. were to become the property of the Crown.

**Huastanton Cliff Light,** was held by S. Lane, Esq. under a lease from the Crown, which would have

expired in 1849. From the 16th of October, 1837, 4-15th parts of the nett produce would have gone to the Crown; and the light-houses, &c. would have become, at the expiration of the lease, the property of the Crown, as in the case of the Dungeness and Winterton lights.

The Smalls light-house in St. George's Channel belonged originally to the Trinity Corporation; but having been leased by that body to private individuals, it became, in consequence of the great increase of navigation, a most valuable property. In proof of this it is only necessary to state that the Trinity House having, in 1822, proposed to purchase the reversion of the lease, which had then 54 years to run, the lessees demanded for it no less than 148,430*l*. The Trinity House subsequently effected the purchase; but, owing to the increase of commerce in the interim, they had to pay a larger sum, notwithstanding the diminished length of the lease! This fact affords a striking illustration of the extreme inexpediency of the practice of leasing light-houses to private parties. Wherever they are necessary, they ought to be raised at the public expense, and the fees kept as low as possible. There cannot, in fact, be any greater imprudence or abuse, than to make over to a private individual or association a power to levy, for a long series of years, a certain amount of toll on the ships passing particular lights. The renewals mentioned above are, however, the last transactions of the sort that are ever likely to occur; for by the act 6 & 7 Will. 4. c. 79., the whole right and property in the Harwich, Dungeness, Winterton and Orford, and Hunstanton lights was vested in the Trinity House, subject to the existing leases; and the corporation has, also, acquired, under the powers conveyed to them in the same act, the property of the Skerries light-house, and of the Spurn and other lights. Hence, all the light-houses on the coast, with the exception of those belonging to other boards, are now subject to the same management and regulations; and it is also enacted by the act 6 & 7 Will. 4. c. 79., that no light-house shall be erected on the Scotch or Irish coasts, without the approval of the Trinity House, and that the officers of the latter shall at all times have power to enter upon and examine such lights.

*The Scotch or Northern Lights* are under the management of a set of parliamentary commissioners. The act 6 & 7 Will. 4. c. 79. s. 40. enacts, that from the 1st of January, 1837, all British and foreign privileged vessels, not wholly in ballast, which shall pass any Scotch light-house, or derive any benefit therefrom, shall pay *½d.* per ton for each time of passing every such light-house, except that on the Bell Rock, for which they are to pay *1d.* per ton each time of passing. Foreign vessels, not privileged, pay double these rates.

*Irish Lights.*—It appears from the *Parl. Paper* No. 331. Sess. 1842, that the gross sum collected for Irish light duties during 1841, amounted to 49,999*l.*, of which 37,964*l.* 10*s.* 4*d.* was collected in Great Britain. The rates of charge are as follows:—

Foreign vessel, *½d.* per ton for each light passed; except harbour lights, which are only chargeable to vessels entering the ports within which they are situated.

British and Irish, *½d.* per ton (*½d.* if in ballast) for each light, except as above.

With a duty of 2*s.* on every entry, cocket, or warrant, when from foreign ports, but not otherwise.

*Compensation to Private Parties.*—The authority acquired by certain individuals and public bodies, under letters patent, acts of parliament, and otherwise, of levying certain duties on account of lights, beacons, pilotage, harbour dues, &c. entitled them, for the most part, to demand higher fees from foreign than from British shipping. When, therefore, we entered into reciprocity treaties with foreign powers, government had to compensate the parties in question for the diminution that consequently took place in their charges on foreign ships. But this payment has now ceased, the Trinity Corporation having long since relinquished their claim to compensation; and the act 6 & 7 Will. 4. c. 79. having forbid such compensation being made to them, the Commissioners of Northern Lights, and the commissioners for managing the Irish lights.—(For some account of the Trinity Corporation, the reader is referred to that article; and for accounts of the charges on account of Beaconage, Ballastage, Pilotage, &c. see these titles.)

The following account of the principal British and Irish Light-houses and Floating Lights has been taken from the official statement published by the Admiralty, corrected to 1843.

### I. ENGLISH LIGHT-HOUSES.

Those marked \* are what are called first-class lights.

Name of Light.	Place.	N. Latitude.	W. Longitude.	Number of Lights.	Fixed, Intermitting, or Revolving.	Interval of Revolution or Flash.	Miles seen in clear Weather.	Colour, or any Peculiarity of Light-house.	Height in Feet of Lantern, above High Water.	Height in Feet of Building.	Year erected.
Scellis.*	Summit of St. Agnes Island.	49 55 37	6 20 39	1	Revolving.	Every minute.	16	White.	138	23	1830
Bishop Rock.	On the rock.	50 2	6 7	2	Fixed.	- -	10	Red; carries a ball at each mast head	F. 20. M. 38.	- -	1841
Seven Stones. Light-vessel.	E. side of the rocks.	50 2	6 7	2	Fixed.	- -	10	Red; carries a ball at each mast head	F. 20. M. 38.	- -	1841
Longships.*	Longships Rock, off Land's End.	50 4 4	5 44 44	1	Fixed.	- -	14	White.	88	26	1780
Penzance Pier.	Pier head.	50 7	5 31	1	Fixed.	- -	9	White.	29	22	1817
Lizard.*	Lizard Cliff.	49 57 40	5 19 6	2	Fixed.	- -	20	White.	E. 221. W. 224.	22 43	1754
Falmouth.	St. Anthony Point.	50 8	5 1	1	Revolving.	Every 20 seconds.	12	White.	63	49	1825
Eddystone.*	Eddystone Rock.	50 10 54	4 15 53	1	Fixed.	- -	13	White.	78	72	1759
Plymouth Break-water.	On West end	50 20	4 9	1	Fixed.	- -	9	Stone.	63	- -	1844
Plymouth Harbour.	W. Barbican pier head.	50 22	4 7	1	Fixed.	- -	6	- -	29	20	1825
Start Point.*	140 yards inside of the S. E. extreme of the Point.	50 13 22	3 37 43	1	Revolving.	Every minute.	19	White.	204	94	1826
Dartmouth.	St. Petrox Point, W. side of entrance.	50 20	3 33	1	Fixed.	- -	7	- -	49	32	1837
Brixham.	Pier head.	50 24	3 50	1	Fixed.	- -	-	On an iron stand	20	- -	1820
Teignmouth.	S. W. end of the Point.	50 53	3 28	1	Fixed.	- -	9	Limestone Tower.	51	- -	1844
Casquets.*	Highest of the Casquet Rocks.	49 43 22	2 22 10	3	Revolving.	Every quarter minute.	15	White.	81 each.	One 13, others 38	1710
Guernsey.	St. Pierre, Pier head, South side of entrance.	49 27	2 33	1	Fixed.	- -	11	White.	40	30	1820
Portland.*	Bill of Portland.	50 51 22	2 26 49	2	Fixed.	- -	19	White.	108	85	1736
Weymouth.	South Pier head.	50 37	2 26	1	Fixed.	- -	16	White.	131	70	1780

**LIMA**, the capital of Peru, on the west coast of South America, lat.  $12^{\circ} 2' 42''$  S., lon.  $77^{\circ} 7' 15''$  W. Population variously estimated; but may probably amount to from 50,000 to 60,000.

Callao, the port of Lima, is about 6 miles W. from the latter. The harbour lies to the north of a projecting point of land, in the angle formed by the small uninhabited island of San Lorenzo. Previously to the emancipation of Peru, and the other *ci-derant* Spanish provinces in the New World, Lima was the grand *entrepôt* for the trade of all the west coast of South America: but a considerable portion of the foreign trade of Peru is now carried on through Buenos Ayres, and the former is also in the habit of importing European goods at second hand from Valparaiso and other ports in Chili. The exports from Lima consist principally of silver, which is by far the most important article, copper ore, bark, soap, Alpaca wool, &c. Guano is found in large quantities on some parts of the coast of Peru, but is principally imported from some small islands, opposite to Pisco, where it is found in vast quantities. The great value of guano as a manure is now generally recognised, and it is hardly of less importance as an article of commerce, no fewer than 80,000 tons having been imported in 1847. It was partly, however, brought from Chili and other parts as well as from Peru; but that from the latter is decidedly the best. The imports consist principally of cotton stuffs, linens, woollens, and hardware, principally from England; silks, brandy, wine, and quicksilver from Spain and France; stock-fish and flour from the United States, indigo from Mexico, Paraguay herb from Paraguay, spices, dye-stuffs, &c. Timber for the construction of ships and houses is brought from Guayaquil. The declared value of the different articles of British produce and manufacture exported to Peru in 1846, amounted to 820,535*l*.

*Monies, Weights, and Measures*, same as those of Spain; for which, see CADIZ.

**LIME** (Ger. *Kalk*; Fr. *Chaux*; It. *Calcina*, *Calce*; Sp. *Cal*; Rus. *Isvest*), an earthy substance of a white colour, moderately hard, but which is easily reduced to powder, either by sprinkling it with water or by trituration. It has a hot burning taste, and in some measure corrodes and destroys the texture of those animal bodies to which it is applied. Specific gravity, 2.3. Calcium, the metallic basis of lime, was discovered by Sir H. Davy.

There are few parts of the world in which lime does not exist. It is found purest in limestone, marble, and chalk. None of these substances is, however, strictly speaking, lime; but they are all easily converted into it by a well-known process; that is, by placing them in kilns or furnaces constructed for the purpose, and keeping them for some time in a white heat, — a process called the burning of lime. — (Thomson's *Chemistry*.)

The use of lime as mortar in building, has prevailed from the earliest antiquity, and is nearly universal. It is also very extensively used in this country, and in an inferior degree in some parts of the Continent and of North America, as a manure to fertilise land. But it is a curious fact that the use of lime as a manure is entirely a European practice; and that its employment in that way has never been so much as dreamed of in any part of Asia or Africa. Lime is of much importance in the arts, as a flux in the smelting of metals, in the shape of chlorate in bleaching, in tanning, &c. Lime and limestones may be carried and landed coastward without any customs document whatever. Its consumption in this country is very great.

**LIME** (Fr. *Citronier*; Ger. *Citron*; Hind. *Nembo*), a species of lemon (*Citrus medica*, var. *δ C.*), which grows in abundance in most of the West India islands, and is also to be met with in some parts of France, in Spain, Portugal, and throughout India, &c. The lime is smaller than the lemon, its rind is usually thinner, and its colour, when the fruit arrives at a perfect state of maturity, is a fine bright yellow. It is uncommonly juicy, and its flavour is esteemed superior to that of the lemon; it is, besides, more acid than the latter, and to a certain degree acrid.

**LINEN** (Ger. *Linnen*, *Leinwand*; Du. *Lynwaat*; Fr. *Toile*; It. *Tela*, *Panno*, *lino*; Sp. *Linza*, *Tela de lino*; Rus. *Polotno*), a species of cloth made of thread of flax or hemp. The linen manufacture has been prosecuted in England for a very long period; but though its progress has been considerable, particularly of late years, it has not been so great as might have been anticipated. This is partly, perhaps, to be ascribed to the efforts that have been made to bolster up and encourage the manufacture in Ireland and Scotland, and partly to the rapid growth of the cotton manufacture — fabrics of cotton having to a considerable extent supplanted those of linen.

In 1698, both houses of parliament addressed his Majesty (William III.), representing that the progress of the woollen manufacture of Ireland was such as to prejudice that of this country; and that it would be for the public advantage, were the former discouraged, and the linen manufacture established in its stead. His Majesty replied, — "I shall do all that in me lies to discourage the woollen manufacture in Ireland, and encourage the linen manufacture, and to promote the trade of England!" We may remark, by the way, that nothing can be more strikingly characteristic of the illiberal and erroneous notions that were then entertained with respect to the plainest principles of public economy, than this address and the answer to it. But whatever the people of Ireland might think of their sovereign deliberately avowing his determination to exert himself to crush a manufacture in which they had begun to make some progress, government had no difficulty in prevailing upon the legislature of that country to second their views, by prohibiting the exportation of all woollen goods from Ireland, except to England, where prohibitory duties were already laid on their importation! It is but justice, however, to the parliament and government of England, to state that they have never discovered any backwardness to promote the linen trade of Ireland; which, from the reign of William III. downwards, has been the object of regulation and encouragement. It may, indeed, be doubted whether the regulations have been always the most judicious that might have been devised, and whether Ireland has really gained any thing by the forced extension of the manufacture. Mr. Young and Mr. Wakefield, two of the highest authorities as to all matters connected with Ireland, contend that the spread of the linen

manufacture has not really been advantageous. And it seems to be blished, that though the manufacture might not have been so widely have been in a sounder and healthier state, had it been less interfered with.

*Bounties.* — Besides premiums and encouragements of various kinds granted on the exportation of linen for a very long period previous to 1829, for example, notwithstanding it had then been very much diminished, amounted to about 300,000*l.*, or to nearly *one seventh* part of the value of the linen exported that year! It is not easy to imagine the bounty of this sort, instead of promoting the manufacture, rendered it comparatively indifferent to improvements; and though it was what is to be thought of the policy of persisting for more than a century the foreigner with linens for less than they cost? We have not the means of ascertaining the various sums expended in well-meant but useless attempts at manufacture, added together, with their accumulations at simple interest, found sufficient to yield an annual revenue, little, if at all, inferior to the value of the linens we now send abroad. And after all, the business of the manufacture, any real good, or to take firm root, till the manufacture ceased to be carried on principally in mills, and by the aid of machinery, the old forcing system tended to counteract. The only real and encouraging encouragement the manufacture has ever met with, has been the exemption of the duties on flax and hemp, and the relinquishing of the absurd tax on their growth at home.

Spinning by the hand is now nearly unknown in Ireland, and the manufacture has appeared from several parts of the country, where it had been largely carried on by those who were partially dependent on it for subsistence, in a very different manner, the whole, however, there can be no doubt that the introduction of machinery will be, in the end, most advantageous. Belfast has long been the seat of the manufacture in Ireland, and there it is carried on in large factories furnished with the most improved machinery, and conducted on the most approved principle. In the town and its immediate vicinity, 25 steam mills for spinning have been erected, which employed 800 hands. In 1835, the exports of linen amounted to 53,881,000 yards of the value of 2,694,000*l.* According to the returns, there were in Ireland, in 1838, 40 flax-mills employing in the manufacture 1,000 hands.

The total average export of linens from Ireland during the 3 years ending with 1838, was 51,947,413 yards, of which 49,031,073 came to this country, and the other parts being only 2,916,340. Since 1825, the trade between Ireland and Britain has been placed on the footing of a coasting trade; and linen is now imported without any specific entry at the Custom-house, and on the same terms as their quantity and value.

*Scotch Linen Manufacture.* — In 1727, a Board of Trustees was established for the superintendence and improvement of the linen manufacture in Scotland, to suppose that the institution of this Board could of itself have been sufficient to promote the service; but considerable bounties and premiums being at the same time granted on the production and exportation of linen, the manufacture went on increasing, but it did not increase so fast as cotton and some others, which had the aid of adventitious support, until machinery began to be extensively employed in the manufacture; so that it is very doubtful whether the influence of the Board has been so great as it would at first sight appear to have been. The regulations of the Board, after having been long objected to by those concerned, were at length altered, and the bounties have now ceased. We subjoin

An Account of the Quantity and Value of the Linen Cloth manufactured and exported from Scotland during the Ten Years ending with 1822, being the latest Period to which the Returns have been made.

Years.	Yards.	Value.	Average Price per Yard.	Years.	Yards.	Value.
		£ s. d.	d.			£ s. d.

This account is not, however, of much use. The stamp was only affixed to the goods when they were paid, that is, on linen intended for exportation. Linen manufactured for private sale, was not stamped. — (*Headrick's Survey of Forfar*, p. 506.)

Dundee is the grand seat of the Scotch linen manufacture; and during the last few years has been so extraordinary, that the following table may not be unacceptable.

The manufacture appears to have been introduced into Dundee at the beginning of last century; but, for a lengthened period, its progress was slow.

slow. In 1745 only 74 tons of flax were imported, without any hemp; the shipments of linen cloth during the same year being estimated at about 1,000,000 yards, no mention being made either of sail-cloth or bagging. In 1791, the imports of flax amounted to 2,444 tons, and those of hemp to 299 tons; the exports that year being 7,842,000 yards linen, 280,000 yards sail-cloth, and 65,000 do. bagging. From this period the trade began to extend itself gradually, though not rapidly. Previously to the peace of 1815, no great quantity of machinery was employed in spinning; but about this period, in consequence, partly and principally, of the improvement of machinery, and its extensive introduction into the manufacture, and partly of the greater regularity with which supplies of the raw material were obtained from the Northern powers, the trade began rapidly to increase. Its progress has, indeed, been quite astonishing; the imports of flax and hemp having increased from about 3,000 tons in 1814 to 15,000 tons in 1830, and 40,000 tons in 1845, of which at least 30,000 tons were spun by the mills in the town, the rest being spun in the vicinity. The value of the exports of manufactured goods and yarn, from Dundee, amounts at present (1847) to from 1,600,000*l.* to 1,700,000*l.* a year. We beg to subjoin

An Account of the Quantities of the different Varieties of Linen Goods exported from Dundee during each of the Four Years ending with 1845.

For some farther details as to the late extraordinary progress made by Dundee, the reader is referred to the art. Docks.

It is not easy to give any satisfactory explanation of the wonderful progress of the linen manufacture at Dundee. Something must be ascribed to the convenient situation of the port for obtaining supplies of the raw material; and more, perhaps, to the manufacture having been long established in the towns and villages of Strathmore, the Carse of Gowrie, and the northern parts of Fife, of which Dundee is the emporium. But these circumstances do not seem adequate to explain the superiority to which she has recently attained in this department; and, however unphilosophical it may seem, we do not really know that we can ascribe it to any thing else than a concurrence of fortunate accidents. Nothing, in fact, is so difficult to explain as the superiority to which certain towns frequently attain in particular departments of industry, without apparently possessing any peculiar facilities for carrying them on. But from whatever causes their pre-eminence may arise in the first instance, it is very difficult, when once they have attained it, for others to come into competition with them. They have, on their side, established connections, workmen of superior skill and dexterity in manipulation, improved machinery, &c. Recently, indeed, the advantages in favour of old establishments have been, to a considerable extent, neutralised by the prevalence of combinations amongst their workmen; but it is to be hoped that means may be devised for obviating this formidable evil.

*Value of the Manufacture. Number of Persons employed.* — There are no means by which to form an accurate estimate of the entire value of the linen manufacture of Great Britain and Ireland. Dr. Colquhoun estimated it at 15,000,000*l.*; but there cannot be the shadow of a doubt that this estimate was, at the time, absurdly exaggerated. In the last edition of this work we estimated the annual value of the manufacture at 7,500,000*l.*\* But it has increased very rapidly in the interval, principally through the great extension of the exports to France, and its value is at present (1847) certainly not under, if it do not exceed, 10,000,000*l.* or 12,000,000*l.* But taking it at the former amount, and setting aside a third part of this sum for the value of the raw material, and another third for profits, wages of superintendence, wear and tear of capital, coal, &c., we have 3,333,000*l.* to be divided as wages among those employed in the manufacture. And supposing each individual to earn, at an average, 24*l.* a year, the total number employed would be about 133,000. It may be thought, perhaps, that 24*l.* is too low an estimate for wages; and such, no doubt, would be the case, were not Ireland taken into the average. But as many persons are there employed in the manufacture at very low wages, we believe that 24*l.* is not very far from the mean rate.†

\* Sir F. M. Eden estimated the entire value of the linen manufacture of Great Britain, in 1800, at 2,000,000*l.* — (*Treatise on Insurance*, p. 76.)

† A great number of persons in Ireland are only partly employed in the manufacture; but the above estimate supposes that the 133,000 individuals are wholly employed in it.

The rapid increase in the exports of linen goods and yarn, &c. France (see, for an account of this increase, the art. *HAYRE*) have declined, is wholly a consequence of their comparative cheapness occasioned by our superior and cheaper machinery. And wish to rival us in this department of industry, they should either repeal the oppressive duties on iron and machinery import would, of course, proportionally reduce the cost of spinning (factories), to place their manufacturers and spinners on some footing as ours. In this way they might, perhaps, have succeeded; but the attempts that have recently been made to bolster up means of duties, must necessarily fail; and will have no effect exploded practices and to promote the trade of smuggling.

Our exports of linen goods are also increasing to most other countries; and we are gaining on the Germans in most markets accessible to both. Hence the decrease of late years in the Hamburg. — (See *HAMBURG*.)

The improvement in the manufacture of damasks and table linen is principally carried on in Dunfermline and Kirkcaldy, has been in the other departments of the trade, especially since the introduction of mounting. In fact, table linen is now shipped from this country the duty of 10 per cent. on the importation of German damasks might be reduced or repealed without the measure having any effect on the manufacture.

*Consumption of Foreign Linens.* — It will be seen from the returns of foreign linens for the 4 years ending with 1844, give the consumption of foreign linens in this country is quite incommensurate declared value of those entered for home consumption, in 1844, £ 40,000*l*.

Account of the Quantities and Values of the Linen Manufactures and Linen U. Kingdom in 1845, specifying the Countries to which the same were exported and Values of those sent to each.

*Regulations as to the Linen Manufacture.* — Any person, native or foreigner, set up in any place, privileged or not, corporate or not, any branch of the foreigners practising the same shall, on taking the oath of allegiance, &c., be of natural born subjects. — (15 *Cha. 2. c. 15.*)

Persons affixing stamps to foreign linens in imitation of the stamps affixed

Ireland, shall forfeit *5*l.** for each offence; and persons exposing to sale or packing up any foreign linens as the manufacture of Great Britain or Ireland, shall forfeit the same and *5*l.** for each piece of linen so exposed to sale or packed up. — (17 Geo. 2. c. 30.)

Any person stealing to the value of 10*l.* any linen, woollen, silk, or cotton goods, whilst exposed during any stage of the manufacture in any building, field, or other place, shall, upon conviction, be liable at the discretion of the court to be transported beyond seas for life, or for any term not less than 7 years, or to be imprisoned for any term not exceeding 4 years, and, if a male, to be once, twice, or thrice publicly or privately whipped, as the court shall think fit. — (7 & 8 Geo. 4. c. 29. § 14.)

**LIQUORICE** (Ger. *Suessholz*; Fr. *Régliasse*, *Racine douce*; It. *Regolizia*, *Logorizia*, *Liquirizia*; Sp. *Regaliz Orozuz*), a perennial plant (*Glycyrrhiza glabra*), a native of the south of Europe, but cultivated to some extent in England, particularly at Mitcham in Surrey. Its root, which is its only valuable part, is long, slender, fibrous, of a yellow colour, and when fresh very juicy. The liquorice grown in England is fit for use at the end of 3 years; the roots, when taken up, are either immediately sold to the brewers' druggists, or to common druggists, by whom they are applied to different purposes, or they are packed in sand, like carrots or potatoes, till wanted.

**LIQUORICE JUICE** (*Succus Liquoritiæ*), popularly *black sugar*, the inspissated juice of the roots just mentioned. Very little of this extract is prepared in Britain, by far the larger part of our supply being imported from Spain and Sicily. The juice obtained by crushing the roots in a mill, and subjecting them to the press, is slowly boiled till it becomes of a proper consistency, when it is formed into rolls of a considerable thickness, which are usually covered with bay leaves. This is the state in which we import it. Most part of it is afterwards redissolved, purified, and cast into small cylindrical rolls of about the thickness of a goose quill, when it is called *refined liquorice*. It is then of a glossy black colour, brittle, having a sweet mucilaginous taste. It is used in the *materia medica*, particularly in coughs, colds, &c. — (*Thomson's Chemistry*; *Thomson's Dispensatory*.)

The imports in 1840 and 1841 amounted, at an average, to 7,123 cwt. a year. The oppressive duty of *3*l.* 15*s.** a cwt., with which it was loaded down to 1842, was reduced in the course of that year to *27*s.* 6*d.** (See **TARIFF**.)

**LISBON**, the capital of Portugal, situated on the north bank of the river Tagus, the observatory of the fort being in lat. 38° 42' 24" N., lon. 9° 5' 50" W. Population about 240,000.

**Port.** — The harbour, or rather road, of Lisbon is one of the finest in the world, and the quays are at once convenient and beautiful. Fort St. Julian marks the northern entrance of the Tagus. It is built on a steep projecting rock. There is a light-house in the centre, 120 feet above the level of the sea. At the mouth of the Tagus are two large banks, called the North and South *Cachops*. There are two channels for entering the river; the north or little, and the south or great channel, exhibited in the subjoined plan. On the middle of the South Cachop, about 1½ mile from Fort St. Julian, is the Bugio fort and light-house, the latter being 66 feet in height. The least depth of water in the north channel on the bar is 4 fathoms, and in the south, 6. The only danger in entering the port arises from the strength of the tide; the ebb running down at the rate of 7 miles an hour; and after heavy rains, when there is a great deal of fresh water in the river, the difficulty of entering is considerably augmented. When, at such periods, there is a strong wind from the sea, there is a complete break all over the bar; vessels moor up and down the river with open hawse to the southward. In some parts they may come within 200 yards of the shore, being guided by the depth of water, which, from nearly 20 fathoms in mid-channel, shoals gradually to the edge.

**References to Plan.** — A, Fort St. Julian and light-house. B, Bugio fort and light-house. C, Barcena look-out house. D, Belem Castle. E, Point Cassilhas. F G, Bugio Fort and Sugar Loaf Hill in one, mark the north channel.

**Trade, &c.** — Lisbon is one of the best situated commercial cities of Europe. But notwithstanding this circumstance, the excellence of the port, and the command of the navigation of the Tagus, her commerce is comparatively trifling. The despotism, intolerance, and imbecility of the government have weighed down all the energies of the nation. The law and police being alike bad, there is no adequate security. Assassination is very frequent. Industry of all sorts is, in consequence, paralysed; and since the emancipation of Brazil, commerce has rapidly declined. Formerly Lisbon had about 400 ships, of from 300 to 600 tons burden, employed in the trade with South America. But at present there are not above 50 ships belonging to the port engaged in foreign trade; and, of these, the average burden does not exceed 150 tons! The produce of Portugal sent to foreign countries, is almost entirely conveyed to its destination in foreign ships. The trade between Lisbon and Cork is, we believe, the only exception to this; it being principally carried on in Portuguese vessels, which take salt from St. Ubes, and bring back butter in return. About 200 small craft belong to the city, which are exclusively employed in the coasting trade.

There are neither price currents, shipping lists, nor official returns of any kind, published in Lisbon. The principal exports are lemons and oranges — which, however, are very inferior to those of Spain; wine, particularly Lisbon and Calcavella; wool, oil, tanned hides, woollen caps, vinegar, salt, cork, &c. Besides colonial produce, the principal imports consist of cotton, woollen, and linen goods; hardware, earthenware, dried fish, butter, corn, cheese, timber and deals, hemp, &c.

**Money.** — Accounts are kept in rees, 1,000 of which = 1 milree. In the notation of accounts the milrees are separated from the rees by a crossed cypher (p.), and the milrees from the millions by a colon: thus, Re. 2700 : 500 = 2,700 milrees and 500 rees.

The cruzado of exchange, or old cruzado, = 400 rees; the new cruzado = 480 rees; the testoon = 100 rees; and the vintem = 20 rees.

The gold piece of 6,400 rees = 35s. 11d. sterling; the gold cruzado = 2s. 3d.; and the milree, valued in gold, = 67½d. sterling. It appears, however, from assays made at the London mint 1831, on modern silver cruzados, that the average value of the milree in silver may be estimated at 60d. or 5s. sterling.

**Weights and Measures.** — The commercial weights are, 5 onunces = 1 marc; 2 marcs = 1 pound or arratel; 32 pounds = 1 arroba; 4 arrobas = 1 quintal; 100 lbs. or arratels of Portugal = 101-19 lbs. avoirdupois = 45-895 kilogram. = 94-761 lbs. of Hamburg = 92-918 lbs. of Amsterdam.

The principal measure for corn, salt, &c. is the moyo, divided into 15 fanegas, 30 alqueires, 940 quartos, 450 sesterias, &c. The moyo = 35-03 Winchester bushels.

The principal liquid measure is the almude, divided into 2 pates, 18 canadas, or 48 quartells; 18 almudes = 1 bardi; 36 almudes = 1 pipe; 54 almudes = 1 tonelada. The almude = 4-27 English wine gallons; and the tonelada = 127½ ditto. A pipe of Lisbon is estimated by the Custom-house (British) at 140 gallons; and this pipe is supposed to be 31 almudes.

**Bank of Lisbon.** — This establishment was founded in 1822. Its capital consists of about 700,000l. sterling, divided into 7,000 shares. The shareholders are not liable beyond the amount of their shares. The bank discounts bills not having more than 3 months to run, at 5 per cent. Its dividends, at an average of the 3 years ending with 1831, were about 6 per cent. It enjoys the singular but valuable privilege of having its claims on all estates paid off in full, provided the estate amounts to so much; other creditors being obliged to content themselves with a division of the residue, if there be any.

**Port Regulations.** — All vessels entering the Tagus are obliged to come to anchor off Belem Castle, where there is an office at which they must be entered, their cargoes declared, from whence they come, and whether the cargo be intended to be landed in Lisbon or not; if not, the master applies for "prangada," that is, for leave to remain 8 days in the port for the purpose of disposing of the cargo or of departing with it. Two Custom-house officers are then sent on board, and if the cargo is to be discharged at Lisbon, the vessel proceeds to the Custom-house, where the master makes entry, delivering the manifest and bills of lading attached to the certificate of the Portuguese consul, at the port of lading, in order to identify the cargo. The officers put on board at Belem are then relieved by 2 others, who remain until the vessel be discharged and visited by the Custom-house searcher. The port duties have to be paid in different offices; but the vessel is not subject to any other charges.

All goods sent on board for exportation must be accompanied by a permit from the Custom-house. When the clearances are obtained, the papers are presented by the master, or the ship's agent, to the authorities at Belem, who deliver the signal the vessel is to hold when going to sea.

There is no regular warehousing and bonding system at Lisbon. All imported dry goods are allowed to remain in the Custom-house stores 1 year, and liquids 6 months, without being charged warehouse rent, provided they are intended for consumption, and pay the duties accordingly. But if, after that period, they are taken out to be exported, they are charged 3 per cent. duty.

**Port Charges.** — On a foreign ship of 300 tons entering the port

A pipe of port is 165 gallons, divided into 21 almudes of Oporto.

Of measures of length, 2 pas = 3 palmos = 1 covado, or cubit; 18 covados = 1 vara; 8 varas = 1 braça. The pa or foot = 19-944 English inches; 100 feet of Portugal = 107-6 English feet; the vara = 43-2 English inches.

For freight a last is reckoned at 4 pipes of oil or wine, 4 chests of sugar, 4,000 lbs. of tobacco, 3,000 lbs. of alum.

But from one place in Portugal to another, a tonelada is reckoned at 52 almudes of liquids, or 54 almudes of dry goods.

Coffee is sold per arratel; cotton, indigo, and pepper, per lb.; oil, per almude; wine, per pipe; corn, per alqueire; salt, per moyo.

Grain, seed, fish, wool, and timber are sold on board.

Weights and long measures are the same throughout Portugal; but there is a great discrepancy in the measures of capacity. The almude and alqueire, at the principal places, are in English measures as follows: —

Lisbon	Almude = 5-37	gail.	Eng. wine measure
	Alqueire = 3-07		Winch. measure
Oporto	Almude = 6-1		wine measure
	Alqueire = 3-1		Winch. measure
Faro	Almude = 4-1		wine measure
Faro	Alqueire = 3-1		Winch. measure
Figueira	Almude = 5-1		wine measure
	Alqueire = 3-1		Winch. measure
Viana	Almude = 6-1		wine measure
	Alqueire = 3-1		Winch. measure.

of Lisbon, with a general or mixed cargo, and clearing out with the same: —

Royal passport	7-300
Petty expenses on entering at the	100
Custom-house, about	500
Anchorage	400
Ballast clearance	30,000
Tonnage, 100 rees per ton	15,000
Lights, 50 rees per ton	1,500
Contribution to Board of Trade	750
Petty charges	240
Bill of health	240

R. 56,360 = 111. 6s. 6d. sterl.

Vessels coming with a cargo, or in ballast, and departing in ballast, pay 200 rees per ton lights, or 4 times as much as if they sailed with cargoes. Vessels coming with a cargo, and sailing with the same cargo, pay no tonnage duty.

**Commission.** — The ordinary rates of commission are, on the sale of goods, ½ per cent.; of red wine, 2½ per cent.; on the value of goods landed from a vessel putting in to effect repairs, 1 per cent.; on ship's disbursements, 5 per cent.

Insurances are effected to a trifling amount. There is a national company for effecting insurances; but it enjoys little credit.

Taxes are not regulated by any certain rule. Those allowed are generally those invoiced or marked on the package. — (See *Annuaire du Commerce Maritime*, p. 250; *Kelly's Compend*; *Compend's Answers to Circular Queries*, &c.)

## LITERARY PROPERTY. See Books.

**LITHARGE** (Ger. *Glätte*, *Glätte*; Du. *Gelit*; Fr. *Litharge*; It. *Litargirio*; Sp. *Almataga*, *Litarjirio*; Rus. *Glet*; Lat. *Lithargyrium*), an oxide of lead in an imperfect state of vitrification. Most of the lead met with in commerce contains silver, from a few grains to 20 ounces or more in the fodder: when the quantity is sufficient to pay the expense of separation, it is *refined*; that is, the metal is exposed to a high heat,

passing at the same time a current of air over the surface : the lead is thus oxidised and converted into *litharge*, while the silver, remaining unchanged, is collected at the end of the process. — (*Thomson's Chemistry, &c.*) *Litharge* is used for various purposes in the arts, by potters, glass makers, painters, &c.

**LOADSTONE** (Ger. *Magnet*; Du. *Magneet*; Fr. *Aimant*; It. *Calamita*; Sp. *Iman*; Rus. *Magnit*; Lat. *Magnes*). M. Haüy observes, that the ores in which the iron contains the least oxygen without being engaged in other combinations, form natural magnets; and he calls the *loadstones* of commerce, which are found in considerable masses in Germany, Sweden, Norway, Spain, Italy, China, Siam, the Philippine Isles, Corsica, and Ethiopia, *oxidulated iron*. The loadstone is characterised by the following properties: — A very strong action on the magnetic needle. Specific gravity 4·2457. Not ductile. Of a dark grey colour, with a metallic lustre. — Primitive form, the regular octahedron. Insoluble in nitric acid. This singular substance was known to the ancients; and they had remarked its peculiar property of attracting iron; but it does not appear that they were acquainted with the wonderful property which it also has, of turning to the pole when suspended, and left at liberty to move freely. Upon this remarkable circumstance the mariner's compass depends, — an instrument which gives us such infinite advantages over the ancients. It is this which enables the mariner to conduct his vessel through vast oceans out of the sight of land, in any given direction; and this directive property also guides the miner in subterranean excavations, and the traveller through deserts otherwise impassable. The natural loadstone has also the quality of communicating its properties to iron and steel; and when pieces of steel properly prepared are touched, as it is called, by the loadstone, they are denominated artificial magnets. — (See COMPASS.)

**LOBSTER** (Fr. *Ecrevisse*; Lat. *Cancer*), a fish of the crab species, of which vast quantities are consumed in London.

The minimum size of lobsters offered for sale is fixed by 10 & 11 Will. 3. c. 24., at *eight inches* from the tip of the nose to the end of the middle fin of the tail. No lobsters are to be taken on the coasts of Scotland between the 1st of June and the 1st of September, under a penalty of 3*l*. The Scilly Islands and the Land's End abound in lobsters, as well as several places on the Scotch shores, particularly about Montrose. But the principal lobster fishery is on the coast of Norway; whence it is believed about 1,000,000 lobsters are annually imported into London. Those of Helligoland are, however, esteemed the best; they are of a deeper black colour, and their flesh is firmer than those brought from Norway. Foreign caught turbot and lobsters may be imported either in British or foreign vessels free of duty.

**LOCK, LOCKS** (Ger. *Schlösser*; Du. *Sloten*; Fr. *Serrures*; It. *Serrature*; Sp. *Cerraduras*, *Cerrujos*; Rus. *Samki*), a well known instrument, of which there are infinite varieties. A great deal of art and delicacy is sometimes displayed in contriving and varying the wards, springs, bolts, &c., and adjusting them to the places where they are to be used, and to the occasions of using them. From the various structure of locks, accommodated to their different intentions, they acquire various names, as stock locks, spring locks, padlocks, &c. Wolverhampton was, at a very early period, famous for the superior skill and ingenuity of its locksmiths; but the best locks are now made in London and Birmingham. The grand difficulty to be overcome in making a lock is to construct it so that it may not be opened by any key except its own, nor admit of being picked; it should also be possessed of sufficient strength and durability, and not be too complex. Many ingenious contrivances have been proposed for the attainment of the desired security, — several of which are possessed of considerable merit. We believe, however, that there is none that combines all the principal requisites of a lock in so eminent a degree as "Chubb's Detector Lock," so called from the inventor, Mr. Chubb, of Portsea. Common door-locks are now usually inserted in the wood, instead of being, as formerly, screwed to it; and when so placed are called *mortise locks*.

**LOGWOOD** (Fr. *Bois de Campêche*; Ger. *Kampescholz*; Du. *Campecheout*; Sp. *Palo de Campeche*), the wood of a tree (*Hamatoxylon Campechianum* Lin.), a native of America, and which attains the greatest perfection at Campeachy, and in the West Indies. It thrives best in a wet soil, with a large proportion of clay. The logwood tree is like the white thorn, but a great deal larger. The wood is hard, compact, heavy, and of a deep red colour internally, which it gives out both to water and alcohol. It is an article of great commercial importance, being extensively used as a dye wood. It is imported in logs, that are afterwards chipped. — (The logwood tree, and the adventures of those that were formerly engaged in cutting it, are described by Dampier; see his *Voyages*, vol. ii. part 2. p. 56. ed. 1729.)

The entries for home consumption, at an average of the 3 years ending with 1842, amounted to 18,713 tons a year. The old duty of 4*s*. 6*d*. a ton on foreign logwood, and of 3*s*. on that from a British plantation, produced, in 1841, 4,409*l*. 19*s*. 6*d*.; but it was reduced in the following year to 2*s*. a ton. Of 27,064 tons of logwood imported in 1840, 13,504 were from the British West Indies, 9,601 from Mexico, and the remainder principally from Hayti and the U. States. Its price in the London market in June, 1843, was — Jamaica, 6*s*. per ton; Honduras, 5*s*. 6*d*.; Campeachy, 8*s*. 8*d*.

We borrow from the learned and able work of Dr. Bancroft, the following curious

details with respect to the use of logwood in this country : — “ It been first brought to England soon after the accession of Queen Elizabeth, and beautiful colours dyed from it proved so fugacious, against its use was soon raised ; and an act of parliament was passed in the reign of Elizabeth, which prohibited its use as a dye under severe penalties, but directed the *burning* of it, in whatever hands it might be found ; and though this wood was afterwards sometimes clandestinely sold under the feigned name of blackwood, it continued subject to this prohibition for many years, or until the passing of the act 13 & 14 Chas. 2. ; the purpose of which was to declare, that the ingenious industry of modern times hath taught the art of fixing colours made of logwood, *alias* blackwood, so that they are found as lasting as the colours made with *any other sort of* wood, and on this ground it repeals so much of the statute of Elizabeth which gave permission to import and use it for dyeing. Probably dyers to obtain this permission, induced them to pretend that they had much more than it really had, in fixing the colours of logwood ; at this time, are notoriously deficient in regard to their durability. (*Colours*, vol. ii. p. 340.)

LOUIS D'OR, a French gold coin, first struck in 1640. It was valued by the French mint regulations equal to 24 livres, or 1*l.* sterling, but was under-rated in respect of silver ; and hence, as every one preferred the over-valued coin, silver became the principal currency of France, being either sent to the melting-pot or exported. In Britain, the Gold having been, for a lengthened period, over-valued by our mint, it became the principal currency of the country. — (See *anté*, p. 1.)

## M.

MACAO, a sea-port and settlement belonging to the Portuguese under the same name, at the mouth of the Canton river in China, in lat. 22° 35' E. The situation of Macao strikingly resembles that of Cadiz, at the extremity of a peninsula projecting from the south-west corner of which it is joined by a long narrow neck. Across this isthmus, 100 yards wide, a wall is erected, with a gate and guard-house, guarded by Chinese soldiers. The greatest length of the peninsula belonging to Macao from N. E. to S. W., is under 3 miles, and its breadth under  $\frac{1}{2}$  mile. The north of the town, is flat, and of a light sandy soil ; but is well cultivated by Chinese, and produces all sorts of Asiatic and European productions. The Chinese part of the island or from the north, where ever the Portuguese do any thing to offend the Chinese authorities, is cut off till they are obliged quietly to submit. They are seldom allowed to enter the narrow precincts of the territory assigned to them. The population may amount to from 12,000 to 13,000, of whom considerably more are Chinese. The functionaries belonging to the East India Company's factory are few, and during the whole of the dead season.

The Portuguese obtained possession of Macao in 1586. It was long the seat of a great trade, carried on not only with China, but with Cochinchina, the Philippine Islands, &c. ; but for these many years it has of comparatively little importance, though it is probable, that if it belonged to a more enterprising and active people, it might still recover most part of its former importance. The public administration is vested in a senate composed of the bishop of the principal inhabitants ; but all real authority is in the hands of the Chinese mandarin resident in the town.

*The Harbour* is on the west side of the town, between it and Priest's Island, being sufficiently deep to admit large ships, they generally anchor in the roadstead, from 5 to 10 miles E.S.E. from the town. All vessels coming into the harbour are obliged to stop at the Portuguese Custom-house on the south side of the town.

When a ship arrives among the islands, she is generally boarded by a Portuguese pilot. As soon as she is anchored, the pilot proceeds to Macao to inform the authorities. If there be any women on board, application must be made to the senate, for leave to send them on shore, as they will not be permitted to proceed without a licence. As soon as the mandarin has made the necessary inquiries, he orders off a river boat to him a *chop* or licence to pass the Bocca Tigris, or mouth of the Canton river, to Whampoa.

*Trade of Macao.* — The Chinese regulations do not permit any vessels, except Portuguese or Spaniards, of which there are very few, to trade at Macao. But the British have, for a trifling consideration, to such foreigners as wish to be as free as possible of trading from the port. Independently, however, of this, vessels of other nations are not permitted to obtain the connivance of the Chinese officers to trade in the roads, by means of Portuguese boats. At intervals, indeed, the regulations are strictly enforced ; but we believe that there has been no instance of this for the

Vessels of other nations, if in distress, and not engaged in the contraband trade, are admitted into the harbour for repairs, on application to the senate.

**Port Charges.**—The measurement duty paid by Spanish and Portuguese vessels is moderate. When a vessel has once paid the full amount, and is admitted on the list of registered ships belonging to the port (limited by the Chinese to 25), she is liable only to a third of the original charges, on every subsequent occasion of her entering, so long as she continues on the register. Portuguese vessels from Europe do not possess this privilege, unless they be registered as belonging to a morador of Macao.

The rates of measurement duty, which vary, as at Canton, (which see), on three classes of vessels, are the following:—

On vessels of 154 covids and upwards, 6'923 per covid.  
1d. — from 120 to 154 — 5'72 —  
2d. — from 90 to 120 covids — 4' —

These rates are nearly the same as those levied at Canton. In addition to these, the following are the charges levied by the hoppo (collector of customs), or his deputy:—  
On a 1st class vessel from Europe, 250 taels; if belonging to Macao or Manila, 50 taels.  
On a 2d class vessel from Europe, 340 taels; if belonging to Macao or Manila, 40 taels.  
On a 3d class vessel from Europe, 170 taels; if belonging to Macao or Manila, 30 taels.

Ships importing rice are exempt from the measurement duty, and pay only the charges levied by the procurador of Macao and the officers of his department.

Portuguese vessels from Europe, in addition to the measurement duty, have to pay to the Canton hoppo merchants a charge, termed by the Portuguese, *Hatseuen*, or *Coma* charge, which is usually a matter of specific bargain, varying from about 200 dollars on a vessel of 300 tons, to 3,500 dollars and upwards on those of 500 tons, and of larger sizes.

The charges on goods carried by the inner passage, between Canton and Macao, being generally less than those paid on goods to and from Whampoa; and the duties levied by the Portuguese, on articles of merchandise imported by vessels belonging to Macao, being very moderate; the Chinese are often led to engage in speculations on board the Macao vessels, the risk being so much less than in native junks. If the ship owners could manage their expenses so as to be satisfied with only the same freight as is charged by English vessels, it would probably induce many more Chinese to make remittances in this way.

**Opium.**—The trade in opium is prohibited at Macao by the Chinese government, as well as throughout the rest of the empire. It was, nevertheless, formerly carried on to a great extent by the Portuguese moradores, or citizens, to the exclusion of all others, even Portuguese who were not citizens. But this restriction having occasioned the decline of the trade, it was abolished in 1823, when the senate passed a regulation throwing open the trade to all, without distinction, whether Portuguese or foreigners; securing to the latter, "hospitality and the utmost freedom in their speculations." At present, however, very little opium is imported, in consequence, it is

said, of the heavy bribes demanded by the Chinese officers, to insure their connivance. The trade is now principally carried on at Lintin, about 30 miles from Macao.

**Imports.**—Goods imported pay at the Portuguese Custom-house a duty of 6 per cent. on a fixed valuation, besides some fees, and coolie hire. The following are a few articles extracted from the tariff:—

	Valuation.	Duty.
Cotton	- - - - -	4 - 0-340
Broad cloth, middling	- - - - -	1-600 0-096
Do. better than ordinary	- - - - -	0-000 0-078
Ordinary or course	- - - - -	0-480 0-078
Camlets	- - - - -	1-280 0-016
Beet nut	- - - - -	1-200 0-072
Tin	- - - - -	8 0-040
Birds' nests, 1st sort	- - - - -	22-000 1-341
Rattans	- - - - -	1-200 0-072
Saltpetre, Bengal	- - - - -	4 2-240
Coast of Goa	- - - - -	1-600 0-096
Pepper	- - - - -	4 0-000

Opium imported in Portuguese ships, pays per chest, drs. 104.  
Do. foreign do. — 154.

Gold and silver, whether in coin, in bullion, or manufactured, pay on importation, 2 per cent.; except in Spanish vessels from Manila, when the charge is 14 per cent.

**Exports.**—No duty is levied by the Portuguese on goods exported from Macao; nor does the Custom-house take any cognizance of them.

**Duties and Charges on Goods landed at Macao.**—Macao is a place without any manufactures or commerce of its own. It is, in consequence, generally dependent on those of Canton. Money is usually paid at 72 taels per 100 dollars.

It is a point of some interest to ascertain the internal duties and expenses to which goods landed at Macao are liable, before coming into the Chinese purchaser's hands at Canton. But the subject is so involved in mystery and uncertainty, the charges varying according to the quantity of goods laden in one boat, &c., that it is scarcely possible to arrive at any accurate information respecting it. We believe, however, that the following may be considered as a pretty close approximation to the real amount of charges incurred on cotton landed at Macao:—  
Portuguese duty, fees, &c. - - - - - mace, 2-6 per picul.  
Duties and charges on conveyance to - - - - - 6-5  
Canton charges, difference of weight, - - - - - 8-0  
Brokerage on sale, &c. - - - - - 8-0

Total, about taels, 2-6-9

The duties and charges on conveyance from Macao to Canton are, for pepper, per picul - - - - - mace, 9-0  
Rice - - - - - 4-0  
Beet nut - - - - - 4-5

The hoppo's examiner charges 90 taels per boat of 1,000 piculs, the largest quantity allowed to be conveyed by a single boat; but the same charge of 90 taels is levied, although the boat should only contain 100 piculs.

The duty on exporting goods from Canton to Macao is in some cases less, in other cases greater, than the Whampoa duty. Thus, nankeens to Macao pay 2 dollars per 100 less than to Whampoa. Most descriptions of silk piece goods also pay less duty. On the other hand, tea, paper, China ware, &c. pay a higher duty to Macao than to Whampoa.

For details as to the *Weights, Measures, &c.* used at Macao, see CANTON.

For further particulars, see *Hamilton's East India Gazetteer*, art. *Macao*; *Milburn's Orient. Com.*; and the *Anglo-Chinese Calendar and Companion to the Almanac*, Macao, 1852.

**MACCARONI**, a species of wheaten paste formed into long, slender, hollow tubes, used amongst us dressed with cheese, and in soups, broths, &c.

Maccaroni is the same substance as vermicelli; the only difference between them being that the latter is made into smaller tubes. Both of them are prepared in the greatest perfection in Naples, where they form the favourite dish of all classes, and the principal food of the bulk of the population. The flour of the hard wheat (*grano duro*) imported from the Black Sea is the best suited for the manufacture of maccaroni. Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so contrived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter; those of the largest size being maccaroni, the next to them vermicelli, and the smallest fedelini. At Genoa, and some other places, the paste is coloured by an admixture of saffron; but at Naples, where its preparation is best understood, nothing is used except flour and water; the best being made of the flour of hard wheat, and the inferior sorts of the flour of soft wheat. When properly prepared and boiled to a nicety, Neapolitan maccaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated meat gravy, and sprinkled with finely grated cheese, it forms a dish of which all classes, from the prince to the beggar, are passionately fond. But the maccaroni used by the poor is merely boiled in plain water, and is rarely eaten with any condiment whatever. The maccaroni usually served up in England is said, by those familiar with that of Naples, to be a disgrace to the name it bears. When properly prepared, maccaroni is nutritious and easy of digestion. The lazzaroni pique themselves on the dexterity with which they swallow long strings of maccaroni and

vermicelli without breaking them. (We are principally indebted for these details to an article on macaroni in the *Penny Magazine* for the 10th of August, 1833.)

**MACE** (Ger. *Macis*, *Muskatenbluthe*; Du. *Poslie*, *Foely*, *Muscaatbloom*; Fr. *Macis*, *Fleur de muscade*; It. *Mace*; Sp. *Macio*; Port. *Marcis*, *Flor de noz moscada*; Lat. *Macis*), a thin, flat, membranous substance, enveloping the nutmeg; of a lively, reddish yellow colour, a pleasant aromatic smell, and a warm, bitterish, pungent taste. Mace should be chosen fresh, tough, oleaginous, of an extremely fragrant smell, and a bright colour—the brighter the better. The smaller pieces are esteemed the best. The preferable mode of packing is in bales, pressed down close and firm, which preserves its fragrance and consistence.

Account of the Quantity of Mace retained for Home Consumption, and of the Total Revenue derived therefrom, in each of the 3 Years ending with 1842.

Quantities.			Duties.								
1840.	1841.	1842.	1840.			1841.			1842.		
Lbs.	Lbs.	Lbs.	£	s.	d.	£	s.	d.	£	s.	d.
16,906	16,296	19,010	2,158	17	9	2,115	17	6	2,485	19	5

The duty on mace is 2s. 6d. per lb.

A production is met with on the coast of Malabar, so like mace, that at first it is not easy to be distinguished; but it has not the least flavour of spiciness, and when chewed has a kind of resinous taste. Eight cwt. of mace are allowed to a ton. — (*Milburn's Orient. Com.*)

**MADDER** (Ger. *Färberöthe*; Du. *Mee*; Fr. *Alizari*, *Garance*; It. *Robbia*; Sp. *Granza*, *Rubia*; Rus. *Mariona*, *Krap*; Hind. *Munji*), the roots of a plant (*Rubia tinctorum*), of which there are several varieties. They are long and slender, varying from the thickness of a goose-quill to that of the little finger. They are semi-transparent, of a reddish colour, have a strong smell, and a smooth bark. Madder is very extensively used in dyeing red; and though the colour which it imparts be less bright and beautiful than that of cochineal, it has the advantage of being cheaper and more durable. It is a native of the south of Europe, Asia Minor, and India; but has been long since introduced into and successfully cultivated in Holland, Alsace, Provence, &c. Its cultivation has been attempted in England, but without any beneficial result. Our supplies of madder were, for a lengthened period, almost entirely derived from Holland (Zealand); but large quantities are now imported from France and Turkey.

Dutch or Zealand madder is never exported except in a prepared or manufactured state. It is divided by commercial men into four qualities, distinguished by the terms *mull*, *gamene*, *ombro*, and *crops*. The roots being dried in stoves, the first species, or mull, consists of a powder formed by pounding the very small roots, and the husk or bark of the larger ones. It is comparatively low priced, and is employed for dyeing cheap dark colours. A second pounding separates about a third part of the larger roots; and this, being sifted and packed separately, is sold here under the name of *gamene*, or *gemeens*. The third and last pounding comprehends the interior, pure, and bright part of the roots, and is sold in Holland under the name of *kor krapa*, but is here simply denominated *crops*. Sometimes, however, after the mull has been separated, the entire residue is ground, sifted, and packed together, under the name of *onberoefde*, or *ombro*. It consists of about one third of *gamene*, and two thirds of *crops*. Prepared madder should be kept dry. It attracts the moisture of the atmosphere, and is injured by it.

The Smyrna or Levant madder (*Rubia peregrina*), the *alizari* or *lizary* of the modern Greeks, is cultivated in Bœotia, along the border of lake Copais, and in the plain of Thebes. It also grows in large quantities at Kurdar near Smyrna, and in Cyprus. The madder of Provence has been raised from seeds carried from the latter in 1761. Turkey madder affords, when properly prepared, a brighter colour than that of Zealand. It is, however, imported in its natural state, or as roots: the natives, by whom it is chiefly produced, not having industry or skill sufficient to prepare it like the Zealanders, by pounding and separating the skins and inferior roots; so that, the finer colouring matter of the larger roots being degraded by the presence of that derived from the former, a peculiar process is required to evolve that beautiful Turkey red which is so highly and deservedly esteemed. — (*Thomson's Chemistry*; *Bancroft on Colours*, vol. ii. pp. 221—278: see also *Beckmann, Hist. of Invent.* vol. iii. art. *Maadder*.)

In France, madder is prepared nearly in the same manner as in Zealand. The following instructive details as to its cultivation, price, &c. in Provence, were obligingly furnished to us by an English gentleman, intimately acquainted with such subjects, who visited Avignon in the autumn of 1829:—

"This town (Avignon) is the centre of the madder country, the cultivation of which was introduced here about the middle of the 18th century, and, with the exception of Alsace, is still confined (in France) to this department (Vaucluse). The soil appears to be better adapted for its cultivation here than any where else, and it has long been the source of great wealth to the cultivators. Of late years, however, the prices have fluctuated so much, that many proprietors have abandoned, or only occasionally cultivated this root, so that the crop, which was formerly estimated to average 500,000 quintals, is now supposed not to exceed from 300,000 to 400,000.

"The root is called *alsari*, and the powder (made from it) *garance*. The plant is raised from seed, and requires 3 years to come to maturity. It is, however, often pulled in 18 months without injury to the quality; the quantity only is smaller. A rich soil is necessary for its successful cultivation; and when the soil is impregnated with saline matter, the root acquires a red colour—in other cases it is yellow. The latter is preferred in England, from the long habit of using Dutch madder, which is of this colour; but in France the red sells at 2 fr. per quintal higher, being used for the Turkey red dye.

"It is calculated that when wheat sells at 50 fr. per hectolitre, *alsari* should bring 35 fr. per quintal (poids de table), to give the same remuneration to the cultivator. That is, wheat 65s. per Eng. quarter, and *alsari* 34s. per Eng. cwt. The price has, however, been frequently as low as 24 fr. per quintal.

"Prices undergo a revolution every 7 or 8 years, touching the minimum of 24, and rising as high as 100 fr. As in every similar case, the high price induces extensive cultivation, and this generally produces its full effect 4 or 5 years after. The produce of Alsace, which is inferior both in quantity and quality to that of Vaucluse, is generally sold in Strasburg market.

"England employs both the root and the powder, according to the purpose for which they are intended. The Dutch madder is more employed by the woollen dyers, and the French by the cotton dyers and printers.

"In making purchases of *garance*, it is essential to employ a house of confidence, because the quality depends entirely upon the care and honesty of the agent. The *finest* is produced from the roots after being cleaned and stripped of their bark. The seed by grinding the roots without cleaning. A *faul* by mixing the bark of the root with grinding; and so on to any degree of adulteration.

"The price of *alsari* in the country, which was only 25 fr. in July, is now (November, 1829) at 35 fr., and is expected to be at 40 fr. very shortly. The crop being deficient both here and in Holland, and the certainty of its being also deficient next year, added to the small quantity existing in England, give reason to believe that the price will reach 60 fr. before many months, and will continue to advance for a year or two more.

"The quintals above mentioned are of 100 lbs. *poids de table*—the weight in general use over the south of France, and even in *Marseilles*. This weight is different in the different provinces, varying from 24 to 25 per cent. lighter than the *poids métrique*. At Avignon, 124 lbs. *p. de table* = 60 kilograms, consequently 125 lbs. are equal to 1 cwt. Eng. At the exchange of 25/0 the cwt. costs (including 11s. for freight, duty, and all charges till delivered in London or Liverpool) 61s. or 62s.

"It is considered that only one sixth or one seventh of the present crop remains for sale.

"Madder does not deteriorate by keeping, provided it be kept dry.

Cost of quintal of roots in the country	Fr. 35
Expenses in do.	2
	37

The root gives 65 per cent. powder, consequently 1 quintal powder	= 43/50
Grinding and cask	2
Transport	2/50
	Fr. 49/0

The English cwt. costs therefore	Fr. 58/5
All expenses till on board at Marseilles	3
Besides commission	Fr. 61/85

Madder, the produce of Europe, is not to be imported for home consumption except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under forfeiture of the same, and 100l. by the master of the vessel. — (3 & 4 W.M. 4. c. 52. sect. 58.)

## MADEIRA. See WINE.

MADRAS, the principal emporium of the coast of Coromandel, or western shore of the Bay of Bengal, lat. of lighthouse 13° 5' 10" N. long. 80° 20' E. It is the seat of the government of the second presidency of British India, having under it a territory, including the tributary states, of 172,000 square miles, with a population, according to the census of 1836–37, of 18,314,000, paying a gross annual revenue of nearly 4,500,000l. sterling. The town is situated in the Carnatic province, a low, sandy and rather sterile country. It is without port or harbour, lying close upon the margin of an open roadstead, the shores of which are constantly beat by a heavy surf. Besides these disadvantages, a rapid current runs along the coast; and it is within the sphere of the hurricanes or typhoons, by which it is occasionally visited. In every respect, indeed, it is a very inconvenient place for trade, and its commerce is consequently greatly inferior to that of either Calcutta or Bombay. It has been in possession of the English above two centuries, having been founded by them in 1639, and retained ever since. Fort Saint George is a strong and handsome fortification, lying close to the shore. The Black Town of Madras, as it is called, stands to the north and eastward of the fort, from which it is separated by a spacious esplanade. Here reside the native, Armenian, and Portuguese merchants, with many Europeans unconnected with the government. Like most other Indian towns, it is irregular and confused, being a mixture of brick and bamboo houses. Madras, like Calcutta and Bombay, is subject

to English law; having a Supreme Court of Judicature, the judges of which are named by the Crown, and are altogether independent of the local government and the East India Company. The population is not exactly ascertained, but there are said to be about 400,000 persons, within a radius of 2½ miles round Fort St. George.

In Madras roads, large ships moor in from 7 to 9 fathoms, with the flagstaff off the fort bearing W.N.W., 2 miles from shore. From October to January is generally considered the most unsafe season of the year, in consequence of the prevalence, during that interval, of storms and typhoons. On the 15th of October the flagstaff is struck, and not erected again until the 15th of December; during which period, a ship coming into the roads, or, indeed, any where within soundings on the coast of Coromandel (reckoned from Point Palmyras to Ceylon), violates her insurance, according to the conditions of the policies of all the insurance offices in India. The cargo boats used for crossing the surf, called *Maasala* boats, are large and light; made of very thin planks sewed together, with straw in the seams instead of caulking, which it is supposed might render them too stiff. When within the influence of the surf, the coxswain stands up, and beats time in great agitation with his voice and feet, while the rowers work their oars backwards, until overtaken by a strong surf curling up, which sweeps the boat along with frightful violence. Every oar is then plied forward with the utmost vigour, until the boat is thrown high and dry upon the beach. The boats belonging to ships in the roads sometimes proceed to the back of the surf, and wait for the country boats from the beach to come to them. When it is dangerous to have communication with the shore, a flag is displayed at the beach-house, which stands near the landing-place, as a caution.

The fishermen and lower classes employed on the water use a species of floating machine of a very simple construction, named a *catamaran*. It is formed of 2 or 3 logs of light wood, 8 or 10 feet in length, lashed together, with a small piece of wood inserted between them to serve as a stem-piece. When ready for the water, they hold generally 2 men, who with their paddles impel themselves through the surf, to carry letters, or refreshments in small quantities, to ships, when no boat can venture out. They wear a pointed cap made of matting, where they secure the letters, which take no damage. The men are often washed off the catamaran, which they regain by swimming, unless interrupted by a shark. Medals are given to such catamaran men as distinguish themselves by saving persons in danger.

**Light-house.**—Previously to the 1st of January, 1844, a tower in the fort, 90 feet in height, was used as a light-house; but since the above epoch, this light has been discontinued, and a powerful "fishing light" has been exhibited on the new light-house immediately to the N. of the fort. This light is elevated 12½ feet above the level of the sea, and may be seen in clear weather from the deck of a ship at a distance of 20 miles. The new light-house bears E. 125° W., and is distant about 13 miles from the N. Eastern extremity of the Pulicat shoal; but no ship or vessel when standing in from the northward for Madras roads should bring the light to bear to the S. of 285° W., or S. S. W. & W., unless her position be well ascertained. Commanders of ships should bear in mind the serious risk they run by incautiously approaching the Pulicat shoal; and as heavy weather or other causes may obscure the light, it is imperatively necessary to keep the land going, and to keep a vigilant look-out. — (Statement *forwarded by Marine Board.*)

**Monies, Weights, and Measures.**—The Company's rupee (for an account of which, see art. CALCUTTA) is now in general circulation, and is the standard uniformly referred to in all accounts. But exclusive of the Company's rupee, several coins are in circulation in Madras and its vicinity. Of the gold coins, the principal are the star or current pagodas = 7s. 5½d., commonly, however, valued at 7s. The gold rupees, new coinage, is worth, according to the mint price of gold in England, 15s. 2½d. The Arcot rupee (silver) is very nearly of the same value with the Company's rupee. The European merchants keep their

accounts at 12 *filanams* the rupee; 80 cash = 1 *filanam*, and 45 *filanams* = 1 *pagoda*. Copper pieces of 90 cash, called *pie*, and of 10 and 5 cash, called *dodans* and *half dodans*, are also current.

**Commercial Weights.**—Goods are weighed by the *camdy* of 30 maunds; the maund is divided into 8 *vis*, 350 *pillams*, or 3,500 *pagodas*; the *vis* is divided into 5 *seers*. The *camdy* of Madras is 500 lbs. avoirdupois. Hence the *pagoda* weighs 2 os. 5 grs., and the other weights are in proportion. These weights have been adopted by the English; but those used in the *Jaghire* (the territory round Madras belonging to the Company), as also in most other parts of the Coromandel coast, are called the Malabar weights, and are as follows:—The *gurray* (called by the English *gallon*) contains 20 *burays* or *candies*; the *buray*, 20 *maningus* or *maunds*; the *maund*, 8 *vis* or *vis*, 350 *pillams*, or 3,500 *varas*. The *varas* weighs 5½ English grains; therefore, the *vis* is 3 lbs. 5 dr.; the *maund*, 24 lbs. 2 os.; the *buray*, 48½ lbs.; and the *gurray*, 9,645½ lbs. avoirdupois, or 4 tons 6 cwt. near. **Measure of Capacity.**—The *gallon*, *corn*, *measures*, contains 80 *parabs*, or 400 *marcali*; and the *marcal*, 6 *padams*, or 64 *ollocks*. The *marcal* should measure 750 cubic inches, and weigh 27 lbs. 2 os. 4 dr. avoirdupois of fresh spring water; hence, 45 *marcali* = 15 Winchester bushels; and therefore the *gallon* = 17½ English quarters nearly. When grain is sold by weight, 9,256½ lbs. are reckoned for 1 *gallon*, being 18 *calandis* 12½ maunds.

## General Rates of Agency and Commission, as revised by the Chamber of Commerce, and recommended for general approval and adoption.— 1st June, 1845.

- On the total sum of a debt or credit side of account at the option of the agent, excepting items on which a commission of 5 per cent. is chargeable, 1 per cent.
- On effecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.
- On subscriptions to government loans, purchasing, selling, transferring or exchanging public securities and bank shares, 6 per cent.
- On delivering up public securities, or lodging them in any of the public offices, 1 per cent.
- On receiving and delivering private commissions of wines, cattle, and merchandise, 2½ per cent.
- On collecting rents, 2½ per cent.
- On purchase of lottery tickets, and amount of prizes, 1 per cent.
- On the sale of lottery tickets from other settlements, 2½ per cent.
- On letters of credit granted against pay and allowances to be drawn monthly, 2½ per cent.
- On executorship or administration to estates of deceased persons, 5 per cent.
- On the management of estates for executors or administrators, 2½ per cent.
- On becoming security for administrators, 2½ per cent.
- On debts when a process of law or arbitration is necessary, 2½ per cent.
- And if recovered by such means, 5 per cent.
- On bills of exchange, notes, &c. dishonoured, 1 per cent.
- On overdue debts collected, 2½ per cent.
- On becoming security for individuals to government or others, 2½ per cent.
- On all sales or purchases of goods, 5 per cent.

With the following exceptions:—

- On houses, lands, and ships, 2½ per cent.
- On diamonds, pearls, and jewellery, 2½ per cent.
- On treasure and bullion, 1 per cent.
- On all goods and merchandise withdrawn, shipped, or delivered to order, half commission.
- On all other descriptions of property for sale, if withdrawn or otherwise disposed of by the owners, half commission.
- On goods transferred to auction or commission salesmen, half commission.

18. On investing proceeds of sales in goods,  $\frac{1}{2}$  per cent.  
 19. On guaranteeing sales, bills, bonds, contracts for goods, or other engagements,  $\frac{1}{2}$  per cent.  
 20. On ship's disbursements,  $\frac{1}{2}$  per cent.  
 21. On chartering ships or engaging tonnage for other parties,  $\frac{1}{2}$  per cent.  
 22. On advertising as the agents of owners or commanders of ships for freight or passengers, on the amount of freight or passage money, by charter or otherwise, whether the same shall pass through the agents' hands or not, 5 per cent.

23. On effecting insurance, or writing orders for insurance, whether on lives or property,  $\frac{1}{2}$  per cent.  
 24. On settling losses, partial or general, and returns of premium, 2 per cent.  
 25. On procuring money on respondentia, wherever payable, 2 per cent.  
 26. On giving orders for the provision of goods where a commission is not chargeable on sale or on protest,  $\frac{1}{2}$  per cent.  
 27. On attending the delivery of contract goods, 2 per cent.  
 28. On receiving freight of goods, and passage money of troops by ships entered inwards,  $\frac{1}{2}$  per cent.

## Rates of Godown Rent per Month.

	Rs.	a.
Bales of punjum cloth of 30 pieces, per bale	-	0 8
Screwed do. of cotton, of 300 lbs., per bale	-	0 4
Loose bundles of do. of 200 lbs., per bundle	-	0 4
Bales of taffeties and raw silk, per bale	-	1 0
Chests of opium, per chest	-	0 8
of indigo, per chest	-	0 8
of wine, of 12 dozens, per chest	-	1 0
Pipes of wine, punchons and butts, each per pipe	-	1 0
Bags of rice and sugar, per bag	-	0 1
of saltpetre, per bag	-	0 1
Metals, per ton	-	0 4

Other articles in proportion to the above.

GOVERNMENT BANK.—*Rate of Interest on Loans.*

Rates of interest on loans for a specified period (not exceeding 12 months) on mortgage of government paper, 5 per cent.  
 On cash accounts made up quarterly on the deposit of government paper on all payments, 6 per cent.  
 On all receipts, 5 per cent.  
 Lowest sum allowed on loan on cash accounts, 5,500 rupees.

## Rates of Discount.

On private bills, 5 per cent.  
 On government bills, 4 per cent.  
 (No bills discounted that have a longer period to run than 1 month.)  
 To open an account, the sum required to be transmitted is 500 rupees.  
 The lowest sum received, after opening an account, is 100.  
 Do. paid on a cheque, is 35.  
 N.B.—No cheques paid, nor monies carried to account after half past 2 p. m.

This bank is entirely a government concern, the directors consisting of the superior officers of government; and the ministerial officers are on fixed salaries. The bank issues notes, receivable as cash at the public treasuries, within the town of Madras; it receives deposits and grants discounts. In 1845, however, a joint stock company called the Bank of Madras with a capital of 300,000l. (30 lacs) was established for the transacting of banking business on more liberal terms.

— for do. do. 35 to 40 inches	-	38	6	0 0	0	0

The foregoing statements sufficiently exhibit the commercial importance of Madras. The limited extent of its trade, as compared with that of Calcutta and Bombay, is partly ascribable to the badness of its port or roadstead, the want of any navigable river or other easy means of communication with the interior, and the backward state of the provinces of which it is the capital, in consequence of the heavy and fluctuating land tax to which they are subject. In 1839-40, there arrived at Madras no fewer than 5,426 vessels (including their repeated voyages) of the aggregate burden of 335,465 tons. But by far the greater number of these were of very small burden, 2,832 being country craft from Bombay, 853 from Ceylon, and 565 from Goa. In the course of the same year 31 vessels arrived from the U. Kingdom. — (*Hamilton's East Indian Gazetteer: Geog. Dict. art. Madras; Madras Almanack for 1839, 1840, and 1845; Official Returns of the Trade of Madras, &c.*)

**MAGNESIA.** (Fr. *Magnésie*; Ger. *Gebraunte Magnesia*; It. *Magnesia*), one of the primitive earths, having a metallic basis. It is not found native in a state of purity, but is easily prepared. It is inodorous and insipid, in the form of a very light, white, soft powder, having a specific gravity of 2.3. It turns to green the more delicate vegetable blues, is infusible, and requires for its solution 2,000 parts of water at 60°.

**MAHOGANY**, the wood of a tree (*Swietenia Mahogany*) growing in the West Indies and Central America. There are two other species of *Swietenia* found in the East Indies, but they are not much known in this country.

Mahogany is one of the most majestic and beautiful of trees: its trunk is often 40 feet in length, and 6 feet in diameter; and it divides into so many massy arms, and throws the shade of its shining green leaves over so vast an extent of surface, that few more magnificent objects are to be met with in the vegetable world. It is abundant in Cuba and Hayti, and it used to be plentiful in Jamaica; but in the latter island, most of the larger trees, at least in accessible situations, have been cut down. The principal importations into Great Britain are made from Honduras and Campeachy. That which is imported from the islands is called Spanish mahogany; it is not so large as that from Honduras, being generally in logs from 20 to 36 inches square and 10 feet long, while the latter is usually from 2 to 4 feet square and 12 or 14 feet long, but some logs are much larger. Mahogany is a very beautiful and valuable species of wood: its colour is a red brown, of different shades, and various degrees of brightness; sometimes yellowish brown; often very much veined and mottled, with darker shades of the same colour. The texture is uniform, and the annual rings not very distinct. It has no larger septa; but the smaller septa are often very visible, with pores between them, which in the Honduras wood are generally empty, but in the Spanish wood are mostly filled with a whitish substance. It has neither taste nor smell, shrinks very little, and warps or twists less than any other species of timber. It is very durable when kept dry, but does not last long when exposed to the weather. It is not attacked by worms. Like the pine tree, the

timber is best on dry rocky soils, or in exposed situations. That which is most accessible at Honduras grows upon moist low land, and is, generally speaking, decidedly inferior to that brought from Cuba and Hayti; being soft, coarse, and spongy; while the other is close grained and hard, of a darker colour, and sometimes strongly figured. Honduras mahogany has, however, the advantage of holding glue admirably well; and is, for this reason, frequently used as a ground on which to lay veneers of the finer sorts. The best qualities of mahogany bring a very high price. Not long since, Messrs. Broadwood, the distinguished pianoforte manufacturers, gave the enormous sum of 3,000*l.* for three logs of mahogany! These logs, the produce of a *single tree*, were each about 15 feet long, and 38 inches square: they were cut into veneers of 8 to an inch. The wood was particularly beautiful, capable of receiving the highest polish; and when polished, reflecting the light in the most varied manner, like the surface of a crystal; and, from the wavy form of the pores, offering a different figure in whatever direction it was viewed. Dealers in mahogany generally introduce an auger before buying a log; but, notwithstanding, they are seldom able to decide with much precision as to the quality of the wood, so that there is a good deal of lottery in the trade. The logs for which Messrs. Broadwood gave so high a price were brought to this country with a full knowledge of their superior worth. Mahogany was used in repairing some of Sir Walter Raleigh's ships at Trinidad, in 1597; but it was not introduced into use in England till 1794.

The cutting of mahogany at Honduras takes place at two different seasons; after Christmas, and towards midsummer. The negroes employed in felling the trees are divided into groups of from 10 to 50. The trees are cut about 12 feet from the ground, and are floated down the rivers.

Of 23,115 tons of mahogany imported in 1840, 17,008 came from the British West Indies (including Honduras), and 4,813 from Hayti. The duty on foreign mahogany used to be 7*l.* 10*s.* a ton, on Honduras, 1*l.* 10*s.*, and on Jamaica mahogany, 4*s.*: the effect of such a duty being to force the consumption of the inferior in preference to the superior article. Luckily, however, the duty on foreign mahogany was reduced in 1842 to 3*s.*, and that on Honduras mahogany to be a ton.—(See *Tredgold's Principles of Carpentry*, p. 304.; *Library of Entertaining Knowledge*, volume on *Timber Trees and Fruits*; and *Edwards's West Indies*, vol. iv. p. 256. ed. 1819, &c.)

Mahogany from Honduras, imported into any free warehousing port in the British possessions in the West Indies or America, in a ship cleared out from Balise, and then warehoused as having been so imported and cleared, may be exported from the warehouse and imported into the U. Kingdom, as if it had been imported direct in a British ship, provided it be stated in the ship's clearance that the mahogany had been so warehoused and exported.—(9 *Geo.* 4. c. 76. § 18.)

Mahogany not to be entered as being the produce of any British possession, unless the master of the ship importing the same deliver to the collector or comptroller a *certificate*, and declare that the goods are the produce of such place.—(See *ante*, p. 672.)

**MAIZE, OR INDIAN CORN** (Fr. *Bled de Turquie*; Ger. *Türkisch horn*, *Mays*; It. *Grano Turco o Siciliano*; Sp. *Trigo de Indias*, *Trigo de Turquía*), one of the cereal grasses (*Zea Mays*), supposed to be indigenous to South America, being the only species of corn cultivated in the New World previously to its discovery. It was introduced into the Continent about the beginning, and into England a little after the middle, of the 16th century. Its culture has spread with astonishing rapidity; being now extensively grown in most Asiatic countries, and in all the southern parts of Europe. It has the widest geographical range of all the cerealia, growing luxuriantly at the equator, and as far as the 50th degree of north, and the 40th of south latitude. It has been raised in England, in nursery gardens near the metropolis, for more than a century; and recently it has been attempted to raise it in the fields, but with indifferent success. Like other plants that have been long in cultivation, it has an immense number of varieties. The ear consists of about 600 grains, set close together in rows, to the number of 8, 10, or 12. The grains are usually yellow; but they are sometimes red, bluish, greenish, or olive-coloured, and sometimes striped and variegated. The maize of Virginia is tall and robust, growing 7 or 8 feet high; that of New England is shorter and lower; and the Indians further up the country have a still smaller sort in common use. The stalk is jointed like the sugar cane. The straw makes excellent fodder; and the grain, as a bread corn, is liked by some; but though it abounds in mucilage, it contains little or no gluten, and is not likely to be much used by those who can procure wheaten or even rye bread.—(*London's Encyclopædia of Agriculture*, &c.) For the imports of maize, duties, &c., see CORN LAWS and CORN TRADE.

**MALAGA**, a city and sea-port of Spain, in the kingdom of Granada, in lat. 36° 43' N., lon. 4° 25' 7" W. Population, perhaps, 65,000.

*Harbour*.—Malaga has an excellent harbour. It is protected on its eastern side by a fine mole, full 700 yards in length. At its extremity a light-house has been constructed, furnished with a powerful light, revolving once every minute. At a distance it appears obscured for 45 seconds, when a brilliant flash succeeds for the other 15 seconds. A shoal has grown up round the mole head, and the depth of water throughout the harbour is said to be diminishing. Latterly, however, a dredging machine has been employed to deepen it, by clearing out the mud and accumulating sand. The depth of water, at the entrance to the harbour and within the mole, is from 26 to 30 feet; and close to the city, from 8 to 10 feet. The harbour could easily accommodate more than 450 merchant ships: it may be entered with all winds, and affords perfect shelter.

*Trade*, &c.—Owing to the want of official returns, and to the prevalence of smuggling, which may be said to have annihilated all fair trade, it is not possible to obtain any accurate accounts of the trade of Malaga, or, indeed, of any Spanish port. The great articles of export are wine and fruits, particularly raisins and almonds, grapes, figs, and lemons; there is also a considerable exportation of olive oil, with quantities of brandy, anchovies, cummin seed, aniseed, barilla, soap, &c. The lead exported from Malaga is brought from Adra.—(See *LEAD*.) The imports are salt fish, iron hoops, bar iron, and nails; cotton stuffs, hides, earthenware, &c., with dye stuffs, all sorts of colonial produce, butter and cheese from Holland and Ireland, linens from Germany, &c. The trade with England seems to be diminishing, and that with the United States to be increasing. This is a consequence, no doubt, of Malaga wine being very little in demand in the

former, while it is pretty largely consumed in the latter. The Americans are also the largest consumers of Malaga fruit.

The following details, abstracted from Mr. Inglis's valuable work, entitled "Spain in 1830," contain the fullest and best account we have met with of the trade of Malaga. Their authenticity may, we believe, be depended upon.

**"Wine.**—The wines of Malaga are of two sorts, sweet and dry; and of the former of these there are four kinds: first, the common 'Malaga,' known and exported under that name. In this there is a certain proportion of boiled wine, which is allowed to burn, and which communicates a slightly burnt taste to the 'Malaga.' The grape from which this wine is made is a white grape, and every pipe of 'Malaga' contains no less than eleven gallons of brandy. Secondly, 'Mountain.' This wine is made from the same grape as the other, and, like it, contains colouring matter and brandy; the only difference is that, for 'Mountain,' the grape is allowed to become riper. Thirdly, 'Lagrimas,' the richest and finest of the sweet wines of Malaga; the name of which almost explains the manner in which it is made. It is the droppings of the ripe grape hung up, and is obtained without the application of pressure.

"The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed when greener; in this wine there is an eighth part more of brandy than in the sweet wine; no less than 1-12th part of the dry Malaga being brandy.

"The whole produce of the Malaga vineyards is estimated at from 35,000 to 40,000 pipes; but owing to the increasing stock of old wine in the cellars, it is impossible to be precise in this calculation. The export of all sorts of Malaga wine may be stated at about 37,000 pipes. The principal market is the U. States and S. America; and to these the export is upon the increase. The average price of the wines shipped from Malaga does not exceed 35 dollars per pipe; but wines are occasionally exported at the price of 170 dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The sherry grape has been reared at Malaga upon a soil very similar to that of Xerez; but the merchants of Malaga have not ventured to enter the wine for export. One reason of the very low price of the wines of Malaga is to be found in the cheapness of labour; field labour is only 24 reals a day (4d.). In the fruit and vintage time it is about double.

**"Fruit.**—Next to its wines, the chief export of Malaga is fruit, consisting of raisins, almonds, grapes, figs, and lemons; but of these, raisins are principally exported. I have before me a note of the exports of Malaga for the months of September and October, 1830,—the chief, though not the sole, exporting months.—and I find that during that time the export of raisins amounted to 968,845 boxes, and 3,916 smaller packages. Of this quantity, 126,334 boxes were entered for the U. States; 45,513 for England; the remaining quantity being for France, the West Indies, the Spanish ports, S. America, and Holland.

"The raisins exported from Malaga are of three kinds, *muscatel*, *bloom* or *sun raisins*, and *lexia*. The muscatel is the finest raisin in the world. In its preparation no art is used; the grape is merely placed in the sun, and frequently turned. The bloom or sun raisin is a different grape from the muscatel; but its preparation is the same. The *lexias* acquire this name from the liquor, or ley, in which they are dipped, and which is composed of water, ashes, and oil; these, after being dipped, are also dried in the sun. All muscatel raisins are exported in boxes, and also a part of the bloom raisins. In 1829, the exports of muscatel and bloom raisins were 326,000 boxes of 25 lbs. each; in all, 8,126,000 lbs. This quantity is independent of the export of bloom raisins in casks, and of *lexias*; the latter amounting to about 30,000 arrobas. The export of raisins to England has fallen off, while that to America has considerably increased. In 1824, 75 ships cleared from Malaga, for England, with fruit; in 1830, down to the 1st of November, 34 vessels had cleared out.

"Of the other fruits raised near Malaga, grapes, almonds, and lemons are the most extensively exported. In the months of September and October, 1830, 11,613 jars of grapes were shipped for England; 6,429 for America; and 1,660 for Russia. During the same months, 5,235 arrobas of almonds (133,375 lbs.) were shipped for England, this being nearly the whole export; there were also exported, during the same period, 3,740 boxes of lemons for England; 4,301 ditto for Germany; and 940 ditto for Russia.

**"Oil.**—There is also a large export of oil from Malaga; but the exportation, during the latter part of 1830, would be no criterion of the average; because, the Greenland whale fishery having failed, extensive orders had been received from England.

**"Shipping.**—The trade between England and Malaga is on the decline: that with both the Americas is increasing, especially in wines. The number of British vessels entered at the port of Malaga, in 1827, I find from an official note furnished by the British consul to have been 104; in 1828, 126; in 1829, 108; and in 1830, to the 1st of November, 88, exclusive of small Gibraltar vessels. The number of American vessels entering in 1829, was 55; but the average burden of the Americans being 175 tons, and that of the English vessels not exceeding 100, the whole American is nearly equal to the whole English trade."—(Vol. II. pp. 190—196.)

**"Money.**—Accounts are kept in reals of 34 maravedis vellon.—(For the coins, and their value, used at Malaga, see CADIZ.)

**"Weights and Measures.**—The weights are the same as those of Cadiz. The arroba, or cantara=4.19 English wine gallons; the regular pipe of Malaga wine contains 35 arrobas, but is reckoned only at 34; a bota of Pedro Ximenes wine=53½ arrobas; a bota of oil is 43, and a pipe 35 arrobas; the latter weighs about 860 lbs. avoirdupois: a carga of raisins is 3 baskets, or 7 arrobas; a cask contains as much, though only called 4 arrobas: as a last for freight are reckoned—4 botas or 5 pipes of wine or oil; 4 bales of orange peel; 5 pipes of Pedro Ximenes wine or oil; 10 casks of almonds (each about 360 lbs. English); 20 chests of lemons and oranges; 25 casks of almonds (of 8 arrobas each); 44 casks of raisins (of 4 arrobas each); 88 half casks of raisins; 50 baskets or 160 jars of raisins.

**"Port Charges.**—The port and harbour dues amount, on an English vessel of 300 tons, to about 21s.; on a Spanish vessel, of the same burden, they would be about 11s. 10s.

**"Warehousing.**—Goods may be warehoused for 12 months, paying 2 per cent. *ad valorem* in lieu of all charges; but, at the end of the year they must be either entered for consumption or reshipped. The 2 per cent. is charged, whether they lie a day or the whole year.

There is an excellent account of Malaga in *Townsend's Travels in Spain*, vol. iii. pp. 10—42.

**MALMSLEY.** See **WINE**.

**MALT** (Ger. *Maly*; Du. *Mout*; Fr. *Mal*, *Blégermé*; It. *Malto*; Sp. *Cebada retonada ó altallada*; Rus. *Solod*; Lat. *Maltum*). The term malt is applied to designate grain which, being steeped in water, is made to germinate to a certain extent, after which the process is checked by the application of heat. This evolves the saccharine principle of the grain, which is the essence of malt. The process followed in the manufacture is very simple. Few changes have been made in it; and it is carried on at this moment very much in the same manner that it was carried on by our ancestors centuries ago. Rice, and almost every species of grain, has been used in malting; but in Europe, and especially in England, malt is prepared almost wholly from barley. It

is the principal ingredient in the manufacture of beer, and is little used except in brewing and the distillation of spirits.

*Duties on, and Consumption of. Malt. Influence of the Reduction of the Duty and the Opening of the Trade.*—Owing to malt liquor having early become the favourite beverage of the people of England, the manufacture of malt has been carried on amongst us, for a lengthened period, on a very large scale. Instead, however, of increasing with the increasing wealth and population of the country, it was nearly stationary for the hundred years ending with 1816. In proof of this we may mention that the quantity of malt that paid duty in England and Wales, at an average of the 12 years ending with 1720, was 24,191,304 bushels a year; whereas the annual average quantity that paid duty during the 12 years ending with 1816, was only 23,197,754 bushels! This apparently anomalous result is probably in some measure to be accounted for by the increased consumption of tea and coffee, which are now in almost universal use; but there cannot be a question that it is mainly owing to the exorbitant duties with which malt, and the ale or beer manufactured from it, have been loaded, and to the oppressive regulations imposed on the manufacture of malt and the sale of beer. The effect of these duties and regulations was to impose a tax of about 7s. on the malt and beer made from a bushel of barley; which, taking the average price of barley at from 4s. to 5s. a bushel, was equivalent to an *ad valorem* duty of from 140 to 175 per cent.! The exorbitancy of the duty was not, however, its most objectionable feature. It was about equally divided—one half being assessed directly on malt, and the other on beer: but the beer duty affected only beer brewed by public brewers, or for sale, and did not affect that which was brewed for private use; and as rich families brewed all the beer they made use of, the consequence of this distinction was, that the beer duty fell wholly on the lower and middle classes, who did not brew any beer; or, in other words, the poor man was compelled to pay twice the duty on the malt he made use of that was paid by the rich man! That such a distinction should ever have been made, or submitted to for any considerable period, is certainly not a little astonishing. Originally, however, the distinction was not so great as it afterwards became; and being increased by slow degrees, the force of habit reconciled the parliament and the country to the gross inequality and oppressiveness of the tax. But the public attention being at length forcibly attracted to the subject, and the effect of the exorbitant duties on malt and beer in increasing the consumption of ardent spirits having been clearly pointed out—(see *Edinburgh Review*, No. 98. art. 4.), the beer duty was repealed in 1830. This measure of substantial justice and sound policy reflects the greatest credit on the administration of the Duke of Wellington; which is also entitled to the public gratitude for having placed the licensing system on a fair footing, and established, for the first time, a free trade in beer.

The repeal of the duty has materially increased the consumption of malt; and the anticipations of those who contended that its abolition, if combined with a free trade in beer, would be no great loss to the revenue, are in a fair way of being realised. The clamour that was raised against the measure, on account of its supposed influence in increasing drunkenness, was, we firmly believe, wholly without foundation. If the measure increased, as it certainly did, the consumption of beer, the probability is that it would, at the same time, equally diminish the consumption of gin; and it is surely superfluous to add, that this is a most beneficial change. It is true that a number of new public houses were opened for the sale of beer; but it has not hitherto been proved that this circumstance, though it occasioned no common alarm among the clergy and magistrates in different parts of the country, was productive of any public inconvenience. Like all newly opened lines of business, the trade of beer selling was overdone; and a considerable number of beer shops have since been shut up. "It is not," as Dr. Smith sagaciously remarked, "the multiplication of alehouses that occasions a general disposition to drunkenness among the common people; but that disposition, arising from other causes, necessarily gives employment to a multitude of alehouses."—(*Wealth of Nations*, p. 161.) The way to eradicate this disposition is by giving a better education to the poor, and inspiring them with a taste for less grovelling enjoyments. All that the fiscal regulations and police enactments intended to promote sobriety have ever done, is to make bad worse, to irritate and disgust, to make the lower classes more enamoured of that which they conceive is unjustly withheld from them, and to stimulate them to elude and defeat the law.

The duty on malt was first imposed in England in 1697, and in Scotland in 1713; but it was not introduced into Ireland till 1785. The following tables exhibit the progress of the consumption and of the duties directly falling on malt from a remote period. But the principal consumption of malt being in beer, the duties on the latter were, in fact, duties on malt; and must always be taken into account in forming anything like a correct estimate of the influence of the latter. Ample information as to the duties on beer will be found in the art. ALE AND BEER.

MALTA, an island in the Mediterranean, belonging to the British, nearly opposite to the southern extremity of Sicily, from which it is about 54 miles distant.

Valetta, the capital, is situated on the north coast of the island, the light-house in the castle of St. Elmo being in lat. 35° 54' 6" N., lon. 14° 31' 10" E. Malta is about 20 miles long, and 10 or 12 broad. The island of Gozo, about a fourth part of the size of Malta, lies to the north-west of the latter, at about 4 miles' distance; and in the strait between them is the small island of Cumino. In 1835, the resident population of Malta amounted to 100,154; and, including troops and strangers, the total population amounted to 106,578. The population of Gozo, at the same period, was 16,547. The total population of both islands making 123,125. The entire revenue collected in Malta amounts to about 100,000*l.* a year, of which about 23,000*l.* is derived from the rent of lands; the expenditure, exclusive of that incurred in England on account of the island, amounts to about 88,000*l.*

Valetta, the capital of the island, is defended by almost impregnable fortifications. "These," says Mr. Brydone, "are, indeed, most stupendous works. All the boasted catacombs of Rome and Naples are a trifle to the immense excavations that have been made in this little island. The ditches, of a vast size, are all cut out of the solid rock; these extend for a great many miles; and raise our astonishment to think that so small a state has ever been able to make them."—(*Tour through Sicily and Malta*, Letter 15.) Since the island came into our possession, the fortifications have been considerably improved; so that at present it is a place of very great strength.

After the capture of Rhodes by the Turks, the Emperor Charles V. made a present of Malta to the Knights of St. John of Jerusalem, in whose possession it remained till 1798, when it was taken by the French. It was taken from the latter by the English in 1800; and was definitively ceded to us in 1814.

The island consists mostly of a rock, very thinly covered with soil, a good deal of which has been brought, at an immense expense, from Sicily; but being cultivated with the utmost care, it produces excellent fruits, particularly the celebrated Maltese oranges, corn, cotton, with small quantities of indigo, saffron, and sugar. The principal dependence of the inhabitants is on their cotton; the crop of which, amounting to about 4,000,000 lbs. a year, is partly exported raw, and partly manufactured to the value of from 80,000*l.* to 100,000*l.* The corn raised in the island is not sufficient to feed the inhabitants for more than 5 or 6 months. The trade in corn used to be monopolised by government; and after the monopoly was abandoned, duties on importation, varying, like those in this country, with the price, were imposed. But in 1835, these duties were abolished; and the fixed duties on corn entered for consumption, specified in the subjoined tariff, were substituted in their stead.

Malta presents unusual facilities, which have not hitherto been taken proper advantage of, for becoming the entrepôt of the corn trade of the Mediterranean and Black Sea. Her warehouses for corn are, like those of Sicily and Barbary, excavated in the rock; and are, perhaps, the best fitted of any in Europe for the safe keeping of corn. The wheat lodged in them may be preserved for an indefinite period; and it is affirmed that though it should, on being deposited, be affected by the weevil, it is very soon freed from that destructive insect. It is not often that corn can be brought direct from Odessa, Taganrog, &c. to England, without the risk of being damaged; but were it brought in the first instance to Malta, and bonded there, it might afterwards be conveyed in the best order to London, or any where else. Malta is also admirably well suited for becoming the centre of the corn trade of Egypt, Barbary, Italy, &c.

During the late war, particularly during the period when Napoleon's anti-commercial system was in operation, Malta became a great entrepôt for colonial and other goods, which were thence conveyed, according as opportunities offered, to the adjacent ports. This commerce ceased with the circumstances that gave it birth; and for some years after the return of peace, the trade of the island was depressed below its natural level, by the imposition of various oppressive discriminating duties. In 1819, this vexatious system was partially obviated; but it continued to exert a pernicious influence till 1837, when, pursuant to the recommendation of Messrs. Austin and Lewis, commissioners of inquiry, the then existing tariffs of customs duties and port charges were wholly abolished; and a new tariff (which is subjoined) was issued in their stead. It imposes moderate duties, for the sake of revenue only, on a few articles in general demand, without regard to the country whence they come, at the same time that it equalises the tonnage duties, and reduces the warehouse rent on articles in bond to the lowest level. Every thing has thus been done that was possible to second the natural advantages enjoyed by Malta for becoming the grand entrepôt of the Mediterranean trade; and we have little doubt they will powerfully contribute to bring about that result.

There are some good springs of fresh water. Valetta is partly supplied by water brought by an aqueduct a distance of about 6 miles, and partly by the rain collected in cisterns.

TABLE exhibiting the various Articles, and their Value in Sterling Money, imported into the Island of Malta during each of the Four Years ending with 1837.

Species of Imports.	1834.	1835.	1836.	1837.	Species of Imports.	1834.	1835.	1836.	1837.

**Harbour.** — The harbour of Valetta is double, and is one of the finest in the world. The city is built on a narrow tongue of land, having the castle and light of St. Elmo at its extremity and an admirable port on each side. That on the south-eastern side, denominated the grand port, is the most frequented. The entrance to it, about 250 fathoms wide, has the formidable batteries of St. Elmo on the one hand, and those of Fort Ricca on the other. In entering, it is necessary not to come within 50 or 60 fathoms of the former, on account of a spit which projects from it; but in the rest of the channel there is from 10 to 12 fathoms water. The port, which runs about 13 mile inwards, has deep water and excellent anchorage throughout: the largest men-of-war coming close to the quays. Port Marmuscato, on the north-western side of the city, is also a noble harbour. The entrance to it, which is about the same breadth as that of the grand port, is between St. Elmo and Fort Tigné. The centre of the basin is an island, on which are built a castle and a lazaretto, for the convenience of the ships performing quarantine, by which the port is principally used. Owing to the narrowness of the entrance, and the usual variability of the wind, it is customary for most vessels bound for Valetta to take a pilot on board before entering the harbour.

**TARIFF (A).** — Duties on Imports, and Dues for Store Rent, which the Collector of Customs is required to levy on the Account of the Government of Malta.

	Import Duties.	Store Rents on Articles lodged in Bond.

Spirits: viz. for every Maltese barrel of such spirits of any strength not exceeding the strength of proof, by Nyke's hydrometer (namely London proof) and so in proportion for any greater strength than the strength of proof	1 2 0	0 0 2
Vinegar, per Maltese barrel	0 2 0	0 0 2
Wines, the value of which shall exceed 12s. per pipe of 11 Maltese barrels, per Maltese barrel	0 11 0	0 0 2
All other wines, per Maltese barrel	0 2 0	0 0 2

**Observations.** — 1. The duties payable by the sale on grain, pulse, and seeds (except large Sicilian beans) to be charged by the strike measure. The duties on large Sicilian beans and on charcoal to be charged by the heaped measure.

2. Every liquid compounded of spirit and any other ingredients or ingredients, and containing more than 25 per cent. of spirit of the strength of proof, to be liable to the duty on spirits which is imposed by the present tariff.

3. The store rents on grain lodged in bond to be payable from the day on which the grain was lodged. The store rents on every other article mentioned in the present tariff to be payable from the tenth day after the day on which such article was lodged.

**TARIFF (B).** — Tonnage Dues which the Collector of Customs is required to levy on the Account of the Government of Malta.

Vessels discharging merchandise in the island shall, on clearing outwards, pay for every ton or any part thereof — 6d.

**TARIFF (C).** — Fees which the Collector of Customs is required to levy on the Account of the Government of Malta.

For each certificate under the office seal — £ s. d.  
For each sheet of printed official forms — 0 0 2

**Tariff of Dues authorized to be levied for Account of Government, by the Superintendent of Quarantine, Malta.**

**Shipping in Quarantine.** — 1. Vessels entered upon a quarantine to pay, for each day of their continuance in port, as follows: —

	s.	d.
Vessels not exceeding 25 tons	0	0
— from 26 tons to 50 —	0	6
— from 51 — 100 —	1	0
— from 101 — 150 —	2	0
— from 151 — 200 —	2	6
— from 201 — 250 —	3	0
— from 251 and upwards	3	0

2. Vessels of whatever size, sailing in quarantine, having entered upon the performance thereof, to pay at the above rates, but in no case more than 2s. a day for the remainder of the term of quarantine.

3. Vessels liable to quarantine, not having entered upon the performance thereof, to pay 2s. for each day of their continuance in port.

4. Vessels compelled by stress of weather to enter the great harbour, to be subject, while they remain there, to the additional charge of 3s. a day, for every guard boat which the Superintendent of Quarantine may deem it necessary to place over them.

\* \* \* Any vessel in quarantine entering the great harbour without a justifiable cause, incurs the penalty of 300 dollars imposed by the second article of the proclamation, dated 12th October, 1820. (No. xiii.)

5. Vessels having contagious diseases on board to pay an extra rate in proportion to the expense that may be incurred, but in no case to exceed 20s. a day, in addition to the usual rate.

Efforts received into the lazaret for deputation to be chargeable with a due proportion of the actual expense thereof, which, at present, on ordinary occasions, is at the rate of 2s. 6d. a day for each guardian, and 1s. 6d. a day for each labourer, whom it may be necessary to employ.

Cattle landed in the lazaret to be chargeable, for each: —  
Horse, mule, or ass — 3 0  
Bullock, or other animal of the kind — 2 0  
Sheep, goat, pig, or other small animal — 1 0

Fees for performing quarantine in the lazaret to pay at the rate of 2s. 6d. a day, for each guardian employed, but no single individual to be chargeable with more than 1s. 6d. a day. Documents issued under the office seal, 2s. 6d. each.

The central position, excellent port, and great strength of Malta, make it an admirable naval station for the repair and accommodation of the men-of-war and merchant-ships frequenting the Mediterranean, and render its possession of material importance to the British empire. Since Malta-built vessels were admitted into the ports of the U. Kingdom on the same terms as those of British built, the trade of ship-building has materially increased in the island. The Maltese shipwrights are diligent expert workmen; and, their wages being moderate, it is a favourable place for careening. Owing to the want of a dry dock, all ships above the size of a sloop of war, that require to have their bottoms examined, have to come to England for that purpose. This, surely, should be obviated. Quarantine is strictly enforced at

Malta; but there is every facility for its performance, and the charges are less than at any other port in the Mediterranean.

Malta is now the centre of a very extensive steam-packet system; the steamers from England for the Ionian Islands, Constantinople, Alexandria, and other ports of the Levant, touching here. The French steamers from these ports usually perform quarantine at Malta.

**Money.**—In 1855, British silver money was introduced into Malta; the Spanish dollar being made legal tender at the rate of 4s. 4d.; the Sicilian dollar at 4s. 2d.; and the scale of Malta at 1s. 8d.

**Weights and Measures.**—The pound or rotello, commercial weight = 50 onces = 12816 English grains. Hence 100 rotelli (the centaro) is 1744 lbs. avoirdupois, or 79·14 klog. Merchants usually reckon the centaro at 175 lbs.

The salma of corn, stricken measure = 8·251 Winchester bushels: heaped measure is reckoned 16 per cent. more. The calico, or measure for oil, contains 64 English gallons = 30·618

Hires. The barrel is double the cask. The Maltese foot = 11 1/2 English inches = 293·6 metres. The canna = 6 palmi = 61·9 English inches = 157·9 metres. Merchants usually convert Malta measure into English in the proportion of 4 palmi to a yard, or 2 1/2-7th yards to 1 canna.

Bills on London are usually drawn at 30 and 60 days' sight. The deputy commissary general is obliged to grant, at all times, bills on the treasury here for British silver loaned to him, at the rate of 1000. lli for every 100l. 10s. silver, receiving, at the same time, other silver, at a discounting rate of exchange.

**MAN (ISLE OF)** is, as every one knows, situated in the Irish sea, at about an equal distance from England, Scotland, and Ireland. It is about 30 miles long, and 10 or 12 broad. The interior is mountainous, and the soil no where very productive. Population, in 1841, 47,975. This island used to be one of the principal stations of the herring fishery; but for a considerable period it has been comparatively deserted by the herring shoals,—a circumstance which is not to be regretted; for the fishery, by withdrawing the attention of the inhabitants from agriculture and manufactures, and leading them to engage in what has usually been a gambling and unproductive business, has been, on the whole, injurious to the island. The steam packets from Glasgow to Liverpool touch at the Isle of Man; which has, in consequence, begun to be largely frequented by visitors from these cities, and other parts of the empire, whose influx has materially contributed to the improvement of Douglas and other towns.

The feudal sovereignty of Man was formerly vested in the Earls of Derby, and more recently in the Dukes of Athol, a circumstance which accounts for the fact of the duties on most commodities consumed in the island having been, for a lengthened period, much lower than those on the same commodities when consumed in Great Britain. This distinction, which still subsists, has produced a great deal of smuggling, and been in no ordinary degree injurious to the revenue and trade of the empire. During the present century, indeed, the clandestine trade of Man has been confined within comparatively narrow limits; but to accomplish this, a considerable extra force of Custom-house officers and revenue cruisers is required; and the intercourse with the island has to be subjected to various restraints. Nothing, as it appears to us, can be more impolitic than the continuance of such a system. The public has, at a very heavy expense, purchased all the feudal rights of the Athol family; and having done so, it is certainly high time that an end were put to the anomalous absurdity of having a considerable island, lying, as it were, in the very centre of the empire, and in the direct line between some of the principal trading towns, with different duties on many important articles! It might be necessary, perhaps, to make some compensation to the inhabitants for such a change; and this might be done, with advantage to them and without expense to the public, by modifying and improving the internal regulations and policy of the island, which are very much in need of amendment. We do not, indeed, imagine that the island would lose any thing by the proposed alteration; for the temptation which the present system holds out to engage in smuggling enterprises diverts the population from the regular pursuits of industry, and, along with the herring lottery, is the principal cause of that idleness for which the Manx are so notorious. We subjoin an

#### ABSTRACT OF § 9 VICT. C. 94., FOR REGULATING THE TRADE OF THE ISLE OF MAN.

**Commencement.**—To commence on the 4th August, 1845.—§ 1.

**Duties to be levied on Goods imported into the Isle of Man.**—With the exception of the customs duties on corn, grain, meal, or flour, there shall be raised, levied, collected, or paid unto H. M., her heirs and successors, the several duties of customs respectively set forth in the subjoined table of duties, upon the importation or bringing into the Isle of Man of the several goods, wares, or merchandise in the said table, according to the quantity or value thereof specified in it, and so in proportion for any greater or less quantity or value of the same; viz.:—

Table of Duties of Customs payable on Goods, Wares, and Merchandise, Imported or brought into the Isle of Man.

	£	s.	d.
Corns from the U. K. . . . .	Free.		
Coffee, the import duties in the U. K. not having been paid thereon, the lb. . . . .	0	0	2
Hemp . . . . .	Free.		
Hops from the U. K. . . . .	Free.		
Iron . . . . .	Free.		
Spirits; viz.:—			
Brandy, Foreign, the gallon . . . . .	0	4	6
Geneva, Foreign, the gallon . . . . .	0	2	6
Rum of the British possessions, the gallon . . . . .	0	1	6
Each spirit not exceeding the strength of proof by Sykes's hydrometer, and so in proportion for any greater or less strength than the strength of proof, and for any greater or less quantity than a gallon.			
Sugar, Muscovado, of the British possessions, and such other sugar as if entered for consumption in the U. K. would be subject, under any act of the present session of parliament, to a duty less than 6s. the cwt., the cwt. . . . .	0	1	0
Sugar, refined in the U. K. from raw sugar, whereupon the import duties have there been paid, the cwt. . . . .	0	9	0

Ten; viz.:—			
Bobas, the lb. . . . .	0	1	0

Timber and wood goods, the produce of the British possessions . . . . .	Free.		
Ran de Cotopax, per flesh (30 not containing more than 1 gallon) . . . . .	0	4	0
Or per gallon . . . . .	0	10	0
Liquors, per gallon . . . . .	0	10	0
Good wares, and merchandise brought from the U. K. and entitled to any bounty or drawback of excise on exportation from thence, and not herein-before enumerated or charged with duty . . . . .	Free.		
Goods, wares, and merchandise the growth, produce, or manufacture of and brought from the U. K., and not herein-before charged with duty . . . . .	Free.		
Goods, wares, and merchandise, not the growth, produce, or manufacture of the U. K., but brought			

from thence, and having there been entered for consumption, and the import duties having been there paid thereon. — Free.

Goods, wares, and merchandise imported or brought

from any place from whence such goods may be lawfully imported into the Isle of Man, and not heretofore charged with duty, or declared to be free of duty, for every 100*l.* of the value thereof. — 15 0 0

*Power to the Lords of the Treasury to remit and to re-impose the Duties on unenumerated Articles.* — It shall be lawful for the Lords of the Treasury, from time to time, by any order or orders under their hands, to declare that all or any articles legally importable into the Isle of Man and not enumerated in the said table, and upon which the said duty of 15*l.* for every 100*l.* value is hereby imposed, shall and may, from and after a day to be named in the said order or orders, be imported from the places and in the manner in the said order or orders mentioned into the Isle of Man duty-free, and that such articles shall be imported duty-free accordingly so long as such order or orders or any part thereof affecting such articles shall continue in force: provided always, that it shall be lawful for the said lords, or any 3 or more of them, at any time and from time to time as they shall consider expedient, by any further order under their hands to revoke the whole or any part of such order or orders for admitting the aforesaid articles or any of them into the Isle of Man duty-free, such order of revocation to take effect from a day to be named therein: provided also, that all orders of the Lords of the Treasury made in pursuance of this enactment shall be duly published in the London and Dublin Gazettes, twice at least within 14 days from the date of such orders respectively, and that a copy of every such order shall be laid before both houses of parliament within 6 weeks after the date of such order, if parliament be then sitting, and if not, then within 6 weeks after the commencement of the then next session of parliament. — § 3.

*Certain Goods Importable only under Licence.* — The several sorts of goods enumerated or described in the subjoined "Schedule of Licence Goods" shall not be brought into the Isle of Man, nor laden on board any vessel to be carried from any place to the Isle of Man, without the licence of the commissioners of customs first obtained, nor in greater quantities in the whole in any 1 year than the respective quantities of such goods specified in the said schedule, and such goods shall not be so brought into the said Isle of Man, except from the respective places set forth in the said schedule, and according to the rules subjoined thereto: provided always, that it shall be lawful for the Lords of the Treasury, or any 3 or more of them, from time to time, upon sufficient cause to them appearing, by any order under their hands to permit the importation into the Isle of Man of such additional quantity of such several sorts of goods or any of them, in any 1 year, beyond the quantities named in the said table as they shall in their discretion consider expedient. — § 4.

#### Schedule of Licence Goods.

*Spirits: viz. —*

Foreign Brandy, 90,000 gallons.

Foreign Geneva, 20,000 gallons

Liqueurs, 50 gallons.

Rum of Colonge, 10 gallons.

From the U. K. or from any place from which the same might be imported into the U. K. for consumption therein.

Rum of the British Colonies, 70,000 gallons.

Tobacco, 55,000 pounds.

Sugar, 5,000 pounds.

From the U. K.

Rules relating to licence goods referred to in this act: —

1. All such goods to be imported or brought into the port of Douglas, and by H. M.'s subjects and in British ships or vessels of the burden of 50 tons or upwards.

2. Such tobacco to be shipped only in ports in the U. K. where tobacco is allowed to be imported and warehoused without payment of duty.

3. Such rum, brandy, and Geneva, to be imported or brought in casks containing not less than 50 gallons each.

4. That the respective quantities of such spirits shall be estimated according to the strength of proof by Sykes's hydrometer.

5. No drawback of excise to be allowed on any such goods until a certificate of the due landing of the goods at the port of Douglas be produced from the collector and comptroller of the customs at that port.

6. If any such goods be laden at any foreign port or place the species and quantity of such goods, with the marks, numbers, and denominations of the casks or packages containing the same, shall be endorsed on the licence, and signed by the British consul at the port of lading; or if there be no British consul, by two known British merchants.

7. Upon importation into the port of Douglas of any such goods, the licence for the same shall be delivered up to the collector or comptroller of that port.

*Application for Licence to be delivered to Officers at Douglas between 5th May and 5th July.* — Every application for licence to import any of the goods aforesaid into the Isle of Man shall be made in writing, and delivered between the 5th day of May and the 5th day of July in each year to the collector or comptroller of the port of Douglas in the said Isle; and such application shall specify the date thereof, and the name, residence, and occupation of the person applying, and the description and quantity of each article for which such licence is required; and all such applications, with such particulars, shall be entered in a book, to be kept at the custom-house at the port of Douglas, and to be there open for public inspection during the hours of business, and on the 5th day of July in each year such book shall be closed, and within 14 days thereafter the collector and comptroller shall make out and sign a true copy of such entries, specifying the applicants resident and the applicants not resident in the said Isle, and deliver or transmit such copy to the governor or lieutenant-governor of the said Isle for the time being. — § 5.

*Governor to allot Quantities.* — Within 14 days after the receipt of such copy the governor or lieutenant-governor of the said Isle shall allot the whole quantity of each article in the first place among the applicants resident in the said island; and in case the whole quantity of any article shall not have been applied for by residents, he shall then allot the quantity not so applied for among the non-resident applicants, in such proportions in all cases as he shall judge most fair and equitable; and shall cause a report thereon to be drawn up in writing, and sign and transmit the same to the Lords of the Treasury, and shall cause a duplicate of such report so signed to be transmitted to the commissioners of customs. — § 6.

*Clause 7.* enacts that the commissioners of customs shall grant licences according to report of governor. *Before Delivery of Licences, Bond to be given.* — Previous to the delivery of any such licences to the persons to whom they are granted, the collector and comptroller of Douglas shall take the bond of such persons, with sufficient security for the importation or bringing in of the articles for which the said licences are respectively granted on or before the 5th day of July succeeding the delivery of such licences, with such conditions, and for the forfeiture of such sums, not exceeding the whole amount of duties payable in Great Britain on articles similar to those specified in such licences, as the commissioners of customs shall think fit: provided always, that if any person to whom such licence shall be granted shall not have given such bond prior to the 5th day of January next after the granting such licence, it shall be lawful for the governor or lieutenant-governor of the said Isle, if he shall see fit, to transfer any such licence to any other person who shall be desirous to take up the same, and willing and able to give such bond; and such transfer shall be notified by endorsement on the licence signed by such governor or lieutenant-governor. — § 8.

*Clause 9.* enacts that parties not importing the whole of the goods for which they have obtained a licence shall be disqualified from having a licence the following year.

*Clause 10.* inflicts a penalty of 500*l.* on all persons counterfeiting or falsifying a licence.

*Licence Goods not to be re-exported, &c.* — It shall not be lawful to re-export from the Isle of Man any goods which have been imported into the said Isle with licence of the commissioners of customs as aforesaid; and it shall not be lawful to carry any such goods coastwise from one part of the said Isle to another, except in vessels of 50 tons burden at the least, and in the same packages in which such goods were imported into the said Isle; and it shall not be lawful to remove any wine from one part of the said Isle to another, except in such packages or in bottles. — § 11.

*Trade with the Isle of Man to be a Coasting Trade.* — All trade from any port of the U. K. to the Isle of Man, or from the Isle of Man to any port of the U. K., shall be deemed to be a coasting trade, and all ships employed therein shall be deemed to be coasting ships, and shall be subject to all the rules, regulations, penalties, and forfeitures now in force relating to coasting ships, and the Isle of Man shall not

be deemed in law with reference to any part of the U. K. to be parts beyond the seas in any matter relating to the trade or navigation or revenue of this realm: provided nevertheless, that all goods subject to duty under this act, when brought from the U. K. into the Isle of Man, and all vessels bringing the same, shall be liable to the same rules and regulations as are required by law in respect of goods imported into the said Isle from foreign parts, and in respect of the vessels importing the same; and that all the penalties and forfeitures inflicted by law for any breach of the said rules and regulations shall attach upon all goods so brought into the said Isle contrary to the said rules and regulations, or any of them, and upon all persons committing any breach of any such rule or regulation; and such penalties and forfeitures shall and may be recovered in the same manner as any penalty or forfeiture may be recovered by any act relating to the customs.

Clause 13. enacts that corn, grain, meal, and flour may be warehoused in the island, under the sanction of the commissioners of customs.

Clause 14. enacts that the provisions of the Warehousing Act shall extend to the Isle of Man in respect of corn, grain, meal, and flour.

Clause 15. enacts that goods warehoused in the U. K. may be removed into the Isle of Man, under certain regulations.

Clause 16. directs that nothing in this act shall affect the existing laws and regulations as to excise drawbacks.

Clause 17. enacts that sugar on which bounty has been allowed may be removed to the Isle of Man.

Clause 18. enacts that bond shall be given not to re-land such sugar.

*Foreign Goods, except Corn, not to be brought from the Isle of Man to the U. K.* — It shall not be lawful to carry any goods not being of the produce or manufacture of the Isle of Man or of the U. K., except corn, grain, meal, or flour, in any ship from the Isle of Man to any port or place in the U. K. — § 19.

*Goods prohibited to be imported into the Isle of Man.* — The several sorts of goods enumerated in the subjoined "Schedule of Prohibitions," shall not be imported or brought into the Isle of Man, viz. —

#### Schedule of Prohibitions.

Goods the produce or manufacture of places within the limits of the East India Company's charter, except from the U. K. Cotton, yarn, cotton cloth, linen cloth, glass manufactures, woolen manufactures, unless *bona fide* laden in and brought directly from the U. K.

British distilled spirits:

*Goods imported, exported, or carried Coastwise, contrary to the Act, forfeited.* — If any goods, or shall be carried coastwise from one part of the said Isle, or from the U. K. to the said Isle, or from the said Isle to the U. K., or shall be waterborne or brought to any wharf or place with intent to be waterborne, to be so exported or carried, or shall be removed by land within the said Isle, contrary to any of the directions or provisions of this act, the same and all the packages containing the same shall be forfeited, together with all ships, vessels, or boats, and all cattle and carriages used or employed therein; and every person offending therein shall forfeit for every such offence the sum of 100*l.*, or the full amount of all duties which would be payable in respect of similar goods the produce of foreign countries, if imported into and entered for home consumption in the U. K., at the election of the commissioners of H. M's. customs. — § 21.

*Limiting the Quantity of Spirits, Tea, and Tobacco for Use of Seamen, &c.* — If any decreed results, bound from the Isle of Man to any port of Great Britain or Ireland, shall have on board for the use of the seamen any spirits exceeding the quantity of half a gallon for each seaman, or any tobacco exceeding 1 lb. weight for each seaman, or any tea exceeding 2 lb. weight for the whole of the seamen on board such vessel, or if any open boat, bound from the Isle of Man to any port of Great Britain or Ireland, shall have on board for the use of the seamen any spirits exceeding 1 quart for each seaman, or any tobacco exceeding 1 lb. weight for each seaman, or any tea exceeding 1 lb. weight for the whole of the seamen on board such boat, all such foreign spirits, tobacco, and tea respectively, together with the casks or packages containing the same, and also every such vessel or boat, together with all the guns, furniture, ammunition, tackle, and apparel thereof, shall be forfeited. — § 22.

Sugar or rum other than that enumerated and described in the table of duties herein-before contained: All goods prohibited to be imported into the U. K. to be used or consumed therein on account of the sort or description of the same. — § 20.

*Certificate for Goods the Produce of the Isle of Man.* — Before any goods shall be shipped in the Isle of Man, to be carried to the U. K. as being the produce or manufacture of that Island, proof shall be made by the written declaration of some competent person to the satisfaction of the collector and comptroller of the customs, at the port of shipment, that such goods, describing and identifying the same, are the produce or manufacture, as the case may be, of the said Island, and in such declaration shall be stated the name of the person by whom such goods are intended to be shipped; and such person at the time of shipping (not being more than 1 month after the date of such declaration) shall make and subscribe a declaration before such collector or comptroller that the goods to be shipped are the same as are mentioned in such declaration; and thereupon the collector and comptroller shall, on demand, give to the master of the ship in which the goods are to be exported a certificate of such proof of produce or of manufacture having been made in respect of such goods, describing the same, and setting forth the name of the party and of the ship, and of the master thereof, and the destination of the goods; and such certificate shall be received at the port in the U. K. into which the said goods shall be brought, instead of the certificate of the governor, lieutenant-governor, or commander-in-chief of the said Island, heretofore required. — § 23.

Clauses 24 and 25 relate to the management and appropriation of the duties, and are not, therefore, of any commercial importance.

Clause 26 enacts that vessels of 50 tons burden registered in the Isle of Man, and the *bona fide* property of cabotage thereof, shall be entitled in the coasting trade to all privileges enjoyed by vessels of 50 tons registered in the U. K.

**MANGANESE** (Ger. *Braunstein*, *Glasseise*; Du. *Braunsteen*; Fr. *Manganèse*, *Magalèse*, *Savon du verre*; It. *Manganesia*; Sp. *Manganenía*; Lat. *Magnesia nigra*, *Manganesium*), a metal which, when pure, is of a greyish white colour, like cast iron, and has a good deal of brilliancy. Its texture is granular; it has neither taste nor smell; it is softer than cast iron, and may be filed; its specific gravity is 8. It is very brittle, and can neither be hammered nor drawn out into wire. Its tenacity is unknown. When exposed to the air, it attracts oxygen with considerable rapidity. It soon loses its lustre, and becomes grey, violet, brown, and at last black. These changes take place still more rapidly if the metal be heated in an open vessel. Ores of manganese are common in Devonshire, Somersetshire, &c. The ore of manganese, known in Derbyshire by the name of *black wudd*, is remarkable for its spontaneous inflammation with oil. Oxide of manganese is of considerable use; it is employed in making oxymuriatic acid, for forming bleaching liquor. It is also used in glazing black earthenware, for giving colours to enamels, and in the manufacture of porcelain. It is the substance generally used by chemists for obtaining oxygen gas. — (*Thomson's Chemistry*, &c.)

**MANGEL WURZEL**, or **FIELD BEET** (Fr. *Betteraves*; Ger. *Mangold Wurzel*; It. *Bietola*), a mongrel between the red and white beet. It has been a good deal cultivated in France, Germany, and Switzerland, partly as food for cattle, and partly to be used in distillation, and in the extraction of sugar. Its culture in Great Britain is very recent; and Mr. Loudon questions whether it has any advantages over the turnip for general agricultural purposes. The preparation of the soil is exactly the same as for turnips, and immense crops are raised on strong clays. The produce per acre is about the same as that of the Swedish turnip; it is applied almost entirely to the fattening of stock, and the feeding of milch cows. — (*Loudon's Enc. of Agriculture*.)

**MANNA** (Fr. *Manne*; Ger. *Mannaesche*; It. *Maana*), the concrete juice of the *Frazinus ornus*, a species of ash growing in the south of Europe. The juice exudes

spontaneously in warm dry weather, and concretes into whitish tears; but the greater part of the manna of commerce is obtained by making incisions in the tree, and gathering the juice in baskets, where it forms irregular masses of a reddish or brownish colour, often full of impurities. Manna is imported in chests, principally from Sicily and Calabria. The best is in oblong pieces or flakes, moderately dry, friable, light, of a whitish or pale yellow colour, and in some degree transparent; the inferior kinds are moist, unctuous, and brown. It has a slight peculiar odour, and a sweet taste, with some degree of bitterness not very pleasant, and leaving a nauseous impression on the tongue. — (*Thomson's Dispensatory*.)

MANIFEST, in commercial navigation, is a document signed by the master, containing the name or names of the places where the goods on board have been laden, and the place or places for which they are respectively destined; the name and tonnage of the vessel, the name of the master, and the name of the place to which the vessel belongs; a particular account and description of all the packages on board, with the marks and numbers thereon, the goods contained in such packages, the names of the respective shippers and consignees, as far as such particulars are known to the master, &c. A separate manifest is required for tobacco. The manifest must be made out, dated, and signed by the captain, at the place or places where the goods, or any part of the goods, are taken on board. — (See IMPORTATION AND EXPORTATION.)

MANILLA, the capital of Luconia, the largest of the Philippine Islands, and the principal settlement of the Spaniards in the East, in lat.  $14^{\circ} 36' 8''$  N., lon.  $120^{\circ} 53'$  E. Population about 100,000, of whom from 4,000 to 5,000 may be Europeans. Manilla is built on the shore of a spacious bay of the same name, at the mouth of a river navigable for small vessels a considerable way into the interior. The smaller class of ships anchor in Manilla roads, in 5 fathoms, the north bastion bearing N.  $37^{\circ}$  E., the fishery stakes at the river's mouth N.  $18^{\circ}$  E., distant about a mile; but large ships anchor at Cavita, about 3 leagues to the southward, where there is a good harbour, well sheltered from the W. and S. W. winds. The arsenal is at Cavita, which is defended by Fort St. Philip, the strongest fortress on the islands. The city is surrounded by a wall and towers, and some of the bastions are well furnished with artillery.

Though situated within the tropics, the climate of the Philippines is sufficiently temperate; the only considerable disadvantage under which they labour in this respect being that the principal part of the group comes within the range of the typhoons. The soil is of very different qualities; but for the most part singularly fertile. They are rich in mineral, vegetable, and animal productions. It is stated in a statistical account of the Philippines, published at Manilla in 1818 and 1819, that the entire population of the islands amounted to 2,249,852, of which 1,376,222 belonged to Luconia. There were, at the period referred to, only 2,837 Europeans in the islands, and little more than 6,000 Chinese. The natives are said to be the most active, bold, and energetic, of any belonging to the Eastern Archipelago. "These people," says a most intelligent navigator, "appear in no respect inferior to those of Europe. They cultivate the earth like men of understanding; are carpenters, joiners, smiths, goldsmiths, weavers, masons, &c. I have walked through their villages, and found them kind, hospitable, and communicative; and though the Spaniards speak of and treat them with contempt, I perceived that the vices they attributed to the Indians, ought rather to be imputed to the government they have themselves established." — (*Voyage de M. De la Perouse*, c. 15.)

The principal articles of export consist of sugar, hemp, indigo, cigars, cotton, coffee, rice, sapan wood, mother of pearl, hides, ebony, gold dust, &c. The principal articles of import are stuffs for clothing, iron, hardware, furniture, fire-arms, and ammunition, &c.

Subjoined is a statement of the import trade of Manilla in 1838, procured direct from that city; but it is right to bear in mind that the official accounts from which it has been drawn up are so defective, that the amounts specified can only be considered as rough approximations; and are, no doubt, under the mark.

Account of the Quantities and Values of the principal Articles exported from Manilla in 1838.

Articles.	Quantities.	Value.
Iron - - - - -	piculs	21,274
Cottons, grey - - - - -	yards	4,643,375
Do. white - - - - -	—	1,138,332

The port charges on foreign vessels consist of a tonnage duty of 3 reals, or a quarter-dollar, per register ton; and fees, varying from 15 to 30 dollars, according to the size of the vessel, for port-captain's and health officer's visits, passport, &c. The tariff is bottomed on a custom-house valuation, fixed every 5 years. Most foreign commodities, imported in foreign vessels, pay an import duty of 14 per cent. *ad valorem*, except wines and spirits, which mostly pay a duty of from 30 to 60 per cent. unless the produce of Spain. Cotton-twist of certain colours, cutlery, ready-made clothes, European fruits, confectionery, and vinegar, pay 40 per cent. if imported in Spanish vessels, and 50 per cent. if in any other. British and other foreign cotton and silk manufactures made in imitation of native cloth, Madras and Senegal cottons, &c. pay 15 per cent. if imported in Spanish, and 35 per cent. if in other ships. Machinery of all sorts for the promotion of industry, cotton twist of certain colours, gold and silver, plants and seeds, are imported duty free; but tropical products, the same as those of the Philippines, gunpowder, swords, and other warlike stores, &c., are prohibited, unless landed in bond for re-exportation. Exports of nearly all descriptions, by Spanish vessels, pay only from 14 to 2 per cent. *ad valorem*, and by foreign vessels double this duty; but manufactured tobacco, rope from Manilla, hemp, and gold and silver, coined or uncoined, if exported to Spain, go duty free. The principal currency of Manilla consists of Spanish dollars, of 8 reals and 96 grains; but S. American dollars are also current. The weights in use are the Spanish lb., which is nearly 2 per cent. heavier than the English; the arroba = 25½ Eng. lbs. nearly; the quintal = 102 lbs.; and the picul of 5 arrobas, or 1¼ cwt. Eng. The coyan is a measure for rice, &c., varying from 96 to 136 lbs. According to a recent list, there are in Manilla 47 Spanish merchants and 11 foreign firms. The Spanish merchants have a chamber of commerce, and a joint-stock insurance society. The U. States, France, and Belgium have consuls, and each of the Canton marine insurance companies has an agent here. There are, however, neither fire nor life offices nor agencies; nor is any newspaper, price-current, or other periodical publication issued in Manilla.

Considering the great fertility and varied productions of the Philippines, and their peculiarly favourable situation for carrying on commerce, the limited extent of their trade, even with its late increase, may excite surprise. This, however, is entirely a consequence of the wretched policy of the Spanish government, which persevered until very recently in excluding all foreign ships from the ports of the Philippines, confining the trade between them and Mexico and S. America to a single ship! Even ships and settlers from China were excluded. "Provisions," says La Perouse, "of all kinds are in the greatest abundance here, and extremely cheap; but clothing, European hardware, and furniture bear an excessively high price. The want of competition, together with prohibitions and restraints of every kind laid on commerce, render the productions and merchandise of India and China at least as dear as in Europe!" Happily, however, this miserable policy, the effects of which have been admirably depicted by M. de la Perouse, has been materially modified during the last few years. The events of the late war destroyed for ever the old colonial system of Spain; and the ships of all nations are now freely admitted into Manilla and the other ports in the Philippines. An unprecedented stimulus has, in consequence, been given to all sorts of industry; and its progress will no doubt become more rapid, according as a wider experience and acquaintance with foreigners makes the natives better aware of the advantages of commerce and industry, and disabuses them of the prejudices of which they have been so long the slaves.

MARBLE (Ger. *Rus.* and Lat. *Marmor*; Du. *Marmer*; Fr. *Marbre*; It. *Marmo*; Sp. *Marmol*), a genus of fossils, composed chiefly of lime; being a bright and beautiful stone, moderately hard, not giving fire with steel, fermenting with and soluble in acid menstrua, and calcining in a slight fire.

The colours by which marbles are distinguished are almost innumerable. Some are quite black; others, again, are of a snowy white; some are greenish; others greyish, reddish, bluish, yellowish, &c.; while some are variegated and spotted with many different colours and shades of colour. The finest and most modern marbles are those of Italy, Blankenburg, France, and Flanders. Great quantities of very beau-

tiful marble have been lately discovered at Portsoy in Banffshire, and at Tiree and other places in the Western Isles. Kilkenny, in Ireland, has abundance of beautiful black marble intermixed with white spots, called *Kilkenny marble*. Derbyshire abounds in this mineral. Near Kemlyn-bay, in Anglessea, there is a quarry of beautiful marble called *serde di Corsica*, from its also being found in Corsica. Its colours are green, black, white, and dull purple, irregularly disposed. Italy produces the most valuable marble, and its exportation makes a considerable branch of her foreign commerce. The black and the milk-white marble of Carara, in the duchy of Massa, are particularly esteemed.

The marbles of Germany, Norway, and Sweden are very inferior, being mixed with a sort of scaly limestone.

Marble is of so hard, compact, and fine a texture, as readily to take a beautiful polish. That most esteemed by statuary is brought from the island of Paros, in the Archipelago; it was employed by Praxiteles and Phidias, both of whom were natives of that island; whence also the famous Arundelian marbles were brought. The marble of Carara is likewise in high repute among sculptors.

The specific gravity of marble is from 2,700 to 2,800. Black marble owes its colour to a slight mixture of iron.

**MARITIME LAW.** By maritime law is meant the law relating to harbours, ships, and seamen. It forms an important branch of the commercial law of all maritime nations. It is divided into a variety of different departments; such as those with respect to harbours, the property of ships, the duties and rights of masters and seamen, contracts of affreightment, average, salvage, &c. The reader will find those subjects treated of under their respective heads.

*Sketch of the Progress of Maritime Law.*—The earliest system of maritime law was supplied by the Rhodians, several centuries before the Christian era. The most celebrated authors of antiquity have spoken in high terms of the wisdom of the Rhodian laws; luckily, however, we are not wholly left, in forming our opinion upon them, to the vague though commendatory statements of Cicero and Strabo. — (*Cicero pro Lege Manilia*; *Strab. lib. xiv.*) The laws of Rhodes were adopted by Augustus into the legislation of Rome; and such was the estimation in which they were held, that the Emperor Antoninus, being solicited to decide a contested point with respect to shipping, is reported to have answered, that it ought to be decided by the Rhodian laws, which were of paramount authority in such cases, unless they happened to be directly at variance with some regulation of the Roman law. — (“*Ego quidem mundi dominus, lex autem maris legis id Rhodia, qua de rebus nauticis præscripta est, iudicetur, quatenus nulla nostrarum legum adversatur. Hoc idem Divus quoque Augustus iudicavit.*”) The rule of the Rhodian law with respect to average contributions in the event of a sacrifice being made at sea for the safety of the ship and cargo, is expressly laid down in the Digest (*lib. xiv. tit. 2.*); and the most probable conclusion seems to be, that most of the regulations as to maritime affairs embodied in the compilations of Justinian have been derived from the same source. The regulations as to average adopted by all modern nations, are borrowed, with hardly any alteration, from the Roman, or rather, as we have seen, from the Rhodian law! — a conclusive proof of the sagacity of those by whom they had been originally framed. The only authentic fragments of the Rhodian laws are those in the Digest. The collection entitled *Jus navale Rhodiorum*, published at Bâle in 1561, is now admitted by all critics to be spurious.

The first modern code of maritime law is said to have been compiled at Amalphi, in Italy, a city at present in ruins; but which, besides being early distinguished for its commerce, will be for ever famous for the discovery of the Pandects, and the supposed invention of the mariner's compass. The Amalphitan code is said to have been denominated *Tabula Amalphitana*. But if such a body of law really existed, it is singular that it should never have been published, nor even any extracts from it. M. Pardessus has shown that all the authors who have referred to the Amalphitan code and asserted its existence, have copied the statement of Freccia, in his book *De Subfeudis*. — (*Collection des Loix Maritimes*, tome i. p. 145.) And as Freccia assures us that the Amalphitan code continued to be followed in Naples at the time when he wrote (1570), it is difficult to suppose that it could have entirely disappeared; and it seems most probable, as nothing peculiar to it has ever transpired, that it consisted principally of the regulations laid down in the Roman law, which, it is known, preserved their ascendancy for a longer period in the south of Italy than anywhere else.

But, besides Amalphi, Venice, Marseilles, Pisa, Genoa, Barcelona, Valencia, and other towns of the Mediterranean, were early distinguished for the extent to which they carried commerce and navigation. In the absence of any positive information on the subject, it seems reasonable to suppose that their maritime laws would be principally borrowed from those of Rome, but with such alterations and modifications as might be deemed requisite to accommodate them to the particular views of each state. But whether in this or in some other way, it is certain that various conflicting regulations were established, which led to much confusion and uncertainty; and the experience of the inconveniences thence arising, doubtless contributed to the universal adoption of the *Comeolato del Mare* as a code of maritime law. Nothing certain is known as to the origin of this code. Azuni (*Droit Maritime de l'Europe*, tome i. pp. 414—439, or rather Jorio, *Codice Ferdinando*, from whose work a large proportion of Azuni's is literally translated) contends, in a very able dissertation, that the Pisans are entitled to the glory

of having compiled the whole, or at least the greater part, of the *Consolato del Mare*. On the other hand, Don Antonio de Capmany, in his learned and excellent work on the commerce of Barcelona — (*Antiguo Comercio de Barcelona*, tome i. pp. 170—183.), has endeavoured to show that the *Consolato* was compiled at Barcelona; and that it contains the rules according to which the consuls, which the Barcelonese had established in foreign places so early as 1268, were to render their decisions. It is certain that the *Consolato* was printed for the first time at Barcelona, in 1502; and that the early Italian and French editions are translations from the Catalan. Azuni has, indeed, sufficiently proved, that the Pisans had a code of maritime laws at a very early period, and that several of the regulations in it are substantially the same as those in the *Consolato*. But it does not appear that the Barcelonese were aware of the regulations of the Pisans, or that the resemblance between them and those in the *Consolato* is more than accidental; or may not fairly be ascribed to the concurrence that can hardly fail to obtain among well-informed persons legislating upon the same topics, and influenced by principles and practices derived from the civil law.

M. Pardessus, in the second volume of his excellent work already referred to, appears to have been sufficiently disposed, had there been any grounds to go upon, to set up a claim in favour of Marseilles to the honour of being the birthplace of the *Consolato*; but he candidly admits that such a pretension could not be supported, and unwillingly adheres to Capmany's opinion. — "Quoique Français," says he, "quoique portée par des sentimens de reconnaissance, qu'aucun événement ne sauroit affaiblir, à faire valoir tout ce qui est en faveur de Marseilles, je dois reconnoître franchement que les probabilités l'emportent en faveur de Barcelone." — (Tome ii. p. 24.)

But to whichever city the honour of compiling the *Consolato* may be due, there can be no doubt that its antiquity has been greatly exaggerated. It is affirmed, in a preface to the different editions, that it was solemnly accepted, subscribed, and promulgated, as a body of maritime law, by the Holy See in 1075, and by the kings of France and other potentates at different periods between 1075 and 1270. But Capmany, Azuni, and Pardessus have shown in the clearest and most satisfactory manner that the circumstances alluded to in this preface could not possibly have taken place, and that it is wholly unworthy of attention. The most probable opinion seems to be, that it was compiled, and began to be introduced, about the end of the 13th or the beginning of the 14th century. And notwithstanding its prolixity, and the want of precision and clearness, the correspondence of the greater number of its rules with the ascertained principles of justice and public utility, gradually led, without the intervention of any agreement, to its adoption as a system of maritime jurisprudence by all the nations contiguous to the Mediterranean. It is still of high authority. Casaregis says of it, though, perhaps, too strongly "*Consulatus maris, in materiis maritimis, tanquam universalis consuetudo habens vim legis, inviolabiliter attendenda est apud omnes provincias et nationes.*" — (*Disq.* 213. n. 12.)

The collection of sea laws next in celebrity, but anterior, perhaps, in point of time, is that denominated the *Roole des Jugemens d'Oleron*. There is as much diversity of opinion as to the origin of these laws, as there is with respect to the origin of the *Consolato*. The prevailing opinion in Great Britain has been, that they were compiled by direction of Queen Eleanor, wife of Henry II., in her quality of Duchess of Guienne; and that they were afterwards enlarged and improved by her son Richard I., at his return from the Holy Land: but this statement is now admitted to rest on no good foundation. The most probable theory seems to be, that they are a collection of the rules or practices followed at the principal French ports on the Atlantic, as Bordeaux, Rochelle, St. Malo, &c. They contain, indeed, rules that are essential to all maritime transactions, wherever they may be carried on; but the references in the code sufficiently prove that it is of French origin. The circumstance of our monarch's having large possessions in France at the period when the Rules of Oleron were collected, naturally facilitated their introduction into England; and they have long enjoyed a very high degree of authority in this country. "I call them the Laws of Oleron," said a great civilian — (*Sir Leoline Jenkins, Charge to the Cinque Ports*), "not but that they are peculiarly enough English, being long since incorporated into the customs and statutes of our admiralties; but the equity of them is so great, and the use and reason of them so general, that they are known and received all the world over by that rather than by any other name." Molloy, however, has more correctly, perhaps, said of the laws of Oleron, that "they never obtained any other or greater force than those of Rhodes formerly did; that is, they were esteemed for the reason and equity found in them, and applied to the case emergent." — (*De Jure Maritimo et Navali, Introd.*)

A code of maritime law issued at Wisby, in the island of Gothland, in the Baltic, has long enjoyed a high reputation in the North. The date of its compilation is uncertain; but it is comparatively modern. It is true that some of the northern jurists contend that the laws of Wisby are older than the Rules of Oleron, and that the latter are chiefly

copied from the former ! But it has been repeatedly shown that there is not so much as the shadow of a foundation for this statement. — (See *Pardessus, Collection, &c.* tome i. pp. 425—462. ; *Foreign Quarterly Review*, No. 13. art. *Hanseatic League*.) The Laws of Wisby are not certainly older than the latter part of the 14th or beginning of the 15th century ; and have obviously been compiled from the *Consolato del Mare*, the Rules of Oleron, and other codes that were then in use. Grotius has spoken of these laws in the most laudatory manner : — “ *Quæ de maritimis negotiis*,” says he, “ *insula Gothlandia habitatoribus placuerunt, tantum in se habent, tum equitatis, tum prudentiæ, ut omnes oceani accolæ eo, non tanquam proprio, sed velut gentium jure, utantur.*” — (*Prolegomena ad Procopium*, p. 64.)

Besides the codes now mentioned, the ordinances of the Hanse Towns, issued in 1597 and 1614, contain a system of laws relating to navigation that is of great authority. The judgments of Damme, the customs of Amsterdam, &c., are also often quoted.\*

But by far the most complete and well digested system of maritime jurisprudence that has ever appeared, is that comprised in the famous *Ordonnance de la Marine* issued by Louis XIV. in 1681. This excellent code was compiled under the direction of M. Colbert, by individuals of great talent and learning, after a careful revision of all the ancient sea laws of France and other countries, and upon consultation with the different parliaments, the courts of admiralty, and the chambers of commerce, of the different towns. It combines whatever experience and the wisdom of ages had shown to be best in the Roman laws, and in the institutions of the modern maritime states of Europe. In the preface to his treatise on the *Law of Shipping*, Lord Tenterden says, — “ If the reader should be offended at the frequent references to this ordinance, I must request him to recollect that those references are made to the maritime code of a great commercial nation, which has attributed much of its national prosperity to that code : a code composed in the reign of a politic prince ; under the auspices of a wise and enlightened minister ; by laborious and learned persons, who selected the most valuable principles of all the maritime laws then existing ; and which, in matter, method, and style, is one of the most finished acts of legislation that ever was promulgated.”

The ordinance of 1681 was published in 1760, with a detailed and most elaborate commentary by M. Valin, in 2 volumes, 4to. It is impossible which to admire most in this commentary, the learning or the sound good sense of the writer. Lord Mansfield was indebted for no inconsiderable portion of his superior knowledge of the principles of maritime jurisprudence to a careful study of M. Valin's work.

That part of the *Code de Commerce* which treats of maritime affairs, insurance, &c. is copied, with very little alteration, from the ordinance of 1681. The few changes that have been made are not always improvements.

No system or code of maritime law has ever been issued by authority in Great Britain. The laws and practices that now obtain amongst us in reference to maritime affairs have been founded principally on the practices of merchants, the principles laid down in the civil law, the Laws of Oleron and Wisby, the works of distinguished juriconsults, the judicial decisions of our own and foreign countries, &c. A law so constructed has necessarily been in a progressive state of improvement ; and, though still susceptible of amendment, it corresponds, at this moment, more nearly, perhaps, than any other system of maritime law, with those universally recognised principles of justice and general convenience by which the transactions of merchants and navigators ought to be regulated.

The decisions of Lord Mansfield did much to fix the principles, and to improve and perfect the maritime law of England. It is also under great obligations to Lord Stowell. The decisions of the latter chiefly, indeed, respect questions of neutrality, growing out of the conflicting pretensions of belligerents and neutrals during the late war ; but the principles and doctrines which he unfolds in treating those questions, throw a strong and steady light on those branches of maritime law. It has occasionally, indeed, been alleged, — and the allegation is probably, in some degree well founded, — that his Lordship has conceded too much to the claims of belligerents. Still, however, his judgments must be regarded, allowing for this excusable bias, as among the noblest monuments of judicial wisdom of which any country can boast. “ They will be contemplated,” says Mr. Serjeant Marshall, “ with applause and veneration, as long as depth of learning, soundness of argument, enlightened wisdom, and the chaste beauties of eloquence, hold any place in the estimation of mankind.” — (*On Insurance*, Prelim. Disc.)

The “ *Treatise of the Law relative to Merchant Ships and Seamen*,” by the late Chief Justice of the Court of King's Bench, does credit to the talents, erudition, and liberality of its noble and learned author. It gives, within a brief compass, a clear and

\* A translation of the Law of Oleron, Wisby, and the Hanse Towns, is given in the 3d edition of *Malynes's Lex Mercatoria* ; but the edition of them in the work of M. Pardessus, referred to in the text, is infinitely superior to every other.

admirable exposition of the most important branches of our maritime law ; and may be consulted with equal facility and advantage by the merchant, the general scholar, and the lawyer. Mr. Serjeant Marshall has entered very fully into some, and has touched upon most points of maritime law, in his work on *Insurance* ; and has discussed them with great learning and sagacity. The works of Mr. Justice Park, Mr. Holt, and a few others, are also valuable. Of the earlier treatises, the *Lex Mercatoria* of Malynes is by far the best ; and, considering the period of its publication (1622), is a very extraordinary performance.

*Statutes with respect to Importation and Exportation, Navigation, &c.* — The preceding remarks refer merely to the principles, or leading doctrines, of our maritime law. These, however, have often been very much modified by statutory enactments ; and the excessive multiplication of acts of parliament suspending, repealing, or altering parts of other acts, has often involved our commercial and maritime law in almost inextricable confusion, and been most injurious to the public interests. No one, indeed, who is not pretty conversant with the subject, would readily imagine to what an extent this abuse has sometimes been carried. From the Revolution down to 1786, some hundreds of acts were passed, each enacting some addition, diminution, or change, in the duties, drawbacks, bounties, and regulations previously existing in the customs. In consequence, the customs laws became so intricate and unintelligible, that hardly one merchant in fifty could tell the exact amount of duty affecting any article, or the course to be followed either in entering or clearing out vessels ; being obliged to leave it entirely to the clerks of the Custom-house to calculate the amount of duties, and to direct him how to proceed so as to avoid forfeiting the goods and the ship ! and yet, so powerful is the influence of habit in procuring toleration for the most pernicious absurdities, that this monstrous abuse was allowed to go on increasing for 50 years after it had been denounced as intolerable. Mr. Pitt has the merit of having introduced something like order into this chaos. Under his auspices, all the separate customs duties existing in 1787 were repealed, and new ones substituted in their stead ; consisting, in most instances, of the equivalents, so far at least as they could be ascertained, of the old duties. In carrying this measure into effect, the House of Commons passed no fewer than 3,000 resolutions. The regulations as to entries and clearances were also simplified.

The advantages resulting from this measure were very great ; but during the war, so many new duties and regulations were passed, that the necessity for a fresh consolidation became again very urgent, and was effected in 1819. It was not, however, in the customs department only, or in the mere article of duties, that the merchant and ship owners were bewildered by the multiplicity of statutory regulations. There was not a single branch of the law regulating their transactions that escaped the rage for legislation. Previously to 1822, no fewer than 113 statutes had been passed relating to the fisheries ; and the makers and buyers of sails and cordage were supposed to be familiar with the various obscure and contradictory regulations embodied in the *twenty-three* acts of parliament relating to these articles ! But the enormity of the abuse will be rendered more apparent, by laying before the reader the following extract from the *Report of the Lords' Committee on Foreign Trade* in 1820.

" Before," say their Lordships, " your committee proceed to advert to the points which have been the principal objects of their inquiry, they are anxious to call the attention of the House to the excessive accumulation and complexity of the laws under which the commerce of the country is regulated, with which they were forcibly impressed in the very earliest stage of their proceedings. These laws, passed at different periods, and many of them arising out of temporary circumstances, amount, as stated in a recent computation of them, to upwards of *two thousand*, of which no less than 1,100 were in force in 1815 ; and many additions have been since made. After such a statement, it will not appear extraordinary that it should be matter of complaint by the British merchant, that, so far from the course in which he is to guide his transactions being plain and simple—so far from being able to undertake his operations, and to avail himself of favourable openings, as they arise, with promptitude and confidence—he is frequently reduced to the necessity of resorting to the services of professional advisers, to ascertain what he may venture to do, and what he must avoid, before he is able to embark in his commercial adventures with the assurance of being secure from the consequences of an infringement of the law. If this be the case (as is stated to your committee) with the most experienced among the merchants, even in England, in how much greater a degree must the same perplexity and apprehension of danger operate in foreign countries and on foreign merchants, whose acquaintance with our statute book must be supposed to be comparatively limited, and who are destitute of the professional authority which the merchant at home may at all times consult for his direction ? When it is recollected, besides, that a trivial unintentional deviation from the strict letter of the acts of parliament may expose a ship and cargo to the inconvenience of seizure, which (whether

sustained or abandoned) is attended always with delay and expense, and frequently followed by litigation, it cannot be doubted that such a state of the law must have the most prejudicial influence both upon commercial enterprise in the country, and upon our mercantile relations and intercourse with foreign nations; and perhaps no service more valuable could be rendered to the trade of the empire, nor any measure more effectually contribute to promote the objects contemplated by the House, in the appointment of this committee, than an accurate revision of this vast and confused mass of legislation; and the establishment of some certain, simple, and consistent principles, to which all the regulations of commerce might be referred, and under which the transactions of merchants engaged in the trade of the United Kingdom might be conducted with facility, safety, and confidence."—(p. 4.)

Since this Report was printed, a very considerable progress has been made in simplifying and clearing up the statute law, on the principles laid down in it. The law as to shipping and navigation has been particularly improved. The principles laid down in the famous navigation acts of 1650 and 1660 were, indeed, sufficiently distinct and obvious; but when these acts were passed, there were above 200 statutes in existence, many of them antiquated and contradictory, which they did not repeal, except in so far as the regulations in them might be inconsistent with those in the new acts. But besides these, a number of statutes were passed almost in every session since 1660, explaining, limiting, extending, or modifying in one way or other, some of the provisions of the navigation acts; so that ultimately there were questions perpetually arising, as to which it was very difficult to discover the precise law. On such occasions, recourse was often had to the courts; and the good sense and equity which generally characterised their decisions mitigated the mischievous consequences resulting from the uncertainty of the statute law, and even gave it the appearance of consistency. Latterly, however, this uncertainty has been well nigh removed. A bill introduced and carried through parliament in 1824 repealed above 200 antiquated and contradictory statutes; and the new customs and navigation acts passed in the following year were drawn up with a brevity and precision which do honour to the memory of their compiler, the late Mr. Hume, of the Board of Trade. But various alterations having been subsequently made in the customs' laws, new statutes embodying these alterations were passed in 1833, and again in 1845. Of those now referred to the principal are—the 8 & 9 Vict. c. 88, for the encouragement of British shipping and navigation, which may be called the present navigation law—(see NAVIGATION LAWS); the 8 & 9 Vict. c. 89, for the registry of British vessels—(see REGISTRY); the 8 & 9 Vict. c. 86, containing the principal regulations with respect to importation and exportation—(see IMPORTATION AND EXPORTATION); and the act 8 & 9 Vict. c. 93, for regulating the trade with the British possessions abroad—(see COLONIES AND COLONY TRADE).

It may be worth while observing, that hardly a session passes without giving birth to more or fewer acts, making certain changes or modifications in the customs' laws. Where these changes apply only to some particular emergency, without affecting the general principles or rules laid down in the statutes, there can be no doubt that they should be embodied in separate acts; but where any modification or alteration is to be made in the principles of the law, the better way, as it appears to us, would be to introduce it directly into the leading act on the subject—re-enacting it in an amended or altered form. In no other way is it possible to preserve that unity and clearness which are so very desirable. The multiplication of statutes is a very great evil, not only from the difficulty of ascertaining the exact degree in which one modifies another, but from its invariably leading to the enactment of contradictory clauses. The property and transactions of merchants ought not to depend upon the subtleties and niceties of forced constructions, but upon plain and obvious rules, about which there can be no mistake. It would, however, be idle to expect that such rules can ever be deduced from the conflicting provisions of a number of statutes: those in the same statute are not always in harmony with each other.

MARK, or MARC, a weight used in several parts of Europe, for various commodities, especially gold and silver. In France, the mark was divided into 8 os. = 64 drachms = 192 deniers or pennyweights = 4,608 grains. In Holland, the mark weight was also called Troy weight, and was equal to that of France. When gold and silver are sold by the mark, it is divided into 24 carats.

The pound, or *Marc*, *poids de marc*, the weight most commonly used in retail dealings throughout France, previous to the Revolution, was equal to 2 marks, and consequently contained 16 oz. = 128 drs. = 384 den. = 9,216 grs. One kilogramme is nearly equal to 2 livres.—Subjoined is a Table of *livres, poids de marc*, from 1 to 10, converted into kilogrammes. Any greater number may be learned by a simple multiplication and addition.

<i>Livres.</i>	<i>Kilog.</i>	<i>Livres.</i>	<i>Kilog.</i>	<i>Livres.</i>	<i>Kilog.</i>	<i>Livres.</i>	<i>Kilog.</i>
1 =	0.4895	4 =	1.9220	7 =	3.4265	9 =	4.4055
2 =	0.9790	5 =	2.4475	8 =	3.9160	10 =	4.8931
3 =	1.4685	6 =	2.9370				

**MARK**, a term sometimes used among us for a money of account, and in some other countries for a coin. The English mark is  $\frac{1}{2}$ ds of a pound sterling, or 13s. 4d.; and the Scotch mark is  $\frac{1}{2}$ ds of a pound Scotch. The mark Lube, or Lubeck mark, used at Hamburg, is a money of account, equal to 14 $\frac{1}{2}$ d. sterling.

**MARKET**, a public place in a city or town, where provisions are sold. No market is to be kept within 7 miles of the city of London; but all butchers, victuallers, &c. may hire stalls and standings in the flesh-markets there, and sell meat and other provisions. Every person who has a market is entitled to receive toll for the things sold in it; and, by ancient custom, for things standing in the market, though not sold; but those who keep a market in any other manner than it is granted, or extort tolls or fees where none are due, forfeit the same. — (See *FAIRS*.)

**MARSEILLES**, a large commercial city and sea-port of France, on the Mediterranean, lat. 43° 17' 49" N., lon. 5° 22' E. Population, including suburbs, 170,000.

**Harbour**. — The harbour, the access to which is defended by several strong fortifications, is in the centre of the city, forming a basin 525 fathoms in length, by about 150 do. in breadth. The tide is hardly sensible; but the depth of water at the entrance to the harbour varies from 16 to 18 feet, being lowest when the wind is N.W., and highest when it is S.W. Within the basin the depth of water varies from 13 to 24 feet, being shallowest on the north, and deepest on the south side. Dredging machines are constantly at work to clear out the mud, and to prevent the harbour from filling up. Though not accessible to the largest class of ships, Marseilles is one of the best and safest ports in the world for moderate-sized merchantmen, of which it will accommodate above 1,000. Ships in the basin lie close alongside the quays; and there is every facility for getting them speedily loaded and unloaded. The Isle de Ratoneau, Pomègues, and the strongly fortified islet or rock of If, lie W. S.W. from the port; the latter, which is the nearest to it, being only  $\frac{1}{2}$  mile distant, and not more than  $\frac{1}{2}$  of a mile from the projecting point of land to the south of the city. There is good anchorage ground for men-of-war and other large ships between the Isles de Ratoneau and Pomègues, to the west of the Isle d'If. When coming from the south, it is usual to make the Isle de Planier, in lat. 43° 11' 54" N., lon. 5° 13' 59" E. A light-house erected on this island is 131 feet high; the flashes of the light, which is a revolving one, succeed each other every 3 minutes, and in clear weather it may be seen 7 leagues off. Ships that have made the Isle de Planier, or that of Le Maire, lying east from it about  $\frac{1}{2}$  miles, steer northerly for the Isle d'If, distant about 7 miles from each, and having got within  $\frac{1}{2}$  or  $\frac{3}{4}$  mile of it, heave to for a pilot, who carries them into harbour; it is not, however, obligatory on ships to take a pilot on board; but being obliged to pay for one, whether they avail themselves of his services or not, they seldom dispense with them. The charge is 4 sous per ton in, and 2 sous per do. out, for French vessels, and the vessels of countries having reciprocity treaties with France. There is a light-house in the fort St. Jean, on the north side of the entrance to the port. The Lazarett, which is one of the best in Europe, lies a little to the north of the city; and there is an hospital on Ratoneau Island, for individuals whose health is dubious. With the exception of the above charge for pilotage, and the charges for such vessels as perform quarantine, there are no port charges on ships entering at or clearing out from Marseilles.

**Trade, &c.** — Marseilles is a city of great antiquity, and has long enjoyed a very extensive commerce. Havre, partly, no doubt, of its being, as it were, the port of Paris, used to enjoy a greater share of the trade of France; but, notwithstanding the increased importance of the former, it has recently been surpassed by Marseilles. The customs duties collected at Havre, in 1841, were 23,000,000 fr., whereas those collected at Marseilles during the same year, amounted to 34,000,000 fr.; and, in 1842, to 34,222,463 fr., having increased to that amount from 25,899,394 fr. in 1830.

This statement shows conclusively, that the trade of Marseilles is not only increasing rapidly, but that it is already very extensive. She is the grand emporium of the South of France, and the centre of 9-10ths of her commerce with the countries on the Mediterranean and the Black Sea. The exports consist principally of silk stuffs, wines, brandies, and liqueurs; woollens and linens; madder, oil, soap, refined sugar, perfumery, stationery, verdigris, and all sorts of colonial products. Among the principal imports are sugar, coffee, and other colonial products; dye stuffs; corn from the Black Sea and the north coast of Africa; cotton from Egypt and America; coal, linen, thread, and various descriptions of manufactured goods from England; with hides, wool, tallow, timber, &c. Marseilles engrosses almost the whole trade between France and Algiers. She is now also the principal seat of the intercourse carried on by steamers with Malta, Alexandria, and Constantinople; and, besides the steamers employed by the government as packets, she has upwards of 20 steamers belonging to private companies. Mr. Maclaren says that in 1839 most part of the latter had English-made engines, and English engineers; and that they burnt English coal, which sold here for about 30s. a ton. There belonged to the port, on the 31st of December 1841, 659 sailing vessels of the burden of 58,945 tons; and 21 steamers of the burden of 2,751 tons. A joint-stock bank established here in 1835 is said to have been exceedingly successful.

We regret we are unable to lay before the reader any very recent account of the import and export trade of Marseilles. We believe, however, that the value of the first may at present (1843), be estimated at about 200,000,000 fr. or 8,000,000l. sterling, and that of the exports at about as much. For information as to money, weights, measures, duties, &c., the reader is referred to the art. *HAVRE*, under which head he will find an account of the trade of France. We subjoin an

Account of the Value of the Imports from different Foreign Countries, and of the Value of the Exports to the same, at Marseilles, in 1833.

Total	6,445	1,107,389	-	6,204	1,090,295	-

The arrivals and departures in this and the preceding year are considerably above the average, a consequence of the great importations of foreign corn. In 1846 the imports of wheat amounted to 1,290,000 quarters, and in 1847 to above 2,200,000 quarters.

The trade of Marseilles has been much increased by the occupation of Algiers, she being the grand centre of the intercourse carried on with that country. But independently of this circumstance, Marseilles engrosses by far the largest share of the extensive commerce carried on between France and the E. coast of Spain, Italy, Greece, and the Levant. Her preponderance as an emporium is obvious from the fact of her customs duties having amounted in 1847 to 34,742,000 fr., while those of Havre and Bordeaux were respectively only 26,002,000 and 14,957,000 do.

MASTER, in commercial navigation, the person intrusted with the care and navigation of the ship.

No one is qualified to be the master of a British ship, unless he be a natural-born British subject, or naturalised by act of parliament, or a denizen by letters of denization; or have become a subject of his Majesty by conquest, cession, &c., and have taken the oaths of allegiance; or a foreign seaman who has served 3 years, in time of war, on board of his Majesty's ships.

"The master is the confidential servant or agent of the owners; and in conformity to the rules and maxims of the law of England, the owners are bound to the performance of every lawful contract made by him relative to the usual employment of the ship."—(*Abbott* (late Lord Tenterden) on the *Law of Shipping*, part ii. c. 2.)

From this rule of law it follows that the owners are bound to answer for a breach of contract, though committed by the master or mariners against their will, and without their fault.—(*Id.*) Nor can the expediency of this rule be doubted. The owners, by selecting a person as master, hold him forth to the public as worthy of trust and confidence. And in order that this selection may be made with due care, and that all opportunities of fraud and collusion may be obviated, it is indispensable that they should be made responsible for his acts.

The master has power to hypothecate, or pledge, both ship and cargo for necessary repairs executed in foreign ports during the course of the voyage; but neither the ship nor cargo can be hypothecated for repairs executed at home.

The master has no lien upon the ship for his wages, nor for money advanced by him for stores or repairs. In delivering judgment upon a case of this sort, Lord Mansfield said—"As to wages, there is no particular contract that the ship should be a pledge; there is no usage in trade to that purpose; nor any implication from the nature of the dealing. On the contrary, the law has always considered the captain as contracting personally with the owner; and the case of the captain has, in that respect, been distinguished from that of all other persons belonging to the ship. This rule of law may have its foundation in policy, for the benefit of navigation; for, as ships may be making profit and earning every day, it might be attended with great inconvenience, if, on the change of a captain for misbehaviour, or any other reason, he should be entitled to keep the ship till he is paid. Work done for a ship in England is supposed to be done on the personal credit of the employer: in foreign parts the captain may hypothecate the ship. The defendant might have told the tradesman, that he only acted as an agent, and that they must look to the owner for payment."

The master is bound to employ his whole time and attention in the service of his employers, and is not at liberty to enter into any engagement for his own benefit that may occupy any portion of his time in other concerns; and therefore, if he do so, and the price of such engagement happen to be paid into the hands of his owners, they may retain the money, and he cannot recover from them.—(*Abbott*, part ii. c. 4.)

During war, a master should be particularly attentive to the regulations as to sailing under convoy; for, besides his responsibility to his owners or freighters, he may be prosecuted by the Court of Admiralty, and fined in any sum not exceeding 500*l.*, and imprisoned for any term not exceeding 1 year, if he wilfully disobey the signals, instructions, or lawful commands of the commander of the convoy; or desert & without leave.—(43 *Geo. 3.* c. 160.)

Wilfully destroying or casting away the ship, or procuring the same to be done by the master or mariners, to the prejudice of the owners, freighters, or insurers; running away with the cargo; and turning pirates; are offences punishable by transportation beyond seas for not less than 15 years, or by imprisonment for not more than 3 years.—(See art *SEAMEN*.)

After the voyage has been commenced, the master must proceed direct to the place of his destination, without unnecessarily stopping at any intermediate port, or deviating from the shortest course. No such deviation will be sanctioned, unless it has been occasioned by stress of weather, the want of necessary repair, avoiding enemies or pirates, succouring of ships in distress, sickness of the master or mariners, or the mutiny of the crew.—(*Marshall on Insurance*, book i. c. 6. § 3.) To justify a deviation, the necessity must be real, inevitable, and imperious; and it must not be prolonged one moment after the necessity has ceased. A deviation without such necessity vitiates all insurances upon the ship and cargo, and exposes the owners to an action on the part of the freighters. If a ship be captured in consequence of deviation, the merchant is entitled to recover from the owners the prime cost of the goods with shipping charges; but he is not entitled to more, unless he can show that the goods were enhanced in value beyond the sum above mentioned.

If a merchant ship has the misfortune to be attacked by pirates or enemies, the master is bound to do his duty as a man of courage and capacity, and to make the best resistance that the comparative strength of his ship and crew will allow.

By the common law, the master has authority over all the mariners on board the ship,—it being their duty to obey his commands in all lawful matters relating to the navigation of the ship, and the preservation of good order. But the master should in all cases use his authority with moderation, so as to be the father, not the tyrant, of his crew. On his return home he may be called upon by action of law, to answer to a mariner he has either beat or imprisoned during the course of the voyage; and unless he show sufficient cause for chastising the mariner, and also that the chastisement was reasonable and moderate, he will be found liable in damages. Should the master strike a mariner without cause, or use a deadly weapon as an instrument of correction, and death ensue,

he will be found guilty, according to the circumstances of the case either of manslaughter or murder. — (*Abbott*, part ii. c. 4.)

The master may by force restrain the commission of great crimes; but he has no jurisdiction over the criminal. His business is to secure his person, and to deliver him over to the proper tribunals on his coming to his own country. — (See art SEAMEN.)

If by shipwreck, capture, or other unavoidable accident, seamen, subjects of Great Britain, be found in foreign parts, her Majesty's governors, ministers, consuls, or 2 or more British merchants, residing in such parts, may send such seamen home in ships of war, or in merchant ships homeward bound in want of men; and if such ships cannot be found, they may send them home in merchant ships that are fully manned, but no such merchant ship shall be obliged to take on board more than *four* such persons for every 100 tons burden: and the master, upon arrival, and producing to the Navy Board a certificate from the governor, minister, consul, &c. where he shipped the men, and his own affidavit of the time he maintained them, shall receive 1*s.* 6*d.* *per diem* for all such seamen above his own complement of men. — (53 Geo. 3. c. 85.) A subsequent statute (58 Geo. 3. c. 38.) inflicts a penalty of 100*l.* on any master of a merchant vessel who shall refuse to take on board or bring home any seafaring man, a subject of Great Britain, left behind in any foreign country, upon being required to do so by the competent authorities.

The discharging of any man when abroad, or leaving behind any man carried out who is in a condition to return, without the express sanction of the consul or other authority to be referred to in such cases, or forcing a seaman on shore, whether in or out of H. M.'s dominions, are, respectively, offences on the part of the master which the law has declared to be misdemeanors, and made punishable as such. — (7 & 8 Vict. c. 112. §§ 46, 47.)

A penalty of 20*l.* is imposed on every master of a vessel, who, having, on account of his inability to proceed on his voyage, left any seafaring man at any foreign port or place, shall neglect or refuse to deliver an account of the wages due, and to pay the same. — (7 & 8 Vict. c. 112. § 49.)

The law makes no distinction between carriers by land and carriers by water. The master of a merchant ship is, in the eye of the law, a carrier; and is, as such, bound to take reasonable and proper care of the goods committed to his charge, and to convey them to the place of their destination, *barring only the acts of God and the king's enemies.*

Every act which may be provided against by ordinary care renders the master responsible. He would not, for example, be liable for damage done to goods on board in consequence of a leak in the ship occasioned by the violence of the tempest, or other accident; but if the leak were occasioned by rats, he would be liable, for these might have been exterminated by ordinary care, as by putting cats on board, &c. On the same principle, if the master run the ship in fair weather against a rock or shallow known to expert mariners, he is responsible. If any injury be done to the cargo by improper or careless stowage, the master will be liable.

The master must not take on board any contraband goods, by which the ship and other parts of the cargo may be rendered liable to forfeiture or seizure. Neither must he take on board any false or colourable papers, as these might subject the ship to the risk of capture or detention. But it is his duty to procure and keep on board all the papers and documents required for the manifestation of the ship and cargo, by the law of the countries from and to which the ship is bound, as well by the law of nations in general, as by treaties between particular states. These papers and documents cannot be dispensed with at any time, and are quite essential to the safe navigation of neutral ships during war. — (See SHIPS' PAPERS.)

It is customary in bills of lading to insert a clause limiting the responsibility of the master and owners, as follows: — "*The act of God, the king's enemies, fire, and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, save risk of boats, as far as ships are liable thereto, excepted.*" When no bill of lading is signed, the master and owners are bound according to the common law.

The most difficult part of the master's duty is when, through the perils of the sea, the attacks of enemies or pirates, or other unforeseen accidents, he is prevented from completing his voyage. If his own ship have suffered from storms, and cannot be repaired within a reasonable time, and if the cargo be of a *perishable nature*, he is at liberty to employ another ship to convey it to the place of destination. He may do the same if the ship have been wrecked and the cargo saved, or if his own ship be in danger of sinking, and he can get the cargo transferred to another\*; and in *extreme cases* he is at

\* The most celebrated maritime codes, and the opinions of the ablest writers, have differed considerably as to these points. According to the Rhodian law (Pand. l. 10. § 1.) the captain is released from all his engagements, if the ship, by the perils of the sea, and without any fault on his part, become incapable of proceeding on her voyage. The laws of Oleron (art. 4.), and those of Wisby (arts. 16, 37, 55.), say that the captain may hire another ship: harmonising in this respect with the present law of England. The famous French ordinance of 1691 (tit. *Du Frêt*, art. 11.), and the *Code du Commerce* (art. 296.), order the captain to hire another ship; and if he cannot procure one, freight is to be due only for that part of the voyage which has been performed (*pro rata itineris peracti*). Valin has objected to this article, and states that practically it meant only that the captain must hire another ship if he would earn the whole freight.

liberty to dispose of the cargo for the benefit of its owners. But, to use the words of Lord Chief Justice Tenterden, "the disposal of the cargo by the master is a matter that requires the utmost caution on his part. He should always bear in mind that it is his *duty to convey it to the place of destination*. This is the purpose for which he has been intrusted with it, and this purpose he is bound to accomplish by every reasonable and practical method. What, then, is the master to do, if, by any disaster happening in the course of his voyage, he is unable to carry the goods to the place of destination, or to deliver them there? To this, as a general question, I apprehend no answer can be given. Every case must depend upon its own peculiar circumstances. The conduct proper to be adopted with respect to perishable goods will be improper with respect to a cargo not perishable: one thing may be fit to be done with fish or fruit, and another with timber or iron: one method may be proper in distant regions, another in the vicinity of the merchant; one in a frequented navigation, another on unfrequented shores. The wreck of the ship is not necessarily followed by an impossibility of sending forward the goods, and does not of itself make their sale a measure of necessity or expedience: much less can the loss of the season, or of the proper course of the voyage, have this effect. An unexpected interdiction of commerce, or a sudden war, may defeat the adventure, and oblige the ship to stop in her course; but neither of these events doth of itself alone make it necessary to sell the cargo at the place to which it may be proper for the ship to resort. In these and many other cases, the master may be discharged of his obligation to deliver the cargo at the place of destination; but it does not therefore follow that he is authorised to sell it, or ought to do so. What, then, is he to do? In general, it may be said, *he is to do that which a wise and prudent man will think most conducive to the benefit of all concerned*. In so doing, he may expect to be safe, because the merchant will not have reason to be dissatisfied; but what this thing will be, no general rules can teach. Some regard may be allowed to the interest of the ship, and of its owners; but the interest of the cargo must not be sacrificed to it. Transhipment for the place of destination, if it be practicable, is the first object, because that is in furtherance of the original purpose: if that be impracticable, return, or a safe deposit, may be expedient. A disadvantageous sale (and almost every sale by the master will be disadvantageous) is the last thing he should think of, because it can only be justified by that necessity which supersedes all human laws." — (*Law of Shipping*, part iii. c. 3.)

The master of a ship is liable for goods of which she is robbed in part; and the reason, as Lord Mansfield stated, is, lest reason should be given for collusion, and the master should get himself robbed on purpose, in order that he might share in the spoil. The master is, however, entitled to indemnify himself out of the seamen's wages for losses occasioned by their neglect.

If any passenger die on board, the master is obliged to take an inventory of his effects; and if no claim be made for them within a year, the master becomes proprietor of the goods, but answerable for them to the deceased's legal representatives. Bedding and furniture become the property of the master and mate; but the clothing must be brought to the deck, and there appraised and distributed among the crew.

If a master die, leaving money on board, and the mate, becoming master, improve the money, he shall, on allowance being made to him for his trouble, account both for interest and profit.

The conditions under which seamen and apprentices are to be taken on board ship, and the obligations of the master with respect to them, are fully set forth in the art. SEAMEN, in this work; and to it also the reader is referred for a statement of the duty of the master with respect to the registry of seamen, and the contributions, &c. due to the corporation for the relief of decayed seamen, their widows, &c.

For the duty of the master, as respects Custom-house regulations, see the articles IMPORTATION and EXPORTATION, QUARANTINE, SMUGGLING, &c.; and for a further discussion of this important subject, see the excellent work of Lord Tenterden on the *Law of Shipping*, part. iii. c. 3, &c.; *Chitty on Commercial Law*, vol. iii. c. 8, &c.; and the articles CHARTERPARTY, FREIGHT, &c. in this Dictionary.

*Qualifications of Masters.* Means by which they should be ascertained. — Considering the important nature of the duties which the master of a ship has to perform, it has been customary in some countries to require that all persons, previously to their being nominated to act in that capacity, should undergo an examination by some public board respecting their knowledge of seamanship, and their possession of the various qualifications necessary to act as masters, and that none should be appointed without their being licensed by such board or other competent authority. We are in-

Emerigon (tom. i. p. 428.) holds that the captain, being the agent not only of the owners of the ship, but also of the shippers of the goods on board, is bound, in the absence of both, to use his best endeavours to preserve the goods, and to do whatever, in the circumstances, he thinks will most conduce to the interest of all concerned; or what it may be presumed the shippers would do, were they present. This, which seems to be the best and wisest rule, has been laid down by Lords Mansfield and Tenterden, as stated above, and may be regarded as the law of England on this point.

clined to think that sound policy would approve of this practice, and we have no doubt that were an examination of this sort instituted in this country and properly conducted, it would add to the respectability of the profession, the public security, and be in all respects of material advantage. There can, unhappily, be no doubt that the ignorance and incapacity of the masters and inferior officers of ships has been a copious source of disaster. Officers of the navy have to go through a course of discipline, and are obliged to submit to certain examinations as to their proficiency in seamanship. This, also, was the case with the officers of the East India Company's ships, which were exceedingly well navigated. Indeed the Company trusted entirely for protection to the goodness of their ships, and the skill of their officers and men; it not being their practice ever to insure. But the masters and officers of ordinary merchant ships, even of those engaged in the conveyance of passengers, are not subjected to any specific training, or regular examination. Everything is left to mere individual investigation and selection; and this, as every one knows, depends almost wholly on accident; or, which is nearly equivalent to it, on the skill, industry, liberality, &c. of the ship owner. It is sufficiently clear that masters so chosen cannot fail of being, in many instances, very ill qualified for their business. Few, however, have any notion of the extent of the mischief thence arising; but we have been assured by gentlemen of undoubted information, and extensively connected with the business of insurance, that nearly half the losses at sea may be ascribed to the incapacity and carelessness of the masters and crews. Perhaps there may be some exaggeration in this; but, supposing that only a third part, or that 212 out of the 636 vessels wrecked in 1841, were lost through the circumstances referred to, is not that enough, not merely to justify government interfering to avert so great an evil, but to make such interference an imperative duty?

The interposition of government in a case of this sort is not only absolutely just and necessary, but it is conformable to the highest authority. The famous French ordinance of 1681 has the following article: — "*Aucun ne pourra ci-après être reçu capitaine, maître, ou patron de navire, qu'il n'ait navigué pendant cinq ans, et n'ait été examiné publiquement sur le fait de la navigation, et trouvé capable par deux anciens maîtres, en présence des officiers de l'Amirauté et du Professeur de l'Hydrographie, s'il y en a dans le lieu.*" — (Liv. ii. tit. 1. § 1.) A like article has been inserted in the *Code de Commerce*; and in 1825, the French Government issued an ordinance specifying, in detail, the qualifications that are necessary before any one can obtain a certificate of his fitness to command a ship, either on a foreign or a coasting voyage; the persons who are to examine candidates; and the rules to be observed in the examination. A similar system has been adopted in Prussia; and we cannot entertain a doubt that it would be of the greatest service were it introduced into this country. The authority of the master is so very great, and the trust reposed in him, including not merely the ship and goods of his employers, but the lives of the crew and passengers, so very extensive, that it is the bounden duty of the public to provide, in as far as practicable, that it be not committed to ignorant or incapable hands.

At present the care of the lives of hundreds of passengers may be committed, without check or control of any sort, and without their knowing anything of the matter, to any incapable blockhead who may be able to prevail on an owner to appoint him to a ship. No doubt it is for the interest of the owner to appoint the best captain he can find; but he may be unable to form a correct estimate of the qualifications necessary for such a situation; and, though this were not the case, hundreds of circumstances may conspire to blind his judgment, and to make him select a master who is really unworthy. Hence the advantage of the preliminary examination by competent parties, which, if made efficient, would certainly afford a powerful guarantee against the chance of an unfit person being appointed.

Perhaps it would, at first, be enough to enact, that no ship, which cleared out for an *ocean* voyage, should be deemed a British ship, unless the master and the second in command had received a certificate of fitness from the proper authorities. This would leave it to the owners to take whom they pleased as masters of coasting vessels; but we believe that the better way would be to enact that all masters of vessels above a specified tonnage, and of all vessels employed in the conveyance of passengers, should be selected from among certificated persons.

We rather incline to think, should we have occasion to notice this important subject on any future occasion, that it will be to announce that some such plan as that which we have ventured to recommend has been adopted. It has, we are glad to say, been approved by the Committee appointed by the House of Commons in 1843 to inquire into the causes and prevention of shipwrecks. "Your Committee, after carefully weighing the evidence adduced, consider that, under all the circumstances, it would materially promote science, and prevent the loss of life and property, if a legislative enactment were introduced by government, establishing local boards for the purpose of examining into the abilities, conduct, and character of all who wish to qualify as masters and mates

in the merchant service. And your Committee further recommend the establishment of schools for the purpose of teaching navigation in the different seaports, to be supported by a small tonnage duty to be levied on the vessels belonging to such ports."—(*Report*, p. 4.)

**MASTICH**, or **MASTIC** (Ger. *Mastix*; Du. *Mastik*; Fr. *Mastie*; It. *Mastice*; Sp. *Almastica*, *Almaciga*; Arab. *Arāh*). This resinous substance is the produce of the *Pistacia Lentiscus*, a native of the Levant, and particularly abundant in the island of Chios. It is obtained by making transverse incisions in the trunks and branches of the trees, whence the mastic slowly exudes. About 1,500 cwt. are annually exported from Chios, part of which is brought to this country, packed in chests. The best is in the form of dry, brittle, yellowish, transparent tears; it is nearly inodorous, except when heated, and then it has an agreeable odour; chewed, it is almost insipid, feeling at first gritty, and ultimately soft; its virtues are trifling.—*Ainslie's Materia Indica*; *Thomson's Dispensatory*.)

**MATE**, in a merchant ship, the deputy of the master, taking, in his absence, the command. There are sometimes only 1, and sometimes 2, 3, or 4 mates in a merchantman, according to her size; denominated 1st, 2d, 3d, &c. mates. The law, however, recognises only 2 descriptions of persons in a merchantman—the master and mariners; the mates being included in the latter, and the captain being responsible for their proceedings.

In men-of-war, the officers immediately subordinate to the captain are called lieutenants. But the *master*, or officer whose peculiar duty it is to take charge of the navigation of the ship, has certain mates under him selected from the midshipmen. The boatswain, gunner, carpenter, &c. have each their mates or deputies, taken from the crew.

The officers subordinate to the commander in the ships belonging to the East India Company were called 1st, 2d, 3d, &c. officers. East Indiamen had no sailing masters, the commanders performing that duty.—(*Falconer's Marine Dictionary*, &c.)

**MATS** (Du. *Matten*; Fr. *Nattes*; Ger. *Matten*; It. *Stuget*, *Stoje*; Port. *Esteras*; Rus. *Progozhki*; Sp. *Esteras*), textures composed, for the most part, of flags, reeds, the bark of trees, rushes, grass, rattans, old ropes, &c. In this country mats are used for a great variety of purposes. The coarser sort are very largely employed in the packing of furniture and goods; in the stowage of corn and various other articles on board ship; in horticultural operations; in covering the floors of churches and other public buildings, &c.: the finer sorts are principally employed in covering the floors of private houses.

In Europe, mats are principally manufactured for sale in Russia, where their production is a prominent branch of national industry. They consist of the bark of the lime or linden tree, and are known in this country by the name of *bast mats*. The Russian peasants manufacture this sort of material into shoes, cordage, sacks for corn, &c., and employ it in an endless variety of ways. In consequence of the vast quantities of matting that are thus made use of at home and sent abroad, the demand for it is immense. It is principally produced in the governments of Viatka, Kostroma, and those immediately contiguous; and in the months of May and June, the period when the bark is most easily detached from the stem, the villages in the governments in question are almost deserted, the whole population being then in the woods employed in stripping the trees. The academician Köppen, who has carefully investigated this curious subject, estimates the average annual production of mats in European Russia, as follows:—

Government of Viatka	-	-	-	-	6,000,000 pieces
Ditto Kostroma	-	-	-	-	4,000,000 —
Ditto Kasan	-	-	-	-	1,000,000 —
Ditto Nijni Novgorod	-	-	-	-	1,000,000 —
Ditto Vologda, Tamboff, Simbirsk, and Penza	-	-	-	-	2,000,000 —
Total					14,000,000

Köppen further estimates that about 1-4th part of this vast quantity, or 3½ millions, are exported, the rest being consumed at home.

It is obvious from these statements that the annual destruction of linden trees must be quite enormous; and it may well excite astonishment that they are not already all but exhausted. But whether it be from the rapid growth of the tree, or the vast extent of the forests in which it is found, the gloomy forebodings of Mr. Tooke, as to its destruction have not hitherto been realised (*View of Russia*, iii. 262.), and mats have not become either scarcer or dearer. It is, however, hardly possible to suppose that such should continue to be the case, seeing the rapid increase of population and of the consumption of matting in most parts of the empire. But in the event of its becoming scarcer, the inhabitants will have no difficulty in finding substitutes; so that we agree in opinion with those who think it would be bad policy to impose any restrictions on this branch of industry, in the view of averting an evil which may never occur; and which, if it do occur, may be easily obviated.—(See a very interesting article in the *Supplement au Journal de l'Interieur de St. Petersburg*, for 1841, p. 113.)

Archangel is the principal port for the shipment of mats; and it appears that at an average of the 6 years ending with 1842, the export of mats from that port amounted to 905,000 pieces a year. (See *ante*, art. ARCHANGEL.) Large quantities are also shipped from Petersburg, Riga, and other ports; and most descriptions of Russian produce sent abroad are packed in mats. Russian mats fetch, in the London market, 3*l.* 10*s.* per 100, duty (5 per cent. *ad valorem*) included.

Various descriptions of reed mats are extensively manufactured in Spain and Portugal; some of them being very beautifully varied. In Spain large quantities of matting are made of the Esparto rush. — (See *ESPARTO*.)

Rush floor mats, and rattan table mats of a very superior description are brought from China. They should be chosen clean, of a bright clear colour, and should, when packed, be thoroughly dry.

The mats of the Japanese are soft and elastic, serving them both for carpets and beds; they are made of a peculiar species of rush cultivated for the purpose.

The bags in which sugar is imported from the Mauritius consist of matting formed of the leaves of a tree growing in the island interwoven in broad strips. They are very strong and durable, and may be washed and cleaned without sustaining any injury. Being imported in large quantities, they are sold very cheap. — Besides the works already referred to, see *Milburn's Oriental Commerce*, and the valuable little work entitled *Vegetable Substances, Materials of Manufactures*, published by the Society for the Diffusion of Useful Knowledge, pp. 116—123.)

It is probable that mats formed the first sort of wove fabrics produced by man; and it is worthy of remark that but few savage tribes have been discovered that have not attained to considerable eminence in their manufacture. On the coast of Guinea and other places in the west of Africa, pieces of fine mat, about a yard long, and of a pretty uniform texture, were denominated *makkutes*, and formed a sort of money; the value of commodities being rated and estimated in them! — (*Morellet, Prospectus d'un Dictionnaire de Commerce*, p. 122.) They enjoyed this distinction, no doubt, from their utility, and the great care and labour bestowed on their preparation. There is hardly an island in the South Seas in which the natives have not acquired great skill and dexterity in the making of mats. The finer sorts consist, generally, of dyed reeds or grass; and have a very brilliant appearance.

MAULMAIN, or MOULMEIN, a sea-port town of India beyond the Ganges cap. British prov. Martaban, at the mouth of the great river Than-lueng, having N. the Birmese town of Martaban, on the opposite side of the river, and W. the island of Balu, which serves as a natural breakwater to defend the port from the heavy seas that would otherwise be thrown in from the W., 100 m. S. S. E. Rangoon, 27 m. N. N. E. Amherst; lat. 16° 30' N., long. 97° 38' E. It was founded in 1825, when the site was selected by Sir A. Campbell as eligible as well for a commercial as a military station. It is about 200 feet above the level of the river, and extensive and fertile plains stretch eastward from it towards the mountains. Its port is good, and, from its extensive command of internal navigation, it promises to become a considerable emporium. The principal articles of export are teak timber and rice; but there is also a considerable export of tobacco, stick-lac, betel-nut, ivory, cutch, cocoa-nut, &c. The imports consist principally of European cotton goods and marine stores. The principal trade of the place has hitherto been carried on with Calcutta, Madras, Rangoon, and Pinang; but, in 1837, a direct trade was commenced with London. Owing to the facility with which supplies of teak timber are obtained, ship-building is carried on very extensively. In 1840, no fewer than 16 vessels, several of which were of from 450 to 750 tons, were built here; and the total burden of the shipping launched at Maulmain between 1830 and 1842 has been stated at 416,324 tons, worth probably, as they came from the hands of the builders, 1,650,000*l.* We have no recent accounts of the population; but, probably, it is not under 8,000 or 10,000. An English newspaper (the *Maulmain Chronicle*), from which we have borrowed the preceding and following details, is published once a week.

"In order to exhibit, at one view, the decided increase of our trade in 1837 over the preceding year, we place the totals to and from each port in juxtaposition.

"From this it will appear, that the imports have increased nearly six lacs of rupees, and the exports two lacs and a half. Among the imports, the increase is found chiefly under the head of marine stores, spirituous liquors, and articles of European and Birmee manufacture. Among the exports, it is found in the staple productions of the country, rice and timber. Under the head of imports, we may notice that five lacs of rupees were received during the year into the government treasury; to which may be added, what does not appear in our statement, about half a lac of rupees, perhaps, from the Mauritius, for the purchase of cargoes of rice and timber. Under the head of exports, also, it would not, we think, be improper to include the estimated value of the vessels built and launched during the year at the several dock-yards. The following is a very rough estimate:—

	No.	Tonnage.	Estimated Value.
Vessels launched	9	2500	250,000
Doitto fitted for sea	-	-	125,000
Total	-	-	Rs. 375,000

"We are not aware that the mode in which our statements are drawn up requires any particular explanation. The word

'sundries' may be, perhaps, thought too comprehensive, but we have divided it among articles of European, Indian, Chinese, and Birmee produce or manufacture.

"The following is a statement of the imports into Madras from the neighbouring Shan States during 1837:—

	No.	Value.
Elephants	68	15,600
Ponies	146	17,500
Buffaloes	99	990
Cows and bullocks	3480	45,000
Sundries	-	4,500

Rs. 81,610

"Of the exports to these states, we can procure no detailed statement. Little else, however, is taken to them from hence but piece goods, either European or native, the value of which may, perhaps, be estimated at about 60,000 rupees.

"Taking, then, into consideration the various items above alluded to, and which are not brought into our statements, we shall have the following as the amount of imports and exports for the year 1837:—

Imports	Rs. 20,92,275
Exports	Rs. 11,03,410

MAURITIUS. See PORT LOUIS.

MEAD, or METHEGLIN (Ger. *Mehl, Meth*; Du. *Meede, Meedrank*; Fr. *Hydromel*; It. *Idromele*; Rus. *Lipez*), the ancient, and for a long time, the favourite drink of the northern nations. It is a preparation of honey and water. Manufacturers of mead for sale must take out an annual licence.

MEAL (Ger. *Mehl*; Du. *Meel*; Fr. and It. *Farine*; Sp. *Farina*; Rus. *Muka*; Lat. *Farina*), the edible part of wheat, oats, rye, barley, and pulse of different kinds, ground into a species of coarse flour.

MEDALS, are pieces of metal, generally in the form of a coin, and impressed with some peculiar stamp, intended to commemorate some individual or action. Medals are of very different prices—varying according to their rarity and preservation, the fineness of the metal, the beauty of the workmanship, &c.

MEDITERRANEAN PASS. The nature of this sort of instrument has been described by Mr. Reeves, in his *Treatise on the Law of Shipping*, as follows:—

"In the treaties that have been made with the Barbary states, it has been agreed, that the subjects of the King of Great Britain should pass the seas unmolested by the cruisers of those states; and for better ascertaining what ships and vessels belong to British subjects, it is provided that they shall produce a *pass* under the hand and seal of the Lord High Admiral, or the Lords Commissioners of the Admiralty. In pursuance of these treaties, passes are made out at the Admiralty, containing a very few words, written on parchment, with ornaments at the top, through which a scolloped indenture is made; the *scolloped tops* are sent to Barbary; and being put in possession of their cruisers, the commanders are instructed to suffer all persons to pass who have passes that will fit these scolloped tops. The protection afforded by these passes is such, that no ships, which traverse the seas frequented by these rovers, ever fail to furnish themselves with them, whether in the trade to the East Indies, the Levant, Spain, Italy, or any part of the Mediterranean; and from the more particular need of them in the latter, they, no doubt, obtained the name of *Mediterranean passes*. For the accommodation of merchants in distant parts, blank passes, signed by the Lords of the Admiralty, are lodged with the governors abroad, and with the British consuls, to be granted to those who comply with the requisites necessary for obtaining them. As this piece of security is derived wholly from the stipulations made by the crown with a foreign power, the entire regulation and management of it has been under the direction of his Majesty, who, with the advice of his privy council, has prescribed the terms and conditions on which these passes shall be granted. Among others are the following:—They are to be granted for none but British-built ships, or ships made free, navigated with a master and  $\frac{3}{4}$ ths of the mariners British subjects, or foreign protestants made denizens. Bond is to be given in the sum of 300*l*. if the vessel is under 100 tons, and in 500*l*. if it is of that or more, for delivering up the pass within 12 months, unless in the case of ships trading from one foreign port to another; and such passes need not be returned in less than 3 years.

"It has been found expedient, at the conclusion of a war, and sometimes during a peace, to recal and cancel all passes that have been issued, and to issue others in a new form. This has been done for 2 reasons. 1st. That these useful instruments, by various means, either accidental or fraudulent, came into the hands of foreigners, who, under cover of them, carried on in security a trade which otherwise would belong to British subjects, and which had been purchased by the crown, at the expense of keeping up this sort of alliance. 2dly, That the Barbary states complained, that, adhering to the rule of fitting the other part of the indenture to the passes, they were obliged to suffer ships to pass that did not belong to British subjects."

We have thought it right to give this explanation, though, since the occupation of Algiers by the French, and the disappearance of the corsairs of the other Barbary powers, Mediterranean passes have fallen into disuse.

**MEMEL**, a commercial town of East Prussia, lat.  $55^{\circ} 41' 42''$  N., lon.  $21^{\circ} 8' 14''$  E. Population, in 1838, 9,034. Memel is situated on the north-east side of the great bay, denominated the *Currische Haf*; near its junction with the Baltic. It is, consequently, the principal *entrepôt* of the country traversed by the Niemen, and as such enjoys a pretty extensive commerce.

**Harbour.** — The harbour of Memel is large and safe; but the bar at the mouth of the Currische Har has seldom more than 17 feet water, and sometimes not more than 13 or 14 feet; so that ships drawing more than 16 feet water are frequently obliged to load and unload a part of their cargoes in the road, where the anchorage is but indifferent, particularly when the wind is N. or N.W. A light-house, originally 75, but now 100 feet in height, has been erected on the N.E. side of the entrance to the harbour. The light, which is fixed and powerful, may be distinguished in clear weather at more than 20 miles distance. The outer buoy lies in 6 fathoms water, about a mile without the light-house, which bears from it S.E. by E.  $\frac{1}{2}$  E. The channel thence to the harbour is marked by white buoys on the north, and red on the south side. Three beacons to the north of the town, when brought into a line, lead directly into the harbour. Inasmuch, however, as the channel is subject to frequent changes, both in depth and direction, it is always prudent, on arriving at the outer buoy, to heave to for a pilot; but this is not obligatory; and the Prussian authorities have issued directions for ships entering without a pilot, which may be found in Mr. Norie's *Sailing Directions for the Cattegat and Baltic*, p. 36.

**Trade.** — Timber forms the principal article of export; for though that of Dantzic be considered better, it is generally cheaper, and almost always more abundant, at Memel. Here, as at Dantzic, the best quality of all sorts of wood articles is called *khron*, or crown, the 2d *brack*, and the 3d *bracks brack*. Large quantities of hemp and flax are also exported, as are bristles, hides, linseed (the finest for crushing brought to England), wax, pitch and tar, &c. The exports of grain are sometimes very considerable. The wheat of Lithuania is reckoned the best. All flax and hemp shipped from Memel must be *bracked*, or assorted by sworn selectors. — (See *FLAX* and *HEMP*.) The imports consist principally of coffee, sugar, spices, dyewoods, tobacco, rum, cotton stuffs and yarn, cutlery, wine, &c. Merchants at Memel generally send their bills to Königsberg to be sold, charging their correspondents with 1 per cent. for bank commission, postage, &c. The navigation generally closes about the latter end of December, and opens about the middle of March.

Notwithstanding the difficulties which our corn laws and timber duties throw in the way of our commerce with Prussia, we have a pretty extensive intercourse with Memel. Our imports consist principally of fir timber, and the ships that go out are mostly only partially loaded, or in ballast. We subjoin an

Account of the Imports into and Exports from Memel by Sea in 1842.

The *Monies, Weights, and Measures* of Memel are the same as those of Dantzic; which see. For further particulars see *Oddy's European Commerce*, pp. 220-234.; *Jacob's First Report on the Agriculture of the North of Europe*; *Geographical Dictionary*, art. *MEMEL*.

**MERCURY**, or **QUICKSILVER** (Fr. *Vif argent*; Ger. *Quicksilber*; It. *Argento vivo*; Sp. *Azogue*; Rus. *Rtut*; Lat. *Hydrargyrum*; Arab. *Zibākh*; Hind. *Parah*; Sans. *Pārada*.) This metal was known in the remotest ages, and seems to have been employed by the ancients in gilding, and separating gold from other bodies, just as it is by the moderna. Its colour is white, and similar to that of silver; hence the names of *Hydrargyrum*, *argentum vivum*, *quicksilver*, by which it has been known in all ages. It has no taste or smell. It possesses a good deal of brilliancy; and when its surface is not tarnished, it makes a very good mirror. Its specific character is 13.568. It differs from all other metals in being always fluid, unless when subjected to a degree of cold

equal to  $-39^{\circ}$ , when it becomes solid. The congelation of mercury was first observed in 1759. — (*Thomson's Chemistry*.)

Mercury is found in various parts of the world. Among the principal mines are those of Almaden, near Cordova, in Spain; Idria, in Carnolia; Wolfstein and Morsfeld, in the Palatinate; Guancavelica, in Peru, &c. "Most of the ores of mercury are readily distinguished from those of any other metal; in the 1st variety, globules of the metal are seen attached to or just starting on the surface, which is at once a sufficient criterion, mercury being unlike every other metal; in the 3d, by the fine white colour, and the action of the blow-pipe, which sublimes the mercury and leaves the silver behind; the 3d, by its beautiful deep red tint, varying from cochineal to scarlet red, excepting in those termed hepatic cinnabars, which are generally of a lead grey; the 4th, by its grey colour, its partial solubility in water, and its complete volatilisation by heat, emitting at the same time an arsenical odour. Before the blow-pipe, these varieties burn with a blue flame and sulphurous odour, leaving more or less residue behind them, and which may consist of earthy matter, as silice and alumina, together with the oxides of iron and copper." — (*Joyce's Chem. Min.*)

Mercury is often adulterated by the admixture of lead, bismuth, zinc, and tin. When the metal quickly loses its lustre, is covered with a film, or is less fluid and mobile than usual, or does not readily divide into round globules, there is reason to suspect its purity.

Our supplies of mercury are derived almost wholly from Spain: thus of 2,157,918 lbs. imported in 1840 no fewer than 2,157,823 lbs. were brought direct from that country, being principally the produce of the mines of Almaden. About 300,000 lbs. are retained for home consumption, the surplus being exported to S. America, France, the East Indies, &c.

Quicksilver is produced in several of the provinces of China. During the war, when the intercourse between Europe and America was interrupted, the price of quicksilver rose to such a height in the latter, that it answered to import it from China. But since the peace it has been regularly exported to the latter.

In 1838 the English and Americans imported into Canton 2,555 piculs, worth 233,825 dollars. There are 2 sulphurets of mercury; the black or *ethiops mineral*, and the red or *cinnabar*. When mercury and sulphur are triturated together in a mortar, the former gradually disappears, and the whole assumes the form of a black powder, denominated *ethiops mineral*. If this powder be heated red-hot, it sublimes; and on a proper vessel being placed to receive it, a cake is obtained, of a fine red colour, which is called *cinnabar*. This cake, when reduced to powder, is well known in commerce by the name of *vermillion*. Cinnabar may be prepared in various other ways.

Calomel, or protochloride of mercury (*mercurius dulcis*), is the most useful of all the preparations obtained from it. It is in the form of a dull white, semi-transparent mass, having a specific gravity of 7.176. It is more generally employed, and with better effect, than almost any other remedy in the whole range of the materia medica.

Besides its uses in medicine, mercury is extensively employed in the amalgamation of the noble metals, in water-gilding, the making of vermilion, the silvering of looking-glasses, the making of barometers and thermometers, &c.

MILE, the usual measure of roads in England, being 8 furlongs, or 1,760 yards.

MILK (*Fr. Lait*; *It. Latte*; *Lat. Lac*), a fluid secreted by the female of all those animals denominated *mammalia*, and evidently intended for the nourishment of her offspring. The milk of every animal has certain peculiarities which distinguish it from all other milk. But the animal whose milk is most used by man, and with which, consequently, we are best acquainted, is the cow. The external character of all milk is that of a white opaque fluid, having a sweetish taste, and a specific gravity somewhat greater than that of water. When allowed to remain at rest, it separates into 2 parts; a thick whitish fluid called *cream*, collecting in a thin stratum over its surface, and a more dense watery body, remaining below. Milk which has stood for some time after the separation of the cream, becomes *acescent*, and then *coagulates*. When the coagulum is pressed gently, a serous fluid is forced out, and there remains the caseous part of the milk, or pure cheese.

Butter, one of the most valuable animal products, is solidified cream, and is obtained artificially by churning. — (See *BUTTER*.)

Milk has always been a favourite food of most European nations, and especially of the British. *Lacte et carne vivunt*, says Cæsar of our ancestors; and the same articles still continue to form a large part of our subsistence. Mr. Middleton estimates (*Agricultural Survey of Middlesex*, 2d ed. p. 419.), that, in 1806, no fewer than 8,500 milch cows were kept for the supply of London and its environs with milk and cream; and he estimates the average quantity of milk obtained from each cow at *nine quarts* a day, or 3285 quarts a year, leaving, every deduction being taken into account, 3200 quarts of marketable produce.

But Mr. Youatt, in his valuable work on cattle, their breeds, &c., estimates the number of dairy cows kept, at present (1843), in London and its environs, at 12,000; affording, on Mr. Middleton's hypothesis, an annual supply of 38,400,000 quarts of milk. Now, as milk is sold by the retailers at from 3d. to 4d. a quart after the cream is separated from it, and as the cream is usually sold at from 2s. 6d. to 3s. a quart, and there is reason to suspect that a good deal of water is intermixed with the milk, we believe we should hardly be warranted in estimating that the milk, as obtained from the cow, is sold at less than 5d. a quart, which gives 800,000*l.* as the total price of the milk consumed in the city and its immediate vicinity. If to this sum were added the further sums paid for cheese and butter, the magnitude of the entire sum paid in the metropolis for milk, and the various products derived from it, would appear not a little astonishing.

MILLET (*Ger. Hirse*; *Fr. Millet, Mil*; *It. Miglio, Panicastrello*; *Sp. Nijo*; *Lat. Milium, Panicum miliaceum*). There are 3 distinct species of millet; the Polish millet, the common or German millet, and the Indian millet. It is cultivated as a species of

grain; and is sometimes employed to feed poultry, and as a substitute for rice. The Indian millet grows to a large size; but the autumn in England are seldom dry and warm enough to allow of its being cultivated here. — (*London's Encyc. of Agriculture.*)

**MILL-STONES** (Ger. *Mühlsteine*; Fr. *Pierres meulières*; It. *Mole macine*; Sp. *Muelas de molino*; Rus. *Schernowoi kamen*), the large circular stones, which, when put in motion by machinery, grind corn and other articles. The diameter of common mill-stones is from 5 to 7 feet, and their thickness varies from 12 to 18 inches. These stones have been principally imported from Rouen and other parts of France; the burr-stones of that country being supposed more durable than our own. Mill-stones are, however, found at Conway, in North Wales, and in some parts of Scotland, which are said to equal any imported from foreign countries. Good mill-stones usually last 35 or 40 years.

The duty on mill-stones formerly depended on their size, or on their being over or under four feet in diameter, but now it is 2s. per ton if they be shaped or scalped, and 10s. if they be hewn.

**MINING COMPANIES.** By this designation was formerly meant the associations formed in London, in 1825, for working mines in Mexico and S. America; but at present it comprises all mining projects carried on by joint stock associations.

The *mania* for mining concerns, which raged in London and the empire generally in 1824 and 1825, after the opening of Mexico and other parts of Spanish America to our intercourse, forms a remarkable, and we are sorry to add, disgraceful era in our commercial history. Now that the delusion is long past, we have difficulty in conceiving how mercantile men could be led to entertain such visionary expectations, and to pay immense premiums for shares in distant and hazardous undertakings of which they knew little or nothing. We may, therefore, be excused for appropriating a page or two to the notice of an infatuation hardly second to that which led to the South Sea and Mississippi schemes.

The American mining companies formed at the outset had some sort of basis for favourable expectations, their directors having made contracts for a number of mines in Mexico, described by Humboldt as having enriched many families. This particularly applies to the Real del Monte Company, whose mines are situated in the mountainous district of that name; to the Anglo-Mexican Company, whose mines are at Guanaxuato, the principal mining quarter in Mexico; and to the United Mexican Company, whose contracts, though too widely spread, comprise several valuable mines at Zacatecas, Sombrerete, Guanaxuato, and other parts.

These associations were formed in London early in 1824, and during the spring and summer of that year their stock or shares bore only a small premium; but towards the winter it began progressively to rise; not because of any favourable intelligence from the mines (for the accounts from Mexico merely reported the arrival of the English agents), but from a blind ardour and spirit of speculation in the public, which really took *omne ignotum pro magnifico*, every rumour of a mine for a certain and inexhaustible source of profit and of wealth! It was supposed that our countrymen were about to reap an immediate harvest; to lay their hands on a treasure hid for ages. This was said to be the true discovery of America, the effectual access to her resources. Every new contract for a Mexican mine produced a rise in the shares of the other companies, as if this fresh undertaking must necessarily be a source of profit to the whole! And the result was, that in January, 1825, the premium on the shares of most of the companies exceeded cent. per cent.! It must not, however, be imagined that this rise of price was occasioned solely by the competition of individuals who intended to continue to hold stock, and to trust to the dividends made by the companies for a return. That this was the case in the first instance, is, speaking generally, true. But a host of others, actuated by very different views, speedily entered the field. A peculiar combination of circumstances, at the head of which must be placed an almost incredible degree of ignorance and folly on the part of a considerable portion of the public, spread a spirit of gambling among all classes. Many who were most eager in the pursuit of shares, intended only to hold them for a few hours, days, or weeks, to profit by the rise which they anticipated would take place, by selling them to others more credulous or bold than themselves. The confidence of one set of speculators confirmed that of others. Meanwhile the public gullibility, or rather its indiscriminating rapacity, was liberally administered to. Company after company was formed without any previous contract; in other words, without any foundation whatever! The plan was to fix on a district in America, understood to contain mines; to form a company bearing the name of such district; to obtain a first payment from the shareholders, and to send or pretend to send out agents, to survey the district and engage mines. Such was the case of most of those companies having the names of districts in South America; and such, also, was the case of the Hispaniola or St. Domingo Company, formed on the basis of accounts given by Robertson of mines wrought in that island some 3 centuries ago! And yet lawyers, clergymen, and

even the nobles of the land, were candidates for shares in these miserable bubbles, in the hope of finding (in which, luckily, most of them were disappointed) some dupe to buy their shares at a premium.\*

As the year 1825 proceeded, the mining mania gradually declined, not from any falling off in the prospects of the companies, for in truth they never had any, but in the supply of money in London. That redundancy of the currency in which the mining mania had partly originated, having brought about an adverse exchange, and a heavy drain for bullion on the Bank of England, the latter was obliged to pull up, and in a moment the bubble burst, and unreasonable suspicion took the place of blind unthinking confidence. Mining projects, from being in the highest favour, fell to the lowest point in the public estimation. The shares of the 3 principal companies, some of which had been at a premium of 500 per cent., fell to par: that is, 100*l.* in money, and no more, could be got for 100*l.* of the company's stock! They maintained this price for a considerable time, because most of the parties interested continued to have a favourable impression of the undertakings. Demands, however, continued to be made for additional sums to meet the expenditure abroad; and in 1826 and 1827 mining shares progressively declined, so that 100*l.* stock fetched only 20*l.* or 25*l.* in money. The bubble companies were entirely destroyed, and the few only remained that were founded by capitalists and had some foundation to stand upon.

Even these would have been relinquished, or have shrunk into very small dimensions, had not the directors been able to enforce further payments, by forfeiting, in default of such, whatever had been previously paid by the subscribers. The usage was, that on becoming a shareholder each person subscribed the deed of the company, engaging to pay, when called on, such instalments or sums to account (generally 10*l.* on each share) as should be required by the directors, until he had completed payment of the 100*l.* And many shareholders who had advanced 50*l.* or 60*l.* unwisely preferred paying 10*l.* from time to time, rather than incur the immediate forfeiture of all they had paid. Those who held only a few shares felt this in a less degree; but to the holders of a number of shares, the grievance was most serious. Numbers of them raised the money with great difficulty; often selling, at a heavy loss, their family property, or prevailing on relations to make them advances, to their great inconvenience, and, as far as can be seen, with almost no prospect of a return. Resentment would be excited against the directors, had they not been, in general, the heaviest sufferers: their regulations required them to hold a certain number of shares (perhaps 20 or 30); but in their blind confidence they frequently held 200 or 300, and drew on themselves a proportional sacrifice—in several cases, the loss of their whole property.

The managers of the companies formed in the outset were principally chargeable with ignorance, rashness, and overweening confidence. They had, in fact, but little information to go upon. The monopoly enforced by Old Spain had prevented any considerable communication between this country and her colonies. And of the Spaniards settled in Mexico, and driven from it by the civil wars and consequent emancipation of the country, few or none found their way hither, the great majority having repaired to Cuba, the south of France, and Spain. Nor were the published accounts of the country entitled to much confidence: Humboldt's Travels formed the chief authority; but their illustrious author, though generally cautious, seems, in this instance, to have placed too much confidence in vague, exaggerated statements. Our merchants knew, generally, that silver mines formed a main branch of the productive industry of Mexico, and had enriched very many families originally in humble circumstances; but they had no idea of the injury sustained by the mines during the civil war, nor of the amount of expenditure required to bring them into a working state: nor were they aware how little useful information could be expected from the natives; the working of the mines, like every operation requiring skill and intelligence, having been superintended by natives of Old Spain, who had either fallen in the civil war, or been expelled after the Mexicans succeeded in the contest. Hence, the agents of our companies found on the spot only native Mexicans, without education or experience in business, and, speaking generally, without candour or probity. They urged our countrymen to drain the mines, not by machinery, of which they had no idea, but by animal power, the use of which was of advantage to them, by employing their horses, and creating a great consumption of maize, the principal grain of the country. Then, as to the last and most important stage in the business of mining,—the mode of extracting the silver from the ore,—the Mexicans, wholly unacquainted with the improvements made

\* Those who may be desirous of seeing the extent to which the public credulity was practised upon in 1824 and 1825, may consult a pamphlet published by H. English, broker, in 1827, which contains an account of all the joint stock companies formed and projected in these memorable years. It presents a most extraordinary picture. There were in all 74 mining companies formed and projected! The number and quality of the other schemes were similar. It is due to Mr. Baring (now Lord Ashburton) to say that he denounced the evil when in progress; and warned the unthinking multitude of the ruin they were bringing upon themselves; but to no purpose.

in Germany during the last half century, recommended amalgamation, a process conducted by them in a very rude manner, and which, in most qualities of silver ore, fails to extract the whole, or any thing like the whole, of the metal. The object of the Mexicans, in short, was merely to make English capital be circulated among them; thus giving employment to their people for a time, and bringing the mines into an improved state; when they (the Mexicans) might hope to resume them after our countrymen had exhausted their resources, or had become weary of their contracts.

Actuated by these views, the Mexicans pressed one undertaking after another on the agents of the companies, who were but too eager to enter on them without such incitement. All the companies fell into errors of the same kind, having engaged too many mines, and conducted them, for a time, as if their funds were unlimited. They reckoned on finding, as they proceeded, supplies in the produce of the mines; but that produce, though considerable in quantity, seldom yielded the expected result, owing to the very imperfect method of extracting the silver from the ore, as well as to the various disadvantages attendant on the vast distance of the undertakings from this country. These disadvantages were ill supplied by the agents of the companies. Mining in England is not conducted on a scale sufficient to afford any great choice of superintendents for mines abroad; it was necessary, in such appointments, to waive the qualification of mining knowledge, and to be satisfied with men of fair character and reputed ability in their respective professions, however different from mining. Hence the appointment as agents, of *naval and military officers, on the half-pay list*; whose habits, whatever might be their personal merits, were very different from those required for such concerns. This suffices, in part at least, to account for the disappointments of the companies in a very material point—the conduct of their commissioners or agents abroad; for, of the whole number, it would be difficult to point out more than 2 or 3 entitled to the praise of judicious management. The same applied to most of the inferior *employés*, or to the practical miners, clerks, and mechanics.

The expense of conveying the requisite machinery from the coast of Mexico to the mining districts, generally at a great distance in the interior, absorbed much capital. The country has few practicable roads, and these have latterly been allowed to fall into disrepair; draught carriages are almost unknown, and burdens are carried on the backs of mules and horses: add to this, that Mexico being under-peopled, labour is nearly as high in it as in the United States of North America; and the mechanical arts being in a manner unknown, all skilled workmen, such as carpenters, blacksmiths, and working engineers, had to be sent from England at a heavy expense. (For an account of the low state of the arts in Mexico, see the extracts from Chevalier's Letters in the *Geog. Dict. art. MEXICO*.)

Such were the chief causes of the failure of the Mexican mining companies; and several of these may be referred to one radical disadvantage—the non-existence of silver-mines in England. We have, in Cornwall, considerable mines of tin and copper, while in the northern counties we have mines of lead; but of silver we have none that deserve the name. How much better had it been had our countrymen set out with a consciousness that Germany is the only country in which the treatment of silver ore is conducted on scientific principles! The Saxons extract a profit from ore of very inferior quality, often worth only a fourth or fifth part of the ore raised by the Mexicans on account of our companies, but which, being wrought by their crude, inefficient, and expensive process, fails to afford any thing like a satisfactory return. There seems no reason to doubt that the German process may be applied to silver ore in Mexico as in Europe: the difficulties arise, not from difference in the quality of the ore, but from the want of experienced smelters, and the general backwardness of the Mexicans in mechanics.

But though the companies had been in all other respects successful, they had a serious drawback to contend with in the unsettled state of the country. No government has as yet been established in Mexico, nor in any other of the newly constituted American states, with power, or perhaps inclination, sufficient to put down disturbances, or to enforce the observance of contracts. So long as the companies were struggling to put their mines into order, they sustained little inconvenience from the circumstances now mentioned; but the moment they had succeeded in bringing them once more into a productive state, and were beginning to have a reasonable prospect of obtaining some return for their enormous outlays, they were annoyed by questions as to title, and by the setting up of claims on the mines, of which they had never heard before. In some instances the claimants have had recourse to violence, and the companies' servants have been forcibly ejected from their works! Chevalier says that it requires an armed force to transport any quantity of ore from the mine to the place of its destination; and he gives an account of a murderous attack made in 1835 on some miners belonging to the Real del Monte company.—(See *Geog. Dict. art. MEXICO*.) Probably, however, there has latterly been, in this respect, some improvement. At all events, the produce of the

mines is increasing in Mexico and most parts of South America. — (See art. *Precious Metals*.)

Without, however, pretending to anticipate the final result of these remote speculations, we shall conclude with a brief notice of the considerations on both sides of the question. The circumstances adverse to the success of mining companies in America, conducted on account of parties in England or in any part of Europe, are —

1. The various disadvantages of distant management. These are so many and so serious, as to admit of only one corrective, — selling the ore as soon as raised, and transferring to individuals, for their own account, the extraction of the metal, as is done in Cornwall, and, in a somewhat different manner, in Saxony. The ores also ought to be raised by paying the workmen, not fixed wages, but a tribute or portion of the proceeds.

2. The half-civilised state of the inhabitants, their unsettled political condition, and the want of power or disposition on the part of those in power to make contracts be observed; and to hinder the former proprietors of the mines, or those connected with them, from setting up fictitious claims, and enforcing them by violence.

3. The high price of labour; the ignorance of the natives as to mechanics, and still more as to science. Hence the necessity of having artisans and confidential superintendents from Europe at a heavy expense.

On the other hand, the circumstances in favour of such undertakings are —

1. The abundance of silver ore, which is far greater than in any part of Europe

2. The former success of mining in Mexico, under a system extremely rude and expensive, compared to that which is now followed in Germany.

3. The probability of peace in Europe, and of an abundance of monied capital; so that the failure of the present companies may not involve a relinquishment of their enterprises, any more than the failure of the first New River Company, about two centuries ago, implied an abandonment of their project. There is surely, also, some probability that anarchy and disorder will ultimately cease; and that the security of property will, in the end, be established. We confess, however, that these are but problematical and contingent events; and that it may reasonably be doubted whether any considerable future success can be anticipated.

It seems, however, as if there were something in mining speculations that renders them exceedingly unsuitable for joint stock associations. At all events, hardly one of the joint stock associations formed in this country for the working of mines has been successful. The company for working the copper mines near Santiago in Cuba appears to be the only one that has in any degree realised the magnificent prospects that were held out in 1824 and 1825. Anglo-Mexican 100*l.* shares are now selling at 2*l.* 15*s.*, and Bolanos 150*l.* shares at 4*l.* 15*s.*, and so forth. We subjoin

An Account of the principal existing Mining Companies, exhibiting the Number of Shares in each, the Amount of each Share, and its Cost Price, &c., in June 1843.

MINIUM, or RED OXIDE OF LEAD, a tasteless powder of an intense red colour, often inclining to orange, and very heavy; its specific gravity being 8.94. It is extensively used in the arts.

MOCHA, the principal port in the Red Sea frequented by Europeans, in that part of Arabia called Yemen, about 40 miles to the north of the Strait of Bab-el-mandeb, lat. 13° 19' 30" N., lon. 43° 20' E. Population variously estimated; but may, perhaps, amount to from 5,000 to 7,000. It is encircled with walls, and indifferently fortified. Its appearance from the sea is imposing.

Mocha is situated on the margin of a dry sandy plain. It is built close to the shore, between 2 points of land which project and form a bay. Vessels drawing from 10 to 12 feet water may anchor within this bay at about a mile from the town; but large ships anchor without the bay in the roads, in 5 or 7 fathoms water — the grand mosque bearing E. S. E., and the fort to the south of the town S. by E., distant about two miles from the shore. The great article of export from Mocha is coffee, which is universally admitted to be of the finest quality. It is not possible to form any very accurate estimate of the quantity exported; but we believe it may be taken at 10,000 tons, or per-

haps more. The greater portion is sent to Djidda and Suez; but there is a pretty large export to Bombay, and other parts of India, whence some is sent to Europe: occasionally, however, the exports from Mocha and Hodeida, direct from Europe, are very considerable. Besides coffee, the principal articles of export are, dates, adjoue, or paste made of dates, myrrh, gum Arabic, olibanum, senna (*cassia senna*), sharks' fins, tragacanth, horns and hides of the rhinoceros, balm of Gilead, ivory, gold dust, civet, aloes, sagan-penum, &c. The principal articles of import are, rice, piece goods, iron and hardware, &c. The ivory, gold dust, and civet, met with at Mocha, are brought from the opposite coast of Abyssinia, whence are also brought slaves, ghee, &c.

The greater part of the foreign trade of Mocha is transacted by the Banians; and it is much safer to deal with them than with either Turks or Arabs. Europeans pay a duty of 3 per cent. *ad valorem* on all goods imported by them from Europe, India or China; the duty being levied on the amount of the sales. The buyer pays brokerage, cooley, and boat hire. All kinds of foreign goods are sold on credit, and the payment is made in 3 instalments, or at a certain day, according as may have been agreed on. Coffee is always paid for in ready money. On the sale of other goods, the produce of the country, a credit is given; or if ready money be paid, a discount is allowed at the rate of 9 per cent. When goods are discharging, the master must furnish the Custom-house officer with a manifest, or account of the marks, numbers, and contents of each package. He then opens two or three bales, taken at random; and if they correspond with the account delivered, no further examination is made; but if they do not correspond, the whole bales are opened, and double duty is charged upon the excess. The quantities being thus ascertained, their value is learned from the account of sales rendered by the seller, and the duty charged accordingly. In this respect there is nothing to object to at Mocha; but a good deal of extortion is practised in the exaction of port charges, presents, &c., which may, however, be defeated by proper firmness. The port charges on ships, or *three-mast* vessels, may amount to about to 400 Mocha dollars, and those on brigs to about half as much. Provisions are plentiful and cheap; but water is dear: that in the vicinity being brackish and unwholesome, whatever is used for drinking, by all but the poorest persons, is brought from Mossa, about 30 miles off. Fish are abundant and cheap, but not very good.

**Money.**—The current coin of the country are carats and commas; 7 carats = 1 commas; 60 commas = 1 Spanish dollar; 100 Spanish dollars = 134 Mocha dollars.

**Weights and Measures.**—The commercial weights are—

15 Vaklas = 1 Rottole = 1 lb. 2 oz. avoird.

40 Vaklas = 1 Maund = 3 lbs. avoird.

10 Maunds = 1 Frazel = 30 lbs. avoird.

15 Frazels = 1 Bahar = 450 lbs. avoird.

There is also a small maund of only 30 vaklas; 1 Mocha bahar = 151 Bembay maunds; 1 Mocha bahar = 13 Surat maunds = 15125 seers. Grain is measured by the kella, 40 of which = 1 tomand, about 170 lbs. avoirdupois. The liquid measures

are 16 vaklas = 1 nuseah; 8 nuseahs = 1 cuda, about 2 English wine gallons. The long measures are the puz = 25 English inches; the hand cuud = 18 inches, and the long iron cuvid = 27 inches.

In compiling this article, we made use of *Millburn's Oriental Commerce*, and *Elmore's Directory*. Niebuhr has given a plan of the port of Mocha in his *Voyage en Arabie*, tome i. p. 348, ed. Amst. 1776. He has also given some details as to its trade in his *Description de l'Arabie*, p. 191. But the best account we have seen of Mocha is in *Hamilton's Account of the East Indies* (vol. i. pp. 40–52), an accurate and valuable work. Burckhardt did not visit Mocha; which is to be regretted.

**MOGADORE**, a sea-port town on the west coast of Morocco, lat. 31° 50' N., lon. 9° 20' W. Population about 10,000. It is indifferently fortified; the country in the immediate vicinity is low, flat, sandy, and unproductive. Water is scarce and rather dear; being either rain water collected and preserved in cisterns, or brought from a river about 1½ mile distant. The port is formed by a small island lying to the southward of the town; but as there is not more than 10 or 12 feet water in it at ebb tide, large ships anchor without, the long battery bearing E. distant 1½ mile. The city of Morocco derives its most considerable supplies of European articles from Mogadore, from which it is distant about 4 days' journey (caravan travelling). The principal imports are, English woollen and cotton stuffs and hardware, German linens, tin, copper, earthenware, mirrors, glass, sugar, pepper, paper, and a variety of other articles. The exports principally consist of sweet and bitter almonds, gum Arabic, and other gums, bees' wax, cow and calf skins, ivory, ostrich feathers, gold dust, olive oil, dates, &c.

**Money.**—Accounts are kept in nutkels of 10 ounces; the ounce being divided into 4 blankels, and the blankel into 24 suce. From their proportion to the Spanish dollar, the blankel may be valued at 1d., the ounce at 4d., and the nutkel or duat at 3s. 4d.

**Weights and Measures.**—The commercial pound is generally regulated by the weight of 90 Spanish dollars; and therefore, 100 lbs. Mogadore weight, or the quintal, = 119 lbs. avoirdupois. The market pound for provisions is 50 per cent. heavier, or 1 lb. 12½ oz. avoirdupois.

The corn measures are for the most part similar to those of Spain, but there are considerable discrepancies.

The cubit, or canna, = 21 English inches, is the principal long measure.

The most ample details with respect to the trade of Mogadore, and the trade and productions of Morocco in general, may be found in *Jackson's Account of Morocco*, c. 6, 7 and 13; see also *Kelly's Cambist*.

**MOHAIR** (Ger. *Mohr*; Fr. *Moire*; It. *Moerro*; Sp. *Mue*, *Muer*), the hair of a variety of the common goat, famous for being soft and fine as silk, and of a silvery whiteness. It is not produced any where but in the vicinity of Angora, in Asia Minor. The exportation of this valuable and beautiful article, unless in the shape of yarn, was formerly prohibited; but it may now be exported unspun. The production, preparation, and sale of mohair have long engrossed the principal attention of the inhabitants of Angora; and it used to form an important article of Venetian commerce. It is manufactured into camlets and other expensive stuffs. Hitherto but little has been imported into England. —(See, for further particulars, *Tournefort, Voyage du Levant*, ii. 463., where there is a figure of the goat; and *Urquhart on Turkey and its Resources*, p. 184.)

**MOLASSES** or **MELASSES** (Fr. *Sirap de Sucre*, *Melasses*; Ger. *Syrup*; It. *Mielazzo di zucchero*; Sp. *Miel de azucar*, *Chancaca*; Port. *Melasso*, *Assucar liquido*; Rus. *Potokha sacharnaja*), the uncrystallisable part of the juice of the sugar cane, separated from the sugar during its manufacture. It is of a brown or black colour, thick, and viscid; has a peculiar odour, and a sweet empyreumatic taste. Molasses imported from the West India colonies and the Mauritius is charged, on being entered for home consumption, with a duty of 9s. a cwt., the duty on foreign molasses, which is quite

prohibitory, being 23s. 9d. a cwt. It is not, however, used in its original state, but is purchased by the sugar-bakers, who, when it is of an ordinary degree of strength, extract from it a coarse, soft species of sugar called bastards, and treacle. But it is obvious, inasmuch as the duty on molasses is fixed, that the duty on the sugar extracted from it will vary indirectly according to the quantity of saccharine matter which it contains; and we understand that, in consequence, molasses is frequently imported so rich as to yield good crystallised sugar. We do not know whether the practice has been carried to such an extent as materially to injure the revenue: but it seems pretty clear that the duty should depend, in part at least, on the quality of the molasses, or on the quantity of saccharine matter which it contains, as well as on the weight. It is difficult — unless advantage has been taken of the way in which the duty is assessed, to elude the sugar duties — to account for the fact of the imports of molasses from the West India islands not having diminished in anything like the same proportion as the imports of sugar. (For an account of the imports of molasses see *ante*, p. 331.)

About 8 gallons of proof spirit may, it is said, be obtained from a cwt. of molasses, such as has recently been imported; but this depends, of course, wholly on the richness of the molasses.

Part of the refuse that remains, after refining muscovado sugar, is a sweet syrup, which, as well as the syrup that remains after boiling molasses to obtain bastards, is called treacle. But the treacle obtained from the former is always preferred to that obtained from the latter, and fetches 2s. per cwt. more.

Molasses is sometimes used in preparing the coarser sort of preserves; and on the Continent it is extensively used in the manufacture of tobacco.

An Account of the Quantity of Molasses entered for Consumption in 1840, 1841, and 1842, and of the Produce of the Duty thereon in each of these Years.

1840.	1841.	1842.	1840.	1841.	1842.
<i>Cwts.</i> 425,725	<i>Cwts.</i> 402,450	<i>Cwts.</i> 555,902	£ 201,580	£ 195,546	£ 256,432

**MONEY.** When the division of labour was first introduced, commodities were directly bartered for each other. Those, for example, who had a surplus of corn, and were in want of wine, endeavoured to find out those who were in the opposite circumstances, or who had a surplus of wine and wanted corn, and then exchanged the one for the other. It is obvious, however, that the power of changing, and, consequently, of dividing employments, must have been subjected to perpetual interruptions, so long as it was restricted to mere barter. A. carries produce to market, and B. is desirous to purchase it; but the produce belonging to B. is not suitable for A. C., again, would like to buy B.'s produce, but B. is already fully supplied with the equivalent C. has to offer. In such cases — and they must be of a constant occurrence wherever money is not introduced — no direct exchange could take place between the parties; and it might be very difficult to bring it about indirectly. \*

The extreme inconvenience attending such situations must early have forced themselves on the attention of every one. Efforts would, in consequence, be made to avoid them; and it would speedily appear that the best or rather the only way in which this could be effected, was to exchange either the whole or a part of one's surplus produce for some commodity of known value, and in general demand; and which, consequently, few persons would be inclined to refuse to accept as an equivalent for whatever they had to dispose of. After this commodity had begun to be employed as a means of exchanging other commodities, individuals would become willing to purchase a greater quantity of it than might be required to pay for the products they were desirous of immediately obtaining; knowing that should they, at any future period, want a further supply either of these or other articles, they would be able readily to procure them in exchange for this universally desired commodity. Though at first circulating slowly and with difficulty, it would, as the advantages arising from its use were better appreciated, begin to pass freely from hand to hand. Its value, as compared with other things, would thus come to be universally known; and it would at last be used, not only as the common medium of exchange, but as a standard by which to measure the value of other things.

Now this commodity, whatever it may be, is *money*.

An infinite variety of commodities have been used as money in different countries and periods. But none can be advantageously used as such, unless it possess several very peculiar qualities. The slightest reflection on the purposes to which it is applied,

\* The difficulties that would arise on such occasions, and the devices that would be adopted to overcome them, have been very well illustrated by Colonel Torrens, in his work on the "Production of Wealth," p. 291.

must, indeed, be sufficient to convince every one that it is indispensable, or, at least, exceedingly desirable, that the commodity selected to serve as money should, (1) be divisible into the smallest portions; (2) that it should admit of being kept for an indefinite period without deteriorating; (3) that it should, by possessing great value in small bulk, be capable of being easily transported from place to place; (4) that one piece of money, of a certain denomination, should always be equal, in magnitude and quality, to every other piece of money of the same denomination; and (5) that its value should be comparatively steady, or as little subject to variation as possible. Without the *first* of these qualities, or the capacity of being divided into portions of every different magnitude and value, money, it is evident, would be of almost no use, and could only be exchanged for the few commodities that might happen to be of the same value as its indivisible portions, or as whole multiples of them: without the *second*, or the capacity of being kept or hoarded without deteriorating, no one would choose to exchange commodities for money, except only when he expected to be able speedily to re-exchange that money for something else: without the *third*, or facility of transportation, money could not be conveniently used in transactions between places at any considerable distance: without the *fourth*, or perfect sameness, it would be extremely difficult to appreciate the value of different pieces of money: and without the *fifth* quality, or comparative steadiness of value, money could not serve as a standard by which to measure the value of other commodities; and no one would be disposed to exchange the produce of his industry for an article that might shortly decline considerably in its power of purchasing.

The union of the different qualities of comparative steadiness of value, divisibility, durability, facility of transportation, and perfect sameness, in the precious metals, doubtless, formed the irresistible reason that has induced every civilised community to employ them as money. The value of gold and silver is certainly not invariable, but, generally speaking, it changes only by slow degrees; they are divisible into any number of parts, and have the singular property of being easily reunited, by means of fusion, without loss; they do not deteriorate by being kept; and, from their firm and compact texture, they are very difficult to wear. Their cost of production, especially that of gold, is so considerable, that they possess great value in small bulk, and can, of course, be transported with comparative facility; and an ounce of pure gold or silver, taken from the mines in any quarter of the world, is precisely equal, in point of quality, to an ounce of pure gold or silver dug from the mines in any other quarter. No wonder, therefore, when all the qualities necessary to constitute money are possessed in so eminent a degree by the precious metals, that they have been used as such, in civilised societies, from a very remote æra. "They became universal money," as Turgot has observed, "not in consequence of any arbitrary agreement among men, or of the intervention of any law, but by the nature and force of things."

When first used as money, the precious metals were in an unfashioned state, in bars or ingots. The parties having agreed about the quantity of metal to be given for a commodity, that quantity was then weighed off. But this, it is plain, must have been a tedious and troublesome process. Undoubtedly, however, the greatest obstacle that would be experienced, in early ages, to the use of gold and silver as money, would be found to consist in the difficulty of determining the degree of their purity with sufficient precision; and the discovery of some means by which their weight and fineness might be readily and correctly ascertained, would be felt to be indispensable to their extensive use as money. Fortunately, these means were not long in being discovered. The fabrication of coins, or the practice of impressing pieces of the precious metals with a stamp indicating their weight and purity, belongs to the remotest antiquity.—(*Gouget, De l'Origine des Loix*, &c. tome i. p. 269.) And it may safely be affirmed, that there have been very few inventions of greater utility, or that have done more to accelerate the progress of improvement.

It is material, however, to observe, that the introduction and use of coined money make no change whatever in the *principle* on which exchanges were previously conducted. The coinage saves the trouble of weighing and assaying gold and silver, but it does nothing more. It declares the weight and purity of the metal in a coin; but the *value* of that metal or coin is in all cases determined by precisely the same principles which determine the value of other commodities, and would be as little affected by being recoined with a new denomination, as the burden of a ship by a change of her name.

Inaccurate notions with respect to the influence of coinage seem to have given rise to the opinion, so long entertained, that coins were merely the *signs* of values! But it is clear they have no more claim to this designation than bars of iron or copper, sacks of wheat, or any other commodity. They exchange for other things, because they are desirable articles, and are possessed of real intrinsic value. A draft, check, or bill may not improperly, perhaps, be regarded as the sign of the money to be given for it. But that money is nothing but a commodity; it is not a sign—it is the thing signified.

Money, however, is not merely the universal equivalent, or *merchandise banale*, used by society: it is also the *standard* used to compare the values of all sorts of products; and the stipulations in the great bulk of contracts and deeds, as to the delivery and disposal of property, have all reference to, and are commonly expressed in, quantities of money. It is plainly, therefore, of the utmost importance that its value should be preserved as invariable as possible. Owing, however, to improvements in the arts, the exhaustion of old mines, and the discovery of new ones, the value of the precious metals is necessarily inconstant: though, if we except the effects produced in the 16th century by the discovery of the American mines, it does not appear to have varied so much at other times as might have been anticipated. Great mischief has, however, been repeatedly occasioned by the changes that have been made in most countries in the weight, and sometimes also in the purity, of coins; and since the impolicy of these changes has been recognised, similar, and perhaps still more extensive, disorders have sprung from the improper use of substitutes for coins. It is, indeed, quite obvious, that no change can take place in the value of money, without proportionally affecting the pecuniary conditions in all contracts and agreements. Much, however, of the influence of a change depends on its direction. An increase in the value of money is uniformly more prejudicial in a public point of view than its diminution: the latter, though injurious to individuals, may sometimes be productive of national advantage; but such can never be the case with the former. — (See *Principles of Political Economy*, by the author of this work, 3d ed. pp. 510—515.)

No certain estimate can ever be formed of the quantity of money required to conduct the business of any country; this quantity being, in all cases, determined by the value of money itself, the services it has to perform, and the devices used for economising its employment. Generally, however, it is very considerable; and when it consists wholly of gold and silver, it occasions a very heavy expense. There can, indeed, be no doubt that the wish to lessen this expense has been one of the chief causes that have led all civilised and commercial nations to fabricate a portion of their money of some less valuable material. Of the various substitutes resorted to for this purpose, paper is, in all respects, the most eligible. Its employment seems to have grown naturally out of the circumstances incident to an advancing society. When government becomes sufficiently powerful and intelligent to enforce the observance of contracts, individuals possessed of written promises from others, that they will pay certain sums at certain specified periods, begin to assign them to those to whom they are indebted; and when the subscribers are persons of fortune, and of whose solvency no doubt can be entertained, their obligations are readily accepted in payment of debts. But when the circulation of promises, or bills, in this way, has continued for a while, individuals begin to perceive that they may derive a profit by issuing them in such a form as to fit them for being readily used as a substitute for money in the ordinary transactions of life. Hence the origin of bank notes. An individual in whose wealth and discretion the public have confidence, being applied to for a loan, say of 5,000*l.*, grants the applicant his bill or note, payable on demand, for that sum. Now, as this note passes, in consequence of the confidence placed in the issuer, currently from hand to hand as cash, it is quite as useful to the borrower as if it had been gold; and supposing that the rate of interest is 5 per cent., it will yield, so long as it continues to circulate, a revenue of 250*l.* a year to the issuer. A banker who issues notes, coins, as it were, his credit. He derives the same revenue from the loan of his written promise to pay a certain sum, that he could derive from the loan of the sum itself, or of an equivalent amount of produce! And while he thus increases his own income, he, at the same time, contributes to increase the wealth of the public. The cheapest species of currency being substituted in the place of that which is most expensive, the superfluous coins are either used in the arts, or are exported in exchange for raw materials or manufactured goods, by the use of which both wealth and enjoyments are increased. Ever since the introduction of bills, almost all great commercial transactions have been carried on by means of paper only. Notes are also used to a very great extent in the ordinary business of society; and while they are readily exchangeable at the pleasure of the holder for coins, or for the precise quantities of gold or silver they profess to represent, their value is maintained on a par with the value of these metals; and all injurious fluctuations in the value of money are as effectually avoided as if it consisted wholly of the precious metals.

In common mercantile language, the party who exchanges money for a commodity is said to buy; the party who exchanges a commodity for money being said to sell. Price, unless where the contrary is distinctly mentioned, always means the value of a commodity estimated or rated in money. — (For a further account of metallic money, see the article *Coin*; and for an account of paper money, see the article *Banks*.)

**MONOPOLY.** By this term is usually meant a grant from the Crown, or other competent authority, conveying to some one individual, or number of individuals, the sole right of buying, selling, making, importing, exporting, &c. some one commodity, or

set of commodities. Such grants were very common previously to the accession of the House of Stuart, and were carried to a very oppressive and injurious extent during the reign of Queen Elizabeth. The grievance became at length so insupportable, that, notwithstanding the opposition of government, which looked upon the power of granting monopolies as a very valuable part of the prerogative, they were abolished by the famous act of 1624, the 21 Jac. 1. c. 3. This act declares that all monopolies, grants, letters patent for the sole buying, selling, and making of goods and manufactures, shall be null and void. It excepts patents for *fourteen* years for the sole working or making of any new manufactures within the realm, to the true and first inventors of such manufactures, provided they be not contrary to law, nor mischievous to the state. It also excepts grants by act of parliament to any corporation, company, or society, for the enlargement of trade, and letters patent concerning the making of gunpowder, &c. This act effectually secured the freedom of industry in Great Britain; and has done more, perhaps, to excite the spirit of invention and industry, and to accelerate the progress of wealth, than any other in the statute book.

MONTEVIDEO, a sea-port, and the capital of the republic of Uruguay, on the north bank of the Río de la Plata, lat. 34° 54' 11" S., lon. 56° 13' 18" W. The population, which is variously estimated, may probably be about 12,000. The town is built in the form of an amphitheatre, on a regular plan, and is well fortified. It has suffered much from the various revolutions to which it has been subject during the last 30 years.

Montevideo is situated 29° 3' 33" W. of Cape St. Mary, the northern limit of the embouchure of the La Plata. Vessels from the north bound to Montevideo generally make this cape, entering the river between it and the small island of Lobos, in from 14 to 17 fathoms. The course is thence nearly W. to the Isle of Flores, on which is a light-house 112 feet above the level of the sea, with a revolving light. From Flores to Montevideo is 16 miles in a direct line, and the course W. by S. by compass. A light-house, 475 feet above the level of the sea, has been erected on the summit of the Montevideo, whence the town has its name. The latter is built on a projecting tongue of land, the port being on its S. side. This, which is the best on the La Plata, is a large circular basin open to the S.W.; generally the water is shallow, not exceeding from 14 to 19 feet, but the bottom being soft mud, vessels are seldom damaged by grounding. It should, however, be observed that the depth of water in the harbour, as well as throughout the whole of the Río de la Plata, depends very much on the direction and strength of the winds. The S. W. wind, called *pampero*, blows right into the bay of Montevideo with much force, not unfrequently causing a rise of a fathom or more in the depth of water! But it rarely occasions much damage to vessels properly moored with anchors to the S.W., S.E., and one to the N.—(*Blunt's American Pilot*, pp. 542—555.; *Coulier sur les Parcs, &c.*)

Montevideo has a considerable commerce. The great articles of export consist of animal products, or of hides, beef, tallow, hair, bones, grease, wool, &c. The imports principally consist of British cottons, woollens, and hardware, flour, wine and spirits, linens, sugar, tobacco, boots and shoes, salt, &c.

Account specifying the Quantities and Values of the various Articles of Native Produce exported from Montevideo in 1842.

649,281	salted ox and cow hides, at \$3 50	-	\$2,272,483	97,033	calf skins, at 3 reals	-	-	-	36,387
703,759	dry ox and cow hides, at \$2 50	-	1,759,397	2,591	dozen sheep skins, at \$2 0	-	-	-	5,182
54,253	salted horse hides, at 15 reals	-	85,161	9,044	quintals hide cuttings, at \$2 0	-	-	-	18,088
3,330	dry horse hides, at 10 reals	-	4,162	4,375	tons bones, at \$6 0	-	-	-	26,520
435,810	quintals jerked beef, at \$2 0	-	867,630	2,074	dozen nutria skins, at \$2 50	-	-	-	5,060

# DUTIES ON IMPORTS.

## In National or Foreign Vessels, at Montevideo.

- Machinery, agricultural implements, instruments used in the arts and sciences, books, prints, and maps - free.
- Silk, raw and wrought, laces, blonde, gold, and silver embroidery, watches, jewellery, saltpetre, plaster of Paris, coal, timber, cotton fringe, and wooden hoops - 5 per cent.
- Powder, pitch, tar, resin, and naval stores - 15 -
- All raw materials and manufactured articles, not included in the preceding enumeration - 15 -
- Sugar, Paraguay and China teas, cocos, casia lignea, and cinnamon, spices, drugs, and provisions in general - 20 -
- Furniture, pictures, looking glasses, musical instruments, all sorts of carriages, carts, &c., and harness, saddles, horse furniture (excepting horse cloths of the manufacture of the adjacent provinces, which pay 15 per cent.), ready made clothes, boots and shoes, liquors, brandy, wine, vinegar, ale and porter, cider, tobacco, and soap - 25 -

- Malt, 2 reals the fanega, say 11d. per 290 lbs. \*
- Hides of all classes, hair, horns, tallow, silver and gold, in bullion or coin - free.

A small charge is made for warehousing and portage on passing through the Custom-house. Goods may be bonded for an indefinite period, during which time they are subject to a moderate warehouse rent.

Foreign flour pays as follows:—

8 dollars per barrel, when wheat is worth 2 to 5 dollars per fanega, about 224 lbs.  
6 dollars per barrel, when wheat is worth 3 to 5 dollars per fanega.

4 dollars, when wheat is worth 5 to 7 dollars.

2 dollars, when wheat is worth 7 to 9 dollars.

1 dollar, when wheat exceeds 9 dollars.

Wheat:—

3 dollars per fanega, when wheat is worth 2 to 3 dollars per fanega.

2 dollars, when wheat is worth 3 to 6 dollars.

1 dollar, when wheat is worth 6 to 10 dollars.

Nothing when wheat is worth above 10 dollars per fanega.

(Goods transhipped, or shipped out of bond, pay 2 per cent.)

Foreign goods, shipped in vessels of less than 100 tons burden, for ports of the Uruguay and Paraguay, pay only 1 per cent.

2. All goods imported, paying duties, are subject to pay an additional 1 per cent. to the consular;  $\frac{1}{2}$  per cent. to the hospital; and, for the extinction of copper money\*, 1 per cent. additional on all goods that pay 3 per cent. On all goods that pay 13, 15, and 20 per cent. — 3 per cent.  
On all goods that pay 25 per cent. — 5 —  
On flour — — — 10 —  
On wheat — — — 3 —

## DUTIES ON EXPORTS.

## In National or Foreign Vessels.

Ox and cow hides, 2 reals, 25 centimos, for reconductor valuations of 1 dollar, and 1 per cent. consular.  
Horse hides, 1 real for reconductor, on valuations of 5 reals for reconductor each, and 1 per cent. consular.  
All other produce of the country pays 4 per cent. on the market value, and 1 per cent. consular.  
Jerked and salt beef, pork, &c.: also all foreign goods that have paid the import duty, free.  
Gold and silver, coined or in bullion, 1 per cent.

## Vessels.

Port Charges. — Tonnage from beyond sea, 5 reals. Foreign. National.  
During loading and unloading both classes, 2 reals.  
pay 1 dollar per day.

Pratique, with pilot — — — 4 dollars. 4 dollars.  
Boat — — — 2 — 2 —  
Without pilot — — — 4 — 2 —

National and foreign vessels, that neither discharge nor load cargo, and that do not remain more than six days, pay nothing; those that remain in the harbour more than six days pay one third of the above tonnage dues.

\* This has, much to the honour of the authorities and people, been already accomplished; but the duty is maintained for general purposes.

MOROCCO, or MAROQUIN (Ger. *Saffian*; Fr. *Maroquin*; It. *Marrocchino*; Sp. *Marroqui*; Rus. *Safian*), a fine kind of leather prepared of the skins of goats, imported from the Levant, Barbary, Spain, Flanders, &c. It is red, black, green, yellow, &c. It is extensively used in the binding of books.

MUNJEET, a species of *Rubia tinctorum*, or madder, produced in Nepal and in various districts of India. That which is brought to England is imported from Calcutta, and is cultivated in the high lands about Natpore in Purnea. The roots are long and slender, and when broken appear of a red colour. It is used in dyeing; the red which it produces being, though somewhat peculiar, nearly the same as that produced by European madder. Dr. Bancroft says that the colour which it imparts to cotton and linen is not so durable as that of madder: but that upon wool or woollen cloth its colour is brighter and livelier; and, when proper mordants are used, nearly, perhaps quite, as permanent. — (*Permanent Colours*, vol. ii. p. 279.) The best munjeet is in pieces about the bigness of a small quill, clean and firm, breaking short, and not pipy or chaffy. Its smell somewhat resembles liquorice root.

Being a very bulky article, as compared with its value, the freight adds greatly to its cost. This seems to be the principal reason of its being so very little used in Great Britain, that the entire imports, during the 3 years ending with 1840, amounted to only 3,539 cwt. The brokers estimate that 42 per ton of freight is equal to 12s. 1d. per cwt. on the value of the article; 5s. per ton being equal to 12s. 10d.; 6s. to 16s. 7d.; and 7s. to 19s. 4d.; and as the price of munjeet in bond varies from 12s. to 15s. a cwt., it is plain it cannot be imported in any considerable quantity, except when freights are very much depressed. It is mostly imported in small packets or bundles of 600 or 800 to the ton; but sometimes it is packed in bales like cotton.

MUSCAT, a city and sea-port situated on the east coast of Arabia, about 96 miles N. W. of Cape Rasselgate (Ras-el-had), in lat. 23° 38' N., lon. 58° 37' E. Population uncertain; but estimated by Lieut. Wellsted at 40,000, which we incline to think beyond the mark. There are more Banians here than in any other city in Arabia. There are amongst them some very extensive merchants, who engross almost the whole pearl trade of the Persian Gulph, and the supply of corn from India. The negro slaves are numerous, and are generally stout, well made, and active.

The harbour, which is the best on this part of the Arabic coast, opens to the north, and is shaped like a horse-shoe. It is bounded on the W. and S. by the lofty projecting shores of the mainland, and on the E. by Muscat Island, a ridge of rocks from 200 to 300 feet high. The town stands on a sandy beach at the south end or bottom of the cove or harbour, about  $\frac{1}{4}$  mile from its mouth. The depth of water near the town varies from 3 to 4 and 5 fathoms. Ships at anchor are exposed to the north and north-west winds; but as the anchorage is every where good, accidents are of very rare occurrence. The harbour is protected by some pretty strong forts. Vessels are not allowed to enter after dusk, nor to leave before sunrise. If the usual signal be made for a pilot, one will come off, but not otherwise. It is best to make them attend till the vessel be secured, as they have excellent boats for carrying out warp anchors.

Muscat is a place of considerable importance, being at once the key to, and commanding the trade of, the Persian Gulph. The dominions of the Imam, or prince, are extensive, and his government is more liberal and intelligent than any other in Arabia or Persia. The town, situated at the bottom of a high hill, is ill-built and filthy; and, during the months of July and August, is one of the hottest inhabited places in the world. The country in the immediate vicinity of the town is extremely barren; but it improves as it recedes from the shore. Dates and wheat, particularly the first, are the principal articles of produce. The dates of this part of Arabia are held in high estimation, and are largely exported, those of Bushire and Busorah being imported in their stead. A date tree is valued at from 7 to 10 dollars, and its annual produce at from 1 to  $\frac{1}{4}$  dollar. An estate is said to be worth 2,000, 3,000, or 4,000 date trees, according to the number it possesses.

But the place derives its whole importance from the commerce and navigation of which it is the centre.

National vessels, and vessels belonging to the provinces of Buenos Ayres, employed within the river Plate, called coasting, pay for a licence for each voyage as follows:—

175 to 7 tons,	4 reals.
8 — 15 —	10 — or 1 dollar, 2 cents.
16 — 30 —	18 — or 2 — 2 —
31 — 45 —	26 — or 3 — 2 —
46 — 60 —	30 — or 3 — 6 —
61 — 80 —	38 — or 4 — 6 —
81 — 100 —	46 — or 5 — 6 —
101 and above	54 — or 6 — 6 —

Hospital Dues. — National and foreign vessels, sailing for a foreign port beyond sea, or in the river Plate, pay 3 dollars for the vessel, 4 reals for the captain, 2 reals for each seaman, 1 dollar for each passenger.

Pilgrimage from Montevideo to Buenos Ayres to be paid in Montevideo.

If the draught of water do not exceed

9 feet Burgos measure,	50 dollars.
9 to 10 feet	60 —
10 — 11 —	70 —
11 — 12 —	80 —

Money, Weights, and Measures. — Paper money there is none. Current money, the Brazilian patacon and Spanish dollar; they pass for 960 centimos.

100 cents make a real.  
800 cents, or 8 reals, make a dollar.  
960 cents, or 9 reals 60 cents, make  $\frac{1}{2}$  current dollar, or 1 half dollar or patacon.

Weights and measures same as those of Spain; for which see CADIZ, in the Dict.

The imaum has some large ships of war, and his subjects possess some of the finest trading vessels to be met with in the Indian seas. The part of Arabia adjoining to Muscat is too poor to have any very considerable direct trade; but, owing to its favourable situation, the backward state of the country round the Persian Gulph, and the superiority of its ships and seamen, Muscat has become an important entrepôt, and has an extensive transit and carrying trade. Most European ships bound for Bussorah and Bushire touch at it; and more than half the trade of the Persian Gulph is carried on in ships belonging to its merchants.—(See BRUSSIA.) But, exclusive of the ports on the gulph, and the south and west coasts of Arabia, ships under the flag of the imaum trade to all the ports of British India, to Singapore, Java, the Mauritius, the east coast of Africa, &c. The pearl trade of the Persian Gulph is now, also, wholly centred at Muscat. All merchandise passing up the gulph on Arab bottoms pays a duty of  $\frac{1}{4}$  per cent. to the imaum. He also rents the islands of Ormuz and Kishmee, the port of Gombroon, and some sulphur mines, from the Persian government.

In the magazines of Muscat may be found every species of produce imported into or exported from the Persian Gulph. Various articles are also imported for the use of the surrounding country, and for the internal consumption of Arabia. Among these, the principal are rice, sugar, coffee from Mocha, cotton and cotton cloth, cocoa nuts, wood for building, slaves from Zanguebar, dates from Bushire and Bussorah, &c. Payment for these is chiefly made in specie and pearls; but they also export drugs of various descriptions, ivory, gums, hides, ostrich feathers, horses, sharks, a sort of earthen jars, called *marutuban*, to Tranquebar, dried fish, an esteemed sweatmeat called *hulwah*, and a few other articles.

The markets of Muscat are abundantly supplied with all sorts of provision. Beef, mutton, and vegetables of good quality may be had at all times, and reasonably cheap. The bay literally swarms with the greatest variety of most excellent fish. Water is excellent, and is conveyed to the beach in such a manner that the casks of a vessel may be filled in her boats while afloat. Fire-wood is also abundant, and is cheaper than at Bombay.

A duty of 5 per cent. is laid on imports, all exports being duty free. The entire value of the imports has been estimated at 900,000*l*.

*Money, Weights, and Measures.*—Accounts here are kept in *gos* and *mamoodies*: 20 *gos*=1 *mamoodi*; and 20 *mamoodies*=1 dollar. All Persian, Turkish, and Indian coins, as well as French and German crowns, and Spanish dollars, are met with; their value fluctuating with the demand; and they are generally sold by weight.

The weights are, the *cucha* and *maund*; 24 *cuchas*=1 *maund*=8 lbs. 12 oz. *avoirdupois*. Niebuhr thinks that Muscat occupies the site of the *Mosca* of Arrian and other Greek writers—(*Foyage en Arabie*, vol. ii. p. 71. ed. Amst. 1780); a conjecture which seems to be confirmed, not merely by the resemblance of the name, but also by the terms applied by Arrian to *Mosca* being sufficiently descriptive of Muscat; and as the port is bounded on all sides by rocks, it must now present almost the same appearance as in antiquity. Dr. Vincent, however, though he speaks doubtfully on the subject, is inclined to place *Mosca* to the west of Cape Rassegate. (*Commerce and Navigation of the Ancients*, vol. ii. pp. 344–347. For further particulars, besides the authorities above referred to, see *Hamilton's New Account of the East Indies*, vol. i. p. 63.; *Fraser's Journey to Khorasán*, pp. 8–19.; *Wellsted's Travels in Arabia*, i. pp. 14–25. The longitude given above is that of *Arrowsmith's Chart of the Persian Gulph*.)

MUSK (Fr. *Musc*; Ger. *Bisam*; Du. *Muskus*; It. *Muschio*; Sp. *Almizete*; Rus. *Muscus*; Arab. and Pers. *Mishk*) is obtained from a species of deer (*Moschus moschiferus*) inhabiting the Alpine mountains of the east of Asia. The musk is found in a small bag under the belly. Musk is in grains concreted together, dry, yet slightly unctuous, and free from grittiness when rubbed between the fingers or chewed. It has a peculiar, aromatic, and extremely powerful and durable odour; the taste is bitterish and heavy; and the colour deep brown, with a shade of red. It is imported into England from China in caddies containing from 60 to 100 oz. each; but an inferior kind is brought from Bengal, and a still baser sort from Russia. The best is that which is in the natural follicle or pod. Being a very high-priced article, it is often adulterated. That which is mixed with the animal's blood may be discovered by the largeness of the lumps or clots. It is sometimes mixed with a dark, highly coloured, friable earth; but this appears to the touch to be of a more crumbling texture, and is harder as well as heavier than genuine musk. 20 cwt. of musk are allowed to a ton. It was not permitted to be brought home in the China ships belonging to the East India Company.—(*Thomson's Dispensatory*; *Milburn's Orient. Com.*) The duty of 6*d*. an oz. on musk produced, in 1840, 53*l*., showing that 2,120 oz. had been entered for consumption. Previously to 1832 the duty was 5*s*. an oz.

MUSLIN (Ger. *Musselin*, *Nesseltuch*; Du. *Neteldoek*; Fr. *Mousseline*; It. *Moussolina*; Sp. *Mosolina*; Rus. *Kissea*), is derived from the word *moussale* or *mousseln*, a name given to it in India, where large quantities are made. It is a fine thin sort of cotton cloth, with a downy nap on the surface. Formerly all muslins were imported from the East; but now they are manufactured in immense quantities at Manchester, Glasgow, &c., of a fineness and durability which rival those of India, at the same time that they are very considerably cheaper.—(See CORROX.)

MUSTARD (Ger. *Mustert*, *Senf*; Fr. *Moutarde*; It. *Mostarda*; Sp. *Mostaza*; Rus. *Gortschiza*; Lat. *Sinapis*; Arab. *Khtirdal*; Hind. *Rāi*), a plant (*Sinapis*) of which there are several species, some of them indigenous to Great Britain. It was formerly extensively cultivated in Durham, but it is now seldom seen in that county. At present it is principally raised in the neighbourhood of York, and throughout other parts of the North Riding; and being manufactured in the city of York, is afterwards sold under the name of Durham mustard. Two quarters an acre are reckoned a good crop. Mustard is of considerable importance in the *materia medica*, and is extensively used as a condiment. It was not, however, known, in its present form, at our tables, till 1720. The seed had previously been merely pounded in a mortar, and in that rude state separated from the integuments and prepared for use. But, at the period referred to, it occurred to a woman of the name of Clements, residing in Durham, to grind the

seed in a mill, and to treat the meal in the same way that flour is treated. Her mustard was, in consequence, very superior; and, being approved by George I., speedily came into general use. Mrs. Clements kept her secret for a considerable time, and acquired a competent fortune. In Bengal, and other Eastern countries, mustard is extensively cultivated, as rape is in Europe, for the purpose of yielding oil. — (*Bailey's Survey of Durham*, p. 147.; *Loudon's Encyc. of Agric.*)

**MYROBALANS**, are dried fruits of the plum kind, occasionally brought from Bengal and other parts of India. There are said to be 5 different species. They vary from the size of olives to that of gall nuts; have an unpleasant, bitterish, austere taste; produce, with iron, a strong, durable, black dye and ink; and with alum, a very full, though dark, brownish yellow. They are used in calico printing and medicine by the Hindoos. They have also been employed, though to a comparatively trifling extent, in the arts, and in pharmacy, in Europe; but they are now discarded from our Pharmacopœias. — (*Lewis's Mat. Med.*; *Bancroft on Permanent Colours*, vol. i. p. 351.)

**MYRRH** (Ger. *Myrrhen*; Du. *Mirrhe*; Fr. *Myrrhe*; Ital. and Sp. *Mirra*; Lat. *Myrrha*; Arab. *Murr*), a resinous substance, the produce of an unknown tree growing in Arabia and Abyssinia. It is imported in chests, each containing from 1 to 2 cwt. Abyssinian myrrh comes to us through the East Indies, while that produced in Arabia is brought by the way of Turkey. It has a peculiar, rather fragrant, odour, and a bitter aromatic taste. It is in small irregularly shaped pieces, which can hardly be called tears. Good myrrh is translucent, of a reddish yellow colour, brittle, breaking with a resinous fracture, and easily pulverised. Its specific gravity is 1.36. When it is opaque, mixed with impurities, and either white, or of a dark colour approaching nearly to black, with a disagreeable odour, it should be rejected. — (*Thomson's Dispensatory*.)

## N.

**NAILS** (Ger. *Nügel*, *Spiker*; Du. *Spykers*; Fr. *Clous*; It. *Chiodi*, *Chiovi*, *Agati*; Sp. *Clavos*; Rus. *Gwozdi*), are small spikes of iron, brass, &c., which, being driven into wood, serve to bind several pieces together, or to fasten something upon them. There is scarcely a town or village in Great Britain in which nails are not forged; but the principal seats of this useful branch of the iron manufacture are at Birmingham, Bilston, Wolverhampton, Dudley, and a small district in Derbyshire. The consumption of nails is immense; and the aggregate value of those annually produced is very large.

**NANGASACKI**, a sea-port town on the south-west coast of the island of Kimo, one of the Japanese islands, being, according to Krusenstern, in lat. 32° 43' 40" N., lon. 130° 11' 47" E. The harbour extends N. E. and S. W. about 2½ leagues, being, in most places, less than a mile in width. Ships lie in 5 or 6 fathoms water, within a gunshot of the town, near the middle of the bay, where they are protected from all winds.

The Japanese islands are situated within the temperate zone. They are believed to contain 50,000,000 of people, superior in industry and civilisation to every other Eastern nation, with the exception of the Chinese. But, notwithstanding Japan has some thousand miles of sea-coast, all foreigners are rigidly excluded from it, with the exception of the Dutch and Chinese; and they are only allowed to visit Nangasacki, the former with 2 ships, and the latter with 10 junks.

The Japanese themselves are prohibited by the laws of the empire from quitting their own shores; and, notwithstanding they formerly emigrated freely, and traded extensively with the neighbouring nations, they have resolutely adhered to this anti-social regulation since 1637, or for nearly 300 years. Both Dutch and Chinese are subjected to a rigorous *surveillance* during their residence in Japan. "The ships," (Dutch) says Mr. Crawford, "no sooner arrive, than their rudders are unshipped, their guns dismounted, their arms and ammunition removed, a military guard put on board, and row boats appointed to watch them. Their cargoes are landed by, and placed in charge of, the officers of the Japanese government, and the Dutch have neither control over, nor access to them, except through *solicitation*. The island of Desima, to which they are confined, is an artificial structure of stone raised upon the rocks of the harbour, measuring in its greatest length 236 paces, by a breadth of 82. It communicates with the town of Nangasacki by a bridge and a gate, and is palisaded all round as well as surrounded by a guard. From this imprisonment the Dutch are allowed to peep twice or thrice a year, rather to be exhibited to the great as a curiosity, than out of indulgence. A corps of constables and interpreters are appointed to watch over their minutest actions; and the most degrading servilities are exacted from the highest among them, by the meanest officers of the Japanese government.

The Chinese trade with Japan is understood to be conducted from the port of Ningpo, in the province of Chekiang, which is so conveniently situated, that 2 voyages may be performed in the year, even by the clumsy junks of China. The commodities with which the Chinese furnish the Japanese, consist of raw sugar, cow and buffalo hides, wrought silks, consisting chiefly of satins and damasks, eagle and sandal wood, ginseng, tutenague or zinc, tin, lead, fine teas, and, for more than 100 years back, some European broad cloths and camlets. The exports consist of copper, limited to 18,000 piculs, or about 900 tons; camphor, sabre blades, pearls, some descriptions of paper and porcelain, and some Japan ware, which is either curious or handsome, but not so substantial as that of China.

Japan, could a trade be freely carried on with it, would unquestionably, from its extent, population, and civilisation, afford a great opening for the commerce of Europe. All attempts hitherto made have been baffled by the watchful jealousy of the Japanese government. The only fair prospect of success is to leave the matter entirely to the enterprise and ingenuity of the British merchants, to whom the trade of the neighbouring Chinese empire is now thrown open. After considering Japan, among Eastern nations, as second only in population, extent, and civilisation, to China, and that the whole empire is situated beyond the tropics, and in the same region as Turkey, Italy, Spain, and a part of the south of France, we may easily discover the sort of commodities which Europe or European colonies could

furnish in a trade with it. They would consist of broad cloths and other woollens, cotton fabrics, iron, spelter, tin, lead, glass ware, sugar, drugs, and spices. These would be paid for in camphor, raw silk, unwrought copper, gold, and silver. Of the 3 metals now mentioned, there can be no question that Japan contains very rich mines. Down to 1710, when the quantity of copper permitted to be exported was limited, the exports by the Dutch and Chinese amounted to 4,500 tons. With respect to silver, before its exportation was prohibited, the Portuguese brought it away in large quantities, having, in 1626, exported no less than 2,350 chests, equivalent to 2,350,000 taels, or (at 6s. the tael) 705,000*l.* sterling. As to gold, it has been always supposed, from its relative abundance in Japan, to bear a smaller proportionate value to silver than in any other country.

The following are the quantities and value of goods exported and imported by the Dutch in their trade with Japan in 1825; the ships employed being one of 600 and one of 700 tons burden. The trade is exclusively carried on with the port of Batavia.

Exports to Nangasacki.		Imports from Nangasacki.

We may take this opportunity of stating that the last authentic account we have of any British vessel attempting to carry on an intercourse with Japan, was that of a ship commanded by Captain Gordon, which touched at the entrance of the bay of Jeddo, in 1818, in a voyage from Calcutta to Ochotak. Captain Gordon remained at anchor 8 days, waiting the receipt of instructions from the capital, Jeddo, at the head of the bay, distant about 100 miles. He requested leave to return next year for the purpose of carrying on trade, which in civil but peremptory terms was refused. During the ship's stay, she was closely watched by an immense police force, but liberal offers were made of supplies. The officers would permit no species of trade to be carried on, for which, however, the people evinced the greatest possible desire, admiring the broad cloths, calicoes, and other European articles which were shown them. The ship was visited by some thousand natives, chiefly from curiosity. Captain Gordon thinks that a contraband trade, similar to that conducted by the European nations off the mouth of the Canton river, may be successfully carried on with Japan.—(*Kempfer's History of Japan*, vol. i. p. 310–356; *Krusenstern's Voyage round the World*, vol. i. p. 261. Eng. trans.; *Crawford's Indian Archipelago*, vol. iii. p. 297; *Evidence of John Deans, Esq., First Report of the Select Committee on the Affairs of the East India Company*, 1830, p. 242; *Personal communications from Capt. P. Gordon*.)

*Money.*—Accounts are kept in taels, mace, and candarines; 10 candarines make 1 mace, and 10 mace 1 tael. The Dutch reckon the Nangasacki tael at 3*l.* florins, equal to about 6*l.* *sd.* The gold coins current are the new and old *itib* and cobangs, or copangs; the silver coins are the *nandigoin*, *itaganne*, and *kodama*. They are in general very simple, struck plain and undecorated, the greater part of them without any rim round the margin, and most of them without any determined value. For this reason they are always weighed by the merchants, who put their chop or stamp upon them, to signify that the coin is standard weight and undeteriorated.

The new cobangs are oblong, rounded at the ends, and flat, about 2 inches broad, scarcely thicker than an English farthing, of a pale yellow colour; the die on one side consists of several cross lines stamped; and at both ends there is a rectangular figure, with raised letters on it, and, besides, a moonlike figure, with a flower on it in relief. On the other side is a circular stamp, with raised letters on it; and within the margin, towards one end, two smaller sunk stamps with raised letters, which are different on each cobang; they are valued at 60 mace. There are old cobangs occasionally met with, which are of fine gold, somewhat broader than the new.

The old cobangs weigh 371 Dutch asen, or 275 English grains, and the gold is said to be 2*l.* carats fine, which would give 4*l.* *sd.* for the value of the old cobang. But the Japanese coins are reckoned at Madras only 87 touch, which is 20 2*l.* 2*l.* carats fine. These are old cobangs to 4*l.*–10*l.* The new cobangs weigh 180 grains; the gold is about 16 carats fine, and the value 2*l.* 3*l.* The *oban* is thrice the value of the cobang.

The *itib* is called by the Dutch golden bean, and is made of pale gold, of a parallelogramical figure and flat, rather thicker than a farthing, with many raised letters on one side and two figures or flowers in relief on the other; the value of this is 1/3 of a cobang. There are old *itib* also to be met with; these are thicker than the new ones, and in value 2*l.* mace 5 candarines.

*Nandigoin* is a parallelogramical flat silver coin, of twice the thickness of a halfpenny, 1 inch long and 4 inch broad, and formed of fine silver. The edge is stamped with stars, and within the edges are raised dots. One side is marked all over with raised letters; and the other on its lower and larger moiety, is filled with raised letters, and at the same time exhibits a double moonlike figure. Its value is 7 mace 5 candarines.

*Itaganne* and *kodama* are denominations by which various lumps of silver, without form or fashion, are known, which are neither of the same size, shape, nor value. The former of these, however, are oblong, and the latter roundish, for the most part thick, but sometimes, though seldom, flat. These pass in trade, but are always weighed in payment from one individual to another, and have a dull leaden appearance.

*Seni* is a denomination applied to pieces of copper, brass, and iron coin, which bear a near resemblance to our old farthings. They differ in size, value, and external appearance, but are always cast, and have a square hole in the middle, by means of which they may be strung together; and likewise have always broad edges. Of these are current, *ajumon seni*, of the value of 4 common *seni*, made of brass, and almost as broad as a halfpenny, but thin. The common *seni* are the size of a farthing, and made of red copper; 60 of them = 1 mace. *Doosa seni* is a cast iron coin, in appearance like the last, of the same size and value, but is so brittle that it is easily broken by the hand, or breaks in pieces when left on the ground.

The *seni* are strung 100 at a time, or as is most commonly the case, 96 on a rush. The coins in use of these parcels are seldom all of one sort, but generally consist of 4, 5, or more different kinds; in this case, the larger ones are strung on first, and then follow the smaller; the number diminishing in proportion to the number of large pieces in the parcel, which is the more the greater value the smaller.

The *schuit* is a silver piece of 4 oz. 18 dwts. 16 grs. Troy, and is 11 oz. fine, which gives it value 1*l.* 5*l.* 3*l.* The name is Dutch, referring, probably, to its shape, like a boat.

These are the candarine, mace, tael, caty, and picul, thus divided:—

10 candarines	=	1 mace.
10 mace	=	1 tael.
16 taels	=	1 caty.
100 caties	=	1 picul.

The picul = 125 Dutch pounds, or 135 1/3 lbs. avoirdupois. It is, however, said to weigh only 130 lbs.

*Measures.*—The revenues of Japan are estimated by two measures of rice, the *man* and *kof*; the former contains 10,000 kofs, each 5,000 bales or bags of rice.

The long measure is the *inc*, which is about 4 Chinese cubits or 6 1/2 feet English nearly; and 2 1/2 Japanese leagues are computed to be about 1 Dutch league.—(*Milburn's Orient. Com.*)

NANKEEN, or NANKIN (Ger. *Nanking*; Du. *Nankings linnen*; Fr. *Toile de Nankin*; It. *Nanquino*; Span. *Nanquina*), a species of cotton cloth in extensive use

\* The imports of copper, in 1828, amounted to 11,631 piculs, worth 988,635 florins.

in this country. It takes its name from Nanking, in China, a European corruption of Kyang-ning, the capital of the extensive province of Kyang-nan, where it is principally produced, and which also furnishes the greater part of the green teas. In the East, the manufacture is wholly confined to China.\* The cloth is usually of a yellowish, though occasionally it is of a blue colour, and of different degrees of fineness; the broad pieces, called "the Company's nankeens," are generally of a better quality than the narrow ones, and are most esteemed. We produce imitation nankeens at Manchester and other places, but it must be admitted that they are inferior to the Chinese; neither lasting so long, nor holding their colour so well. The colour, whether yellow or blue, is given to the cloth by dyeing; for, though yellow cotton wool be raised in the East, the cloth made from it is too glaring. The nankeens brought to England come under the general denomination of piece goods. They are mostly made into trowsers and waistcoats for gentlemen's wear during summer, ladies' pelisses, &c. In some of the more southern parts of Europe, the warmer parts of Asia and America, and the British settlements in Africa, nankeen is worn by both sexes all the year round, and constitutes the principal article of attire. Latterly, however, they have become unfashionable in this country, and their importation has, in consequence, all but ceased, only 3,300 pieces having been imported in 1842. — (See article CANTON, for an account of the imports of Nankeen.)

NANTES, a large commercial city and sea-port of France, on the Loire, about 34 miles from its mouth, lat.  $47^{\circ} 13' 6''$  N., lon.  $1^{\circ} 32' 44''$  W. Population, in 1836, 75,150. Vessels of 200 tons burden come up to the city; but those of larger size load and unload in the roads of Paimbœuf, about 24 miles lower down the river.

*Entrance to the Loire.* — There are 3 entrances to the Loire. The first and most generally frequented is between the bank called *Le Four* and *Point Croisic*: there is a second between *Le Four* and the bank called *La Banche*; and the third, which in southerly winds is much resorted to, between the latter and the rocks called *La Couronne*. The navigation, which is naturally rather difficult, has been much facilitated by the erection of light-houses and beacons. Of the former, one has been recently constructed on the north part of *Le Four*, about a league from *Croisic*, in lat.  $47^{\circ} 17' 53''$  N., lon.  $2^{\circ} 28' 3''$  W. It is 36 feet high. The light is a revolving one; the flash, which continues for 7 seconds, being succeeded by a dark interval of 53 seconds. Two light-houses, called the *Aiguillon* lights, stand on the north side of the river, near its mouth; the lower light, adjoining *Point de Lévi*, being in lat.  $47^{\circ} 14' 33''$  N., lon.  $2^{\circ} 15' 46''$  W. The light is fixed, and is 111 feet above the level of the sea. The upper *Aiguillon* light, situated about a mile N.  $31^{\circ}$  E. from the lower, is 127 feet high; it also is a fixed light, varied, however, by a flash every 3 minutes. A beacon tower, called the *Turk*, is erected on the southernmost extremity of *La Banche*; the course for vessels entering between it and *La Couronne*, is to bring the *Aiguillon* lights in one. The depth of water on the bar at the mouth of the river varies from 2 to  $\frac{3}{4}$  fathoms. At springs the rise is 14, and at neaps 7 or 8 feet. High water at full and change  $3\frac{1}{4}$  hours.

*Trade, &c.* — Her situation renders Nantes the emporium of all the rich and extensive country traversed by the Loire, so that she has a pretty considerable import and export trade, particularly with the West Indies. The exports consist of all sorts of French produce, but principally of brandy, wine and vinegar, silk, woollen and linen goods, refined sugar, wheat, rye, biscuits, &c. The principal imports are sugar, coffee, and other colonial products, cotton, indigo, timber, hemp, &c. Nantes is a considerable *entrepôt* for the commerce of salt, large quantities being made in the dep., principally at Noirmutiers and Croisic. During the time that the slave trade was carried on, Nantes was more extensively engaged in it than any other French port.

The customs duties of Nantes produce, exclusive of those on salt, about 12,000,000fr. a year, being in this respect inferior only to Marseilles, Havre, and Bordeaux.

Subjoined is a statement of the French and foreign ships that entered and cleared from the port in 1838, specifying the departments in which the French ships were engaged, and the number in each.

Branch of Trade.	Entered.		Cleared.	
	Ships.	Tons.	Ships.	Tons.
French ships in foreign trade	201	24,549	138*	15,317
— colonial do.	80	15,825	84	19,291
— coasting do.	4,003	135,180	4,303	90,167
— fisheries	13	9,475	—	—
Foreign ships	176	26,385	139	22,706
Steam-vessels chiefly to and from Bordeaux	10	736	15	1,040
	4,463	204,380	4,674	151,343

\* Of these, 40 vessels, of 4,616 tons, left in ballast.

Of the vessels engaged in the fisheries, 10 came from the banks of Newfoundland, laden with 15,665 cwt. of cod-fish and 290 cwt. of oil: 3 whalers brought in, during the same year, 13,433 cwt. of whale-oil, and 306 cwt. of whalebone. The pilchard fishery is also carried on with great activity; and employs, in the season, 700 boats, manned by about 3,000 seamen. Nantes has 2 weekly markets, and 12 yearly fairs, one of which, beginning May 26th, lasts 15 days. Living is cheap; and fish of many varieties, as well as the fine fruits of the S. of France, are abundant in the markets.

*Monies, Weights, and Measures* same as in the rest of France. — (See BORDEAUX.)

*Taxes.* — 2½ per cent. on coffee in bags; real on ditto in hides, cakes, &c.; 6 per cent. on cottons; real on indigo; 17 per cent. on Brasil muscovado sugar, 19 per cent. on Martinique and Guadeloupe ditto, 13 per cent. on ditto clayed.

\* It was stated in the first edition of this work, on authority that should not have been trusted to, that the manufacture of nankeen was carried to great perfection in the East Indies: but, in point of fact, the manufacture is wholly unknown every where in the East except China.

**NAPLES**, a large city and sea-port in the south of Italy, the capital of the kingdom of the same name, the light-house being in lat. 40° 50' 12" N., long. 14° 14' 15" E. Population, 350,000. Naples is well situated for commerce; but the policy of the government has hitherto been most unfavourable to its growth, and has confined it within comparatively narrow limits.

**Harbour.**—The bay of Naples is spacious, and is celebrated for its picturesque views. The harbour is formed by a mole, built nearly in the form of the letter L, having a light-house on its elbow. Within the mole there is from 3 to 4 fathoms water, the ground being soft. The water in the bay is deep, and there is no bar: it is, however, a good deal exposed to the south-westerly winds; and to guard against their effects, vessels lying in the bay move with open haws in that direction. There is no obligation to take a pilot on board, but it is usual to take one the first time that a ship anchors within the mole. The lighthouse has a revolving light. The period of revolution is 2 minutes, during the first of which the full strength of the light is continued, and during the second minute its brilliancy rapidly decreases. The height of the light is 161 feet above the sea, and it is visible at the distance of 18 or 20 miles. At the extremity of the mole is a low fixed light to guide vessels round the mole.

**Money.**—Accounts are kept at Naples in ducati di regno of 100 carlini. According to the new monetary system introduced in 1818, the unit of coins is the silver ducat=3s. 3d. sterling. The ducat is 10 carlini; and there are coins of 1, 2, 5, and 12 carlini in proportion. (Coins of a less value than 1 carlino are

in copper. The smallest gold piece is the onecetta = 10s. 3d. sterling.)

**Weights and Measures.**—The commercial weights are the cantaro and rotolo. The cantaro *grasso* = 100 rotoli=196 lb. avoirdupois = 89·105 klog. = 184 lb. of Hamburg = 180·4 lb. of Amsterdam. The cantaro piccolo = 106 lb. avoirdupois = 48 klog.

In dry measure, the carro of corn contains 36 tomoli. The tomolo = 1·45 Winchester bush.

In wine measure, the carro is divided into 2 botti, or 24 barilli, or 1,410 caraffi. The carro = 264 English wine gallons. The regular pipe of wine or brandy = 132 English gallons.

In oil measure, the salma is divided into 16 stajle, 256 quart, or 1,536 misurette. The salma at Naples = 421 English wine gallons; at Gallipoli it is from 3 to 4 per cent. less; at Bari it is a little larger.

In long measure, the canna is divided into 8 palmi, or 96 oncie, and is = 6 feet 11 inches English. Hence the palmo = 10·38 English inches.

Eleven salme are allowed to a ship's last. — (*Nelkenrecher*; *Kelly*.)

**Exports and Imports.**—The exports principally consist of the products of the adjacent country. Of these, silk is the most important. Olive oil is also a most important article; but it is principally supplied by Gallipoli, a town in the Terra d'Otranto, whence it is commonly called Gallipoli oil. The entire exports of oil from the kingdom of Naples have been estimated at about 200,000 salme, or 36,333 tuns, a year, which, taking its mean value when exported at 21l. per tun, is equivalent to the annual sum of 762,993l. — (See *OLIVE OIL*.) The other articles of export are wool, wine, brandy, dried fruits, red and white argol, tallow, liquorice, gloves, madder, hemp, linseed, cream of tartar, bones, lamb and kid skins, oak and chesnut staves, rags, saffron, &c. There is a great variety in the Neapolitan wines. The most esteemed is the *lacrima Christi*, a red luscious wine, better known in England by name than in reality, the first growths being confined to a small quantity only, which is chiefly reserved for the royal cellars. There are, however, large quantities of second-rate wines produced in the vicinity of Naples, such as those of Pozzuoli, Ischia, Nola, &c., which are sold under the name of *lacrima Christi*, and are largely exported. Several parts of Calabria produce sweet wines of superior quality. — (*Henderson's Ancient and Modern Wines*, p. 239.) The price of wine at Naples depends entirely on the abundance of the vintage; only a small quantity comes to England. The imports consist principally of English cottons and cotton twist, hardware, iron and tin, wools, sugar, coffee, indigo, spices, &c. Naples is a good market for pilchards, and it requires a large supply of dried and barrelled cod.

\* Account of the Quantities of Merchandise imported into Naples in 1835, specifying the Countries whence they were imported, and the Quantities brought from each, with the Rate of Duty on each Article, and the Average Price thereof.

Registering papers	-	0 20
Tonnage duty at 40 grains per ton	-	120 0
(Equal to about 21l. 17s. 2d. sterling.)	D.	131 14

*Custom-house Regulations.*—Masters of merchantmen are bound, within 24 hours of their arrival, to furnish the Custom-house with a general manifest of their cargoes, provisions, and stores; and the master, when consignee, or the consignee, are bound, within 48 hours after the arrival of the ship, to send in a declaration or manifest in detail, of all goods on board. Should the consignees omit to render the manifest in detail within 48 hours, they are subjected to a fine of 30 per cent. upon the non-specified articles.

This declaration or manifest cannot be corrected after the 48 hours are elapsed; and the master or consignee is liable to a fine of 30 shillings for every package erroneously declared. This, however, is usually remitted, unless there be suspicion of fraud, upon application to the director general of the customs. The importation of gunpowder, tobacco, and salt, though they may be for the ship's use, is strictly prohibited. When such articles are on board the exact quantity of each on hand must be specified in the manifest; and on the vessel receiving *protique* they are taken to the custom-house, and kept till her departure, when they are restored to her. The slightest deviation from the rules with respect to these articles subjects them, and sometimes the vessel also, to confiscation, and the master to a heavy fine.

*Quarantine Regulations.*—The free admission, conditional reception, or absolute refusal of a vessel arriving at the port is determined by the wholesome or unwholesome character of the place from which she comes. The place may be, 1. Infected. 2. Suspicious. 3. Endangered. Or, 4. Secure. In the first case, the vessel is refused altogether; in the 2d, she is admitted on a long quarantine in the 3d, she is received on a short quarantine; in the 4th, she is allowed free *protique*. If the vessel be a ship of war, her quarantine is performed in the Bay of Naples; the days of her passage being allowed in the calculation: if a merchantman, quarantine is performed at Nisida, an island about 6 miles from Naples. It commences from the day of her arrival, if in ballast, or loaded with unsusceptible merchandise; if otherwise, from the day of the discharge of her cargo. Vessels from Great Britain or the N. of Europe are subject to a quarantine of 3 days; but if they touch by the way at any port in Spain or Barbary, the quarantine is lengthened to 14 days: provided, however, they have clean bills of health they may wholly avoid the quarantine by touching at

some Italian port, or at Malta, the latter being in free *protique* with Naples. Vessels from the Ionian Islands are subject to a quarantine of 30 days. No foul lazaretto exists at Naples; but at Nisida there is a lazaretto of expurgation for vessels from suspicious or endangered districts or territories. Vessels from infected places usually go to Leghorn or Genoa, where they may unload in a *lazaretto sporco*. The fees charged on ships performing quarantine are heavy. No distinction is made between national and foreign bottoms.

*Brokers, Commission, &c.*—No person can legally act as a broker unless authorised by government. All patented brokers are obliged, by way of security, to hold furnished property producing 500 ducats of "rente," or a dividend of 83l. 6s. 8d. sterling. Many persons, however, act as brokers without being patented, but no contract made by them is admitted in a court of law. Any person may set up as a merchant, by giving due notice to the *Camera di Commercio*.

#### *Rates of Commission and Charges established by the Merchants at Naples.*

Commission on sales of fish	-	5 per cent.
Do. on manufactures of all kinds	-	5 —
Do. on all other goods	-	5 —
Do. on goods purchased	-	2 —
Do. on receiving and forwarding	-	1 —
Do. on attempting sales	-	1 —
Do. on re-sale of goods for the same account on which a purchasing commission has been charged	-	13 —
Do. on chartering vessels, or procuring charters	-	5 —
Do. on collecting freights on charter ships	-	2 —
Do. on ships both inwards and outwards	-	4 —
Do. on advances on letters of credit	-	1 —
Do. on effecting insurances	-	1 —
Do. on negotiating bills	-	1 —
Do. on receiving and paying or remitting	-	1 —
Del credere on sales	-	2 —
Do. on purchase of oil, not exceeding 3 months	-	1 —
Do. do. do., not exceeding 6 do.	-	1 —
Do. per underwriters	-	1 —

*Taxes usually allowed by the Custom-house at Naples on the leading articles of importation:—*

Sugar in hogsheads	-	12 per cent.
Do. in boxes or barrels	-	14 —
Do. in Brazil chests	-	18 to 20 per cent.
Do. in bags	-	6 retolli.
Leaves, in casks	-	10 per cent.
Do. extra for paper and strings	-	5 per cent.
Indigo	-	real tare.
Tin, in barrels, each	-	12 retolli.
Alum, in casks	-	10 per cent.
Wax, real tare and extra	-	2 to 3 per cent.
Cod and stock-fish	-	1 per cent.
Coffee, in casks	-	real tare.
Do. in bags, each	-	3 retolli.
Pepper, do.	-	—
Pimento, do.	-	—
Cocoa, do.	-	—
Cocoa, in casks	-	3 do. 2 ad. 5 per cent.
Cassia lignea, cochineal, and bark	-	80 dust, real tare.

*Insurance.*—There are 4 or 5 companies for the insurance of ships, and 1 for lives. Their terms are generally higher than those of similar establishments in London. Houses are never insured at Naples, their construction rendering fire very rare. The companies are established by royal authority, the shareholders being only liable for the amount of their shares.

*Banking.*—The principal merchants of Naples are all, more or less, bankers, inasmuch as they advance money on letters of credit, and deal in foreign exchanges, and other financial operations. But the only banking establishment at present in existence is the Bank of the Two Sicilies, founded by govern-

ment, and guaranteed by the possession of landed property. It is not a bank for the issue of notes on credit, like the Bank of England, but for their issue on deposit, somewhat on the principle of the Bank of Hamburg. Government makes all its payments by means of notes or orders on the bank; and they are issued to individuals for whatever sums they desire, on their paying an equivalent sum of money to the bank. These notes or orders form a considerable part of the circulating medium of Naples; they are paid in cash on demand.

Government has also established a discount office, where bills, indorsed by 2 persons of good credit, and not at more than 3 months' date, are discounted at 4 per cent.

No large city as Naples, and so advantageously situated for the commerce with the Black Sea, the Levant, Greece, Spain, Northern Italy, Northern Africa, &c., would, had it been allowed to avail itself of its natural advantages, have become a

most important *entrepôt*. But in consequence of injudicious regulations no goods have been carried to it except those destined for horse consumption. In this respect, however, a considerable change may now be anticipated.

*Credit, &c.*—Goods are universally sold at long credit, mostly from 4 to 8 months; and for manufactured goods, sometimes longer. On sales of indigo, from 12 to 18 months' credit is given. Discount for ready money is at the rate of 6 per cent. per annum. Merchants are arranged by the Chamber of Commerce into 5 different classes; and a 6 months' credit is given at the Customs-house for duties, to the extent of 40,000, 30,000, 20,000, and 15,000 ducats, to individuals, according to the class in which they happen to be enrolled. But this is of little importance. Unless the transactions of a merchant be very limited indeed, the duties he has to pay amount so much more than the credit he is allowed.

**Commercial Policy.**—The policy of the Neapolitan government with respect to commerce was for a lengthened period the most objectionable that can well be imagined. Articles, whether of import or of export, were burdened, alike, with oppressive duties and restrictions; and even the warehousing of foreign goods could hardly be said to be permitted. Of late, however, we are glad to observe, the administration appears to have become alive to the injurious influence of this *felu de se* system, and has given its sanction to several measures of a comparatively liberal character. In proof of this we may mention that a treaty of commerce and navigation with this country, bottomed on a fair principle of reciprocity, was signed at Naples in the course of this year (1845), and that a similar treaty has been entered into with France. (See *TREATIES, COMMERCIAL*.) Several important changes have also been made in the rates of duty in the Neapolitan tariff. The export duty on sulphur is wholly to cease from the 1st of January next (1846); and the 30s. per tun of discriminating duty on olive oil, when exported in a foreign ship, over and above the duty of 3*l*. per tun imposed on it, when exported in a native ship, will be put an end to, in so far at least as our vessels are concerned, by the reciprocity treaty referred to above. The export duty on olive oil ought, however, to be wholly abolished. Even though Naples enjoyed a monopoly of this valuable product, the imposition of a duty is wholly indefensible on any sound principle. But when, instead of having a monopoly of the oil trade, the Neapolitans are exposed to the keen competition of the Tuscans, Genoese, Spaniards, &c., the imposition of an export duty is in the last degree impolitic. It depresses that branch of industry which is most suitable for the country, and gives a corresponding encouragement to its extension amongst foreigners. The increased duty of 30s. a tun on oil exported in foreign ships was, of course, intended to force the employment of native ships: but it has not had, and could not rationally be expected to have, any such consequence; its only effect being to tempt foreigners to make a corresponding addition to the duties on oil, when imported in Neapolitan ships. Such regulations are never, in fact, productive of any thing except injury to those by whom they are enacted.

The duties on imports have also undergone various modifications. Those on fish (of which large quantities are imported from England), sugar, and other colonial products, have been reduced fully a half. But we beg to submit in illustration of these changes the following statement of the old and new rates of duty on certain articles:—

	Old duty.	New duty.		Old duty.	New duty.
	duc. s.	duc. s.		duc. s.	duc. s.
Herrings -	-	-	Claves -	-	-
codfish -	-	-	nutmegs -	-	-
Cocoa -	-	-	pepper -	-	-
Coffee -	-	-	Pilchards, &c. -	-	-
Camphor, raw -	-	-	Stockfish -	-	-
Do. refined -	-	-	Sugar of any kind, in powder -	-	-
Cinnamon, in sorts -	-	-	Do. in leaves -	-	-
Cassia lignes, of any sort -	-	-	Vanilla -	-	-
	centar gross	5 61		centar	77 0
	50	5 80		rotolo	7 0
	16 50	5 0		5 35	7 8
	24 75	12 0		centar gross	4 47
	35 0	24 0		4 68	5 0
	1	0 70		25 0	10 0
	1 54	0 60		35 0	15 0
	centar	60 0		5 78	1 80

We have no doubt that the beneficial influence of these wise and liberal measures will lead to farther changes. The duties on iron, with those on cottons, woollens, and other descriptions of manufactured goods, are a great deal too high. These duties were imposed partly for the sake of revenue, and partly in the view of encouraging domestic manufactures; but they have not accomplished either object. The inordinate extent to which they have been carried has made them advantageous only to the smuggler, and ruinous to every one else. How, indeed, could it be otherwise? The coast of Naples, exclusive of Sicily, stretches from 800 to 1,000 miles; in many places it is uninhabited, while, in a great number of others, the people are not more than half civilised. The facilities for smuggling are, therefore, incalculably great; and, combined with the inadequate remuneration of the customs' officers, and the ease with which they are corrupted, our only wonder is, not that smuggling is in a thriving state, but that there should be any considerable legitimate traffic. The latter, indeed, has been principally confined to Naples, where a stricter police is established; for it has not been uncommon to find the same articles, in country towns at no great distance from the capital, selling for  $\frac{1}{3}$  or  $\frac{1}{4}$  their cost in it. In a country subjected to a commercial code like that which till the present year has existed in Naples, the smuggler is a great public benefactor. He is, in fact, the natural enemy of oppressive duties and prohibitions. These bring him into the field, and make him put forth all his enterprise and energy: and it is fortunate for the best interests of society that he is uniformly victorious over

penalties, confiscations, racks, and gibbets; and cannot be defeated otherwise than by the adoption of enlarged and liberal principles of commercial policy.

Of the direct taxes, the most productive is the *fondiarie*, or tax on rent, producing above 1,000,000*l.* a year. It was imposed during the French occupation, when it was fixed at 25 per cent. of the sum received by the landlord. It was subsequently reduced to 12½ per cent.; and during the current year (1845) it has been further reduced to 10 per cent.

Considering the great natural fertility, varied productions, and advantageous situation of Naples and Sicily, it is plain that nothing more than freedom and security are required to render them among the richest, most industrious, and flourishing countries of Europe. But, instead of this, the fetters laid upon commerce, by depriving the inhabitants of a market for their productions, and, consequently, of the most powerful stimulus to industry and invention, have hitherto paralysed all their energies, and immersed them in poverty, sloth, and barbarism. It was high time that a different line of policy should be adopted. At Naples, extensive reforms may be undertaken without (which is not always the case elsewhere) endangering any thing either useful or valuable. The foundations of a great and rapid improvement have, we believe, been laid. To carry it to its fullest extent government has only to abolish all duties and restrictions on exportation, to establish the warehousing system, and to reduce the duties on the importation of manufactures to ½ or ¼ part of their present amount. If it do this, it will add prodigiously to its own revenue; at the same time that it will do 10 times more to rouse the dormant energies and to augment the wealth of its subjects, than it is possible to do by any other means.

In compiling this article, we have been much indebted to the carefully drawn up, and judicious *Answers* of Mr. Goodwin, British consul, to the *Comité Central*, to various narrative works on Naples, and to some valuable *private communications* from Mr. Goodwin and others. We have also looked into the works of a good many English and foreign travellers, but seldom with much advantage. They are filled with accounts, a thousand times repeated, of antiquities, *Vesuvius*, the churches, theatres, *lazzaroni*, &c.; but few among them com-

municate any information from which any just ideas can be formed of the state of industry and commerce, the financial system of the country, &c. The statistical works of the Neapolitans are equally defective. They are overladen with insignificant details, while they neglect altogether, or pass slightly over, the more important departments. This may arise from the jealousy of government; but the English travellers can make no such apology for their defects.

**NAVIGATION LAWS.** These laws form an important branch of Maritime Law. In this country they are understood to comprise the various acts that have been passed, defining British ships, the way in which such ships are to be manned, the peculiar privileges enjoyed by them, and the conditions under which foreign ships shall be allowed to engage in the trade of the country, either as importers or exporters of commodities, or as carriers of commodities from one part of the country to another.

*Sketch of the History and Principles of the Navigation Laws.*—The origin of the Navigation Laws of England may be traced to the reign of Richard II., or perhaps to a still more remote period. But, as no intelligible account of the varying and contradictory enactments framed at so distant an epoch could be compressed within any reasonable space, it is sufficient to observe, that, in the reign of Henry VII., two of the leading principles of the navigation law were distinctly recognised, in the prohibition of the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. In the early part of the reign of Elizabeth (5 Eliz. c. 5.), foreign ships were excluded from our fisheries and coasting trade. The republican parliament gave a great extension to the navigation laws, by the act of 1650, which prohibited all ships, of all foreign nations whatever, from trading with the plantations in America, without having previously obtained a licence. These acts were, however, rather intended to regulate the trade between the different ports and dependencies of the empire, than to regulate our intercourse with foreigners. But in the following year (9th of October, 1651) the republican parliament passed the famous *Act of Navigation*. This act had a double object. It was intended not only to promote our own navigation, but also to strike a decisive blow at the naval power of the Dutch, who then engrossed almost the whole *carrying trade* of the world, and against whom various circumstances had conspired to incense the English. The act in question declared, that no goods or commodities whatever, of the growth, production, or manufacture of Asia, Africa, or America, should be imported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English. Having thus secured the import trade of Asia, Africa, and America, to the English ship owners, the act went on to secure to them, as far as that was possible, the import trade of Europe. For this purpose, it further enacted, that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in such ships as were the real property of the people of the country or place in which the goods were produced, or from which they could only be, or most usually were, exported. The latter part of the clause was entirely levelled against the Dutch, who had but little native produce to export, and whose ships were principally employed in carrying the produce of other countries to foreign markets. Such were the leading provisions of this famous act. They were adopted by the regal government which succeeded Cromwell, and form the basis of the act of the 12th Car. 2. c. 18., which continued, to a very recent period, to be the rule by which our naval intercourse with other countries was mainly regulated; and has been pompously designated the *Charta Maritima* of England.

In the statute 12 Car. 2. c. 18., the clause against importing foreign commodities, except in British ships, or in ships belonging to the country or place where the goods were produced, or from which they were exported, was so far modified, that the prohibition was made to apply only to the goods of Russia and Turkey, and to certain articles since well known in commerce by the name of *enumerated* articles, leave being at the same time given to import all other articles in ships of any description. But this modi-

fication was of very little importance; inasmuch as the enumerated articles comprised all those that were of most importance in commerce, as timber, grain, tar, hemp and flax, potashes, wines, spirits, sugar, &c. Parliament seems, however, to have very speedily come round to the opinion that too much had been done in the way of relaxation; and in the 14th of Charles II. a supplemental statute was passed, avowedly with the intention of obviating some evasions of the statute of the preceding year, which it was affirmed had been practised by the Hollanders and Germans. This, however, seems to have been a mere pretence, to excuse the desire to follow up the blow aimed, by the former statute, at the carrying trade of Holland. And such was our jealousy of the naval and commercial greatness of the Dutch, that, in order to cripple it, we did not hesitate totally to proscribe all trade with them; and to prevent the possibility of fraud, or of clandestine or indirect intercourse with Holland, we went so far as to include the commerce with the Netherlands and Germany in the same proscription. The statute of the 14th Car. 2. prohibited all importation from these countries of a long list of enumerated commodities under any circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods. So far as it depended on us, Holland, the Netherlands, and Germany were virtually placed without the pale of the commercial world! And though the extreme rigour of this statute was subsequently modified, its principal provisions remained in full force until the late alterations.

The policy, if not the motives, which dictated these statutes, has met with very general eulogy. It has been said, and by no less an authority than Dr. Smith, that national animosity did, in this instance, that which the most deliberate wisdom would have recommended. "When the act of navigation was made," says he, "though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun during the government of the long parliament, which first framed this act, and it broke out soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended, — the diminution of the naval power of Holland, the only naval power which could endanger the security of England. The act of navigation is *not favourable to foreign commerce, or to the growth of that opulence which can arise from it*. The interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the act of navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England." — (*Smith's Wealth of Nations*, p. 204.)

It may, however, be very fairly doubted, whether, in point of fact, the navigation law had the effects here ascribed to it, of weakening the naval power of the Dutch, and of increasing that of this kingdom. The Dutch were very powerful at sea for a long period after the passing of this act; and it seems natural to conclude, that the decline of their maritime preponderance was owing rather to the gradual increase of commerce and navigation in other countries, and to the disasters and burdens occasioned by the ruinous contests the Republic had to sustain with Cromwell, Charles II., and Louis XIV., than to the mere exclusion of their merchant vessels from the ports of England. It is not meant to say that this exclusion was altogether without effect. The efforts of the Dutch to procure a repeal of the English navigation law show that, in their apprehension, it operated injuriously on their commerce.\* It is certain, however, that its influence in this respect has been greatly over-rated in this country. *Excessive taxation*, and not our navigation law, was the principal cause of the fall of profits, and of the decline of manufactures, commerce, and navigation, in Holland. "Les guerres," says the well-informed author of the *Commerce de la Hollande*, "terminées par les traités de Nimegue, de Ryswick, d'Utrecht, et enfin la dernière par le traité d'Aix-la-Chapelle, ont successivement obligé la République de faire usage d'un grand crédit, et de faire des emprunts énormes pour en soutenir les fraix. Les dettes ont surchargé l'état d'une somme immense d'intérêts, qui ne pouvoient être payés que par une augmentation excessive d'impôts, dont il a fallu faire porter la plus forte partie par les consommations dans un pays qui n'a qu'un territoire extrêmement borné, et par conséquent par l'industrie. Il a donc fallu faire enchérir infiniment la main-d'œuvre. Cette cherté de la main-d'œuvre a non seulement restreint presque toute sorte de fabrique et d'industrie à la consommation intérieure,

\* In the treaty of Breda, agreed upon in 1667, between the States General and Charles II., the latter undertook to procure the repeal of the navigation law. But the subject was never agitated in either house of parliament.

mais elle a encore porté un coup bien sensible au commerce de frêt, partie accessoire et la plus précieuse du commerce d'économie: car cette cherté a rendu la construction plus chère, et augmenté le prix de tous les ouvrages qui tiennent à la navigation, même de tous les ouvrages des ports et des magasins. Il n'étoit pas possible que l'augmentation du prix de la main-d'œuvre ne donnât, malgré tous les efforts de l'économie Hollandaise, un avantage sensible aux autres nations qui voudroient se livrer au commerce d'économie et à celui de frêt."—(Tome ii. p. 211.)

This extract, which might, were it necessary, be corroborated by others to the same effect from all the best Dutch writers, show that it is not to our navigation law, nor to the restrictive regulations of other foreign powers, but to the abuse of the funding system, and the excess of taxation, that the decline of the commercial greatness and maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the naval power of this country, rests on any better foundation. The taste of the nation for naval enterprise had been awakened, the navy had become exceedingly formidable, and Blake had achieved his victories, before the enactment of this famous law. So far, indeed, is it from being certain that the Navigation Act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, and that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger Coke's *Treatise on Trade*, published in 1671 (p. 36.), that this act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states that we had lost, within 2 years of the passing of the act of 1650, the greater part of the Baltic and Greenland trades.—(p. 48.) Sir Josiah Child, whose treatise was published in 1691, corroborates Coke's statement; for while he decidedly approves of the navigation law, he admits that the English shipping employed in the Eastland and Baltic trades had decreased at least *two thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased.—(*Treatise on Trade*, p. 89. Glasg. edit.) Exclusive of these contemporary authorities, it may be worth while to mention that Mr. Richardson, an extensive and extremely well-informed merchant, condemns the whole principle of the Navigation Act; and contends, that instead of increasing our shipping and seamen, it had diminished them both; and that, by rendering the freight of ships higher than it would otherwise have been, it had entailed a heavy burden on the public, and been one of the main causes that had prevented our carrying on the fishery so successfully as the Dutch.—(*Essay on the Causes of the Decline of Foreign Trade*, p. 60. ed. 1756.)

There do not seem to be any very good grounds on which to question these statements; and they are at all events sufficient to show, that the assertions of those who contend that the navigation laws had a prodigious effect in increasing the number of our ships and sailors, must be received with very great modification. But suppose that all that has been said by the apologists of these laws were true to the letter; suppose it were conceded, that when first framed, the Act of Navigation was extremely politic and proper; that would afford but a very slender presumption in favour of the policy of supporting it in the present day. Human institutions are not made for immortality: they must be accommodated to the varying circumstances and exigences of society. But the situation of G. Britain and the other countries of Europe has totally changed since 1650. The envied wealth and commercial greatness of Holland have passed away: we have no longer any thing to fear from her hostility: and "he must be, indeed, strangely influenced by antiquated prejudices and by-gone apprehensions, who can entertain any of that jealousy from which the severity of this law principally originated." London has become, what Amsterdam formerly was, the grand emporium of the commercial world—*universi orbis terrarum emporium*: and the real question which now presents itself for our consideration is, not what are the best means by which we may rise to naval greatness? but—what are the best means of preserving that undisputed pre-eminence in maritime affairs to which we have attained?

Now, it does not really seem that there can be much difficulty in deciding this question. Navigation and naval power are the children, not the parents—the effect, not the cause—of commerce. If the latter be increased, the increase of the former will follow as a matter of course. More ships and more sailors become necessary according as the commerce between different and distant countries is extended. A country in the condition of G. Britain in the reign of Charles II., when her shipping was comparatively limited, might perhaps be warranted in endeavouring to increase its amount, by excluding foreign ships from her harbours. But it is almost superfluous to add, that it is not by any such regulations, but solely by the aid of a flourishing and widely extended commerce, that the immense mercantile navy we have now accumulated can be supported.

It may be easily shown, that to have continued, in the present state of the world, to

enforce the provisions of the old navigation law, would have been among the most efficient means that could have been devised for the destruction of our commerce. The wealth and power to which Britain has attained, have inspired other nations with the same feelings of envy and jealousy, that the wealth of Holland formerly generated in our minds. Instead of ascribing our commercial and manufacturing superiority to its true causes, that is, to the comparative freedom of our constitution, the absence of all oppressive feudal privileges, the security of property, and the fairness of our system of taxation, our foreign rivals contended that it had been entirely owing to our exclusive system, and appealed to our example to stimulate their respective governments to adopt retaliatory measures, and to protect them against British competition. These representations had the most injurious operation. In 1817, the American legislature passed an act, copied to the very letter from our statute book, with the avowed intention of its operating as a retaliatory measure against this country. The northern powers threatened to act on the same principle; and would have carried their threats into effect but for timely concessions on our part. The same engines by which we laboured to destroy the trade of Holland were thus about to be brought, by what we could not have called an unjust retribution, to operate against ourselves. Nor can there be a doubt that, had we continued to maintain our exclusive system, and refused to set a better example to others, and to teach them the advantage of recurring to more liberal principles, we should have run a very great risk of falling a victim to the vindictive spirit which such short-sighted and selfish policy would have generated.

These statements are sufficient to show that a considerable relaxation of our navigation laws had become indispensable; and this was partly effected in 1821 and 1825, but principally in the latter, by the measures introduced with that view into parliament by Mr. Wallace (afterwards Lord Wallace) and Mr. Huskisson. The effect of these was to place the intercourse of all European countries at amity with the U. Kingdom on the same footing. The memorials of our former animosity, and of our jealousy of the prosperity of certain neighbouring states, being thus abolished, the same law has since continued to regulate our commerce with the continent. This uniformity, besides giving greater scope to mercantile operations, and facilitating our traffic with some of our most opulent neighbours, removed a prolific source of embarrassment and litigation, at the same time that it detracted considerably from that selfish character which had been believed on the continent, and not without considerable reason, to be the animating principle of our commercial policy.

The changes that were also made in 1821 and 1825, in regard to the importation of *enumerated goods*\*, and of articles, the produce of Asia, Africa, and America, though of considerable importance, were very far from obviating the hardships arising out of the previous rules. The importation of European goods continued to be practicable only in British ships, or in ships of the country of which the goods were the produce, or of the country from which they were shipped. This regulation was kept up to hinder the Dutch, the Danes, or any other people from becoming the carriers of the produce of other nations to our ports. But while this result was not very likely to occur, the rule imposed a serious hardship on foreigners, and also on ourselves. Suppose that a Dutch ship took in part of a cargo of Dutch produce, such as cheese, butter, and Geneva at Rotterdam for England, what could be more vexatious, in the event of her not being able to complete her cargo with Dutch goods suitable for our markets, than to hinder her from making it up with the foreign goods suitable for them warehoused at Rotterdam, such as the wines and brandies of France, the corn of Poland, the hemp and tallow of Russia, &c. ? But its vexatious character was not the only thing to be objected to in a regulation of this sort. It really increased the cost of the butter, cheese, &c. sent to us; for as these had to bear the whole charge on account of freight which, but for the regulation, would have been in part borne by other articles, their price was proportionally enhanced, at the same time that the Dutch were tempted to resort to retaliatory measures. And how injurious soever in other respects, it is sufficiently plain that this regulation could never, as has been alleged, occasion an increased demand for British shipping. It no doubt compelled the foreigners to sort their cargoes less advantageously than they might otherwise have done. But the burden of this fell upon the employers of the carriers and not on the carriers themselves; that is, it fell upon us and not on the foreigners; while, in the event of their retaliating, our trade was subjected to the same difficulties. It is visionary to pretend that a system so prejudicial to commerce could be advantageous to shipping and navigation.

The measures introduced in 1825 left also untouched the regulation by which goods, the produce of Asia, Africa, and America, were prohibited from being imported from any European port †, and could not be imported on foreign bottoms, except when they

\* These changes are specified in the former editions of this work.

† The only exception to this rule were articles from Asiatic and African Turkey imported from the Levant, and bullion.

were imported direct in ships of the country of which the goods were the produce. It was proposed in 1821 to authorise British ships to import all non-prohibited articles from wherever they might find them; and though nothing apparently could be more reasonable than such a regulation, it was objected to on the pretence that foreign ships being more cheaply navigated than ours, would take advantage of this circumstance to import Asiatic, African, and American products into the contiguous continental ports, and would thus confine the employment of our ships to their carriage thence! And upon this futile pretence, for which there was not so much as the shadow of a foundation in fact, the old rule was maintained; and, in consequence, though the ports along the English Channel might have been glutted with the corn and cotton of America, the sugar of Brazil and Cuba, the coffee of Java, and the tea of China, and though all or some of these articles might at the time have been deficient here, not one of them could be imported in a foreign ship, unless, as was sometimes the case, it were carried back to the country whence it had been originally shipped, nor even in a British ship, unless it were first carried from Europe to some other continent! It is hardly possible to imagine any rule or regulation more extravagantly oppressive and absurd, and it is really astonishing it should have been able to keep its place on the statute book for about two centuries. Luckily, however, this preposterous system, as well as the regulations affecting importation from Europe, ceased on the 1st of January, 1850. The act for their repeal, the 12th and 13th Vict. c. 29., may be regarded as the completion of the free trade measures adopted in 1842 and 1846, and will, we have little doubt, have the most favourable influence over the commerce and navigation of the empire.

The monopoly of the coasting trade is still secured to British ships, and it is very doubtful whether it would have been expedient to interfere with it. Speaking generally, the coasting trade of a country may be always most cheaply and efficiently carried on by the agency of its own ships, while, by confining it to them, the risk of smuggling is materially diminished.

The relaxations made in 1825 and 1826 in the regulations embodied in our old navigation laws in regard to the colonial trade, were perhaps the most valuable portion of the changes introduced by Mr. Huskisson. But though they did much to obviate the hardships growing out of the previous rules, and to give freedom to the colonial trade, they did not entirely effect that object; and some regulations were subsequently continued in force which, though irritating and mischievous in their bearing on the colonies, were of no real advantage to ourselves. These, however, wholly ceased on the 1st of January, 1850. All varieties of goods may now be imported into the colonies from all countries at peace with Great Britain, and exported from the colonies to them, whether in British, colonial, or foreign shipping. The complaints of the colonists, in regard to the injuries they have sustained from the rules enforced by our navigation laws, are thus completely obviated, and on that ground, at all events, they have no farther claim to prohibitory duties.

Besides the restrictive regulations already alluded to, it was a part of our former policy to encourage the employment of British shipping by imposing higher duties on commodities imported in foreign vessels than were imposed on them when imported in British vessels; and it was also customary to charge foreign vessels with higher port and lighthouse duties, &c. This practice was always loudly complained of by foreigners; but we had little difficulty in maintaining it, so long as we could afford to disregard the retaliatory measures of other powers. But the extraordinary increase that took place, since the commencement of the late war, in our manufactures for foreign consumption, and the necessity under which we were, in consequence, placed, of conciliating our customers abroad, led to the adoption of the *reciprocity system*. The latter was first introduced into the trade with the U. States. After the N. American colonies had succeeded in establishing their independence, they set about framing rules for their navigation on the model of those of this country. Among other regulations of a restrictive character, it was enacted that all foreign vessels trading to the U. States should pay 44 cents, which was afterwards raised to 94 cents (nearly a dollar), per ton duty, beyond what was paid by American ships; and farther, that goods imported in foreign vessels should pay a duty of 10 per cent. over and above the duty payable on them when imported in American vessels.

This law was avowedly directed against the shipping of this country, though, as it was bottomed on the same principles as our navigation laws, we could not openly complain of its operation. Under these circumstances it would have been sound policy to have at once proposed an accommodation; and, instead of attempting to meet retaliation by retaliation, to have offered to modify our navigation law, in so far as American shipping was concerned, on the Americans making reciprocal modifications in our favour. A different course was, however, followed. Various devices were fallen upon to counteract the navigation system of the Americans, without in any degree relaxing our own: but they all failed of their object; and at length it became obvious

to every one that we had engaged in an unequal struggle, and that the real effect of our policy was, to give a bounty on the importation of the manufactured goods of other countries into the U. States, and thus gradually to exclude both our manufactures and ships from the ports of the republic. In consequence, a conviction of the necessity of making concessions gained ground progressively; and it was ultimately fixed, by the commercial treaty agreed upon between G. Britain and the U. States, in 1815, that in future equal charges should be imposed on the ships of either country in the ports of the other, and that equal duties should be laid upon all articles, the produce of the one country imported into the other, whether such importation were effected in the ships of the one or the other.

Brazil and the other states of S. America were naturally anxious to establish a commercial marine; and, to forward their views in this respect, they contemplated enacting navigation laws. But this intention was frustrated by the interference of the British government, who, without stipulating for any peculiar advantage, wisely offered to admit their ships into our ports on a principle of reciprocity, or on their paying the same charges as our own ships, on condition of their admitting British ships into their ports on a similar footing. Commercial treaties, framed on this sound principle, were afterwards entered into with most of these states.

The reciprocity system having been thus adopted as the basis of the intercourse with the U. States, whose commercial marine was second only to that of G. Britain, it was not possible to refuse adopting it in the case of such European countries as might choose to admit our ships into their ports on a footing of equality.\* The first demand of this sort was made on the part of the Prussian government, which, on the 20th of June, 1822, issued an order in council, making large additions to the port dues previously charged on all ships belonging to those nations which did not admit Prussian ships on a principle of reciprocity. The real object of this order was to injure the navigation of this country; and it was speedily found that it had the desired effect, and that its operation on British shipping was most mischievous.

Under these circumstances, the British merchants and shipowners applied to our government for relief.

"We were assailed," said Mr. Huskisson, "with representations from all quarters connected with the shipping and trade of the country, against the heavy charges imposed upon British ships in the ports of Prussia. In such circumstances, what course did his Majesty's government take? We felt it to be our duty, in the first instance, to communicate with the Prussian minister in this country; and our minister at Berlin was, I believe, also directed to confer with the Prussian government on the subject. I myself had a conference with the Prussian minister at this court, and I well recollect the substance of his reply to me: 'You have,' he said, 'set us the example, by your port and light charges, and your discriminating duties on Prussian ships; and we have not gone beyond the limits of that example. Hitherto, we have confined the increase of our port and tonnage charges to ships only; but it is the intention of my government next year' (and of this he showed me the written proof) 'to imitate you still more closely, by imposing discriminating duties on the goods imported in your ships. Our object is a just protection to our own navigation; and so long as the measure of our protection does not exceed that which is afforded in your ports to British ships, we cannot see with what reason you can complain.'

"Against such a reply what remonstrance could we, in fairness, make to the Prussian government? We might have addressed ourselves, it may be said by some, to the friendly feelings of that government;—we might have pleaded long usage in support of our discriminating duties;—we might have urged the advantages which Prussia derived from her trade with England. Appeals like these were not forgotten in the discussion, but they were of little avail against the fact stated by the consul at Danzig—that 'the Prussian shipowners were all going to ruin.'

"By others it may be said, 'Your duty was to retaliate by increasing your own port charges and discriminating duties, on Prussian shipping.' I have already stated generally my reasons against the policy of this latter course. We were not prepared to begin a system of commercial hostility, which, if followed up on both sides to its legitimate consequences, could only tend to reciprocal prohibition. In this state of things, more prudently, as I contend, we entered upon an amicable negotiation with the Prussian government, upon the principle of our treaty with the United States,—that of abolishing, on both sides, all discriminating duties on the ships and goods of the respective countries in the ports of the other.

"Having concluded an arrangement with Prussia upon this basis, we soon found it necessary to do the same with some other of the northern states. Similar conventions were accordingly entered into with Denmark and Sweden. Reciprocity is the foundation of all those conventions; but it is only fair to add, that they contain other stipulations for giving facility to trade, and from which the commerce of this country, I am confident, will, in the result, derive considerable advantage."†

This statement shows that the establishment of the reciprocity system with respect to which so violent a clamour was afterwards raised, was not a measure of choice but of necessity. We could not afford to hazard the exclusion of our manufactures from countries into which they were annually imported to a large amount. So long as the Prussians, Swedes, Danes, and other nations, chose to submit, without attempting to retaliate, to our system of discriminating duties on foreign ships, and on the goods imported in them, it was no business of ours to tell them that that system was illiberal and unjust. But when they discovered that such was really the case, and declared that unless we modified our restrictions, they would retaliate on our commerce, and

\* By the fourth section of the act 6 Geo. 4. c. 1., it was enacted, that his Majesty might, by an order in council, admit the ships of foreign states into our ports, on payment of the like duties that are charged on British vessels, provided that British ships are admitted into the ports of such foreign states on payment of the like duties that are charged on their vessels.

† Huskisson's Speech, May 13. 1836, on the State of the Shipping Interest.

either entirely exclude our commodities from their markets, or load those that were imported in British ships with prohibitory duties, should we have been justified in refusing to come to an accommodation? Were we to sacrifice the substance to the shadow? To turn away some of our best customers because they chose to stipulate that the intercourse between them and us should be conducted either in their ships or in ours, as the merchants might think best? Government had only a choice of difficulties; and they wisely preferred adopting a system which has preserved the access to foreign markets for English goods, and has farther secured an equal chance to English ships, with those of foreigners, of being employed in the trade with other countries. More could not have been obtained; nor would it have been really desirable. Had we endeavoured to enforce in the nineteenth century the rules and regulations that had been justly objected to and regarded as oppressive in the sixteenth and seventeenth centuries, we should have provoked a spirit of hostility and retaliation that must eventually, and at no distant period, have crippled alike the manufactures, the trade, and the navigation of the empire.

The reciprocity system is still wisely maintained, and is, indeed, embodied in the act 12 & 13 Vict. c. 29. But we do not make its previously agreeing to this system a condition of a foreign country being entitled to participate in the advantages conferred by this act. Such preliminary arrangements would have occasioned much embarrassment and difficulty, and we, therefore, have contented ourselves with reserving power to her Majesty in council, in the event of her thinking it expedient to interfere, to impose such prohibitions, restrictions, and discriminating duties on the ships of any foreign power frequenting our ports, as may be required to countervail any peculiar prohibitions, restrictions, or duties laid upon British ships in the ports of such foreign power.

Much difference of opinion has existed as to the practical effect on our shipping and navigation, of the changes in the navigation law introduced by Mr. Huskisson. But there is really no ground for any such difference. This will be apparent from the following comparison between the shipping belonging to the empire in 1825, when Mr. Huskisson's reforms began, and in 1848:—

Account of the Ships, their Tonnage, and their Crews, belonging to the British Empire in 1825 and 1848.

Years.	United Kingdom and Possessions in Europe.		Colonies.		Total.		Crews.
	Ships.	Tons.	Ships.	Tons.	Ships.	Tons.	
1825	80,701	2,228,807	3,579	214,875	84,280	2,443,682	166,143
1848	25,638	3,400,809	8,054	651,351	33,692	4,055,160	236,069
Excess in 1848.	4,937	1,072,002	4,455	436,476	9,392	1,498,478	69,886

It is plain from this statement that the number of our ships, the amount of their tonnage, and the number of our sailors, have all been vastly increased since 1825. And if this be not, we should like to know what can be, a conclusive proof of the wisdom of the changes effected in 1825. They have, in fact, been successful to a degree which the most sanguine could not previously have supposed possible.

Although, however, the fact of a vast increase of our mercantile marine having taken place since 1825, be too well established to admit of any doubt, it is contended by the apologists of the old restrictive system, that the share which foreigners have in the trade of the U. K. is notwithstanding greater now than in 1825. But this greater preponderance of foreign vessels in our trade, if such really be the case (which is doubtful), is admitted to be but inconsiderable; though, were it incomparably greater than it is alleged to be, it would afford no room or ground for objecting to the measures of 1825 and 1849. The shipping and foreign trade of most continental states were all but wholly destroyed during the war terminated in 1815, while our shipping and trade were then proportionally increased: and the influence of this depression on the one side, and of the unnatural stimulus on the other, was far from being exhausted in 1825. But in the lengthened interval that has since elapsed, the mercantile navies of the continental states have attained to their ordinary state. And while we have no longer had any peculiar advantages on our side, we have had to contend with them, and with the rapidly increasing marine of the U. States. As respects the latter, we may observe, that while in 1825 our imports of cotton, principally from America, amounted to about 222,500,000 lbs., they amounted in 1848, to about 670,000,000 lbs.; at the same time that the imports of corn and flour from the U. States in the latter year bore a still greater proportion to their amount in the former. Our intercourse with Holland, France, the Elbe, &c., which was all but wholly suppressed during the war, is now become very extensive; and are we, under such circumstances, to be surprised that the proportion of foreign shipping frequenting our ports has increased? Had such increase been ten times greater, it could not have surprised any reasonable person; and the fair

presumption is, that but for the reforms effected in 1825, such would have been the case. And there is every reason to anticipate that the farther reforms effected in 1849, which, like those of 1825, were imperatively required by the exigencies of the commercial world, will be equally beneficial.

No evidence has been, or, we believe, can be produced, to warrant the often repeated assertion, that foreigners man and navigate ships cheaper than ourselves. There is not at present any trade open to British ships in which they do not, without difficulty, maintain their ground against every other competitor. The wages of seamen in the U. States are higher than here; and this, indeed, is a principal cause of our seamen engaging so very extensively as they are known to do in the American service. And while the wages paid by the northern shipowners differ but little from ours, their crews are larger, compared with the burden of their ships. The difference in the cost of victualling must be inconsiderable; for in all distant voyages our ships procure provisions and stores of all sorts at the same rates as the foreigner. Hence, as it appears to us, nothing can be more futile and unfounded than the fears, whether real or pretended, that our shipowners will not be able to withstand any competition to which they may be exposed. The late changes will be more advantageous to ourselves than to any other nation. Being the greatest commercial and naval people in the world, we must necessarily gain most by whatever gives increased facilities to commerce and navigation.

In estimating the capacity of the British shipowners to maintain their ground against their competitors in other parts of the world, it must be remembered that they are not now, as heretofore, obliged to use only ships of the build of the U. K. or the colonies. This restriction has been repealed by the 12 & 13 Vict. c. 39; and the fact of a ship being British, and entitled to all the privileges peculiar thereto, no longer depends on her having been constructed in our dominions, but on her being registered and manned according to the provisions in the statute now referred to. The building yards of all the countries of the world are thus laid open to our merchants, or others wishing to buy ships, who may purchase them as they do corn and wine, wherever they may be had cheapest.

We, however, incline to think that the power to buy foreign ships is one that will be rarely exercised. At present, taking their quality and durability into account, English built ships are as cheap as those of any other country, or cheaper. But we are ready to admit the superior importance of the shipbuilding business, and that it is right and proper to adopt any measure not injurious to others, by which its safety, and the well-being of our commercial marine, may be most effectually secured. And hence we think it would be good policy to remit the duty on the timber used in the building of ships, or, if that cannot be conveniently done, to allow them to be built and fitted out in bond. Even as it is, our shipbuilders have little or nothing to fear from foreign competition; but with the concession now referred to, which might be made with very little loss to the revenue, there can be no manner of doubt that ships would be built cheaper here than anywhere else; and, under the circumstances supposed, the probability is, that besides supplying our own demand, we should export them in large numbers.

Among the drawbacks to which our commercial marine has been, and continues to be subject, the most formidable appears to be the frequent incompetence of the masters, and the prevalence of intemperance among them and the crews. To obviate the first of these evils, it is proposed conformably to the policy adopted in some other countries\*, to subject all parties seeking to be employed as masters of ships to a previous examination, in the view of ascertaining their capacity properly to discharge the important duties incident to such employment. And provided the examination were conducted by thoroughly qualified parties, and made sufficiently stringent, it would raise alike the character and the skill of the masters; and were some better system also introduced for the maintenance of discipline and good order on board merchant ships, and for the prevention or discouragement of intemperance, the result could not fail to be in the highest degree beneficial.

#### NEW NAVIGATION ACT OF 1849, THE 12 & 13 VICT. c. 39.

*Certain Acts repealed from 1st January 1850.*—From and after the 1st of January 1850, the following acts and parts of acts shall be repealed, viz. the act 8 & 9 Vict. c. 88, intitled "An Act for the Encouragement of British Shipping and Navigation;" so much of the act 8 & 9 Vict. c. 89, intitled "An Act for registering of British Vessels," as limits the privileges of vessels registered at Malta, Gibraltar, and Heligoland; and so much as provides that no ship or vessel shall be registered, except such as are wholly of the build of some part of the British dominions; and so much as relates to the disqualification of ships repaired in a foreign country; and so much as prevents British ships which have been captured by or sold to foreigners from becoming entitled to be again registered as British in case the same again become the property of British subjects; and so much of the act 8 & 9 Vict. c. 98, intitled "An Act to regulate the Trade of British Possessions abroad," as provides that no goods shall be imported into or exported from any of the British possessions in America by sea from or to any place other than the U. K., or some other of such possessions, except into or from the ports denominated free ports; so much thereof as provides for the limitation of the privileges allowed to foreign ships by the law of navigation in

\* For an account of the regulations adopted in France in regard to this matter, see art. MASTER.

respect of importations into the British possessions in Asia, Africa, and America; and so much thereof as provides that no vessel or boat shall be admitted to be a British vessel or boat on any of the inland water or lakes of America, except such as shall have been built at some place within the British dominions, and shall not have been repaired at any foreign place to a greater extent than in the said act is mentioned; and so much of the act 8 & 9 Vict. c. 86, intitled "An Act for the general Regulation of the Customs," as prohibits the importation of train oil, blubber, spermaceti oil, head-matter, skins, bones, and fins, the produce of fish or creatures living in the sea, unless in vessels which shall have been cleared out regularly with such oil, blubber, or other produce on board from some foreign port; and so much thereof as prohibits the importation of tea, unless from the Cape of Good Hope, or from places eastward of the same to the Straits of Magellan; and so much of the act 7 & 8 Vict. c. 112, intitled "An Act to amend and consolidate the Laws relating to Merchant Seamen, and for keeping a Register of Seamen," as provides that the master or owner of every ship belonging to any subject of H. M., of the burden of 80 tons or upwards, (except pleasure yachts,) shall have on board at the time of her proceeding from any port of the U. K., and at all times when absent from the U. K., or navigating the seas, one apprentice or more in a certain proportion to the number of tons of his ship's admeasurement, and that if any such master or owner shall neglect to have on board his ship the number of apprentices thereby required, together with their respective registered indentures, assignments, and register ticket, he shall forfeit and pay the sum of 10*l*. in respect of each apprentice, indenture, assignment, or register ticket so wanting or deficient; also act 37 G. 3. c. 117, intitled "An Act for regulating the Trade to be carried on with the British Possessions in India by the Ships of Nations in amity with H. M.," and so much of the act 4 G. 4. c. 80, intitled "An Act to consolidate and amend the several Laws now in force with respect to Trade from and to Places within the limits of the Charter of the E. I. Company, and to make further Provisions with respect to such Trade, and to amend an Act of the present Session of Parliament for the registering of Vessels registered in India," as enacts that no Asiatic sailors, Lascars, or natives of any of the territories, countries, islands, or places within the limits of the charter of the E. I. Company, shall at any time be deemed or taken to be British seamen; and so much of the act 4 G. 4. c. 77, intitled "An Act to authorise H. M. under certain circumstances, to regulate the Duties and Drawbacks on Goods imported or exported in Foreign Vessels, and to exempt Foreign Vessels from Pilotage," as relates to the regulation of duties and drawbacks; also the act 5 G. 4. c. 1, intitled "An Act to indemnify all Persons concerned in advising, issuing, or acting under a certain Order in Council for regulating the Tonnage Duties on certain Foreign Vessels, and to amend an Act of the last Session of Parliament for authorising H. M. under certain circumstances, to regulate the Duties and Drawbacks on Goods imported or exported in any Foreign Vessels;" also so much of the act 8 & 9 Vict. c. 90, intitled "An Act for granting Duties of Customs," as empowers H. M. in council to direct that additional duties shall be levied on articles the growth, produce, or manufacture of foreign countries, or upon goods imported in the ships of foreign countries, or to prohibit the importation of manufactured articles the produce of foreign countries; also so much of the act 5 & 6 Vict. c. 14, intitled "An Act to amend the Laws for the Importation of Corn," as enables H. M. under certain circumstances, to prohibit the importation of corn, grain, meal, or flour from the dominions of certain foreign powers; and the said several acts and parts of acts before mentioned are hereby accordingly repealed, except so far as the said acts or any of them repeal any former act or acts, or any part of such act or acts, and except so far as relates to any penalty or forfeiture which shall have been incurred under the said act or acts hereby repealed or any of them, or to any offence which shall have been committed contrary to such act or acts or any of them.—§ 1.

*Coasting Trade.*—No goods or passengers shall be carried coastwise from one part of the U. K. to another, or from the U. K. to the Isle of Man, or from the Isle of Man to the U. K., except in British ships.—§ 2.

*Trade with the Channel Islands.*—No goods or passengers shall be imported into the U. K. from any of the islands of Guernsey, Jersey, Alderney, or Sark, nor shall any goods or passengers be exported from the U. K. to any of the said islands, nor shall any goods or passengers be carried from any of the islands of Guernsey, Jersey, Alderney, Sark, or Man to any other of the said islands, nor from one part of any of the said islands to another part of the same island, except in British ships.—§ 3.

*Coasting Trade of the British Possessions.*—No goods or passengers shall be carried from one part of any British possession in Asia, Africa, or America to another part of the same possession, except in British ships.—§ 4.

*Queen in Council may regulate Coasting Trade of Colonies.*—If the legislature or proper legislative authority of any such British possession shall present an address to H. M. praying H. M. to authorise or permit the conveyance of goods or passengers from one part of such possession to another part thereof in other than British ships, or if the legislatures of any two or more possessions, which for the purposes of this act H. M. in council shall declare to be neighbouring possessions, shall present addresses or a joint address to H. M. praying H. M. to place the trade between them on the footing of a coasting trade, or of otherwise regulating the same, so far as relates to the vessels in which it is to be carried on, it shall thereupon be lawful for H. M., by order in council, so to authorise the conveyance of such goods or passengers, or so to regulate the trade between such neighbouring possessions, as the case may be, in such terms and under such conditions, in either case, as to H. M. may seem good.—§ 5.

*Coasting Trade of India to be regulated by Governor General.*—It shall be lawful for the G. General of India in council to make any regulations authorising or permitting the conveyance of goods or passengers from one part of the possessions of the E. I. Company to another part thereof in other than British ships, subject to such restrictions or regulations as he may think necessary; and such regulations shall be of equal force and effect with any laws and regulations which the said G. General in council is now or may hereafter be authorised to make, and shall be subject to disallowance and repeal in like manner as any other laws or regulations made by the said G. General in council under the laws from time to time in force for the government of the British territories in India, and shall be transmitted to England, and be laid before both houses of parliament, in the same manner &c.—§ 6.

*No Ship British unless registered and navigated as such.*—No ship shall be admitted to be a British ship unless duly registered and navigated as such; and every British-registered ship (so long as the registry of such ship shall be in force, or the certificate of such registry retained for the use of such ship,) shall be navigated during the whole of every voyage (whether with a cargo or in ballast) in every part of the world by a master who is a British subject, and by a crew whereof three-fourths at least are British seamen; and if such ship be employed in a coasting voyage from one part of the U. K. to another, or in a voyage between the U. K. and the Islands of Guernsey, Jersey, Alderney, Sark, or Man, or from one of the said islands to another, or from one part of either of them to another of the same, or be employed in fishing on the coasts of the U. K. or of any of the said islands, then the whole of the crew shall be British seamen: provided always, that if a due proportion of British seamen cannot be procured in any foreign port, or in any place within the limits of the E. I. Company's charter, for the navigation of any British ship, or if such proportion be destroyed during the voyage by any unavoidable circumstance, and the master of such ship make proof of the truth of such facts to the satisfaction of the collector and controller of the customs at any British port, or of any person authorised in any other part of the world to inquire into the navigation of such ship, the same shall be deemed to be duly navigated: provided also, that every British ship (except such as are required to be wholly navigated by British seamen) which shall be navigated by one British seaman for every 20 tons of the burthen of such ship shall be deemed to be duly navigated, although the number of other seamen shall exceed one-fourth of the whole crew.

**What Persons to be British Seamen.**—No person shall be deemed to be a British seaman, or to be duly qualified to be master of a British vessel, except persons of one of the following classes, viz. natural-born subjects of H. M.; persons naturalised by or under any act of parliament, or by or under any act or ordinance of the legislature or proper legislative authority of one of the British possessions, or made denizens by letters of denization; persons who have become British subjects by virtue of the conquest or cession of some newly acquired country, and who have taken the oath of allegiance to H. M., or the oath of fidelity required by the treaty of capitulation by which such newly acquired country came into H. M.'s possession; Asiatic sailors or Lascars, being natives of any of the territories, countries, islands, or places within the limits of the charter of the E. I. Company, and under the government of H. M. or of the said company; and persons who have served on board any of H. M.'s ships of war, in time of war, for the space of 3 years.—§ 8.

**Proportion of Seamen may be altered by Proclamation.**—If H. M. shall at any time declare by proclamation that the proportion of British seamen necessary to the due navigation of British ships shall be less than the proportion required by this act, every British ship navigated with the proportion of British seamen required by such proclamation shall be deemed to be duly navigated, so long as said proclamation remains in force.—§ 9.

**H. M. may restrict the Privileges of foreign Ships in certain Cases.**—In case it shall be made to appear to H. M. that British vessels are subject in any foreign country to any prohibitions or restrictions as to the voyages in which they may engage, or as to the articles which they may import into or export from such country, H. M. may (if she think fit), impose, by order in council, such prohibitions or restrictions upon the ships of such foreign country, either as to the voyages in which they may engage, or as to the articles which they may import into or export from any part of the U. K. or of any British possession in any part of the world, as may place the ships of such country on as nearly as possible the same footing in British ports as that on which British ships are placed in the ports of such country.—§ 10.

**H. M. may impose additional Duties.**—In case it shall be made to appear to H. M. that British ships are either directly or indirectly subject in any foreign country to any duties or charges of any sort or kind whatever from which the national vessels of such country are exempt, or that any duties are imposed upon the articles imported or exported in British ships which are not equally imposed upon the like articles imported or exported in national vessels, or that any preference whatever is shown either directly or indirectly to national vessels over British vessels, or that articles imported or exported in national vessels over the like articles imported or exported in British vessels, or that British trade and navigation is not placed by such country upon as advantageous a footing as the trade and navigation of the most favoured nation, then and in any such case H. M. may (if she think fit), impose, by order in council, such duty or duties of tonnage upon the ships of such nation entering into or departing from the ports of the U. K. or any British possession in any part of the world, or such duty or duties on all goods, or on any specified classes of goods, imported or exported in the ships of such nation, as may appear to H. M. justly to counterbalance the disadvantages to which British trade and navigation is so subjected as aforesaid.—§ 11.

**Order in Council to specify Ships to which it applies.**—In every such order H. M. may (if she think fit) specify what ships are to be considered as ships of the country or countries to which such order applies, and all ships answering the description contained in such order shall be considered to be ships of such country or countries for the purposes of such order.—§ 12.

**Orders may be revoked.**—H. M. may from time to time revoke any order or orders in council made under the authority of this act.—§ 13.

Section 14. enacts that orders in council are to be published in "Gazette," and to be laid before parliament.

**Penalties.**—If any goods be imported, exported, or carried coastwise contrary to this act, all such goods shall be forfeited, and the master of the ship in which the same are so imported, exported, or carried coastwise shall forfeit the sum of 100*l.* except where any other penalty is hereby specially imposed.—§ 15.

Section 16. directs how penalties may be recovered.

**Who may be Owners of British Vessels.**—All natural-born subjects of H. M., and all persons made denizens by letters of denization, and all persons naturalised by or under any act of parliament, or by or under any act or ordinance of the legislature or proper legislative authority of any of the British possessions in Asia, Africa, or America, and all persons authorised by or under any such act or ordinance to hold shares in British shipping, shall, on taking the oath of allegiance to H. M. her heirs and successors, be deemed to be duly qualified to be owners or part owners of British-registered vessels, anything in the said recited act for the registering of British shipping to the contrary in anywise notwithstanding.—§ 17.

**Form of Certificate of Registry.**—The following form of certificate shall be substituted for the form of certificate prescribed by the said act for the registering of British shipping:—

This is to certify, that [here insert the name, occupations, and residences of the subscribing owners] have taken and subscribed the declaration required by law, and having declared that [he or they], together with [names, occupations, and residences of nonsubscribing owners], is [or are] sole owner [or owners] in the proportions specified on the back hereof of the ship or vessel called [the ship's name] of [place to which the vessel belongs], which is of the burden of [number of tons], and whereof [master's name] is master, and that the said ship or vessel was [when or where built, or condemned as prize, referring to builder's certificate, judge's certificate, or certificate of last registry, then delivered up to be cancelled, or (if the vessel was foreign built, and the time and place of building not known,) was foreign, and that he or they did not know the time or place of building, and (some and employment of surveying officer)] having certified to us that the said ship or vessel has [number] decks and [number] masts, that her length from the inner part of the main stem to the fore part of the sternpost is [number] feet [number] tenths, her breadth in midships is [number] feet [number] tenths, her depth in hold at midships is [number] feet [number] tenths, that she is [how rigged] rigged with a [masting or running] bowsprit, is [description of stern] sterned, [carvel or clincher] built, has [whether any or not] gallery, and [kind of head, if any] head, that the framework and planking [or plating] is [state whether of wood or iron] and that she is [state whether a sailing vessel or a steamer, and (if a steamer, state whether propelled by paddle wheels or screw pro-

pellers]; and the said subscribing owners having consented and agreed to the above description, and having caused sufficient security to be given as required by law, the said ship or vessel called the [name] has been duly registered at the port of [name of port], certified under our hands at the custom house in the said port of [name of port], this [date] day of [name of month] in the year [words of length].

(Signed) Collector.  
(Signed) Comptroller.

And on the back of such certificate of registry there shall be an account of the parts or shares held by each of the owners mentioned and described in such certificate, in the form and manner following:—

Names of the several Owners within mentioned.		Number of Sixty-fourth Shares held by each Owner.
Name	- - -	- - - Thirty-two.
Name	- - -	- - - Sixteen.
Name	- - -	- - - Eight.
Name	- - -	- - - Eight.
(Signed)		Comptroller.
(Signed)		Collector.

§ 18.

**Form of Declaration.**—The following declaration shall be substituted for the declaration by the said act directed to be made by the owner or owners of any vessel previous to the registry thereof:—

I A.B. of [place of residence and occupation] do truly declare, that the ship or vessel [name] of [port or place], whereof [master's name] is at present master, being [kind of build, burthen &c., as described in the certificate of surveying officer] was [when and where built, or (if prize or forfeited, capture and condemnation as such, or (if the vessel be foreign built, and the owner does not know when and where she was built), that the said vessel is foreign built, and that I do not know the time and place of her building, and that I the said A.B. (and the other owners' names and occupations, if any, and where they respectively reside,] am [or are] sole-owner [or owners] of the said vessel, and that no other person or persons whatever hath or have any right, title, interest, share, or property therein or

thereto; and that I the said A.B. [and the said other owners, if any,] am [or are] truly and bona fide a subject [or subjects] of G. Britain, and that I the said A.B. have not [nor have any of the other owners, to the best of my knowledge, (or be so called), taken the oath of allegiance to any foreign state whatever (except under the terms of some capitulation describing the particulars thereof), or that since my taking [or his or their taking] the oath of allegiance to [naming the foreign state respectively to which or to any of the said owners shall have taken the same] I have [or he or they hath or have] become a denizen, or denizens, or naturalised subject or subjects, or the heir or heirs of the U. Kingdom, by H. M.'s letters patent, (or by act of parliament, or by or under or by virtue of an act or ordinance

of the legislature of \_\_\_\_\_ or have been authorized by an act or ordinance of the legislature of \_\_\_\_\_ to hold shares in British shipping within the said colony, and since the passing of such act or ordinance I have (or he or they hath or have) taken the oath of allegiance to H. M. (Queen Victoria) (naming the times when such letters of denatation have been granted respectively, or the year or years in which such act or acts of naturalization, or such colonial acts or ordinances have passed respectively), and that no foreigner, directly or indirectly, hath any share or part interest in the said ship or vessel: Provided always, that if it shall become necessary to register any ship or vessel belonging to any corporate body in the U.K., the following declaration, in lieu of the declaration herein

before directed, shall be made and subscribed by the secretary or other proper officer of such corporate body; (that is to say.)

I A. B., secretary or officer of (name of company or corporation), do truly declare, that the ship or vessel (name) of (port) whereof (master's name) is at present master, being (kind of build, burthen, &c., as described in the certificate of the surveying officer), was (when and where built, or, if prize or forfeited, capture and condemnation as such), or (if the vessel be foreign built, and that such secretary or officer does not know when and where built), that the said vessel is foreign built, and that I do not know the time and place of the building, and that the same doth wholly and truly belong to (name the company or corporation).—§ 18.

*Proviso for Vessels under 15 Tons' Burthen.*—Notwithstanding that by the said recited act for the registering of British vessels it is enacted, that in case any ship, not being duly registered, shall exercise any of the privileges of a British vessel, the same shall be forfeited, nevertheless all boats or vessels under 15 tons' burthen, wholly owned and navigated by British subjects, although not registered as British ships, shall be admitted to be British vessels in all navigation in the rivers and upon the coasts of the U. K. or of the British possessions abroad, and not proceeding over sea, except within the limits of the respective colonial governments within which the managing owners of such vessels respectively reside; and that all boats or vessels wholly owned and navigated by British subjects, not exceeding the burthen of 30 tons, and not having a whole or fixed deck, and being employed solely in fishing on the banks and shores of Newfoundland and of the parts adjacent, or on the banks and shores of the provinces of Canada, Nova Scotia, or New Brunswick adjacent to the Gulf of St. Lawrence, or on the north of Cape Canso, or of the islands within the same, or in trading coastwise within the said limits, shall be admitted to be British boats or vessels, although not registered, so long as such boats or vessels shall be solely so employed.—§ 20.

Section 21. enacts that the act shall take effect on 1st Jan. 1850.

NEW ORLEANS, the capital of Louisiana, one of the United States, on the eastern bank of the Mississippi, about 105 miles from its mouth, lat. 29° 57' 45" N., lon. 90° 9' W. Population, in 1840, 102,191, but now, 1849, probably 150,000. The new-built streets are broad, intersecting each other at right angles; and the houses are mostly of brick. It is the grand emporium of all the vast tracts traversed by the Mississippi, the Missouri, and their tributary streams, enjoying a greater command of internal navigation than any other city either of the Old or New World. Civilisation has hitherto struck its roots, and begun to flourish only in some comparatively small portions of the immense territories of which New Orleans is the sea-port; and yet its progress has been rapid beyond all precedent. It appears, from the accounts printed by order of Congress, that during the year ended the 30th of June, 1848, the value of the native American produce exported from this city amounted to 39,350,148 dollars, while the value of that exported from New York was 38,771,209. With respect to imports, the case is materially different; the value of those of New Orleans, in the year just mentioned, being only 9,380,439 dollars, whereas those of New York amounted to 94,525,141. It is believed by many, seeing how rapidly settlements are forming in the "West," that New Orleans must, at no very distant period, exceed every other city of America, as well in the magnitude of its imports as of its exports; and, considering the boundless extent and extraordinary fertility of the uncultivated and unoccupied basins of the Mississippi and Missouri, the anticipations of those who contend that New Orleans is destined to become the greatest emporium, not of America only, but of the world, will not appear very unreasonable. Steam navigation has been of incalculable service to this port, and, indeed, to the whole of central America. The voyage up the Mississippi, that used formerly to be so difficult and tedious, is now performed in commodious steam packets with ease, celerity, and comfort. "There have been counted," says Mr. Flint, "in the harbour, 1,500 flat boats at a time. Steam boats are arriving and departing every hour; and it is not uncommon to see 50 lying together in the harbour. A forest of masts is constantly seen along the *levée*, except in the sultry months. There are often 5,000 or 6,000 boatmen from the upper country here at a time; and we have known thirty vessels advertised together for Liverpool and Havre. The intercourse with the Havannah and Vera Cruz is great, and constantly increasing."—(*Geography and History of the Western States*, vol. i. p. 557.) From 1811, when the first steam boat was launched in the Mississippi, down to the beginning of 1830, no fewer than 336 steam boats had been built for the navigation of this river, the Missouri, Ohio, &c., of which 213 were employed at the latter period, and the number has since been vastly increased. As a shipping port, she now ranks third in the Union; being in this respect inferior only to New York and Boston. Vessels of the largest burden may navigate the river several hundreds of miles above New Orleans. The total tonnage belonging to New Orleans on the 30th of June, 1848, amounted to 225,681 tons; of which 82,405 tons were registered. In the year ending the 30th of June, 1848, the arrivals of steamers, principally from the interior, were 2,186. The depth of water in the river opposite to New Orleans is, at a medium, about 70 feet; and it maintains soundings of 30 feet till within a mile of its confluence with the sea. Besides 3 or 4 of inferior consequence, the Mississippi has 4 principal passes or outlets. In the south-east, or main-pass, at Balize, the water on the bar at ordinary tides does not exceed 12 feet; and as the rise of tides in the Gulf of Mexico is not more than 2 or 2½ feet, vessels drawing much water cannot make their way from the ocean to New Orleans.—(*Darby's View of the United States*, p. 467.)

The unhealthiness of the climate is the great drawback on New Orleans. This probably arises from the low and marshy situation of the city and surrounding country, which is under the level of the Mississippi, being protected from inundation by an artificial levee or mound, varying from 5 to 30 feet in height, and extending along the bank of the river a distance of 100 miles. The unhealthy season includes July, August, and September; during which period the yellow fever often makes dreadful havoc, particularly among the poorer classes of emigrants from the North and from Europe. Latterly, great efforts have been made to improve the health of the city, by supplying it abundantly with water, paving the streets, removing wooden sewers, and replacing them with others of stone, &c. Many places, where water used to stagnate, have been filled up; and large tracts of swampy ground contiguous to the town have been drained. And as such works will no doubt be prosecuted on a still larger scale, according to the increase of commerce and population, it is to be hoped that the ravages of fever may be materially abated, though the situation of the city excludes any very strong expectation of its ever being rendered quite free from this dreadful scourge.

The following Tables give a pretty complete view of the trade of this great and growing emporium. Its preponderance in the shipment of cotton is quite as decided as the preponderance of Manchester in its manufacture.

Account of the Quantity of the principal Articles imported from the Interior to New Orleans during the Six Years ending with the 31st of August, 1846. These, of course, form also the Articles of Exportation.

**New Orleans Levee Dues.**—The following ordinance, amendatory of existing ordinances concerning levee dues, is and for the port of New Orleans, was ordained by the general council and approved by the Mayor, May 26th, 1845:—

1. That from and after the 31st day of August next the levee or wharfage dues on ships and other decked vessels, and on steam-vessels arriving from sea, shall be as follows:—

On each vessel under 75 tons	\$15
of 75 and under 100 tons	20
100	25
125	30
150	35
200	40
250	45
300	50
350	55
400	60
450	65
500	70
550	75
600	80
650	85
700	90
750	95
800	100
900	105
1,000	110
1,100	115
1,200 and upwards	120

2. That from and after the 31st day of August next, the levee dues on steam vessels navigating on the river, and which shall moor or land in any part of the incorporated limits of the port, shall be as follows:—

On each steamer under 75 tons	\$12
of 75 and under 100 tons	15
100	20
150	25
200	30
250	35
300	40
350	45
400	50
450	55
500	60
550	65
600	70
650	75
700 and over	80

3. That hereafter it shall not be lawful for any pique, flatboat, bargeboat or keelboat, to remain in port longer than 12 days, as fixed by the 13th article of an ordinance approved the 21st October, 1839, under a penalty of \$25; and it shall be the duty of the wharfingers of the several municipalities to cause to be removed beyond the limits of the port any pique, flatboat, barge, or other craft, found, in violation of this ordinance, within the limits of their respective municipalities. The fines arising from any violation hereof shall be recoverable before any court of competent jurisdiction, of the owner, agent, or consignee of such pique, flatboat, or other craft, for the benefit of the municipality within which the offence may be committed.

4. That hereafter it shall not be lawful for any flatboat, keelboat, barge, or old hull, to remain within the limits of the port longer than 24 hours after the discharge of its cargo, under a penalty of \$25, recoverable as aforesaid; and after the expiration of said 24 hours, it shall be the duty of the wharfinger of either of the municipalities to cause to be removed beyond the limits of the port, or to turn adrift, without delay, any such flatboat, keelboat, or other craft in contravention.

5. That in case any captain, owner, or person in command of any steamboat, flatboat, barge, keelboat, or other craft, neglect or refuse to obey the orders of the wharfinger to conform to the ordinances regulating the port, he or they shall be liable to a fine of \$25 to \$50 for each offence, recoverable as aforesaid.

6. That from and after the 31st day of August next, all ships and other decked vessels, and steam vessels, arriving from sea, which shall have landed or moored in front of one municipality, and shall have paid or be liable to pay the levee dues to such municipality, and which shall afterwards remove from such municipality to one of the other municipalities, shall pay to the municipality to which they remove, the following dues:—

All vessels over 750 tons	\$5 00 per day
500	2 50
250	1 50
100	1 00
All vessels under 100	75

Such daily levee dues to be collected for every day such vessel may remain in the port of the municipality to which they may have removed, the days of removal and departure excepted.

7. That so much of all existing ordinances as is inconsistent with the provisions of this ordinance is hereby repealed.

**Banks.**—The banks in New Orleans differ but little from those in other parts of the Union, and are quite as little entitled to credit or confidence. The stoppage of their payments would seem to be quite an ordinary occurrence, and does not, in fact, seem to be thought of much consequence! We give the following statement as we find it in Hunt's *Commercial Magazine*, but without vouching for its accuracy.

Condition of the specie-paying banks of New Orleans, on the 30th May, 1846.

Banks.	Cash liabilities.	Assets.	Circulation.	Specie.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Bank of Louisiana	2,975,145	4,929,877	1,461,329	2,319,258
Canal bank	1,769,876	2,594,694	603,300	1,090,680
City bank	1,440,832	2,151,634	637,890	706,435
Louisiana State bank	1,481,437	2,108,797	429,149	718,517
Mechanics' and traders' bank	2,888,409	3,477,380	877,570	1,576,585
Union bank	80,390	801,179	26,830	245,194
Total	11,605,129	16,135,931	4,213,518	6,687,672

Insurance companies are quite as numerous in New Orleans as in the other cities of the Union, and are conducted in precisely the same manner.

The following table, which gives the value as well as the quantities of the principal articles shipped from New Orleans during the years ending the 1st of September 1845 and 1846, sets the increase in the trade of that emporium in the most striking point of view.

Articles.	1845.		1846.	
	Quantity.	Value.	Quantity.	Value.
		<i>Dollars.</i>		<i>Dollars.</i>
Corn	530,650	404,853	1,594,693	7,556,181
Hacon	21,250	890,270	35,213	1,008,590
Hogging	111,294	1,113,240	96,691	917,710
Flour	633,312	2,134,248	837,985	3,770,598
Beef	-	-	36,017	354,110
Hemp	46,174	469,270	30,990	309,800
Lead	732,135	1,618,455	795,394	1,963,484
Molasses	9,000,000	1,160,000	9,000,000	1,710,000
Sugar	9,000,000	1,160,000	186,650	10,363,730
Tobacco	64,093	2,881,125	57,399	2,803,300
Pork	923,701	2,379,246	579,589	2,276,424
Cotton	979,238	23,201,712	1,033,638	33,716,125
All other	-	11,550,343	-	15,559,037
Total	-	57,199,122	-	77,183,394

In so far as the trade to foreign countries is concerned, the great increase has been in the value of cotton, and in the shipments of grain and flour, but more especially of Indian corn. The largest supplies of that article might be obtained from New Orleans, but it is quite otherwise with wheat and flour. We have been assured by excellent authorities that in Ohio, the principal wheat growing state in the Union, the average produce of the wheat lands rarely exceeds 12 bushels an acre! It is not easy to imagine that such a return can be productive; and in years when there is no unusual demand in Europe, it is not conceivable that any large quantity of wheat should be brought hither from the valley of the Mississippi, without a very great improvement in its agriculture. This, however, if it do take place, must be the work of time; and it will not be effected until the existing facilities for the acquirement of unoccupied lands be very much diminished.

*Sugar.*— We subjoin a statement of the sugar produced in Louisiana during each of the 11 years ending with 1844. The statement sets the very precarious nature of this branch of industry in a striking light. An unfavourable season for planting, or the occurrence of frost a little earlier than usual, will reduce the crop a half; so that the amount of the produce can never be estimated beforehand. It partakes more of a gambling character than any other branch of industry carried on in the States.

Crop of 1844	200,000 hhd.	Crop of 1839	115,000 hhd.	Crop of 1835	30,000 hhd.
1843	100,000	1838	70,000	1834	100,000
1842	140,000	1837	65,000	1833	70,000
1841	95,000	1836	70,000	1832	70,000
1840	87,000				

TARIFF OF COMMERCIAL CHARGES AND RATES, ADOPTED BY THE NEW ORLEANS CHAMBER OF COMMERCE, 2ND NOVEMBER, 1846.

<i>Commissions on Sales.</i>		Adjusting and collecting insurance or other claims, without litigation		3 per cent
Sugar, cotton, tobacco, lead, flour, and other products of the soil	2 1/2 per cent.	with litigation	-	5
Domestic manufactures, and all foreign merchandise	5	Purchasing and remitting drafts, or receiving and paying money on which no other commission has been charged	-	1
Guarantee of sales on time	2 1/2	If bills remitted are guaranteed, in addition	-	1 1/2
Purchase and shipment of merchandise or produce	2 1/2	Bills and notes remitted for collection presented and returned	-	1
Sales or purchase of stocks or bullion	1	Landing, custody, and re-shipping merchandise or produce from vessels in distress	-	1
Collecting and remitting dividends	1	— bullion or specie	-	5
Selling vessels or steam boats	2 1/2	Adjusting and collecting general average	-	1
Purchasing	5	Consignments of merchandise withdrawn or re-shipped per order, on account of advances and responsibilities — full commission.	-	15,000
Procuring freights	5	On the surplus amount of invoices of such com-	-	
Collecting freights from foreign ports	2 1/2			
Coasting	5			
Outfits and disbursements	2 1/2			
Effecting insurance	1			

Signments, deducting advances and liabilities  
— half commission.  
Drawing, endorsing, or negotiating foreign bills  
of exchange — domestic bills of exchange — 1 1/4 per cent.  
Receiving, entering, and re-shipping merchandise  
to a foreign port — on amount of invoice — 1 —  
On amount of advances, charges, and liabilities  
on same — 2 1/2 —  
For drawing, accepting, negotiating or endorsing  
notes or drafts without funds, produce, or  
bills of lading in hand — 2 1/2 —  
On cash advances in all cases — 2 1/2 —  
For entering and bonding merchandise for the  
interior — an amount of duties, freight, and  
charges, besides the regular charge for  
warehousing — 2 1/2 —  
Agency for steam boats — according to special  
contract.  
The foregoing rates to be exclusive of brokerage  
and charges actually incurred.

**Receiving and Forwarding Merchandise, exclusive of Charges  
actually incurred.**  
Sugar, molasses, and tobacco — 10 bbl. 50 cents.  
Cotton — 10 bale 50 —  
Hemp — 20 —  
Moss — 10 —  
Provisions or bacon — 10 bbl. 25 per cent.  
— ditto — 10 tierce 12 1/2 —  
Pork, beef, lard, tallow, whiskey, &c., — 10 barrel 6 —  
Flour, grain, and other dry barrels — 5 —  
Lard, nails, and shot — 10 keg 2 1/2 —  
Lead — 10 pig 1 —  
Corn, wheat, beans, oats, and other grain — 10 bag 3 —

**Liquids.**  
Pipes and hogheads — 50 cents.  
Half pipes and tierces — 25 —  
Quarter casks and barrels — 12 1/2 —

**Sundries.**  
Boxes, bales, cases, trunks, and other packages  
dry goods — 10 a 50 cents.  
Earthen and hardware — 1/2 package 25 a 50 —  
Iron and castings — 1/2 ton \$1 00 —  
Soap, candles, wine, &c. — 1/2 box 02 —  
Coffee, spices, salt, &c. — 1/2 bag 06 —  
Gunpowder — 1/2 keg 09 —

**Storage per Month.**  
Cotton and wool — 1/2 bale 20 cents.  
Tobacco — 1/2 bbl. 50 —  
Hemp — 1/2 bale, not exceeding 300 lbs. 10 —  
— — — 600 — 20 —  
— — — 800 — 25 —  
Moss — 1/2 bale 6 —  
Bagging and rope — — — 5 —  
Fetters — — — 1 —  
Hides — — — each 1 1/2 —  
Lead — — — 1/2 pig 100 —  
Iron — — — 1/2 bbl. 25 —  
Bacon and provisions — — — 1/2 bbl. 8 —  
Pork, beef, lard, tallow, whiskey, &c. — 1/2 bbl. 10 —  
Molasses and oil — — — 10 —

Flour — 1/2 bbl. 3 cents.  
Lard — 1/2 keg 2 1/2 —  
Sugar and molasses — 1/2 bbl. 40 —  
Corn, wheat, oats, and other grain — 1/2 bag 5 —  
Coffee, spices, &c. — 1/2 bag 5 —  
Salt — — — 5 —  
Candles, soap, wine, fish, raisins, oil, sweetmeats,  
sugars, &c. — 1/2 box or basket 2 —  
Do. in half boxes — — — 1 —  
Nails — — — 1 —  
Dry goods, as in bulk — 1/2 package 10 a 50 —  
Crochery — 1/2 cask or crate 25 —  
Hardware — 1/2 cask 40 —  
Do. — 1/2 tierce 20 —  
Do. — 1/2 bbl. 10 —  
Liquids — 1/2 pipe or bbl. 40 —  
Do. — 1/2 half pipe or tierce 25 —  
Do. — 1/2 gr. cask or bbl. 10 —  
Claret — 1/2 cask 20 —  
Gunny bags — 1/2 bale 8 —

**Weight of Grain per Bushel.**  
Wheat and rye — 60 lbs.  
Corn — 56 —  
Oats — 32 —  
The tare on lard is as follows: — in bbls., 16 per cent.;  
half do., 18 per cent.; kegs, 20 per cent.

**Freights.**  
When vessels are chartered, or goods shipped by the ton,  
and no special agreement respecting the proportion of tonnage  
which each particular article shall be computed at, the fol-  
lowing regulation shall be the standard: —

That the articles, the bulk of which shall compose a ton, to  
equal a ton of heavy materials, shall in weight be as fol-  
lows: —

Coffee in casks — 1,568 lbs.; in bags 1,830 lbs.  
Cocoa — 1,190 — 1,300  
Pimento — 950 — 1,100  
Flour — 8 bbls. of 196 lbs.  
Beef, pork, tallow, pickled fish,  
and naval stores — 6 bbls.  
Fig and bar iron, lead, and other  
metals or ore, heavy dye-woods,  
sugar, rice, honey, or other  
articles — 2,240 lbs. gross.  
Ship bread, in casks — 672 lbs., bags, 784; bulk,  
896.

Wines, brandy, spirits, and  
liquids generally, reckoning the  
full capacity of the casks, wine  
measure — 200 gallons.  
Grain, peas, and beans, in casks — 12 bushels; in bulk 36 bush.  
Salt, European — 56 —  
Do., West India — 31 —  
Stone coal — 28 —  
Timber, planks, furs, peltry, in  
bales or boxes, cotton wool, or  
other measurement goods — 40 cubic feet.  
Dry hides — 1,120 lbs.

When molasses is shipped by the hoghead without any  
special agreement, it shall be taken at 110 gallons, estimated  
on the full capacity of the cask.

Freights, and commissions on them, when in sterling money,  
shall be settled at \$4 84 per pound sterling; and other cur-  
rency at the value fixed by Congress.

**Louisiana Dry Dock, New Orleans.** — This dock is capable of securing ships of 1,000 tons, and  
drawing 16 feet water, and all steamboats not exceeding 275 feet in length. The following are the rates  
of dockage charged on ships and steamboats.

Rates for docking Ships, and daily Use of Dock.				Rates for docking Steamboats, and daily Use of Dock.			
	Tons.	Rates for docking.	Rates per Day.		Tons.	Rates for docking.	Rates per Day.
Vessels under 100	100	\$75	\$14	Steamboats under 100	100	\$95	\$14

Every additional 25 tons will pay \$10, and \$2 per day.				Every additional 25 tons will pay \$15, and \$2 50 per day, and all boats over 210 feet long will pay \$5 for every additional foot.			

We avail ourselves of this opportunity to lay before the reader the following state-  
ments with respect to Mobile, with which New Orleans is intimately connected.

Mobile, at the mouth of the Alabama river in Mobile bay, had, in 1844, about  
17,000 inhab. It is now become the second port in the Union for the shipping of

cotton, and it has also an extensive and rapidly increasing trade in other things, being the entrepôt for nearly the whole of the state.

The entrance to Mobile Bay is between Mobile Point on the E., and Dauphin Island on the W., about 34 m. apart, the deepest channel having 15 feet water at low ebb.; but vessels drawing more than 8 or 9 feet water cannot, owing to a shoal in the bay, reach the town except at high water. A lighthouse erected on the point, lat. 30° 16' N., long. 88° 32' W., exhibits a fixed light elevated 55 feet above the level of the sea.

Account of the Quantity of the various Articles imported from the Interior to Mobile, in the under-mentioned Years.

Note. — A large number of small coasting vessels have sailed without clearing.

**Tariff of Charges on Cotton at Mobile.** — The proprietors of the several presses and warehouses at Mobile, have adopted the following uniform tariff of charges on cotton: —

Factor's storage on cotton, for the season - - - - - Per bale.  
Compressed cotton - - - - - 20 cents  
Extra ropes on compressed cotton, each - - - - - 64 —

Labour on ship marked cotton - - - - - Per bale.  
Drayage, compressed ditto - - - - - 5 —  
Wharfage, ditto - - - - - 5 —  
Storage on cotton going coastwise, per week - - - - - 5 —  
Turning out and re-storing cotton - - - - - 5 —  
Arranging - - - - - 8 —

**NEWSPAPERS.** Publications in numbers, consisting commonly of single sheets, and published at short and stated intervals, conveying intelligence of passing events.

**Importance and Value of Newspapers in a Commercial Point of View.** — It is foreign to the purposes of this work to consider the moral and political effects produced by newspapers: of the extent of their influence there is no doubt, even among those who differ widely as to its effect. Their utility to commerce is, however, unquestionable. The advertisements they circulate, though these announcements are limited in Great Britain by a considerable duty, the variety of facts and information they contain as to the supply and demand of commodities in all quarters of the world, their prices, and the regulations by which they are affected, render newspapers indispensable to commercial men, supersede a great mass of epistolary correspondence, raise merchants in remote places towards an equality, in point of information, with those in the great marts, and wonderfully quicken all the movements of commerce. But Newspapers themselves have become an important commercial article. In 1842 the gross produce of the stamp duty levied on newspapers in the U. Kingdom was 252,003*l.*: the gross produce of the sale may be estimated at 4½ times this sum; so that on this hypothesis the newspapers produced in that year must have cost the public about 1,134,000*l.* sterling, exclusive of the sums paid for advertisements.

Newspapers, in London, are sold by the publishers to newsmen or newsvenders, by whom they are distributed to the purchasers in town and country. The newsmen, who are the retailers, receive, for their business of distribution, a regulated allowance. The papers sold to the public at 5*d.*, which form the great mass of London newspapers, are sold to the newsmen in what are technically called quires. Each quire consists of 27 papers, and is sold to the newsmen for 8*s.* 9*d.*; so that the newsman's gross profit on 27 papers is 2*s.* 6*d.* In some instances, where newspapers are sent by the post,  $\frac{1}{4}$ *d.* additional on each paper is charged by the newsmen to their country customers. Some of the clerks of the post-office, called clerks of the roads, used to be considerable news-agents; but this, we believe, is no longer the case. Previously to 1836 the stamp duty on a newspaper was rather under 3 $\frac{1}{4}$ *d.* (4*d.* — 20 per cent.); but it was then reduced to 1*d.* nett. A single paper being sold to the newsmen at 4*d.*, the sum which is received by the newspaper proprietors for paper, printing, and the expenses of their establishments, is 3*d.* for each copy: but this is said to be inadequate to defray the expenses; and as it is not improbable that the selling price of newspapers may be raised to 6*d.*, we have constructed the subjoined table to show how papers are disposed of at present to the different classes of dealers, when the price is 5*d.*, and how they would be disposed of were the price raised to 6*d.*

Papers at	Wholesale Newsmen, per 27 Papers.		Retail Newsmen, per 27 Papers.*		Retail Newsmen, per single Copy.	
	Cost.	Profit on Sale.	Cost.	Profit on Sale.	Cost.	Profit on Sale.
5 <i>d.</i>	s. d. 8 9	s. d. 2 6	s. d. 9 0	s. d. 2 3	d. 4	d. 1
6 <i>d.</i>	10 9	2 9	11 3	2 3	5	1

Advertisements form a considerable source of profit to newspapers; and without this source, some of those that are most widely circulated could not support their great expenditure. Each advertisement is charged, without distinction of length, with a duty of 1*s.* 6*d.*, and in 1842 this duty produced 117,056*l.* nett in Great Britain, and 9,321*l.* in Ireland. We have no means of ascertaining exactly the portion of this sum derived from newspapers, as distinguished from other publications, but we believe we should under-estimate it by taking it at 4-5ths of the whole. The charges of newspapers for advertisements are proportioned to their length, and to the character of the newspaper itself. The sum received for them may now be taken, inclusive of the duty, at above 300,000*l.*

Newspaper stamps are obtained at the Stamp Office, where the paper is sent by the stationers to be stamped. The stamps are paid for before the paper is returned. The duty on advertisements, which is also under the management of the commissioners of stamps, is paid monthly; and, for securing these payments, the printer and 2 sureties become bound in moderate sums.

The London newspapers have become remarkable for the great mass and variety of matter which they contain, the rapidity with which they are printed and circulated, and the accuracy and copiousness of their reports of debates. These results are obtained by a large expenditure and considerable division of labour. The reports of parliamentary proceedings are obtained by a succession of able and intelligent reporters, who relieve each other at intervals of  $\frac{1}{3}$  of an hour, or occasionally less. A newspaper cannot aim at copious and correct reports with less than 10 reporters for the House of Commons; and the expense of that particular part of a morning newspaper's establishment exceeds 3,000*l.* per annum.

*Regulations as to Newspapers.*—An important alteration was made in 1836, in the duties on, and in the regulations relating to, newspapers. The act of that year, 6 & 7 Will. 4. cap. 76., has repealed the former duty on newspaper stamps, and imposed in its stead the duties specified in the following schedule:—

		s. d.			s. d.
For every sheet or other piece of paper whereon any newspaper shall be printed	0 0 1		And the following shall be deemed and taken to be newspapers chargeable with the said duties; viz:—		
And where such sheet or piece of paper shall contain, on one side thereof, a superfluous, exclusive of the margin of the letter-press, exceeding 1,530 inches, and not exceeding 2,295 inches, the additional duty of	0 0 4		Any paper containing public news, intelligence, or occurrences printed in any part of the U. Kingdom to be dispersed and made public:		
And where the same shall contain on one side thereof a superfluous, exclusive of the margin of the letter-press, exceeding 2,295 inches, the additional duty of	0 0 1		Also any paper printed in any part of the U. Kingdom weekly or oftener, or at intervals not exceeding 26 days, containing only or principally advertisements:		
Provided always, that any sheet or piece of paper containing on one side thereof a superfluous, exclusive of the margin of the letter-press, not exceeding 765 inches, which shall be published with, and as a supplement to, any newspaper chargeable with any of the duties aforesaid, shall be chargeable only with the duty of	0 0 4		And also any paper containing any public news, intelligence, or occurrence, or any remarks or observations thereon, printed in any part of the U. Kingdom for sale, and published periodically or in parts or numbers at intervals not exceeding 26 days between the publication of any 2 such papers, parts, or numbers, where any of the said papers, parts, or numbers respectively shall not exceed 2 sheets of the dimensions herein-after specified (exclusive of any cover or blank leaf, or any other leaf upon which any advertisement or other notice shall be printed), or shall be published for sale for a less sum than 6 <i>d.</i> , exclusive of the duty by this		

\* Such of the retail newsmen as have a good share of business, purchase direct from the publishers at the wholesale prices.

act imposed thereon: provided always, that no quantity of paper less than a quantity equal to 21 inches in length and 17 inches in breadth, in whatever way or form the same may be made or may be divided into leaves, or in whatever way the same may be printed, shall, with reference to any such paper, part, or number as aforesaid, be deemed or taken to be a sheet of paper: And provided also, that any of the several papers heretofore described shall be liable to the duties by this act imposed thereon, in whatever way or form the same may be printed or folded, or divided into leaves or stitched, and whether the same shall be folded, divided, or stitched, or not.

*Exceptions.*—Any paper called "Pall Mall Gazette," or "Herald and Cry," published in Great Britain by authority of the Secretary of State, or in Ireland by the authority of the Lord Lieutenant.

Daily accounts or bills, of goods imported and exported, or warrants or certificates for the delivery of goods, and the week's bills of mortality: and also papers containing any list of prices current, or of the state of the markets, or any account of the arrival, sailing, or other circumstances relating to merchant ships or vessels, or any other matter wholly of a commercial nature: provided such bills, lists, or accounts do not contain any other matter than what hath been usually comprised therein.

*Regulations, &c.*—A discount of 25 per cent. is to be allowed on the above duties on newspapers printed in Ireland.—(§ 2.)

In order to prevent fraud, in the returns as to newspapers, it is enacted, that, from the 31st of December, 1836, a separate or distinctive stamp or die shall be used for each newspaper.—(§ 3.)

No person is to print or publish a newspaper until after a declaration has been made and lodged at the Stamp Office, containing certain particulars (specified in the act), as to the names and addresses of the printer, and certain of the proprietors of such paper, &c., under a penalty of 50*l.* Persons wilfully making a false or defective declaration are, upon conviction, to be deemed guilty of a misdemeanour.—(§§ 6, 7.)

There are a number of regulations intended to provide for the discovery and liability of the printer and proprietors, the security of the duties, and the prevention of the sale of unstamped papers. A penalty of 50*l.* is imposed on any person printing, publishing, selling, &c. newspapers not duly stamped; and it is declared to be lawful for any officer of stamp, or any person authorised by the commissioners in that behalf, to seize any such offender, and take him before any justice having jurisdiction where the offence is committed, who shall summarily determine the matter, and upon conviction and default of payment, shall commit such offender to prison for some term not exceeding 3, nor less than 1 calendar month.—(§ 17.)

Penalty for sending abroad newspapers not duly stamped, 50*l.*—(§ 18.) Justices may grant warrants to search for unstamped newspapers, and to seize presses, &c. used in printing the same; and on refusal of admittance, officers may break open doors, &c. Persons resisting officers liable to a penalty of 20*l.*—(§§ 22, 23.)

*Influence of the Reduction of the Duty.*—The reduction of the price of newspapers from 7*d.* to 5*d.* occasioned a considerable increase in the demand for the old or established papers; and a considerable number of new weekly papers have also started into existence since the reduction of the duty in the metropolis and throughout the country. Hitherto, however, no new daily paper has been established.

*Influence of the Tax on Newspapers.*—Formerly it used to be impossible, without a violation of the stamp laws, to sell newspapers under 7*d.* or 7½*d.*; so that those poorer persons who could not afford so large a sum, or who had no means of getting a newspaper in company with others, were obliged either to be without one, or to resort to those low-priced journals that were circulated in defiance of the law. This inconvenience has, however, been obviated by reducing the duty to 1*d.* Probably, however, the better plan would have been to have made the duty 1*d.* on all papers sold at or under 4*d.*, and to have made it an *ad valorem* duty of 25 per cent. on all papers published at above that rate. This would have had the same influence as the present plan on the lower priced class of papers, at the same time that it would have subjected the larger and more expensive papers to a proportionally greater charge. But it may, perhaps, be doubted whether the reduction of the duty to 1*d.*, even supposing it had been confined to the cheaper class of papers, was a judicious measure, and whether it would not have been better to have fixed it at 2*d.* on all papers without exception. No doubt, it was contended, at the time that the subject was under discussion, that various advantages would result from the proposed reduction; that the clandestine circulation of cheap journals advocating dangerous doctrines would be suppressed; and that, the stigma attached to low priced journals in the public estimation being removed, men of ability and attainments would find it as much for their advantage to write in them as in the higher priced journals. Probably these anticipations have been in some degree realised; but we much doubt whether the circulation of low priced political journals can ever be of advantage. Such papers are, speaking generally, addressed to the lower and poorer classes of the community; and their writers find it more for their advantage to flatter the prejudices entertained by their readers, and to espouse their peculiar views, how inconsistent soever these may be with the interests of society in general, than to inculcate sounder though less popular principles;—hence the revolutionary character of the greater number of the low priced papers. This, perhaps, may be a necessary evil in a highly advanced country like this; but whether it be so or not, there can be no doubt of its existence, and of its formidable magnitude.

It has sometimes been thought singular that that division of subjects which has been introduced into most other things has not been introduced amongst newspapers. Instead of having all sorts of matter crammed into the same journal, it might be presumed that the better plan would be to have all topics of considerable interest separately treated in papers appropriated to them only, and conducted by persons fully conversant with their principles and details. Under the present omnivorous system, individuals who care nothing for the theatre are, notwithstanding, unable to procure a paper in which it does

not occupy a prominent place; and those who cannot distinguish one tune from another have daily served up to them long dissertations on concerts, operas, oratorios, and so forth. But, how desirable soever in some respects, the plan of appropriating particular papers to particular subjects does not appear to be at all suited to the public taste. In a well conducted daily paper, like *The Times*, ably written articles on all subjects of interest are brought together under the reader's notice, who may read them all, or such only as he pleases. This is incomparably more convenient than to have to hunt for different articles among a variety of journals; and is, in fact, the only plan calculated to meet the wants and exigencies of the public.

Instead of imposing an equal fixed duty or an *ad valorem* duty on newspapers, it has been proposed to repeal the duty entirely, and to substitute in its stead a post-office duty, similar to that charged in the United States. A scheme of this sort would entirely exempt all newspapers printed and sold in large towns from the duty; a result which, we confess, we do not think is in any respect desirable, but the reverse. In our view of the matter, the object ought not to be to relieve newspapers from taxation, or to create differences in their price by charging a duty only on those carried by post, but to assess the duty so that it should fall equally on them all.

*Notices of Newspapers.*—The history of newspapers, and of periodical literature in general, remains to be written; and were the task executed by an individual of competent ability, and with due care, it would be a most interesting and important work. It appears, from the researches of Mr. Chalmers, that the first newspaper published in modern Europe made its appearance at Venice, in 1536; but the jealousy of the government would not allow of its being printed; so that, for many years, it was circulated in manuscript! It would seem that newspapers were first issued in England by authority, in 1588, during the alarm occasioned by the approach of the *Armada* to our shores; in order, as was stated, by giving real information, to allay the general anxiety, and to hinder the dissemination of false and exaggerated statements. From this era, newspapers, of one sort or other, have, with a few intermissions, generally appeared in London; sometimes at regular, and sometimes at irregular intervals. During the civil wars, both parties had their newspapers. The earliest newspaper published in Scotland made its appearance under the auspices of Cromwell, in 1652. The Caledonian Mercury was, however, the first of the Scotch newspapers of native manufacture; it made its appearance at Edinburgh, under the title of *Mercurius Caledonius*, in 1660; but its publication was soon afterwards interrupted. In 1715, a newspaper was, for the first time, attempted in Glasgow.

The *Daily Courant*, the first of the daily newspapers published in Great Britain, made its appearance in London in the early part of the reign of Queen Anne.—(See the *Life of Kuddiman*, pp. 102—121.)

From the Stamp Office accounts, it appears that the number of newspapers sold annually in England, during the 3 years ending with 1753, was 7,411,757; in 1760, 9,464,790; in 1790, 14,035,539; in 1792, 15,005,760.

*American Newspapers.*—The increase of newspapers in the U. States has been a good deal more rapid than in England; a consequence, partly, no doubt, of the greater increase of population in the Union, but more, probably, of their freedom from taxation, and of the violence of party contests. The total number of newspapers annually issued in the Union may be estimated at from 65,000,000 to 75,000,000, while the total number issued in Great Britain and Ireland, in 1841, was only 60,759,392; so that, making allowance for the difference of population, every individual in America has, at an average, nearly twice the supply of newspapers enjoyed by individuals in England. "From this exuberant supply of daily and weekly papers, and the low price charged, as compared with the English and French newspapers, they are liberally patronised by all classes, and are found in almost every dwelling and counting house, and in all hotels, taverns, and shops; and attract a large share of the public attention. As the paths of honour and promotion are alike open to every one, it follows that public discussion forms the principal staple of the newspapers. There is no country where the press has a more powerful influence over public opinion."—(*Picture of New York*, p. 391.)

We are not, however, to estimate the influence of newspaper literature by its quantity only, but must have regard also to its *quality*. The latter is, indeed, the principal thing to be attended to; and in whatever degree the Americans may exceed us in the number, they certainly are immeasurably below us in the quality, of their newspapers. Speaking generally, we do not hesitate to say that the newspaper press is a disgrace to the union. The journals indulge, with few exceptions, in the most offensive personalities. Instead of examining the principles of the measures brought forward, they assail the character and misrepresent the motives of those by whom they are introduced. It is impossible, we believe, to name an individual, who has attained to any high office in the U. States, or to consideration in Congress, who has not been libelled, traduced, and calumniated by a large portion of the press, to a degree that can hardly be imagined. The magnitude of the evil will, probably, lead to its cure. No people, with any pretensions to instruction and morality, can continue to patronise a press whose principal features are misrepresentation, exaggeration, and abuse.

NEW YORK, the capital of the state of that name, and the commercial metropolis

of the U. States, on the southern extremity of Manhattan Island, at the point of confluence of the Hudson River, which separates Manhattan from New Jersey, with East River, which separates it from Long Island, lat.  $40^{\circ} 42'$  N., lon.,  $74^{\circ} 8'$  W. New York bay, or inner harbour, is one of the most capacious and finest in the world; it is completely land locked, and affords the best anchorage. The entrance to the bay through the Narrows is extremely beautiful. On each side, the shore, though wooded down to the water's edge, is thickly studded with farms, villages, and country seats. At the upper end are seen the spires of the city; and in the distance the bold precipitous banks of the Hudson. From New York to the bar between Sandy Hook Point and Schryer's Island (the division between the outer bay or harbour and the Atlantic) is about 17 miles. Fortifications have been erected at the Narrows, Governor's Island, and other places, for the defence of the city and shipping. The wood-cut on the opposite page represents the city and bay of New York, and the surrounding country.

The Hudson river was first explored in 1609, by the famous English navigator whose name it bears, then in the service of the West India Company of Holland. In 1612, New Amsterdam, now New York, was founded by the Dutch, as a convenient station for the fur trade. In 1664, it was taken by the English. The Dutch again recovered possession of it in 1673; but it was retaken by the English in the following year, and continued in their occupation till the termination of the revolutionary war.

New York has increased faster than any other city of the United States. In 1699 it contained 6,000 inhabitants. In 1774, previously to the commencement of the war of independence, the population amounted to 22,750. During the war the population continued stationary; but since 1783, its increase has been quite extraordinary. In 1790, the population amounted to 33,131; in 1800, to 60,489; in 1820, to 123,706; in 1830, to above 213,000, and in 1840, to 312,710. Originally the houses were mostly of wood, and the streets narrow and confined. In these particulars, however, a great improvement has taken place during the last half century; most of the old houses having been pulled down and rebuilt with brick. The new streets, which are broad, and intersect each other at right angles, are well paved and lighted. Broadway, the principal street, is one of the largest and finest in the world. Many of the public buildings are commodious and elegant. The pools, that were formerly abundant in the city and its vicinity, have been completely filled up; a measure that has done much to improve the health of the population. In respect of cleanliness, however, New York is not to be compared with an English town. There is hardly such a thing as a sink or common sewer in the whole city; the night-soil and filth are collected in pits, of which there is one in every house, and, being conveyed to the nearest quay, are thrown into the water; but as these quays are made of timber, with many projections, a great deal of filth is retained about them, producing, in hot weather, an abominable stench. The yellow fever, by which New York is sometimes visited, uniformly breaks out in the lower and dirtiest part of the town; and seldom, indeed, extends to the new and more elevated streets. It is now much less prevalent than formerly; and the general opinion seems to be, that if stones were substituted for timber in the quays, sewers constructed, and proper regulations enforced as to cleanliness, the scourge would entirely disappear.

New York is indebted, for her wonderful increase, to her admirable situation, which has rendered her the greatest emporium of the New World. The rise of the tide is about 6 feet; and even at ebb, there is 21 feet water on the bar; and the water in the outer and inner bays, and in the river, is so deep, that ships of the largest burden lie close to the quays, and may proceed to a great distance up the river. The navigation of the bay is rarely impeded by ice. The great strength of the tide, and the vicinity of the ocean, keep it generally open, even when the Chesapeake and Delaware bays are frozen over. The influence of the tides is felt in the Hudson as far as Troy, 160 miles above New York, affording very peculiar facilities for its navigation. These natural advantages have been vastly extended by a system of canals, which has connected the Hudson not merely with Lake Ontario and Lake Erie, but with the Ohio river, and consequently with the Mississippi and the Gulph of Mexico! So prodigious a command of internal navigation is not enjoyed by any other city, with the exception of New Orleans; but the readier access to the port of New York, the greater salubrity of the climate, and her situation in the most industrious part of the Union, where slavery is abolished, give her advantages over her southern rival, which, it is most probable, will secure her continued preponderance.

*Entrance to Harbour, Light-houses, &c.* — The course in entering the harbour of New York is nearly due W. from the outermost white buoy on the bar, till the buoy on the S. W. point of the east bank be passed, and then nearly due N. The navigation is extremely easy. Pilots generally board vessels without the bar; for, otherwise, they are only entitled to half fees. Were it not for fear of vitiating insurances, their services would seldom be required. — (See *Rates of Pilotage, post.*) The light-house near the extremity of the long, low, narrow tongue of land, projecting from the New Jersey shore, called Sandy Hook, is in lat.  $40^{\circ} 28'$  N., lon.  $74^{\circ} 8'$  W. It is fitted up with a very powerful fixed light, which, in clear weather, may be seen by vessels coming from the westward 10 leagues off. But, from its

position, it is not readily discovered by ships coming from the S. till too near. To obviate this inconvenience, a floating light was moored about 7 miles E. from Sandy Hook Point. In 1838, however, 2 light-houses were erected on Neversink hills, nearly 4 miles S. by E. from Sandy Hook. They are 200 feet apart; the most northerly being furnished with a fixed, and the other with a revolving light, both of great power. The lights are elevated 250 feet above the level of the sea; and may be seen, in clear weather, in all directions, from 40 to 50 miles. Since they were fitted up, the floating light has been discontinued. Vessels load and unload at the wharfs on both sides the city.

*Trade, &c.* — The commerce of New York is very extensive. The value of the merchandise annually loaded and unloaded in the port may be respectively estimated at from 100,000,000 to 120,000,000 dollars. The number of vessels in the port in the busy season varies from 500 to 750, exclusive of about 50 steam packets. The number of arrivals from foreign ports amounted in 1841 to 2,118; and the coasting arrivals are between 4,000 and 5,000. The total value of the imports into the U. States in the year ending the 30th of September, 1841, was 127,946,177 dollars; of which no less than 75,713,426, or nearly 2-3ds, were imported into New York! The imports comprise an infinite variety of articles. The principal are cottons, woollens, linens, hardware, and cutlery; with earthenware, brass and copper manufactures, &c. from Great Britain; silk, wine, brandy, &c. from France and Spain; sugar and coffee from the Havannah and Brazil; with tea, spices, cochineal, indigo, dyewoods, &c. The value of the exports to foreign countries from New York in the year ending the 30th of September 1841, amounted to 33,139,838 dollars, being between  $\frac{1}{2}$  and  $\frac{3}{4}$  part of the total exports from the U. States. The exports principally consist of wheat flour, corn, rice, and cotton; beef, pork, butter, dried fish, and all sorts of provisions; furs, tobacco, coarse

manufactured goods, lumber, &c. The great excess of the imports into New York over the exports is accounted for by the fact, that, while mostly all articles of export from the Western States are shipped at New Orleans, the greater part of the more valuable articles brought from abroad, and destined for the consumption of Ohio, Indiana, Illinois, and, in some degree, even Kentucky, are principally imported into New York.

The tonnage of New York is greater than that of Liverpool, or any other city, with the single exception of London. The registered tonnage belonging to the port on the 30th of June, 1847, amounted to 297,516 tons, and the enrolled and licensed tonnage to 348,527 tons; making a grand total of 646,043 tons, being more than one-fifth part of the whole tonnage of the U. States.

December	-	5	14	16	51	377
Whole number as above	-	-	-	-	-	4,864
Which added to the foreign	-	-	-	-	-	5,167
Makes a total for the year of	-	-	-	-	-	8,031
Whole number last year	-	-	-	-	-	6,562
Increase	-	-	-	-	-	1,079

*Note.*—In the above there are no sloops included, which, if added to the many schooners from Virginia and Philadelphia, with wood and coal, which discharge their cargoes at Brooklyn, Williamsburgh, Jersey City, and the adjacent towns on the Hudson, and are not boarded, owing to the remoteness of those points for general business, would make the number much greater. We estimate the schooners that arrive at the above places, and are not reported, at 6 per day, which we think a small estimate;—this would give for the year 2,190 additional schooners to be added to the coastwise trade, making the whole number of coastwise arrivals for 1847, 7,734.

The following Statement shows the Number of Foreign Arrivals and Passengers in different Years :—

Years.	Arrivals.	Passengers.	Years.	Arrivals.	Passengers.	Years.	Arrivals.	Passengers.
1835	2,094	35,305	1840	1,959	61,797	1844	2,308	61,072

1824	2,612	372,576	45	1840	2,479	618,186	140 58-100ths
1825	2,778	420,514	63 73-100ths				

In addition to these arrivals, which are from foreign and coastwise ports, there are about 1,050 schooners, sloops, &c., employed in coasting inland, not included in the above, averaging about 75 tons, making 78,750 tons. These vessels

are here probably every week during the season of navigation, and about 75 steamboats, which probably are here about every other day; tonnage, 30,760.

**Regulations as to Passengers arriving at New York.**—On the arrival of passengers, an entry must be made at the Custom-house, of their names, clothes, implements of trade or profession (all of which are exempt from duty), and an oath taken respecting them; the form of which, and the entry, may be had at the office gratis. Cabin passengers make this entry themselves, and pay 20 cents each for a permit; on exhibiting which to the officer on board, they are allowed to remove their baggage after having been inspected. Only 1 entry and permit is necessary for a family, and only 90 cents demanded, whatever may be the number of the family. Remains of sea stores, such as tea, sugar, foreign spirits and wines, are liable to pay duties; but unless these are of great bulk or quantity, they are generally allowed to pass free.

An entry is usually made by the master of the vessel, of stowage passengers and their baggage: they pay each 20 cents for a permit. When entry is made by any person not the owner, he gives bond for payment of the duties, if any; and if, after entry is made at the Custom-house, and the oath taken, any article is found belonging to a passenger, liable to pay duty, not specified in the entry, it is forfeited, and the person in whose baggage the article is found subjected in treble the value.

Besides making entry at the Custom-house, it is provided by a law of the State, that every master of a vessel arriving from a foreign country, or from any other port of the U. States, "shall within 24 hours after entering his vessel at the Custom-house, make a report in writing, on oath, to the mayor, and a case of his sickness or absence, to the recorder of the said city, of the name, age, and occupation of every person who shall have been brought as passenger in such ship or vessel on her last voyage, upon pain of forfeiting, for every neglect or omission to make such report, the sum of 75 dollars for every alien, and the sum of 50 dollars for every other person neglected to be so reported as aforesaid."

Masters of ships bringing passengers to New York must also pay a dollar on account of each passenger to the corporation, as commutation money, or give bond that none of them shall become chargeable on the city poor rates for the space of 2 years. They almost uniformly prefer paying the commutation.

**Lines of Packets.**—The establishment of regular lines of packets from New York to foreign ports, and also to every principal port in the U. States, produced a new era in the commerce of the city, and has redounded equally to the benefit of the enterprising individuals by whom they were projected, and the public. The principal intercourse is carried on with Liverpool; there being about 34 packet ships, distributed in 5 lines, employed at present (1848), in maintaining a regular communication with that port. A dozen packet ships are also employed in the trade between New York and London; and 15 in the trade between New York and Havre. These ships vary in size from 600 tons to above 1,000 tons. Their tonnage has latterly been increasing; and, at an average, it may now be estimated at about 1,000 tons. These ships are all American property, and built chiefly in New York. They are probably the finest and fastest sailing merchant vessels in the world; being beautifully modelled, of the best workmanship, and fitted up with every convenience for passengers, and in the most expensive style. The safety, regularity, and expedition with which they perform their voyages is quite astonishing. The average length of a voyage from Liverpool and Portsmouth to New York, may be estimated at about 24 days, and, from the latter to the former, at about 20 days. And it is material to observe, that these voyages are not reckoned from land to land, but from port to port.

The packet ships for New York sail from London on the 7th, 17th, and 27th; and from Portsmouth, or rather Cowes, at which place they touch, on the 1st, 10th, and 30th of each month.

Those bound for New York from Liverpool sail on the 1st, 7th, 13th, 19th, and 25th of each month; and they sail on the same days from New York for Liverpool. Those bound for New York from Havre sail on the same days as those from Liverpool.

Cabin passage to New York from London and Liverpool, 25 guineas; from New York to London and Liverpool, 75 dollars. This includes provisions, beds, &c.; but neither wines nor liquors of any kind.

Each ship has a separate cabin for ladies; each state-room, in the respective cabins, will accommodate two passengers; but a whole state room may be secured for 1 individual by paying at the rate of 1½ passage, that is, 37½ guineas to New York.

Packets for Philadelphia sail from Liverpool on the 8th of every month throughout the year; and 4 of these ships sail from Philadelphia for Liverpool on the 30th of each month; the others do not always return direct for Liverpool, but sometimes go to Charleston, Savannah, &c., to bring cargoes of produce to Liverpool.

Cabin passage same as that to and from New York.

These ships are all American built and owned, being from 500 to 800 tons burden: some of them are as splendid as the New York packets, and all are fitted up with every regard to comfort.

The rate of stowage passage varies, in the course of the year, considerably; depending on the number of ships and the number of passengers going at the time. By the packet ships it fluctuates from 3 to 4 guineas for each full-grown person; and children under 14 years are taken at half price. By other ships

the rate of steerage passage varies, at Liverpool, from 1*l*. 10*s*. to 2*l*. 10*s*.; but the *average* rate may be taken at 2*l*. 10*s*. For these rates, the ship provides nothing but berths, fire, and water; the passengers provide their own provisions, bedding, &c. The expense of provisions for a poor person, who might wish to be as economical as possible, for the voyage out to the U. States, would not be more than from 40*s*. to 50*s*.

The *cabin* passage by the common traders (and many of them are quite equal to the packets in equipment and safety) varies from 12*l*. to 25*l*.; no wines being provided by the ships at these rates, but provisions, bedding, and malt liquor.

**Rules observed by the New York Banks.**—The banks are open every day in the year from ten to three in the afternoon, except Sundays, Christmas Day, New Year's Day, the 4th of July, and general holidays appointed by legal authority, and the bank of New York on Good Fridays.

The interest for discount in the banks in this city is fixed at six per cent. per annum, upon notes or bills not having 60 days to run. Three days of grace are allowed, and the discount taken for the same. Upon notes or bills having more than 60 days to run, 7 per cent. is taken.

Every bill or note offered for discount, must be delivered into the office on the day preceding the day of discount, inclosed in a sealed cover, directed to the cashier, advising the name of the person upon whose account it is offered, &c.

Bills or notes lodged at the banks for collection, are collected free of expense, except when protested for non-payment: the person lodging the same pays the charge of protest.

Deposits of money, or notes for collection, must be entered in the dealer's book at the time such deposit is made.

Gold coins of France, Great Britain, and Spain, are received and paid at the banks at the following rates, according to an act of Congress, passed 1834, viz.: France, 5*s* 1-10 cents the pennyweight. Great Britain, Portugal and Brazil, 94 8-10 cents do. Spain, 89 9-10 cents do.

Silver coins are received at the banks as follows.—1 crown, 10*s* cents.; 1 dollar, 100 cents.; 5 francs, 93 2-100 cents.; pastarens, 18 cents.

**Remarks on Banking in New York.**—The reader will find in the article BANKS, FOREIGN (*anté*, p. 111.), some details as to the banking system of the U. States. It seems to be quite as defective in New York as in any other part of the Union. Several banks in that State have failed, and some of those that still exist, obtained their charters by resorting to the most disgraceful practices. In the summer of 1826, the grand jury of the city entered upon an investigation of certain circumstances connected with the formation of some of these establishments, which ended in the conviction, as conspirators to defraud the public, of not a few citizens, and even of some members of the legislature, who had previously been deemed highly respectable! The Court of Errors afterwards decided, by a small majority, that these convictions were illegal; but the fact of the most scandalous abuses having prevailed was established beyond all question. We may mention, by way of example, that the United States Lombard Association, incorporated in 1825, was sworn to as having a paid-up capital of 300,000 dollars; but the association having failed in 1826, it was ascertained that not more than 30,000 dollars had ever been paid up! There were, we are sorry to say, several other cases quite as bad, or, if possible, even worse than this.—(*Report and Observations on the Banks, &c. of the State of New York*, p. 10.)

In order to protect the public from the mischief resulting from the failure of banks, the legislature of

the State of New York enacted a law, in 1829, compelling all banks chartered in future, or getting their charters renewed, to pay from  $\frac{1}{4}$  to 1 per cent of their capital stock to the treasurer of the State, by whom it is invested and accumulated as a guarantee fund. When a bank fails, its debts, under certain restrictions, are to be paid from this fund. Commissioners have also been appointed, having authority to examine upon oath, and to inquire into any particulars as to the management of the different banks subjected to this regulation.

When the last edition of this work was published, we observed of this system, that "it has not been established for a sufficient length of time to enable a conclusive opinion to be formed as to its practical operation. We believe, however, that it will be found quite inadequate to eradicate the evils complained of. Even were it otherwise successful, what can be more unjust than to tax the capital of solid and well-managed concerns, to create a fund to pay the debts of those set on foot for the purpose of swindling? The interference of the commissioners, by lessening the responsibility of the directors, must be a good deal worse than useless; and can have no effect other than the multiplication of abuses."

These anticipations have been more than realized; and, with but few exceptions, the banks of New York are about in the same rotten and disgraceful state as those in most other parts of the Union. In 1838, the State passed what was called a "general banking law," which it was supposed would have considerable influence, and under which several banks have been established. But this law, like its predecessor, left untouched all the radical vices of the system, and has been quite as ineffectual for any good purpose. In proof of this, it is sufficient to state that the New York Register for 1843 (p. 177.) has a list of no fewer than 26 banks established under the law of 1838 that have since failed and been shut up. The truth is, that the business of banking in New York, as in other parts of the Union, is, as now carried on, an unmixed and scandalous nuisance. And it is worse than idle to expect that it should ever be improved without abolishing the system of limited responsibility, and making the partners in the banks liable to the utmost extent of their means for the debts of the banks. Even this would leave much untouched that is objectionable; but it would go far to prevent banks from degenerating into mere swindling engines; and, were it coupled with the obligation on the part of those who issue notes to give security for their payment, it would do all that legislation can do to obviate the abuse of private banking. The devices that the legislatures of New York and other American States have adopted in this view, are not of the slightest use; while, by teaching the public to depend on them, they facilitate the fraud and misconduct inseparable from the system.

Forgery is extremely prevalent in the State of New York, and, indeed, throughout the Union; a consequence of the low value at which notes are issued, and of their employment even in the smallest transactions.

**SALES BY AUCTION.**—The practice of selling goods, particularly those imported from abroad, by auction, is of long standing in New York, and is carried to a very great extent. Auctioneers are appointed by the senate, on the nomination of the governor.

**Statement of Sales at Auction in the State of New York, from 1833 to 1842 inclusive, from Returns made by the Auctioneers to the Comptroller.**

Years.	Duties.	Amount of Sales dutiable.	Amount of Sales not dutiable.
1833	\$228,719	\$21,985,506	\$12,400,512

**Abstract of the principal Provisions of the Law, concerning Auctions.**

The duties are—  
1. On wines and ardent spirits, foreign or domestic, 2 per cent.

2. On goods imported from beyond the Cape of Good Hope, and sold in packages, bales, &c., as imported, 1 per cent.  
3. On all other articles, subject to duties,  $\frac{1}{4}$  per cent.

The following articles are not subject to duties:—

1. Ships and vessels.

2. Utensils of husbandry, horses, neat cattle, hogs, and sheep.

3. Articles grown, produced, or manufactured in this state, except distilled spirits.

4. All fabrics of cotton, wool, hemp, and flax, manufactured within the jurisdiction of the United States.

Goods are exempted from auction duties:—

1. When they belong to the United States or this State.

2. When sold by the authority of a court, or when seized by a public officer on account of any forfeiture or penalty, or under a distress for rent.

3. The effects of a deceased person sold by executors or administrators, or by a person authorized by a surrogate.

4. The effects of a bankrupt or insolvent sold by his assignees, appointed pursuant to law, or by a general assignment for the benefit of all his creditors.

5. Goods damaged at sea and sold within 90 days after being landed, for the benefit of insurers.

Any citizen of this State may sell at auction (except in the city of New York) all such goods as are not subject to duties. But in the city of New York, or where the goods pay duties, the sale must be by an authorized auctioneer, his partner, or clerk. And any person selling contrary to the said provisions is guilty of a misdemeanor.

When an auctioneer cannot attend an auction by sickness, by duty as a fireman, by military orders, or necessary attendance in a court of justice, or when he is temporarily absent from the place for which he is appointed, he may employ a partner to attend in his behalf.

He must give bond to the people of this State, with 4 freehold sureties, conditioned in the penalty of 5,000 dollars, for the payment of the duties imposed by law and accruing on the sales. The penalty of selling without the bond, is 125 dollars for each article offered for sale.

No auctioneer in any city shall at the same time have more than 1 house or store for holding his auctions, and shall, before entering on his office, designate in a writing, to be filed with the clerk of the city, such house or store, and his partner or partners.

But goods sold in the packages in which they were imported, furniture, and such bulky articles as have usually been sold in warehouses, in the streets, or on the wharfs, need not be sold in the house or store designated in such writing, if such sales be advertised at least 4 days previously, in 1 or more newspapers.

Auctioneers are to receive  $\frac{1}{4}$  per cent. on the amount of all sales, unless by previous agreement in writing; and for de-

manding and receiving an unlawful commission, shall forfeit 250 dollars, and refund the monies so received.

No auctioneer, on the same day and at the same place where his public auction shall be held, nor any other person, at the same time and place, shall sell at private sale any goods liable to auction duties, under penalty of forfeiting their price.

Every auctioneer shall make out in writing a quarterly account, dated on the 1st days of April, July, October, and January in the year for which he is appointed, setting minutely—

1. The sum for which any goods shall have been sold at every auction held by or for him, from the time of his giving bond, or from the date of his last quarterly account.

2. The days on which sales were so made, and the amount of each day's sale, designating the sales made by himself, or in his presence, and those made in his absence, by his partner or clerk, and the causes of his absence.

3. The amount of all private sales made by himself or his partner, and the times thereof.

4. The amount of duties chargeable on all sales made.

Every such account shall, within 90 days after its date, be exhibited, by auctioneers for a city, to the mayor or recorder; and if by an auctioneer for a county, to a county judge, and be verified by oath. Every partner of an auctioneer, and every clerk who has made any sales, shall also swear to be true in the truth and justice of every particular of such account.

The State duties (together with the addition of  $\frac{1}{4}$  per cent. on the whole amount of sales) are to be paid within 10 days after exhibiting such account.

Any deceit or fraud in violating any provision of the law respecting auctioneers, is made a misdemeanor, and the offending party to the payment of treble damages to the party injured.

**Coins.**

**Gold eagle.**—This, with its subdivisions, is the only American gold coin. By the mint regulations of the United States, the eagle, which is the equivalent of 10 dollars, contained previously to the 31st of July, 1834, 170 grains of pure gold, and 232 are pure, and 20 grains alloy. In consequence of the alteration in the composition, that was formerly worth 4 dollars 57 cents, is now worth 4 dollars 67 cents, and is received by the Americans at this rate.

We do not know whether it was the object of the American government, in enacting this law, to introduce a gold in the place of a silver currency; but it will, perhaps, have that effect.

Under the former system, silver was over-valued in the American mint as compared with gold; and, in its consequence, the same everybody's interest to pay his debts in silver rather than in gold, the latter was nearly banished from circulation, precisely in the same way that the over-valuation of gold in the

British mint banished all silver coins of full weight from this country, and that the over-valuation of silver in the French mint banished gold. — (*Année*, p. 304.) Under the present American system, it is said that gold is over-valued from 14 to 14 per cent., so that an individual who has to pay a debt of 1000*l.*, and who employs metallic money for that purpose, will save from 14*l.* to 140*l.* by using gold rather than silver.

*Value of Foreign Gold Coins in the Currency of the U. States.*— It was ordered by an act of Congress, passed at the same time with the New Mint Act, that there "shall pass current as

money, and be receivable in all payments, by weight, for the payment of all debts and demands, from and after the 31st day of July, 1834," viz.: 1. The gold coins of Great Britain, Portugal, and Brazil, of not less than 22 carats fine, at the rate of 93 8-10 cents per penny weight; 2. The gold coins of France, 9-10ths fine, at the rate of 93 1-10 cents per penny weight; and 3. The gold coins of Spain, of the fineness of 90 carats, 3-7-16 grains, at the rate of 89 9-10 cents per penny weight. On this principle the following table has been calculated.

Gold Coins of Great Britain, Portugal & Brazil, 22 Carats fine.

	Weight.		Contents in pure gold.	Value in U. S. currency, estimated by the quantity of pure gold compared with that in the new eagle of 23 1/4 grains	Value in U. S. currency, estimated by the quantity of pure gold compared with that in the new eagle of 23 1/4 grains
	dwt.	gr.	grains	d. c. m.	d. c. m.
GUINEA, (half and 7a. piece in proportion)	5	9 39-89	118-6	5 11 0	5 11 2
SOVEREIGN (half in proportion)	6	5 171-623	113	4 86 9	4 87 *
PORTUGAL.					
Dobron of 21,000 rees (half in proportion)	34	12	759	32 70	32 71
Dobra of 15,000 rees	25	6	401-5	13 10	13 10
Moldova -	6	2	152-2	6 55	7 64
Milree, 1755 -	19	2-4	18-1	0 78	0 78
BRAZIL.					
Dobron -	34	12	759	32 70	32 71
Dobra -	25	6	401-5	13 10	13 10
Moldova -	6	2	152-2	6 55	7 64

*N. B.*— There are several gold coins of Portugal and Brazil, the Joazeiro, the pieces of 16, 12, and 8 testoons, and the old and new cruzado, which are not included in the above table, because they are not 22 carats fine, and of course are not legal tenders, the words of the act being expressed in the currency of the U. States of Great Britain, Portugal, and Brazil, of not less than 22 carats fine.

\* In the above table the coins are all presumed to be of full weight, but fractional parts of a mill have been disregarded in the calculation of their value. It will be found to be a sufficient approximation to the truth for all ordinary purposes. To those who wish perfect accuracy, it may be observed that the quantity of pure gold in the sovereign is 113 18-11, 214 grains, and that the true value of the sovereign compared with the new eagle of 232 grains, is 4 87-7 100. This is also the true par of exchange between the United States and London, and is equal to a premium of 97-10 per cent., as near as can be calculated, on the nominal par of 4 44 or 109 7-10 for 100.

Silver Coins.

Dollar, val. 10 dimes, wt. 416 grs. stand. silver =	4 3-75 ster.
Half dollar 5 dcs.	2 08 do.
Quarter, 2 1/2 dcs.	1 04 do.
Dime, 10 cents, 41 2-5ths	1 0-5 do.
Half dime, 5 dcs.	20 4-5ths

Standard silver is 1,485 parts pure, and 179 alloy.

Coins of the United States legally tendered. — 10 mills make 1 cent, 10 cents 1 dime, 10 dimes 1 dollar, 10 dollars 1 eagle.

Rules for reducing the Currencies of the different States into each other.

To reduce the currencies of New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, into those of New York and North Carolina. — To the given sum add 1-3d part thereof. Of Pennsylvania, New Jersey, Delaware, and Maryland, — to the given sum add 1-4th thereof. Of South Carolina and Georgia, — from the given sum subtract 2-9ths thereof.

To reduce New York and North Carolina into New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, — from the given sum deduct 1-4th thereof. Into Pennsylvania, New Jersey, Delaware, and Maryland, — from the given sum deduct 1-5th thereof. Into South Carolina, — to the sum given add 1-16th, then take 3 of the whole.

To reduce Pennsylvania, New Jersey, Delaware, and Maryland, into New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, — from the sum given deduct 1-5th thereof. Into New York and North Carolina, — to the sum given add 1-5th thereof. Into South Carolina and Georgia, — multiply by 3 and 1-9th and divide the product by 5; or multiply by 28, and divide by 45.

To reduce South Carolina and Georgia into New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, — to the given sum add 2-7ths thereof. Into Pennsylvania, New Jersey, Delaware, and Maryland, — multiply the given sum by 45, and divide by 100. Into New York and North Carolina, — from the given sum subtract 1-7th, and double the remainder.

CUSTOM-HOUSE REGULATIONS. — Vessels must be reported to the collector by the pilot, 24 hours after arrival; must come to a full entry 48 hours after arrival, at which time the commander swears to a detailed account of his cargo, stores, and passengers, and that he has deposited all letters in the post office, except such as are for his ship's husband, at which time he must also deposit the register, clearance, and cocket in the Custom-house.

Warehousing. — There is no warehousing system, but goods are received into the public stores, where they are allowed to

Gold Coins of France, 9-10ths fine.

	Weight.		Contents in pure gold.	Value in U. S. currency, estimated by the quantity of pure gold compared with that in the new eagle of 23 1/4 grains	Value in U. S. currency, estimated by the quantity of pure gold compared with that in the new eagle of 23 1/4 grains

remain 9 months at the risk and expense (for fees of cartage, labourage and storage, as fixed by the Chamber of Commerce, see post) of the owner, without any duties being demandable. Woolens are the only exception to this rule, and are not subject to duty, but are charged upon the amount of duty payable on their account from the time of their importation.

Port Charges. — For American vessels, or those of States having reciprocity treaties: —

	Doll. cts.	d.	s.
Fees on entering -	5	70	1 5 7 1/2
Fees on clearing -	2	700	0 12 1 1/2

CUSTOM-HOUSE FEES. — 1. *Fees payable to Collector.* — Entry of a vessel of 100 tons or upwards, 2 dollars and 50 cents; clearance of a vessel of 100 tons or upwards, 2 dollars and 50 cents; entry of a vessel under 100 tons 1 dollar and 50 cents; clearance of a vessel under 100 tons 1 dollar and 50 cents; every port entry, 2 dollars; permit to land goods, 20 cents; every bond taken officially, 40 cents; permit to load goods, for the exportation, for drawback, 30 cents; drawback or other official certificate, 20 cents; official document (register excepted), required by any person, 20 cents.

2. *Fees payable to the Surveyor.* — Admeasuring and certifying the same, of every ship or vessel of 100 tons and under, per ton, 1 cent; admeasuring of every ship or vessel of 100 tons, and not exceeding 800 tons, 1 dollar and 50 cents; above 800 tons, 2 dollars; for all other services on board any ship or vessel of 100 tons and upwards, having on board goods, wares, or merchandise subject to duty, 3 dollars; for like services on board any ship or vessel of less than 100 tons, 1 dollar and 50 cents; on all vessels not having on board goods, wares, or merchandise subject to duty, 66 2-3 dcs. Certificate for entry of vessel, 3 dollars. Endorsement on registry or record, 1 dollar. Every bond required by this act, 25 cents; every bond for a Mediterranean passport, 40 cents; every seaman's protection, 25 cents.

Under the Coasting Act. — Admeasuring every vessel in order to the registering, enrolment, licensing, or recording the same, of 5 tons or upwards, and less than 20, 50 cents; 20 and not exceeding 70, 75 cents; 70, 1 dollar; above 100, 150 cents. For every certificate of enrolment, 50 cents; every endorsement of ditto, 20 cents; every license, including the bond, not exceeding 20 tons, 25 cents; above 20 tons, and not more than 100, 50 cents; more than 100, 1 dollar. Recording certificate, manifest, and granting permit, of less than 20 tons, 25 cents; above 20 tons, 50 cents. For certifying a manifest and granting permit for registered vessels, 150 cents. For receiving certified manifest and granting permit for registered vessels, 150 cents. Granting permit for a vessel not belonging

to a citizen, on arrival, to proceed from district to district, and receiving a manifest, \$2 dollars; receiving manifest and granting permit to unload, as above, 2 dollars. Granting permit for a vessel to carry on fishery in a foreign port, 25 cents. For report and entry of foreign goods imported in such last-mentioned vessel, 25 cents.

	Dolls.	& c.	d.

*Rates of Wharfage.*—Vessels under 50 tons, 50 cents per day =  $\frac{1}{2}$  3d.; and for every 50 tons more, 12½ cents additional = 7d.

*N.B.*—Wharfs are all private property.

*RATES OF COMMISSION, recommended for general Adoption, and allowed by the New York Chamber of Commerce, when no Agreement subsists to the contrary.*

*On Foreign Business.*—On the sale of merchandise, 5 per cent.—Sale or purchase of stocks, 1 per cent.—Specie, ½ per cent.—Purchase and shipment of merchandise, with fund in hand, on the aggregate amount of costs and charges, ¼ per cent.—Drawing or indorsing bills, in all cases, ¼ per cent.—Vessels, selling or purchasing, ¼ per cent.—Procuring freight, 5 per cent.—Collecting freight on general average, ¼ per cent.—Outfits or disbursements, with funds in hand, ½ per cent.—Effecting marine insurance, in all cases, when the premium does not exceed 10 per cent., on the amount insured, ¼ per cent.—When the premium exceeds 10 per cent., on the amount of premium, 5 per cent.—Remittances in bill, ½ per cent.—Collecting delayed or litigated accounts, 5 per cent.—Adjusting and collecting insurance losses, 2½ per cent.—Receiving and paying monies, from which no other commission is derived, 1 per cent.—Remittances in bill, ½ per cent.—Landing and reshipping goods from vessels in distress, on the value, 2½ per cent.—Receiving and forwarding goods entered at the Custom-house, on the value, 1 per cent.—and 2½ per cent. on remittances in bill, in all cases, ½ per cent.

*On Inland Business.*—On the sale of merchandise, 2½ per cent.—Purchase and shipment of merchandise, or accepting for purchase, without funds or property in hand, 2 per cent.—Sale or purchase of stocks, 1 per cent.—Sale in purchase of specie, ½ per cent.—Sale of bills of exchange with indorsement, ½ per cent.—Sale of bank notes or drafts not current, ½ per cent.—Selling or indorsing bills of exchange, ¼ per cent.—Selling or purchasing vessels, ¼ per cent.—Chartering to proceed to other ports to load, ¼ per cent.—Procuring or collecting freight, 5 per cent.—Outfits or disbursements, 2½ per cent.—Collecting general average, ¼ per cent.—Effecting marine insurance, in all cases when the premium does not exceed 10 per cent., on the amount insured, ¼ per cent.—When the premium exceeds 10 per cent., on the amount of premium, 5 per cent.—Adjusting and collecting insurance losses, 2½ per cent.—Collecting dividends on stocks, ½ per cent.—Collecting bills, and paying over the amount, or receiving and paying monies from which no other commission is derived, 1 per cent.—Receiving and forwarding goods, on the value, ½ per cent.—The same when entered for duty or debenture, 1 per cent.—Remittances in bill, in all cases, ½ per cent.

The above commissions to be exclusive of the guarantee of debts for sale on credit, storage, brokerage, and every other charge actually incurred. The risk of loss by fire, unless insurance be ordered, or robbery, theft, and other unprovided occurrences, if the usual care be taken to secure the property, is in all cases to be borne by the proprietor of the goods. When bills are remitted for collection, and are returned under protest for non-acceptance or non-payment, the same commission to be charged as though they were duly honoured. On consignments of merchandise withdrawn or reshipped, full commission to be charged to the extent of advances or responsibilities incurred, and half commission on the residue of the value.

*RATES OF STORAGE, chargeable per month, as established by the New York Chamber of Commerce.*

#### Quarantine Regulations of the Port of New York.

The following "Act concerning Quarantine, and Regulations in the nature of Quarantine," was passed May 13th, 1846:—

§ 1. The anchorage ground for vessels at quarantine shall be near the Marine Hospital, on Staten Island, and be assigned by buoys to be anchored under the direction of the health officer; and every vessel subject to quarantine shall, immediately on her arrival, anchor within them, and there remain, with all persons arriving in her, subject to the examinations and regulations imposed by law.

§ 2. Vessels arriving at the port of New York shall be subject to quarantine as follows:—

1. All vessels direct from any place where yellow, bilious, malignant, or other pestilential or infectious fever existed at the time of their departure, or which shall have arrived at any place, and proceeded thence to New York, or on board of which during the voyage any case of such fever shall have occurred, arriving between the thirty-first day of May and the first day of October, shall remain at quarantine for at least thirty days after their arrival, and at least twenty days after their cargo shall have been discharged, and shall perform such further quarantine as the health officer may prescribe.

2. All vessels embraced in the foregoing subdivision arriving between the first day of April and the first day of November, exclusive of the time in said subdivision mentioned; all vessels from a foreign port, on board of which during the voyage, or while at the port of departure, any person shall have been sick, or from any place in the ordinary passage from which they pass south of Cape Henlopen, arriving between the thirty-first day of May and the sixteenth day of October; and all vessels from any place (including islands) in Asia, Africa, or the Mediterranean, or from any of the West India, Bahama, Bermuda, or Western Islands, or from any place in America, in the ordinary passage from which they pass south of Georgia, arriving between the first day of April and the first day of November, shall be subject to such quarantine and other regulations as the health officer shall prescribe.

3. It shall be the duty of the health officer to board every vessel subject to quarantine or visitation by him immediately on her arrival; to inquire as to the health of all persons on board, and the condition of the vessel and cargo, by inspection of the bill of health, manifest, log book, or otherwise; to examine on oath as many and such persons on board of vessels suspected of coming from a sickly port, or having had sickness on board during the voyage, as he may judge expedient, and to report the facts and his conclusions to the mayor and commissioners of health in writing.

4. The health officer shall have power

1. To remove from the quarantine anchorage ground any vessel he may think unsafe, to any place south of the quarantine buoys, and inside of Sandy Hook.

2. To cause any vessel under quarantine, when he shall judge it necessary for the purification of the vessel or her cargo, to discharge her cargo at the quarantine grounds, or at some other suitable place out of the city.

3. To cause any such vessel, her cargo, bedding, and the clothing of persons on board, to be ventilated, cleaned, and purified in such manner and during such time as he shall direct; and if he shall judge it necessary to prevent infection or contagion, to destroy any portion of such cargo, bedding, or clothing which he may deem incapable of purification.

4. To prohibit and prevent all persons arriving in vessels subject to quarantine, from leaving quarantine until fifteen days after the sailing of their vessel from the port of her departure, and fifteen days after the last case of pestilence or sickness, or fever that shall have occurred on board, and ten days after her arrival at quarantine, unless sooner discharged by him.

5. To permit the cargo of any vessel under quarantine, or any portion thereof, whenever he shall judge the same free from infection and contagion, to be conveyed to the city of New York, or such place as may be designated by the mayor and commissioners of health, after having reported in writing to the mayor and commissioners of health the state of the condition of said cargo, and his intention to grant such permission; such permission, however, to be inoperative without the written approval of the mayor and commissioners of health.

6. The health officer, the board of health, or the mayor and commissioners of health may, in their opinion it will not be dangerous to the public health, permit the cargo of any vessel under quarantine, or any portion thereof, to be shipped for exportation by sea, or transportation up the North or East rivers; but if the vessel receiving the same shall approach nearer than three hundred yards to the wharves of this city, such cargo may be seized and the vessel and cargo may be held for the use of the Marine Hospital.

7. Every vessel during her quarantine shall be designated by colours, to be fixed in a conspicuous part of her main aloofs.

8. No vessel or boat shall pass through the range of vessels lying at quarantine, or land at the quarantine ground after sunset, without the permission of the health officer.

9. No lighters shall be used for the removal of such vessels at quarantine without permission of the health officer, and subject to such restrictions as he shall impose.

10. All passengers under quarantine who shall be unable to maintain themselves, shall be provided for by the master of the vessel in which they shall have arrived; and if the master shall omit to provide for them, they shall be maintained on shore at the expense of such vessel, and such vessel shall not be permitted to leave the quarantine until such expense shall have been repaid.

11. The health officer, upon the application of the master of any vessel under quarantine, may confine in any suitable place on shore, any person on board of such vessel charged with having committed an offence punishable by the laws of this State, or the United States, and who cannot be secured on board such vessel, and such confinement may continue during the quarantine of such person, or until he shall be proceeded against in due course of law, and the expenses thereof shall be charged and collected, as in the last preceding section.

12. All vessels and persons remaining at quarantine on the first day of October, shall thereafter be subject to such regulations and restrictions as vessels and persons arriving on or after that day.

13. The board of health, or the mayor and commissioners of health, whenever in the judgment of the public health shall require it, may order any vessel at the wharves of the city, or in their vicinity, to the quarantine ground, or other place of safety, and may require all persons, articles, or things belonging to such vessel, to be removed to such place, and remain on board, or removed to the quarantine ground. In case the master, owner, or consignee of the vessel cannot be found, or shall refuse or neglect to obey the order of removal, the board of health, or the mayor and commissioners of health, shall have power to cause such removal at the expense of such master, owner, or consignee; and such vessel or persons shall not return to the city without the written permission of the board of health, or the mayor and commissioners of health.

14. If any vessel arriving at the quarantine ground, subject to quarantine, shall be bound to some port east of the city of New York, the health officer, after having duly visited and examined her, may permit her to pass on her voyage through the Sound; but no such vessel shall be brought to anchor off the city, nor shall any of the crew or passengers land in, or hold any communication with the city, or any person therefrom.

15. No vessel, found on examination of the health officer to be infected with the yellow fever, or to have been so infected after sailing from her port of departure, shall be permitted to approach within three hundred yards of the city of New York, between the first day of May and the first day of October in the same year. But the health officer, with the permission of the board of health of the city of New York and Brooklyn, may permit any vessel arriving at the port of New York to proceed to some wharf designated by the board of health of either of the cities of New York or Brooklyn, and discharge its cargo; provided satisfactory proof be given to the health officer that the port or ports from which said vessel came were free from contagious or infectious disease at the time of her sailing therefrom, and that no sickness of a contagious or infectious type has existed on board the vessel during her entire voyage.

16. The master of every vessel released from quarantine, and arriving at the city of New York, shall, within twenty-four hours after such arrival, deliver the permit of the health officer at the office of the mayor and commissioners of health, or to such person as they shall designate, and such vessel shall not approach within three hundred yards of the city of New York, without the written permission of the mayor and commissioners of health.

17. Every vessel having had during the voyage a case of small-pox, or infectious or contagious disease, and every ves-

and from a foreign port having passengers, and not heretofore declared subject to quarantine, shall, on her arrival at the quarantine ground, be subject to visitation by the health officer, but shall not be detained beyond the time requisite for due examination, unless she shall have on board during the voyage some case of small-pox, or infectious or contagious disease, in which case she shall be subject to such quarantine as the health officer shall prescribe; and it shall be the duty of the health officer, whenever he thinks it is necessary for the preservation of the public health, to cause the persons on board of any vessel to be vaccinated.

§ 17. Nothing in this contained shall prevent any vessel arriving at the quarantine from again going to sea before breaking bulk.

§ 18. The commissioners of health shall admit into the Marine Hospital any passenger who shall have paid hospital monies, during any temporary sickness, within one year after such payment.

The mayor of the city of New York, the resident physician, and the commissioners of health of said city, shall constitute a board of appeal from any direction or regulation of the health officer, with power to grant such and so much relief as may appear to the board thus constituted, or a majority of them, expedient and proper; the decision of the board of health, however, to be paramount.

§ 19. Every appeal from a decision of the health officer shall be made by serving upon him a written notice of such appeal, within twelve hours after such decision, (Sundays excepted,) and the health officer shall make a return in writing, including the facts on which the decision is founded, within twelve hours after the receipt of such notice, (Sundays excepted,) to the mayor, who shall immediately call a meeting of the board of appeal, and shall be president of said board, and said appeal shall be heard and decided within twenty-four hours thereafter, (Sundays excepted,) and the execution of the decision appealed from shall be suspended until the determination of the appeal.

§ 20. Every master of a vessel subject to quarantine or visitation, arriving in the port of New York, who shall refuse or neglect either—

1. To proceed with and anchor his vessel at the place assigned for quarantine, at the time of his arrival;

2. To submit his vessel, cargo, and passengers to the examination of the health officer, and to furnish all necessary information to enable that officer to determine to what length of quarantine and other regulations they ought respectively to be subject to;

3. To remain with his vessel at quarantine during the period assigned for her quarantine; and while at quarantine, to comply with the directions and regulations prescribed by law, and with such as any of the officers of health, by virtue of the authority given to them by law, shall prescribe in relation to his vessel, his cargo, himself, or his crew, shall be guilty of a misdemeanor, and be punished by a fine not exceeding \$2000 dollars, or by imprisonment not exceeding twelve months, or by both such fine and imprisonment.

§ 21. Every master of a vessel hailed by a pilot, who shall either—

1. Give false information to such pilot relative to the condition of his vessel, crew, passengers, or cargo, or the health of the place or places whence he comes, or refuse to give such information as shall be lawfully required;

2. Or land any person from his vessel, or permit any person except a pilot to come on board his vessel, or unlade or tranship any portion of his cargo, before his vessel shall have been visited and examined by the health officer;

3. Or shall approach with his vessel nearer the city of New York than the place of quarantine to which he shall be directed;

shall be guilty of the like offence, and be subject to the like punishment. And every person who shall land from any such vessel, or unlade or tranship any portion of her cargo, under like circumstances, shall be guilty of the like offence, and be subject to the like punishment.

§ 22. Every person who shall violate any provision of this act, or neglect or refuse to comply with the directions and regulations which any of the officers of health may prescribe, shall be guilty of the like offence, and be subject, for each offence, to the like punishment.

§ 23. Every person who shall oppose or obstruct the health officer in performing the duties required of him, shall be guilty of the like offence, and be punished by fine not exceeding 500 dollars, or by imprisonment not exceeding three months, or by both such fine and imprisonment.

§ 24. Every person who, without authority of the health officer, commissioners of health, or board of health, shall go within the enclosure of the quarantine ground, shall be guilty of the like offence, and be punished by fine not exceeding 100 dollars, or by imprisonment not exceeding thirty days, or by both such fine and imprisonment.

§ 25. Every person who shall go on board of, or have any communication, intercourse or dealing with any vessel at quarantine, without the permission of the health officer, shall be guilty of the like offence, and be subject to the like punishment. And such offender shall be detained at quarantine so long as the health officer shall direct, not exceeding twenty days, unless he shall be taken sick of some pestilential or infectious disease.

§ 26. Every person who shall violate the provisions of the sixth article of title 2nd of chapter 14th of part first of the Revised Statutes, by refusing or neglecting to obey or comply with any order, prohibition or regulation made by the board of health, in the exercise of the powers therein conferred, shall be guilty of a misdemeanor, punishable by fine and imprisonment, at the discretion of the court by which the offender shall be tried.

§ 27. Articles 1st, 3rd, 4th, and 6th, of title 2nd of chapter 14th of part first of the Revised Statutes; an act entitled "An act to amend title 2nd, chapter 14th, part first of the Revised Statutes, relating to the quarantine regulations of the port of New York," passed May 2, 1836; an act entitled "An act relative to the quarantine laws," passed May 7, 1839; an act entitled "An act to amend the Revised Statutes relating to the public health," passed April 12, 1842, and all other laws inconsistent with this act, are hereby repealed.

We have derived these statements from the *New York Annual Register*; *The Picture of New York*; *Hunt's Commercial Magazine*; and valuable private communications.

#### TRADE AND NAVIGATION OF THE UNITED STATES.

*Trade and Navigation of the United States, for the Year ending the 30th of June, 1847.—(From the Official Accounts, printed by order of Congress, 14th December, 1847.)*

Statement of the Commerce of each State and Territory, for the year commencing the 1st of July, 1846, and ending the 30th of June, 1847.

\* The decrease of shipping in 1829 is apparent only. From 1790 down to that year, the returns were made up from the registries, without making any allowance for vessels worn out, lost, sold, or captured! This glaring defect was, if noticed at all, not obviated till 1822. No dependence can, therefore, be placed on any previous statement as to the amount of American tonnage.

Statistical View of the Commerce of the United States, exhibiting the Value of the Imports from, and of the Exports to, each Foreign Country: also the Tonnage of American and Foreign Vessels, arriving from, and departing to, each Foreign Country, during the Year ending the 30th of June, 1845.

[illegible]

*Bills of Exchange.*—By a revised law of the State of New York, the following damages on bills drawn or negotiated in this State, and protested for non-payment, are allowed, viz. —

Bills drawn on the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Delaware, Maryland, Virginia or district of Columbia, 5 per cent.

North Carolina, South Carolina, Georgia, Kentucky, or Tennessee, 5 per cent.

Any other state or territory of the U. States, or any other place, on or adjacent to this continent, and north of the equator, or any British or other foreign possessions in the West Indies, or elsewhere on the Western Atlantic Ocean, or any port or place in Europe, 10 per cent.

Such damages shall be in lieu of interest, charges of protest, and all other charges incurred previous to and at the time of giving notice of non-payment, but the holder of such bill shall be entitled to demand and recover lawful interest upon the

aggregate amount of the principal sum specified in such bill, and of the damages thereon, from the time at which notice of protest for non-payment shall have been given, and payment of such principal sum shall have been demanded. — Sect. 19.

If the contents of such bill be expressed in the money of account of the U. States, the amount due thereon, and of the damages herein allowed for the non-payment thereof, shall be ascertained and determined without any reference to the rate of exchange existing between this State and the place on which such bill shall have been drawn, at the time of the demand of payment or of notice of non-payment. — Sect. 20.

If the contents of such bill be expressed in the money of account or currency of any foreign country, then the amount due, exclusive of the damages payable thereof, shall be ascertained and determined by the rate of exchange or the value of such foreign currency, at the time of the demand of payment. — Sect. 21.

**TARIFF OF THE UNITED STATES.**—Notwithstanding the unprecedented progress of the United States in wealth and population, their foreign trade was nearly stationary for the 10 years ending with 1830. And yet, considering the spirit of commercial enterprise by which the people, particularly in the New England States and New York, are animated, and their skill in navigation, it might have been fairly presumed that the growth of their foreign trade would, at least, have kept pace with the development of the internal resources of the country. That it did not do so, is wholly owing to the policy of government. Not satisfied with the extraordinary advances their constituents had made in numbers and wealth, Congress seems to have believed that their career might be accelerated by means of Custom-house regulations!—by giving an artificial direction to a portion of the public capital and industry, and turning it into channels into which it would not naturally flow.

No one who has the slightest acquaintance with the condition of America—who knows that she is possessed of boundless tracts of fertile and unappropriated land—that her population is comparatively thin, and wages high—can doubt for a moment that agriculture *must*, for a long series of years, be the most profitable species of employment in which her citizens can engage. There can be no question, indeed, that such branches of manufacture as are naturally adapted to her peculiar situation will gradually grow up and flourish in America, without any artificial encouragement, according as her population becomes denser, and as the advantage which now exists on the side of agriculture becomes less decided. And the imposition of moderate duties on foreign articles for the sake of revenue would certainly give these branches all the protection to which they are justly entitled, or more. But to force, by means of duties and prohibitions, imposed not for the sake of revenue, but of protection, the premature growth of manufactures, is plainly to force a portion of the industry and capital of the country into businesses in which it will be *least* productive.

Such, however, was, for a lengthened period, the policy of the American legislature. The exploded sophisms of the mercantile system, though renounced by every statesman in Europe, have acquired a noxious influence in Congress, and have been put forth with as much confidence, as if their soundness neither had been nor could be questioned! From 1816 down to the present time (1846), the object of the American legislature has, for the most part, been to bolster up a manufacturing interest, by imposing oppressive duties on most manufactured articles imported from abroad. Now, it is obvious, even had the articles produced in America through the agency of this plan been nearly as cheap as those they superseded, that nothing would have been gained by it; for, to whatever extent the importation of foreign articles may be diminished, there must be a corresponding diminution in the exportation of native American products; so that the only result would have been the raising up of one species of industry at the expense of some other species entitled to an equality of protection. But the "American system" was not so innocuous. Instead of the goods manufactured in the States being as cheap as similar ones manufactured in Europe, they were admitted to be, at an average, from 30 to 50 or 60 per cent. dearer! The extent of the pecuniary sacrifice that was thus imposed on the Union by the tariff modified in 1832 has been variously estimated by American writers; and we have been assured by those who have the best means of knowing, that it may be taken as amounting to from 50,000,000 to 60,000,000 dollars, or from about 11,000,000L to 13,000,000L! And this immense burden—a burden nearly *three* times as great as the whole public expenditure of the republic—was incurred for no purpose of public utility, and was productive of nothing but mischief! The whole effect of the scheme was to divert a certain amount of the national capital from the production of cotton, wheat, rice, tobacco, &c., the equivalents sent to foreigners in payment of manufactured goods, to the direct production of these goods themselves! And as the latter species of industry is less suitable for America, a tax of 13,000,000L a year was imposed on the Union, that the manufacturers might be enabled to continue a losing business. We leave it to others to determine whether the absurdity of the system, or its costliness, be its more prominent feature. That its influence has not been more injurious is solely owing to the smuggling it occasioned. With a frontier like

that of America, it would be worse than absurd to suppose that the old tariff could be carried into effect. But it had enough of influence to render it highly prejudicial — to occasion a great rise in the price of many important articles — to cripple the trade and navigation of the country — and to throw a considerable part of it into the hands of smugglers, who carried it on in defiance of the law.

It is difficult, however, to say how long the system of imposing high duties on most foreign products might have been maintained without so much as a check, but for its political effects. It was principally patronised by the Northern States; and though it would be difficult to show that they derived any benefit from it, it is, at all events, pretty certain that it was most injurious to the Southern States. Their staple products are cotton, tobacco, and rice, of which by far the largest portion is exported to foreign countries; and the planters speedily found that every restriction on importation from abroad occasioned a corresponding difficulty of exportation. This led to a disunion of interests, and to strong remonstrances against the tariff by the Southern States. These, however, were disregarded. Provoked by this treatment, South Carolina took the decisive step of refusing to enforce the customs acts; and threatened, if coercion were attempted, to repel force by force, and to recede from the Union! This was a death-blow to the high duties of the old tariff. Congress now saw, what all sensible men had seen long before, that it was necessary to recede; that, in fact, either the tariff must be modified, or the integrity of the Union be brought into jeopardy. A law, commonly called the "Compromise Act," was in consequence passed on the 14th of July, 1832, which provided that certain reductions should be progressively made on the then existing duties on most descriptions of foreign goods, at certain specified periods between 1833 and 1842, when they were, in most instances, to be reduced to 20 per cent., *ad valorem*.

This act was allowed to take effect for a few years; but as the reduction specified in it began to come into practical operation, the manufacturers, also, began to set up fresh claims for additional protection. Probably, however, the latter might not have been able to carry their point had not the Southern States been apprehensive that if they made any resolute stand against the proposal to increase the duties, and still more if they threatened to secede from the Union in the event of its being carried, they might be brought into serious difficulties by the agitation of the question as to the emancipation of their slaves. The latter, therefore, having to choose between two evils, preferred, of course, that which they believed to be least; and purchased a truce for the emancipation question by agreeing to the tariff act passed in 1842, by which comparatively high duties were again imposed on most descriptions of imported articles.

Happily, however, this system has not been so permanent as was expected. The Western and Southern States, being those most directly interested in a low tariff, have of late years had a majority in Congress; and the apprehensions with regard to negro emancipation, excited by the proceedings in our islands, having subsided, sounder opinions with regard to commercial matters began again to prevail in Congress. Perhaps, however, the majority now referred to, or the party of Mr. Polk, might not have endeavoured to act on these principles without the example set by England; but the great commercial reforms effected in this country during the administration of Sir Robert Peel, and more especially the last and greatest of all, the change in the corn-laws, had a powerful influence in the U. States, and Mr. Polk's government, having profited by these and other circumstances which it is needless to specify, succeeded in carrying the comparatively liberal tariff given below, which took effect from the 1st December, 1846. They have also passed the warehousing act, of which we have subjoined an abstract.

It is, of course, impossible to foretell whether the new tariff will be maintained for any considerable period. It is understood that the political party by which it has been enacted are losing ground, and that those opposing them will, most likely, be in the ascendant at the next presidential election; and, if so, it is probable that an attempt will be made to alter the tariff, by again imposing high duties on most species of manufactured goods. But we would fain hope that the bulk of the American people may see the policy of opposing any such change. They never have been supposed to be blind or indifferent to their own interests; and these, they may be assured, will be better promoted by maintaining a system which enables them to sell in the dearest and to buy in the cheapest markets. If they re-impose high duties they will fall wholly on themselves, and on no one else; and the less they buy from foreigners, the less will they be able to export to them. It is incomparably more for their own advantage than for that of those who deal with them, that the existing tariff should be maintained; and such being the case, the presumption would seem to be that it will be maintained.

We subjoin some paragraphs from a late able report of Mr. Walker, secretary to the Treasury of the U. States, in which the sound principles of commercial intercourse, by the expediency of low duties on imports, are set in a clear light.

"We are beginning to realise the benefits of the new tariff, many imports having been warehoused in anticipation of the new duties, and some already paid. By freer interchange of commodities, the foreign market is opened to our agricultural products, our tonnage and commerce are rapidly augmenting, our exports enlarged and the price enhanced, exchanges are in our favour, and specie is flowing within our limits. The country was never more prosperous, and we have never enjoyed such large and profitable markets for all our products. This is not the result of an inflated currency, but is an actual increase of wealth and business. Whilst agriculture, commerce, and navigation, released from onerous taxes and restrictions, are thus improved and invigorated, manufactures are not depressed. The large profits of manufacturers may be in some cases somewhat diminished, but that branch of industry, now reposing more on its own skill and resources, is still prosperous and progressive. New manufactories are being erected throughout the country, and still yield a greater profit, in most cases, than capital invested in other pursuits.

"Commerce between nations is but an exchange of their respective products, specie liquidating only the occasional fluctuating balances, and cannot long be maintained to any great extent by sales for specie only. Thus, if England opens her markets to our products, whilst we exclude by high duties most of the fabrics she would sell in exchange, her specie would rapidly diminish, and such a commerce would languish and decline. She might still, from necessity, purchase a portion of our products; but a necessity, equally stern and irresistible, from exhausted means, would soon compel her to reduce the purchases and price, and thus diminish the balance demanded from her in specie. To maintain, then, permanently a profitable commerce with England, the barriers must be broken down on both sides — her corn-laws repealed, and our duties reduced, so as to permit an exchange of her fabrics and our products. With high duties on our part, we could realise but little permanent advantage from the repeal of her corn-laws. Such high duties would continue to enforce, against our farmers, the British corn-laws, nearly as effectually as though they had never been repealed. Before the repeal of these laws, the advocates of our protective policy conceded that, if England would open her markets for our breadstuffs and provisions, we should receive her fabrics in exchange. Now her markets are thus opened to these products, and the friends of a protective tariff, abandoning their former position, would still arrest, by high duties, the exchange of English fabrics for our breadstuffs and provisions. If the reduced duties are continued on both sides, so as to permit a reciprocal interchange of commodities, the foreign market, now opened for our breadstuffs and provisions, must be maintained.

"Our farmers now have, and must retain, our home market, with or without the tariff, because breadstuffs and provisions cannot profitably be imported here. The few diverted from farming to manufactures, by a high tariff, bear no comparison in number with the people of the world, whose markets are lost, in whole or in part, by high duties. Nor is it chiefly the farmers, but the merchant, the ship-builder, and ship-owners, the seamen, and the thousands of labourers in the marts of our foreign commerce, that furnish much the larger portion of those who are driven by a high tariff from existing pursuits into manufactures; and consuming, as they all did, our own breadstuffs and provisions, as well before as after this change of their pursuits, no additional market is thereby secured to the farmer. Indeed, there is an absolute loss, in so far as the machinery of the manufacturer, which consumes no breadstuffs or provisions, is substituted for the manual labour engaged in agriculture, commerce, and navigation.

"The number of manufacturers would not be increased (if increased at all) more than one-tenth by the difference between the tariff of 1843 and that of 1846; and of that tenth more than one-half would not have changed from agricultural pursuits. In the mean time, when commerce and navigation flourish under low duties, a larger number of consumers of breadstuffs and provisions are diverted to these pursuits from agriculture, than would be driven from it into manufactures by high duties. Nothing, then, is gained in a home market to the farmer by high duties, whilst the markets of the world are lost or diminished. The population of the world is now one thousand millions, increasing at the rate of ten millions per annum, with but little augmentation anywhere of breadstuffs and provisions, except in our own country; yet our farmers are asked to abandon this immense market, in the vain attempt to create an adequate home market, by sacrificing agriculture, commerce, and navigation for the benefit of manufactures.

"Experience is against the protective policy. In England, after a long trial, and ruinous results, it is abandoned; and here, under the tariff of 1842, the prices of breadstuffs and provisions fell, and have now risen with the reduction of duties and the opening of a foreign market. From a long peace, Europe is becoming so densely populated, that her poorer soil and more uncertain climate afford a less adequate supply of food from year to year for her rapidly increasing population. Under a system of low duties, and a reciprocal interchange of commodities, it will be the interest, not only of Great Britain, but also of most of the continent of Europe, to take a large supply of food from us; but, by arresting the exchange of their fabrics for our products, it becomes their interest, and in fact a necessity, to look for and encourage markets elsewhere; and also by extraordinary means, and high governmental bounties, to drive capital into agriculture there, to supply the wants of their people, unable to purchase our products, for which, by high duties, we demand payment in specie.

"If we receive the fabrics of Europe in exchange for our products, it will be their interest to encourage and enlarge that commerce, and it must go on rapidly augmenting, until our country becomes the granary for Europe, and our export there of food shall even exceed that of cotton, great as that is destined to be under a system of low duties. With this enlargement of our exports will come a correspondent increase of our imports, and a great augmentation of the revenue of the government, and of the prosperity of the people. There will be a greater number more profitably engaged in agriculture, commerce, and navigation. The increased number and prosperity of those classes, constituting four-fifths of the whole people, will enable them greatly to extend their purchases; and the manufacturers, by the increased ability and means of our own people, will derive, in a series of years, a greater benefit, than by destroying the ability of our customers, by excluding their products from the foreign market, and depriving them to that extent of the means to purchase at home or abroad.

"If the ship-builder constructs, and the navigator freights more vessels — if the farmer sells more breadstuffs and provisions, and the planter more cotton, and at better prices — if the merchant transacts a larger and more prosperous business — if the seamen increase in number and receive better wages — if the working classes employed in connection with trade in our American marts of foreign commerce are increased and rendered more prosperous, they must all be enabled to purchase more of our own manufactures, and at better prices. Under such a system of reciprocal interchange of commodities with all the world, the great city of New York would become (what she now is for the States of this union) the great mart for the commerce of the various nations of the earth. Located near the centre of the commerce of the world than any European city, she would go on augmenting, until she had surpassed them all, and within her own limits and suburbs would afford a larger home market for our breadstuffs and provisions, than the whole number whom a protective tariff would drive from agriculture to manufactures.

"Such would be the effect on New York as a market for breadstuffs and provisions, whilst New Orleans, Philadelphia, Boston, Baltimore, and our other great commercial marts, would move onward in an accelerated progress, augmenting the demand for agricultural products as well as for foreign and domestic manufactures. This is the true method of building up a home market for the products of all our industry. This is the most equal, just, certain, and permanent, as well as the most effectual and comprehensive protection and encouragement, not only of manufactures, but also of agriculture, commerce, and navigation, and the labour connected with every branch of American industry."

## COMMERCIAL REGULATIONS.—THE UNITED STATES TARIFF, 1846.

*An Act reducing the Duty on Imports, and for other Purposes.*

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that from and after the first day of December next (1846), in lieu of the duties heretofore imposed by law on the articles hereinafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid on the goods, wares, and merchandise herein enumerated and provided for, imported from foreign countries, the following rates of duty: that is to say—

On goods, wares, and merchandise mentioned in Schedule A, a duty of 100 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule B, a duty of 40 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule C, a duty of 30 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule D, a duty of 25 per centum ad valorem.

On goods, wares, and merchandise mentioned in Schedule E, a duty of 20 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule F, a duty of 15 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule G, a duty of 10 per centum ad valorem.  
On goods, wares, and merchandise mentioned in Schedule H, a duty of 5 per centum ad valorem.

Sec. 2. From and after the 1st day of December next, the goods, wares, and merchandise mentioned in Schedule I, shall be exempt from duty.

Sec. 3. From and after the 1st day of December next, there shall be levied, collected, and paid, on all goods, wares, and merchandise imported from foreign countries and not specially provided for in this act, a duty of 20 per centum ad valorem.

Sec. 4. In all cases in which the invoice or entry shall not contain the weight or quantity, or measure of goods, wares, or merchandise, not weighed, or measured, or gauged, the same shall be weighed, gauged, or measured, at the expense of the owner, agent, or consignee.

Sec. 5. From and after the 1st day of December next, in lieu of the bounty heretofore authorized by law to be paid on the exportation of pickled fish of the fisheries of the United States, there shall be allowed, on the exportation thereof, if cured with foreign salt, a drawback equal in amount to the duty paid on the salt, and no more; to be ascertained under such regulations as may be prescribed by the Secretary of the Treasury.

Sec. 6. All goods, wares, and merchandise, imported after the passage of this act, and which may be in the public stores on the 2nd day of December next, shall be subject to no other duty upon the entry thereof than if the same were imported respectively after that day.

Sec. 7. The 12th section of the act entitled "An act to provide revenue from imports and to change and modify existing laws imposing duties on imports, and for other purposes," approved August 30, 1842, shall be and the same is hereby so far modified, that all goods imported from this side the Cape of Good Hope or Cape Horn may remain in the public stores for the space of 1 year, instead of the term of 60 days prescribed in the said section: and that all goods imported from beyond the Cape of Good Hope or Cape Horn may remain in the public stores one year, instead of the term of 90 days, prescribed in the said section.

Sec. 8. It shall be lawful for the owner, consignee, or agent of imports which have been actually purchased, on entry of the same, to make such addition in the entry, to the cost or value given in the invoice, as, in his or their opinion, may raise the same to the true market value of such imports in the principal markets of the country whence the importation shall have been made, or in which the goods imported shall have been originally manufactured or produced, as the case may be; and to add thereto all costs and charges which, under existing laws, would form part of the true value at the port where the same may be entered, upon which the duties should be assessed. And it shall be the duty of the collector within whose district the same may be imported or entered to cause the dutiable value of such imports to be appraised, estimated, and ascertained, in accordance with the provisions of existing laws; and if the appraised value thereof shall exceed, by ten per centum or more, the value so declared on the entry, then, in addition to the duties imposed by law on the same, there shall be levied, collected and paid, a duty of 20 per centum ad valorem on such appraised value: provided, nevertheless, that under no circumstances shall the duty be assessed upon an amount less than the invoice value; any law of Congress to the contrary notwithstanding.

Sec. 9. The deputies of any collector, naval officer, or surveyor, and the clerks employed by any collector, naval officer, surveyor, or appraiser, who are not by existing laws required to be sworn, shall, before entering upon their respective duties, or, if already employed, before continuing in the discharge thereof, take and subscribe an oath or affirmation faithfully and diligently to perform such duties, and to use their best endeavours to prevent and detect frauds upon the revenue of the United States; which oath or affirmation shall be administered by the collector of the port or district where the said deputies or clerks may be employed, and shall be of the form to be prescribed by the Secretary of the Treasury.

Sec. 10. No officer or other person connected with the navy of the United States shall, under any pretence, import in any ship or vessel of the United States any goods, wares, or merchandise, liable to the payment of any duty.

Sec. 11. All acts and parts of acts repugnant to the provisions of this act be and the same are hereby repealed.

## SCHEDULE A.—100 per centum ad valorem.

Brandy, and other spirits distilled from grain, or other materials.	Cordials, absynthe, arrack, curacao, kirschenwasser, liqueurs, maraschino, &c.	raffa, and all other spirituous beverages of a similar character.
---	--	---

## SCHEDULE B.—40 per centum ad valorem.

Alabaster and spar ornaments.	Dates.	and game, sealed, or enclosed in cans, or otherwise.
Almonds.	Figs.	Prunes.
Anchovies, sardines, and all other fish preserved in oil.	(Linger root, dried or green.	Raisins.
Campybor, refined.	Glass, cut.	Seaglass tops for tables or other articles of furniture.
Casals.	Man.	Segars, snuff, paper segars, and all other manufactures of tobacco.
Cloves.	Manufactures of cedar-wood, granadilla, ebony, mahogany, rose-wood, and satin-wood.	Wines—Burgundy, Champagne, claret, Madeira, port, sherry, and all other wines, and imitations of wines.
Composition tops for tables or other articles of furniture.	Nutmegs.	
Comfits, sweetmeats, or fruit preserved in sugar, brandy, or molasses.	Pimento.	
Currents.	Prepared vegetables, meats, poultry,	

## SCHEDULE C.—30 per centum ad valorem.

Ale, beer, and porter, in casks or bottles.	of grass, oier, palm-leaf, straw, whalebone, or willow, not otherwise provided for.	Cameos, real and imitation, and mosaic, real and imitation, when set in gold, silver, or other metal.
Argentine, Alabaster, or German silver, manufactured or unmanufactured.	Bay rum.	Cases and sticks for walking, finished or unfinished.
Articles embroidered with gold, silver, or other metal.	Beads, of amber, composition, or wax, and all other beads.	Capers, pickles, and sauces of all kinds, not otherwise provided for.
Articles worn by men, women, or children, of whatever material composed, made up, or made wholly, or in part, by hand.	Benzoates.	Caps, hats, muff, and tippets of fur, and all other manufactures of fur, or of which fur shall be a component material.
Asen's skin.	Boleigne sausages.	Caps, gloves, leggings, mits, socks, stockings, wore shirts and drawers, and all similar articles made on frames worn by men, women, or children, and not otherwise provided for.
Balsam, cosmetics, essences, extracts, perfume, pastes, and tinctures, used either for the toilet or for medicinal purposes.	Bracelets, braids, chains, curls, or ringlets, composed of hair, or of which hair is a component part.	
Baskets, and all other articles composed	Braces, suspenders, webbing, or other fabrics, composed wholly or in part of India rubber, not otherwise provided for.	
	Brooms and brushes of all kinds.	

Card cases, pocket books, shell boxes, souvenirs, and all similar articles, of whatever material composed.

Carpets, carpeting, hearth-rugs, bed-sides, and other portions of carpeting, being either Aubusson, Brussels, Ingrain, Saxony, Turkey, Venetian, Wilton, or any other similar fabric.

Carriages, and parts of carriages.

Cayenne pepper.

Cheese.

Cinnamon.

Clocks, and parts of clocks.

Clothing, ready-made, and wearing apparel of every description, of whatever material composed, made up or manufactured, wholly or in part, by the tailor, seamstress, or manufacturer.

Coach and harness furniture, of all kinds.

Coal.

Coke and culm of coal.

Combs of all kinds.

Compositions of glass or paste, when set.

Confectionery of all kinds, not otherwise provided for.

Coral, cut or manufactured.

Corks.

Cotton cords, gimps, and galloons.

Court-plaster.

Crayons of all kinds.

Cutlery of all kinds.

Diamonds, gems, pearls, rubies, and other precious stones, and imitations of precious stones, when set in gold, silver, or other metal.

Dolls, and toys of all kinds.

Earthen, China and stone ware, and all other wares, composed of earthy or mineral substances, not otherwise provided for.

Epaulettes, galloons, laces, knots, stars, tassels, tresses and wings of gold, silver, or other metal.

Fans and fire-screen of every description, of whatever material composed.

Feathers and flowers, artificial or ornamental, and parts thereof, of whatever material composed.

Fire-crackers.

Flats, brads, plaits, spertures, and willow squares, used for making hats or bonnets.

Frames and sticks for umbrellas, parasols, and sun-shades, finished or unfinished.

Furniture, cabinet and household.

Ginger, ground.

Glass, colored, stained, or painted.

Glass crystals for watches.

Glasses or pebbles for spectacles.

Glass tumblers, plain, moulded, or pressed, not cut or painted.

Bones or tincol.

Burgundy pitch.

Buttons and button moulds, of all kinds.

Baiter, bookings, flannels, and floor-cloths, of whatever material composed, not otherwise provided for.

Cables and cordage, tarred or untarred.

Calomel, and all other mercurial preparations.

Campbor, crude.

Cotton laces, cotton insertings, cotton trimming laces, cotton laces and braids.

Acids—acetic, aceticus, benzoic, boracic, chromic, citric, muriatic, white and yellow, nitric, pyrogenuous and tartaric, and all other acids of every description, used for chemical or medicinal purposes, or for manufacturing, or in the fine arts, not otherwise provided for.

Aloes.

Alum.

Amber.

Ambergris.

Angora, Thibet, and other goat's hair or mohair, unmanufactured.

Aniseed.

Animal carbon.

Antimony, crude and regulus of.

Arrow-root.

Articles, not in a crude state, used in dyeing or tanning, not otherwise provided for.

Asafoetida.

Bacon.

Bananas.

Barley.

Beef.

Brewers.

Berries, vegetables, flowers, and bark, not otherwise provided for.

Bismuth.

Bitter apples.

Blankets of all kinds.

Blank books, bound or unbound.

Paintings on glass.

Porcelain glass.

Grapes.

Gum benzoin or Benjamin.

Hair pencils.

Hat bodies of cotton.

Hats and bonnets, for men, women, and children, composed of straw, satin straw, chip, grass, palm-leaf, willow, or any other vegetable substance, or of hair, whalebone, or other material not otherwise provided for.

Hemp, unmanufactured.

Honey.

Human hair, cleaned or prepared for use.

Ink and ink-powder.

Iron, in bars, blooms, bolts, loops, pigs, rods, slabs, or other form, not otherwise provided for.

Castings of iron.

Old or scrap iron.

Vessels of cast-iron.

Japanned ware of all kinds, not otherwise provided for.

Jewelry, real or imitation.

Jet, and manufactures of jet, and imitations thereof.

Lead pencils.

Macaroni, vermicelli, gelatine, jellies, and all similar preparations.

Manufactures of the bark of the cork-tree, except corks.

Manufactures of bone, shell, horn, pearl, ivory, or reptile ivory.

Manufactures, articles, vessels, and wares, not otherwise provided for, of brass, copper, gold, iron, lead, pewter, platinum, silver, tin, or other metal, or of which either of those metals or any other metal shall be the component material of chief value.

Manufactures of cotton, linen, silk, wool, or worsted, if embroidered or tamboured in the loom, or otherwise, by machinery, or with the needle, or other process.

Manufactures, articles, vessels, and wares, of glass, or of which glass shall be a component material, not otherwise provided for.

Manufactures and articles of leather, or of which leather shall be a component part, not otherwise provided for.

Manufactures, and articles of marble, marble paving tiles, and all other marble more advanced in manufacture than in slabs or blocks in the rough.

Manufactures of paper, or of which paper is a component material, not otherwise provided for.

Manufactures, articles, and wares of paper mache.

Manufactures of wood, or of which

#### SCHEDULE D. — 25 per centum ad valorem.

Floss silk, feather beds, feathers for beds, and down of all kinds.

Grass-cloth.

Hair-cloth, hair seating, and all other manufactures of hair, not otherwise provided for.

Jute, seal grass, colt, and other vegetable substances, unmanufactured, not otherwise provided for.

Manufactures, composed wholly of cotton, not otherwise provided for.

Manufactures of goat's hair or mohair, or of which goat's hair or mohair shall

be a component part, not otherwise provided for.

Manufactures of wool, or of which wool shall be the component material of chief value, not otherwise provided for.

Medicinal preparations, not otherwise provided for.

Metallic pens.

Mineral waters.

Molasses.

Musk, rifles, and other fire-arms.

Nuts, not otherwise provided for.

Oats and ochry earths, used in the composition of putters, corks, whether dry or ground in oil.

Oil-cloth of every description, of whatever material composed.

Oils, volatile, essential, or expressed, and not otherwise provided for.

Olive oil in casks, other than used oil.

Olive seed oil, and all other olive oil, not otherwise provided for.

Olive.

Paper—antiquarian, demy, drawing, elephant, folio, quarto, imperial, heart, and all other paper not otherwise provided for.

Paper boxes, and all other fancy boxes.

Paper envelopes.

Parasols and sun-shades.

Parment.

Pepper.

Plaster and gilt ware of all kinds.

Plat.

Plum.

Potatoes.

Red chalk pencils.

Rodent of all kinds, not otherwise provided for.

Salmon, preserved.

Sealing wax.

Shew silk, in the gum or purified.

Shoes composed wholly of India rubber.

Side-arms of every description.

Silk twist and twist composed of silk.

Silver-plated metal, in sheets or other form.

Sloop Castle, perfumed, Windsor, and all other kinds.

Sugar of all kinds.

Syrup of sugar.

Tobacco, unmanufactured.

Tarsons and pack-thread, of whatever material composed.

Umbrellas.

Vellum.

Vinager.

Wafers.

Water colours.

Wood, unmanufactured, not otherwise provided for, and fire-wood.

Wool, unmanufactured.

#### SCHEDULE E. — 20 per centum ad valorem.

Blue or Roman vitriol, or sulphate of copper.

Boards, planks, staves, lath, scantling, split, shaven and saved timber, and timber to be used in building wharves.

Bocho leaves.

Broccia.

Brown liquor.

Bronze powder.

Butter.

Calcium.

Calamine.

Cantharides.

Caps, gloves, leggins, mits, socks, stockings, wove shirts and drawers, made on frames, composed wholly of cotton, worn by men, women, and children.

Cassa buds.

Castor oil.

Cestrum.

Cedar-wood, ebony, granadilla, mahogany, rose-wood, and satin-wood, unmanufactured.

Chocolate.

Chromate of lead.

Chromate, bichromate, hydriodate, and prussiate of potash.

Coleus.

Cocos-nuts.

Coculus indicus.

Copperas or green vitriol, or sulphate of iron.

Copper rods, bolts, nails, and spikes.

be a component material, not otherwise provided for.

Manufactures of silk, or of which silk shall be a component material, not otherwise provided for.

Manufactures of worsted, or of which worsted shall be a component material, not otherwise provided for.

Mitting, China, and other floor mats and mats, made of flags, jute, or grass.

Roofing slates, and slates other than roofing.

Woolen and worsted yarn.

Copper bottoms.

Copper in sheets or plates, called brassiers' copper, and other sheets of copper, not otherwise provided for.

Crown of tartar.

Cuba.

Dried pulp.

Emery.

Ribes.

Extract of indigo.

Extracts and directions of log-wood and other tree-woods, not otherwise provided for.

Extract of madder.

Felapar.

Fish-bone.

Fish, foreign, whether fresh, smoked, dried, or pickled, not otherwise provided for.

Fish, green or bluish-green.

Fish-oil.

Plumage.

Flour of sulphur.

French beet.

French chalk.

Fruit, green or ripe, not otherwise provided for.

Putrescent or fermenting powders.

Pure dressed on the skin.

Gamboge.

Glass.

Green turtle.

Gummy cloth.

Gunpowder.  
Hair, curled, moss, sea-weed, and all other vegetable substances used for beds or mattresses.  
Hairs.  
Hats of wool.  
Hats of bodies, made of wool, or of which wool shall be a component material of chief value.  
Hatters' plumb, composed of silk and cotton, but of which cotton is the component material of chief value.  
Hemp-seed or linseed, and rape-seed oil, and all other oils used in painting.  
Indian corn and corn-meal.  
Ipecacuanha.  
Iridium.  
Iris or orris root.  
Iron liquor.  
Ivory or bone black.  
Jalap.  
Juniper berries.  
Lac spirits.  
Lac sulphur.  
Lampblack.  
Lard.  
Leather, tanned, bend or sole.  
Leather, upper of all kinds.  
Lead in pipe, bars, or sheets.  
Lead-pipes.  
Lead-pipe shot.  
Lead-pipe.  
Linen of all kinds.  
Liquorice paste, juice, or root.  
Litharge.  
Malt.  
Manganese.  
Manna.  
Manufactures of flax, not otherwise provided for.  
Manufactures of hemp, not otherwise provided for.  
Marble, in the rough, slab, or block, unmanufactured.  
Marine coral, unmanufactured.  
Medicinal drugs, roots, and leaves, in a crude state, not otherwise provided for.  
Metals, Dutch and bronze, in leaf.  
Metals, unmanufactured, not otherwise provided for.

Arsenic.  
Bark, Peruvian.  
Bark, Quina.  
Brazil paste.  
Brimstone, crude, in bulk.  
Codilla, or tow of hemp or flax.  
Cork-tree bark, unmanufactured.  
Diamonds, glaziers', set or not set.

Ammonia.  
Annatto, Kamcon or Orleans.  
Bartite.  
Bleaching powders, or chloride of lime.  
Books printed, magazines, pamphlets, periodicals, and illustrated news papers, bound or unbound, not otherwise provided for.  
Building stones.  
Burr stones, wrought or unwrought.  
Caneos and mosaics, and imitations thereof, not set.  
Chronometers, box or ships', and parts thereof.  
Cudbear.  
Cocoa.  
Cocoa shells.  
Compositions of glass or paste, not set.  
Cudbear.  
Diamonds, gems, pearls, rubies, and other precious stones, and imitations thereof, when not set.  
Engravings or plates, bound or unbound.

Alcornoque.  
Argol, or crude tartar.  
Bells, when old, or bell metal, fit only to be remanufactured.  
Berries, nuts, and vegetables, used exclusively in dyeing or compounding dyes; but no article shall be classed as such that has undergone any manufacture.  
Brass, in pigs and bars.  
Brass, when old, and fit only to be remanufactured.  
Brazil wood, and all other dye-wood, in sticks.  
Bristles.  
Chalk, not otherwise provided for.  
Clay, unwrought.  
Copper, in pigs or bars.  
Copper, when old, and fit only to be remanufactured.  
Filins.

Animals imported for breed.  
Bullion, gold and silver.  
Culmets of coins, medals, and other collections of antiquities.

Mineral and bituminous substances, in a crude state, not otherwise provided for.  
Musical instruments of all kinds, and strings for musical instruments of whip gut or cat-gut, and all other strings of the same material.  
Needles of all kinds, for sewing, darning, or knitting.  
Nitrate of lead.  
Onits and ostrual.  
Oils—neat-foot and other animal oil, spermaceti, whale, and other fish oil, the produce of foreign fisheries.  
Opium.  
Oranges, lemons, and limes.  
Orange and lemon peel.  
Oster or willow, prepared for basket-makers' use.  
Patent mordant.  
Paints, dry or ground in oil, not otherwise provided for.  
Paper hangings and paper for screens or fire-boards.  
Paving-stones.  
Paving and roofing tiles and bricks.  
Peel or hulled barley.  
Periodicals and other works in the course of printing and republication in the United States.  
Pine-apples.  
Pitch.  
Plantains.  
Plaster of Paris, when ground.  
Plumbago.  
Pork.  
Potassium.  
Prussian blue.  
Pumpkins.  
Putty.  
Quackilver.  
Quills.  
Rack chalk.  
Rhubarb.  
Rice, or paddy.  
Roll brimstone.  
Roman cement.  
Rye and rye flour.  
Saddlery, common, tinned, or japanned.  
Saffron and saffron cake.  
Sago.

#### SCHEDULE F. — 15 per centum ad valorem.

Dragon's blood.  
Flax, unmanufactured.  
Gold and silver leaf.  
Mineral kermes.  
Silk, raw, not more advanced in manufacture than singles, tram and thrown, or organzine.

#### SCHEDULE G. — 10 per centum ad valorem.

Fullers' earth.  
Furs, hatters', dressed or undressed, not on the skin.  
Furs, undressed, when on the skin.  
Gold-beaters' skins.  
Gum Arabic and Gum Senegal.  
Gum tragacanth.  
Gum Barbary.  
Gum East India.  
Gum Jodia.  
Gum guaiacum, or burnt starch.  
Hair of all kinds, uncleaned and unmanufactured.  
Hempseed, linseed, and rape-seed.  
India rubber, in bottles, slabs, or sheets unmanufactured.  
Indigo.  
Keip.  
Lemon and lime juice.  
Lime.  
Maps and charts.  
Music and Music paper, with lines, bound or unbound.

#### SCHEDULE H. — 5 per centum ad valorem.

Grindstones, wrought or unwrought.  
Horns, horn-tips, bones, bone-tips, and teeth, unmanufactured.  
Ivory, unmanufactured.  
Ivory nuts, or vegetable ivory.  
Kermes.  
Lac dye.  
Lustings suitable for shoes, boots, booties, or buttons exclusively.  
Madder, ground.  
Madder root.  
Manufactures of Mohair cloth, silk, twist, or other manufacture of cloth suitable for the manufacture of shoes, boots, booties, or buttons exclusively.  
Nickel.  
Nutmegs.  
Pearl, mother of.  
Pewter, when old, and fit only to be remanufactured.

#### SCHEDULE I. — Exempt from duty.

Coffee and tea, when imported direct from the place of their growth or production in American vessels, or in foreign vessels entitled by reciprocal

Sal soda, and all carbonates of soda, by whatever names designated, not otherwise provided for.  
Salts—Epsom, glauber, Rochelle, and all other salts and preparations of salts, not otherwise provided for.  
Sarsaparilla.  
Seppia.  
Shaddocks.  
Sheathing paper.  
Skins, tanned and dressed, of all kinds.  
Skins of all kinds, not otherwise provided for.  
Slate pencils.  
Smalts.  
Spermaceti candles and tapers.  
Spirits of turpentine.  
Sponges.  
Spunk.  
Squills.  
Starch.  
Stereine candles and tapers.  
Steel not otherwise provided for.  
Stereotype plates.  
Still bottoms.  
Sulphate of barytes, crude or refined.  
Sulphate of quinine.  
Tallow candles.  
Tapioca.  
Tar.  
Thread laces and insertings.  
Type metal.  
Types, new or old.  
Vanilla beans.  
Verdigris.  
Velvet, in the piece, composed wholly of cotton.  
Velvet, in the piece, composed of cotton and silk, but of which cotton is the component material of chief value.  
Vermilion.  
Wax candles and tapers.  
Whalebone, the produce of foreign fisheries.  
Wheat and wheat flour.  
White and red lead.  
Whiting, or Paris white.  
White vitriol, or sulphate of zinc.  
Window glass, broad, crown, or cylinder.  
Woolen listings.  
Yams.

Steel in bars, cast, shear, or German  
Terne tin plates.  
Tin foil.  
Tin, in plates or sheets.  
Tin plates, painted or sheathed, not otherwise provided for.  
Zinc, spelter, or teuteneque, in sheets.

Natron.  
Oils, tannic.  
Oils, palm and cocon-nut.  
Orpiment.  
Palm-leaf, unmanufactured.  
Polishing stones.  
Pumice and pumice stones.  
Ratons and reeds, unmanufactured.  
Rotten stone.  
Sal ammoniac.  
Saltpetre (or nitrate of soda or potash), refined or partially refined.  
Soda ash.  
Sulphuric acid or oil of vitriol.  
Tallow, marrow, and all other grease, and soap stocks and soap stuff, not otherwise provided for.  
Terra japonica, or calachou.  
Watches, and parts of watches.  
Watch materials of all kinds, not otherwise provided for.  
Woad or pastel.

Rags, of whatever material.  
Raw hides and skins of all kinds, whether dried, salted, or pickled, not otherwise provided for.  
Safflower.  
Saltpetre or nitrate of soda, or potash, when crude.  
Seedling.  
Shells.  
Sumac.  
Tin in pigs, bars, or blocks.  
Tortoise and other shells, unmanufactured.  
Turmeric.  
Waste, or shoddy.  
Weld.  
Zinc spelter, or teuteneque, unmanufactured, not otherwise provided for.

treaties to be exempt from discriminating duties, tonnage and other charges.  
Coffee, the growth or production of the

possessions of the Netherlands, imported from the Netherlands in the same manner.

Coins, gold, silver, and copper.

Copper ore.

Copper, when imported for the U. S. mint.

Cotton.

Felt, adhesive, for sheathing vessels.

Garden seeds, and all other seeds, not otherwise provided for.

Goods, wares, and merchandise, the growth, produce, or manufacture of the United States, exported to a foreign country, and brought back to the United States in the same condition as when exported, upon which no drawback or bounty has been allowed: Provided, that all regulations to ascertain the identity thereof, prescribed by existing laws, or which may be prescribed by the Secretary of the Treasury, shall be complied with.

Guns.

Household effects, old, and in use, of persons or families from foreign countries, if used abroad by them, and not intended for any other person or persons, or for sale.

Junk, old.

Models of inventions and other improvements in the arts: Provided, that no article or articles shall be deemed a model or improvement which can be fitted for use.

Oakum.

Oil, spermaceti, whale, and other fish, of American fisheries, and all other articles the produce of such fisheries.

Paintings and statuary, the production of American artists residing abroad, and all other paintings and statuary: Provided, the same be imported in good faith as objects of taste, and not of merchandise.

Personal and household effects (not merchandise) of citizens of the United States dying abroad.

Plaster of Paris, unground.

Printed matter.

Sheathing copper; but no copper to be considered such, and admitted free, except in sheets forty-eight inches long, and fourteen inches wide, and weighing from fourteen to thirty-four ounces the square foot.

Sheeting metal.

Specimens of natural history, mineralogy, or botany.

Trees, rubs, bulbs, plants, and roots, not otherwise provided for.

Wearing apparel, except hats, and other personal effects not merchandise, professional books, implements, instruments and tools of trade, occupation, or employment of persons arriving in the United States: Provided, that this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for sale.

#### AN ACT ESTABLISHING A WAREHOUSING SYSTEM IN U. STATES.

The following is an official copy of an act passed by both Houses of Congress July, 1846, and signed by the President of the United States on the 6th of August, 1846:

*An Act establishing a Warehousing System, and to amend an Act entitled "An Act to provide Revenue from Imports, and to change and modify existing Laws imposing Duties on Imports, and for other Purposes."*

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that the twelfth section of the act entitled "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes," approved the 20th day of August, 1842, is hereby amended so as hereafter to read as follows:—[Sec. 12.] and be it further enacted, that on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise, shall be paid in cash: Provided, that, in all cases of failure or neglect to pay the duties within the period allowed by law to the importer to make entry thereof, or whenever the owner, importer, or consignee shall make entry for warehousing the same in writing, in such form, wares or merchandise by such proof as shall be prescribed by the Secretary of the Treasury, the said goods, wares or merchandise shall be taken possession of by the collector, and deposited in the public stores, or in other stores to be agreed on by the collector or chief revenue officer of the port and the importer, owner or consignee, the said stores to be secured in the manner provided for by the first section of the act of the 20th day of April, 1818, entitled "An act providing for the deposit of wines and distilled spirits in public warehouses, and for other purposes," there to be kept with due and reasonable care, at the charge and risk of the owner, importer, consignee, or agent, and subject at all times to their order upon payment of the proper duties and expenses, to be ascertained on due entry thereof for warehousing, and to be secured by bond of the owner, importer, or consignee, with surety or sureties, to the satisfaction of the collector in double the amount of the said duties, and in such form as the Secretary of the Treasury shall prescribe: provided, that no merchandise shall be withdrawn from any warehouse in which it may be deposited in a less quantity than in an entire package, bale, cask, or box, unless in bulk; nor shall merchandise so imported in bulk be delivered, except in the whole quantity of each parcel, or in a quantity not less than 1 ton weight, unless by special authority of the Secretary of the Treasury. And in case the owner, importer, consignee, or agent of any goods on which the duties have not been paid, shall give to the collector satisfactory security that the said goods shall be landed out of the jurisdiction of the United States, in the manner now required by existing laws relating to exportations for the benefit of drawback, the collector and naval officer, if any, on an entry to re-export the same, shall, upon payment of the appropriate expenses, permit the goods, under the inspection of the proper officers, to be shipped without the payment of any duties thereon. And in case any goods, wares, or merchandise, deposited as aforesaid, shall remain in public store beyond 1 year, without payment of the duties and charges thereon, then said goods, wares, or merchandise shall be appraised by the appraisers of the United States, if there be any at such port, and if none, then by two merchants to be designated and sworn by the collector for that purpose, and sold by the collector at public auction, on due public notice thereof being first given, in the manner and for the time to be prescribed by a general regulation of the Treasury Department; and at said public sale, distinct printed catalogues descriptive of said goods with the appraised value affixed thereto, shall be distributed among the persons present at said sale; and a reasonable opportunity shall be given before such sale, to persons desirous of purchasing, to inspect the quality of such goods; and the proceeds of said sales, after deducting the usual rate of storage at the port in question with all other charges and expenses, including duties, shall be paid over to the owner, importer, consignee, or agent, and proper receipts taken for the same: provided, that the overplus, if any there be, of the proceeds of such sales, after the payment of storage, charges, expenses and duties as aforesaid, remaining unclaimed for the space of 10 days after such sales, shall be paid by the collector into the treasury of the United States; and the said collector shall transmit to the Treasury Department, with the said overplus a copy of the inventory, appraisalment, and account of sales, specifying the marks, numbers, and descriptions of the packages sold, their contents, and appraised value, the name of the vessel and master in which, and of the port or place whence they were imported, and the time when, and the name of the person or persons to whom said goods were consigned in the manifest, and the duties and charges to which the several consignments were respectively subject, and the receipt or certificate of the collector shall onerate the master or person having charge or command of any ship or vessel in which said goods, wares, or merchandise were imported, from all claim of the owner or owners thereof, who shall, nevertheless, on due proof of their interest, be entitled to receive from the treasury the amount of any overplus paid into the same under the provisions of this act: provided, that so much of the 56th section of the general collection law of the 2d March, 1799, and the 13th section of the act of the 30th of August, 1842, to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes, as conflicts with the provisions of this act, shall be, and is hereby repealed, excepting that nothing contained in this act shall be construed to extend the time now prescribed by law for selling unclaimed goods: provided, also, that all goods of a perishable nature, and all gunpowder, fire-crackers, and explosive substances, deposited as aforesaid, shall be sold forthwith.

Sec. 2. Any goods, when deposited in the public stores in the manner provided for in the foregoing section, may be withdrawn therefrom and transported to any other port of entry, under the restrictions provided for in the act of the 2d March, 1799, in respect to the transportation of goods, wares, and merchandise from one collection district to another, to be exported with the benefit of drawback; and the owner of such goods so to be withdrawn for transportation, shall give his bond with sufficient sureties, in double the amount of the duties chargeable on them, for the deposit of such goods in store in the port of entry to which they shall be destined, such bond to be cancelled when the goods shall be re-deposited in store in the collection district to which they shall be transported: provided, that nothing contained

in this section shall be construed to extend the time during which goods may be kept in store, after their original importation and entry, beyond the term of 1 year.

Sec. 3. If any warehoused goods shall be fraudulently concealed in or removed from any public or private warehouse, the same shall be forfeited to the United States; and all persons convicted of fraudulently concealing or removing such goods, or of aiding or abetting such concealment or removal, shall be liable to the same penalties which are now imposed for the fraudulent introduction of goods into the United States; and if any importer or proprietor of any warehoused goods, or any person in his employ, shall by any contrivance fraudulently open the warehouse, or shall gain access to the goods, except in the presence of the proper officer of the customs, acting in the execution of his duty, such importer or proprietor shall forfeit and pay for every such offence, 1000 dollars. And any person convicted of altering, defacing, or obliterating any mark or marks which have been placed by any officer of the revenue on any package or packages of warehoused goods, shall forfeit and pay, for every such offence, 500 dollars.

Sec. 4. The collectors of the several ports of the United States shall make quarterly reports to the Secretary of the Treasury, according to such general instructions as the said Secretary may give, of all goods which remain in the warehouses of their respective ports, specifying the quantity and description of the same; which returns, or tables formed thereon, the Secretary of the Treasury shall forthwith cause to be published in the principal papers of the city of Washington.

Sec. 5. The Secretary of the Treasury be, and he is hereby authorised to make, from time to time, such regulations, not inconsistent with the laws of the United States, as may be necessary to give full effect to the provisions of this act, and secure a just accountability under the same. And it shall be the duty of the Secretary to report such regulations to each succeeding session of Congress.

#### TRADE OF THE UNITED KINGDOM WITH THE UNITED STATES.

Account of the declared Value of the Total Exports of British Produce and Manufactures to the United States of America, during each of the 13 Years ending with 1845.

Years.	Declared Value.	Years.	Declared Value.	Years.	Declared Value.
1833	7,579,899	1838	7,583,760	1843	5,529,807

It appears from the previous statement that the trade between the U. States and this country has lately undergone the most extraordinary vicissitudes; the exports to the U. States having declined from 12,425,605*l.* in 1836, to 3,528,807*l.* in 1842! This remarkable decline has been mainly occasioned by the bankruptcy and disorder that grew out of the abuse of banking and the over issue of paper money in the U. States in 1836, 1837, and 1838. The facility with which discounts and loans were then obtained occasioned a vast deal of overtrading among individuals, and also led to the contracting of loans with which to undertake extensive public works by the different States. But no sooner had the banks, which, for the most part, were without any solid foundation, been entangled in the difficulties consequent to such over issue, than a severe shock was given to credit, and bankruptcy became prevalent from one end of the Union to the other. Had the general government had the power, or the state governments the wish, to mitigate the severity of the crisis, there were abundant means at their disposal; but the former would appear to be nearly impotent for either good or bad purposes, and (with a few distinguished exceptions) the state governments, instead of providing by a small increase of taxation for the payment of their creditors, and the completion of the works in which they had engaged, were impolitic enough to abandon the latter, and dishonest and shameless enough to repudiate the former! Discredit and bankruptcy have, therefore, been all but universal in America, and hence the limited amount of her imports. In so far, however, as we are concerned, the decline of the latter is of little importance. It is better we should export nothing than that the exports should not be paid for. After the experience they have purchased at an expense of many millions, our countrymen will, it is to be hoped, be cautious in the extreme how they deal with the Americans in future.

NICARAGUA or PEACH WOOD (Ger. *Nicaragaholz*, *Blutholz*; Du. *Blood-hout*; Fr. *Bois de sang*, *Bois de Nicaragua*; It. *Legno sanguigno*; Sp. *Palo de sangre*; Port. *Pao sanguinho*), a tree of the same genus (*Casalpinia*) as the Brazil and sapan wood; but the species has not been exactly ascertained. It grows principally in the vicinity of the lake of Nicaragua, whence its name. It is said by Dr. Bancroft to be almost as red and heavy as the true Brazil wood, but it does not commonly afford more than a third part, in quantity, of the colour of the latter; and even this is rather less durable and less beautiful, though dyed with the same mordants. Nicaragua or peach woods differ greatly in their quality as well as price; one sort being so deficient in colouring matter, that 6 pounds of it will only dye as much wool or cloth as 1 pound of Brazil wood; while another variety of it will produce nearly half the effect of an equal quantity of Brazil wood, and will sell proportionally dear. — (*Bancroft on Colours*, vol. ii. p. 332.)

The London dealers distinguish Nicaragua wood into 3 sorts, viz. *large*, *midding*, and *small*; the price of the 1st sort (duty included) being from 14*l.* to 20*l.* per ton; of the 2d, from 8*l.* to 10*l.* per do.; and of the 3d, from 7*l.* to 8*l.* per do. The entries of Nicaragua wood for home consumption amounted, in 1840, to 2,614 tons, and in 1841, to 1,899 tons. The duty was reduced in 1831 from 15*s.* to 5*s.* a ton, and in 1842 it was farther reduced to 2*s.* per ton.

NICKEL, a scarce metal, which occurs always in combination with other metals, from which it is exceedingly difficult to separate it. When pure, it is of a fine white colour resembling silver. It is rather softer than iron: its specific gravity, when cast, is 8.279; when hammered, 8.932. It is malleable, and may without difficulty be hammered into plates not exceeding  $\frac{7}{16}$ th part of an inch in thickness. It is attracted by the magnet; and is not altered by exposure to the air, nor by being kept under water. It is employed in potteries, and in the manufacture of porcelain. — (*Thomson's Chemistry*.)

NITRE. See SALT-PETRE.

NOTE, PROMISSORY. See BANKING, and BANKS.

NUT, or HAZEL NUT (Ger. *Haselnüsse*; Fr. *Noisettes*, *Avelines*; It. *Naccinole*, *Avelane*; Sp. *Avellanas*; Port. *Avellãs*; Lat. *Avellana*), the fruit of different species of *Coryli*, or hazels. The kernels have a mild, farinaceous, oily taste, agreeable to most palates. A kind of chocolate has been prepared from them; and they have sometimes been made into bread. The expressed oil of hazel nuts is little inferior to that of almonds. Besides those raised at home, we import nuts from different parts of France, Portugal, and Spain, but principally from the latter. The Spanish nuts in the highest estimation, though sold under the name of Barcelona nuts, are not really shipped at that city, but at Tarragona, a little more to the south. Mr. Inglis says that the annual average export of nuts from Tarragona is from 25,000 to 30,000 bags, of 4 to the ton. They cost, free on board, in autumn, in 1830, 17*s.* 6*d.* per bag. — (*Spain in 1830*, vol. ii. p. 362.) In 1841, 149,845 bushels of hazel nuts were retained for consumption. The duty is 2*s.* a bushel.

NUTMEG (Ger. *Muskatennüsse*; Du. *Muskaüt*; Fr. *Muscades*, *Noix muscades*; It. *Noce muscada*; Sp. *Moscada*; Arab. *Jwezulleib*; Sans. *Jatiphala*; Malay, *Buah-paku*).

the fruit of the genuine nutmeg tree (*Myristica Moschata*), a native of the Moluccas, but which has been transplanted to Sumatra, Penang, &c. An inferior and long-shaped nutmeg is common in Borneo; but the fruit nowhere attains to the same perfection as in the Moluccas. Of the several varieties of the tree, that denominated the Queen Nutmeg, which bears a small round fruit, is the best. The kernel, or proper nutmeg, is of a roundish oval form, marked on the outside with many vermicular furrows, within of a fleshy farinaceous substance, variegated whitish and bay. Nutmegs are frequently punctured and boiled, in order to obtain the essential oil; the orifice being afterwards closed; but the fraud is easily detected by the lightness of the nutmeg. — (*Thomson's Dispensatory*; *Ainslie's Materia Indica*.)

Nutmegs should be chosen large, round, heavy, and firm, of a lightish grey colour on the outside, and the inside beautifully marbled, of a strong fragrant smell, warm aromatic taste, and a fat oily body. They are very subject to be worm-eaten. The best manner of packing them is in dry chunam. The oblong kind, and the smaller ones, should be rejected. 15 cwt. are allowed to a ton. — (*Milburn's Orient Com.*)

The dried produce of a nutmeg tree consists of nutmeg, mace (which see), and shell. Supposing the whole produce to be divided into 100 parts, there are 13½ of mace, 33½ of shell, and 53½ of nutmeg. In the ancient commerce, and down to the establishment of the Dutch monopoly, nutmegs were always sold and exported in the shell. The natives, whenever the commerce is left to their management, continue the practice, which is strongly recommended by Mr. Crawford. — (*Eastern Archipelago*, vol. iii. p. 396.)

The jealous policy of the Dutch has reduced the trade in nutmegs to a mere trifle, compared to what it would otherwise have been. They have, in so far at least as it was possible, exerted themselves to exterminate the nutmeg plants every where except in Banda. They bribe the native princes of the surrounding islands to root out the trees; and annually send a fleet to see that the work of destruction has been effected, and that the bribes have not been bestowed in vain. To engage in an illicit trade in spices is death to an inferior person, and banishment to a noble; and yet, notwithstanding these tremendous penalties, it is supposed that about 60,000 lbs. of nutmegs, and 15,000 lbs. of mace, are clandestinely exported each year! In Banda, the aboriginal inhabitants have been expatriated, and their land parcelled among settlers from Holland, under the name of *pork keepers*. These persons, who may be turned out of their farms on the most trifling pretext, have about 2,000 slaves, who cultivate and prepare the nutmegs. The prices paid to the cultivator are all fixed by government; and it deserves to be mentioned, as affording one of the most striking illustrations of the ruinous effects of monopoly, that the fixed price which the government is now obliged to pay for nutmegs is five times greater than the price at which they bought them when the trade was free! Such is a rough outline of that system, which has reduced what used to be one of the most important branches of Eastern commerce so low, that it is unable to afford employment for the capital of a single wealthy merchant. We cannot conceive how so enlightened and liberal a government as that of Holland should continue to tolerate such scandalous abuses — abuses destructive alike of the rights of those subjected to its authority in the East, and the commerce and wealth of its subjects at home. — (*Modern Universal History*, vol. x. p. 457—467. 8vo. ed.; and *Crawford's Eastern Archipelago*, vol. iii. p. 394—413.)

Mr. Crawford estimates the produce of the Banda Islands at about 600,000 lbs. of nutmegs, and 150,000 lbs. of mace.

During the period that the English had possession of the Spice Islands, nutmeg plants were carried to Penang, Bencoolen, and some of the West India Islands. In the latter they have altogether failed, at least as far as respects any useful purpose; but very good nutmegs, and in considerable quantities, are now raised at Penang and Bencoolen. Mr. Crawford, however, alleges that the cost of bringing them to market is there so high, that the restoration of a free culture in the native country of the nutmeg would instantly destroy this unstable and factitious branch of industry. — (*Eastern Archipelago*, vol. iii. p. 409.)

The duty on nutmegs was reduced, in 1819, from 5s. 6d. to 2s. 6d. per lb.; and the quantities entered for home consumption have since rapidly increased. We subjoin

An Account of the Quantities of Nutmegs entered for Home Consumption in the United Kingdom, in 1840, 1841, and 1842, and of the Amount of Duty received thereon.

Quantities.			Duties.		
1840.	1841.	1842.	1840.	1841.	1842.
Lbs.	Lbs.	Lbs.	£.	£.	£.
118,664	113,411	170,064	15,041 9	14,851 10	22,018 12

In 1842 the duties were fixed at 3s. 6d. per lb. on those from a foreign, and at 2s. 6d. per lb. on those from a British possession. The duty on wild nutmegs in the shell was then also fixed at 3d. without regard to origin.

**NUTRIA**, or **NEUTRIA**, the commercial name for the skins of *Myopotamus Bonariensis* (Commerson), the *Coypon* of Molina, and the *Quoia* of D'Azara. In France, the skins were, and perhaps still are, sold under the name of *raconda*; but in England they are imported as *nutria* skins — deriving their appellation, most probably, from some supposed similarity of the animal which produces them, in appearance and habits, to the otter, the Spanish name for which is *nutria*. Indeed, Molina speaks of the *coypou* as a species of water rat, of the size and colour of the otter.

Nutria fur is largely used in the hat manufacture; and has become, within the last 15 or 20 years, an article of very considerable commercial importance. The imports fluctuate considerably. In 1841 they amounted to 1,125,212 skins; but in some years they are much less; and, in 1840, amounted to only 242,733. Those entered for home consumption pay a duty of 1s. per 100 skins. They are principally brought from the Rio de la Plata. — (*See FUR TRADE*.)

The *coypou* or *quoia* is a native of S. America, very common in the provinces of Chili, Buenos Ayres, and Tucuman, but more rare in Paraguay. In size it is less than the beaver, which it resembles in many points. The head is large and depressed, the ears small and rounded, the neck stout and short, the muzzle sharper than that of the beaver, and the whiskers very long and stiff. There are, as in the beaver, 2 incisor teeth, and 18 molar, above and below — 20 teeth in all. The limbs are short. The fore feet have each 5 fingers not webbed, the thumb being very small; the hind feet have the same number of toes; the great toe and 3 next toes being joined by a web which extends to their ends, and the little toe being free, but edged with a membrane on its inner side. The nails are compressed, long, crooked, and sharp. The tail, unlike that of the beaver, is long, round, and hairy; but the hairs are not numerous,

and permit the scaly texture of the skin in this part to be seen. The back is of a brownish red, which becomes redder on the flanks: the belly is of a dirty red. The edges of the lips and extremity of the muzzle are white.

Like the beaver, the coypou is furnished with 2 kinds of fur; viz. the long ruddy hair which gives the tone of colour, and the brownish ash-coloured fur at its base, which, like the down of the beaver, is of much importance in hat making, and the cause of the animal's commercial value.

The habits of the coypou are much like those of most of the other aquatic rodent animals. Its principal food, in a state of nature, is vegetable. It affects the neighbourhood of water, swims perfectly well, and burrows in the ground. The female brings forth from 6 to 7 at a time; and the young always accompany her.

The coypou is easily domesticated, and its manners in captivity are very mild.

\*.\* We are indebted for this account of nutria — the first, we believe, that appeared in any English work — to W. J. Broderip, Esq., F.R.S., &c.

**NUX VOMICA** (Fr. *Noix Vomique*; Hind. *Kaachla*), the fruit of a species of *Strychnos*, growing in various places in the East Indies. The fruit is about the size of an orange, covered with a smooth crustaceous yellow bark, and filled with a fleshy pulp, in which are imbedded several orbicular flattened seeds, about  $\frac{1}{2}$  of an inch in diameter. *Nux vomica* is inodorous, and has a very bitter, acrid taste, which remains long on the palate. It is known as a very virulent poison. A suspicion has, however, been entertained, that it has been used in porter breweries; but its introduction into them is prohibited under heavy penalties. — (*Thomson's Dispensatory*, &c.)

## O.

**OAK** (Ger. *Eiche*; Du. *Eik*; Da. *Eg*; Sw. *Ek*; Fr. *Chêne*; It. *Quercia*; Sp. *Roble*, *Carballo*; Port. *Roble*, *Carbalho*; Rus. *Dub*; Pol. *Dab*; Lat. *Quercus*; Arab. *Baalut*). There are several varieties of this valuable tree; but the common English oak (*Quercus robur*) claims precedence of every other. The oak timber imported from America is very inferior to that of this country: the oak from the central parts of Europe is also inferior, especially in compactness and resistance of cleavage. The knotty oak of England, the "unwedgeable and gnarled oak," as Shakespeare called it, when cut down at a proper age (from 50 to 70 years), is the best timber known. Some timber is harder, some more difficult to rend, and some less capable of being broken across; but none contains all the three qualities in so great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by a cannon shot, the timber of the oak is superior to every other.

A fine oak is one of the most picturesque of trees; it conveys to the mind associations of great strength, and of all but endless duration. It stands up against the blast, and does not take, like other trees, a twisted form from the action of the winds. Except the cedar of Lebanon, no tree is so remarkable for the stoutness of its limbs; they do not exactly spring from the trunk, but divide from it; and thus it is sometimes difficult to know which is stem and which is branch. The twisted branches of the oak, too, add greatly to its beauty; and the horizontal direction of its boughs, spreading over a large surface, completes the idea of its sovereignty over all the trees of the forest. Even a decayed oak, such as that described by Spenser, —

"————— dry and dead,  
Still clad with reliques of its trophies old,  
Lifting to heaven its aged, hoary head,  
Whose foot on earth has got but feeble hold," —

is strikingly beautiful. To such an oak Lucan compared Pompey in his decline: —

"Qualis frugifero quercus sublimis in agro  
Exuvius veteres populi, sacratæque gestans  
Dona ducum: nec jam validis radicibus hærens,  
Pondere fixa suo est; nudosque per æra ramos  
Effundens, trunco, non frondibus, efficit umbram.  
At quamvis primo nutet casura sub Euro,  
Tot circum silvæ firmo se robore tollant,  
Sola tamen colitur," — (Lib. i. l. 136.)

The oak is raised from acorns, sown either where the oak is to stand, or in a nursery, whence the young trees are transplanted.

The colour of oak wood is a fine brown, and is familiar to every one; it is of different shades; that inclined to red is the most inferior. The larger transverse septa are in general very distinct, producing beautiful flowers when cut obliquely. Where the septa are small, and not very distinct, the wood is much the strongest. The texture is alternately compact and porous; the compact part of the annual ring being of the darkest colour, and in irregular dots surrounded by open pores, producing beautiful dark veins in some kinds, particularly pollard oaks. Oak timber has a particular smell, and the taste is slightly astringent. It contains gallic acid, and is blackened by contact with iron when it is damp. The young wood of English oak is very tough, often cross-grained, and difficult to work. Foreign wood, and that of old trees, is more brittle and workable. Oak warps and twists much in drying; and, in seasoning, shrinks about  $\frac{1}{3}$  of its width.

Oak of a good quality is more durable than any other wood that attains a like size. Vitruvius says it is of eternal duration when driven into the earth: it is extremely durable in water; and in a dry state it has been known to last nearly 1,000 years. The more compact it is, and the smaller the pores are, the longer it will last; but the open, porous, and foxy coloured oak, which grows in Lincolnshire and some other places, is not near so durable.

Besides the common British oak (*Quercus robur*), the sessile-fruited bay oak (*Quercus sessiliflora*) is pretty abundant in several parts of England, particularly in the north. The wood of this species is said by Tredgold to be darker, heavier, harder, and more elastic than the common oak; tough, and difficult to work; and very subject to warp and split in seasoning. Mr. Tredgold seems disposed to regard this species as superior to the common oak for ship building. But other, and also very high authorities, are opposed to him on this point; and, on the whole, we should think that it is sufficiently well established, that for all the great practical purposes to which oak timber is applied, and especially for ship building, the wood of the common oak deserves to be preferred to every other species. A well-informed writer in the *Quarterly Review* has the following remarks on the point in question:—

"We may here notice a fact long known to botanists, but of which our planters and purveyors of the timber appear to have had no suspicion,—that there are two distinct species of oak in England—the *Quercus robur*, and the *Quercus sessiliflora*; the former of which affords a close-grained, firm, solid timber, rarely subject to rot; the other more loose and sappy, very liable to rot, and not half so durable. This difference was noted so early as the time of Ray; and Martyn in his *Flora Rustica*, and Sir James Smith in his *Flora Britannica*, have added their testimony to the fact. The second species is supposed to have been introduced some 2 or 3 ages ago, from the Continent, where the oaks are chiefly of this latter species, especially in the German forests, the timber of which is known to be very worthless. But what is of more importance to us, is, that *de facto* the imposture abounds, and is propagated vigorously in the New Forest and other parts of Hampshire; in Norfolk, and the northern counties, and about London; and there is but too much reason to believe that the numerous complaints that were heard about our ships being infected with what was called, improperly enough, *dry rot*, were owing to the introduction of this species of oak into the naval dock-yards, where, we understand, the distinction was not even suspected. It may thus be discriminated from the true old English oak:—The acorn stalks of the *robur* are long, and its leaves short; whereas the *sessiliflora* has the acorn stalks short, and the leaves long: the acorns of the former grow singly, or seldom two on the same footstalk; those of the latter, in clusters of 2 or 3 close to the stem of the branch. We believe the Russian ships of the Baltic, that are not of larch or fir, are built of this species of oak; but if this were not the case, their exposure on the stocks, without cover, to the heat of summer, which, though short, is excessive, and the rifts and chinks which fill up with ice and snow in the long winter, are enough to destroy the stoutest oak, and quite sufficient to account for their short-lived duration."

A great deal of inquiry and discussion has taken place at different periods as to the supply and consumption of oak timber; but the results have not been very satisfactory. In a *Report of the Commissioners of Lead Revenue*, printed in 1812, it is stated that, taking the tonnage of the navy in 1806 at 776,087 tons, it would require, at  $1\frac{1}{2}$  load to a ton, 1,164,085 loads to build such a navy; and supposing the average duration of a ship to be 14 years, the annual quantity of timber required would be 83,149 loads, exclusive of repairs, which they calculate would be about 27,000 loads; making the whole about 110,000 loads: of which, however, the commissioners reckon may be furnished 31,341 loads as the annual average of the prizes; and of the remaining 88,699 loads, they think it not unreasonable to calculate on 28,659 from other sources than British oak. "This," they observe, "leaves 60,000 loads of such oak, as the quantity which would be sufficient annually to support, at its present unexampled magnitude, the whole British navy, including ships of war of all sorts; but which may be taken as equivalent together to 20 14-gun ships, each of which, one with another, contains about 2,000 tons, or would require, at the rate of  $7\frac{1}{2}$  load to the ton, 3,000 loads; making just 60,000 loads for 20 such ships."

Now, it has been supposed that not more than 40 oak trees can stand on an acre of ground, so as to grow to a full size fit for ships of the line, or to contain each  $1\frac{1}{2}$  load of timber; 50 acres, therefore, would be required to produce a sufficient quantity of timber to build a 74-gun ship, and 1,000 acres, for 20 such ships; and as the oak requires at least 100 years to arrive at maturity, 100,000 acres would be required to keep up a successive supply, for maintaining a navy of 700,000 or 800,000 tons. The commissioners further observe, that as there are 30,000,000 acres of waste lands in the kingdom, a 200th part set aside for planting would at once furnish the whole quantity wanted for the use of the navy.

According to Mr. Barrow, this calculation is over-rated by about a half. "In the first place," says he, "it supposed a state of perpetual war, during which the tonnage of the whole navy is considered as more than double of what it now actually is; and, in the second place, it reckons the average duration of the navy at 14 years only; but from the improvements that have taken place in the construction and preservation of ships of war, with the resources of oak ships built in India, we should not hesitate in assuming at an average of twice that number of years; and if so, the quantity of oak required for the navy will be nothing like that which the commissioners have stated."

"The fact, however, is certain, that long before the conclusion of the late war, a scarcity begun to be felt, especially of the larger kind of timber fit for ships of the line; and so great was this scarcity, that if Sir Robert Seppings had not contrived the means of substituting straight timber for that of different forms and dimensions, before considered to be indispensable, the building of new ships must entirely have ceased."

"If, however, the growth of oak for ship timber was greatly diminished during the war, so as to threaten an alarming scarcity, there is little doubt that, from the increased attention paid by individuals to their young plantations, and their great extension, as well as from the measure of allotting portions of the royal forests to those who had claims on them, and inclosing the remainder for the use of the public, this country will, in future times, be fully adequate to the production of oak timber equal to the demand for the naval and mercantile marine."—(*Ency. Brit.* art. *Navy*.)

The bark of the oak tree is very valuable. It is preferred to all other substances for the purpose of tanning, and brings a high price.—(See *BARK*.)

The foreign oak timber imported into Great Britain is principally derived from Canada and Prussia. The latter is the most valuable—its price being to the former in the proportion of about 9 to 6; that is, if a load of Prussian oak timber brought 3*l.*, a load of Canada ditto would not bring more than 2*l.* The quantity imported varies; but may, at an average, amount to about 10,000 loads, of 50 cubic feet each; the greater part from Quebec. Oak plank is almost wholly imported from Prussia. The quantities imported during the 6 years ending the 5th of January, 1842, were—

Years.	Loads.	Years.	Loads.	Years.	Loads.
1836	8,870	1838	5,998	1840	6,467
1837	2,198	1839	5,489	1841	2,517

For further details with respect to the Importation of oak, its price, duty on, &c., see WOOD. — See also, *Tredgold's Principles of Carpentry*; art. *Navy. Supplement to Encyc. Brit.*; the very interesting work on *Timber Trees and Fruits*, in the *Library of Entertaining Knowledge*; *Rees's Cyclopaedia*, &c.

**OATS** (Ger. *Hafer*; Du. *Haver*; Da. *Havre*; Sw. *Hafre*; Fr. *Avoine*; It. *Vena*, *Avena*; Sp. *Avena*; Port. *Avea*; Russ. *Oves*; Pol. *Owies*), a species of grain, the *Avena sativa* of botanists. There are innumerable varieties of this grain, some of which are said to be indigenous to Britain. It is the hardiest of all the cereal grasses, growing luxuriantly in cold northern climates, and in coarse mountainous districts, where neither wheat nor barley can be advantageously cultivated. It thrives best, and is, indeed, chiefly raised, in latitudes north of Paris; being but little known in the south of France, Spain, or Portugal. It is, however, cultivated in Bengal, so low as the 25th degree of latitude, and, it is said, with considerable success. In Scotland, where it has long formed a principal part of the food of the people, it is far more generally cultivated than any other species of grain. It is also very extensively cultivated in Ireland. In England it is grown principally in the northern counties, and in the fens of Lincoln, Huntingdon, Cambridge, and Norfolk; but the oats of Northumberland and Scotland are reckoned superior to those raised farther south.

There are 4 leading varieties of this grain cultivated in England, viz. white, black, grey, and brown or red oats. The sub varieties of the white are numerous. That denominated the potato oat is at present almost the only one raised on land in a good state of cultivation in the north of England and the south of Scotland, and usually brings a higher price in the London market than any other variety. It was accidentally discovered growing in a field of potatoes in Cumberland in 1788; and from the produce of that single stalk has been produced the stock now in general cultivation. Black and grey oats are little cultivated, except in some places in the north of Scotland. The red oat is chiefly confined to Cheshire, Derbyshire, and Staffordshire. A species of naked oats, provincially called *pillar*, is raised in Cornwall. — (*London's Encyc. of Agriculture; Brown's Rural Economy*, vol. ii. pp. 47—52.)

In 1765, Mr. Charles Smith estimated the number of consumers of oats in England and Wales at 623,000. — (*Tracts on the Corn Trade*, 2d edit. p. 140.), but at present we believe they are very considerably fewer. The feeding of horses has at all times occasioned the greatest consumption of oats in this part of the kingdom; and as the number of horses kept for business and pleasure has been vastly increased within the last 30 or 40 years, the culture of oats has been considerably extended, notwithstanding the increasing imports from Ireland. Perhaps the produce of no species of grain varies more than that of oats. Where the ground is foul and exhausted, not more than 20 bushels an acre are obtained; but on rich soils, well managed, 64, 72, and sometimes 80 bushels and upwards have been reaped. Oats weigh from 35 to 45 lbs. a bushel, yielding at an average, 8 lbs. meal for 14 lbs. corn: but the proportion of meal increases as the oats become heavier.

For information as to the laws regulating the importation and exportation of oats, their prices, the quantities imported and exported, &c., see CORN LAWS and CORN TRADE.

**ODESSA**, a flourishing sea-port of Southern Russia, on the north-west coast of the Black Sea, between the rivers Dneister and Bug, in lat. 46° 28' 54" N., lon. 30° 45' 22" E. Population, in 1838, 69,023. The foundations of Odessa were laid so lately as 1792, by order of the Empress Catharine, after the peace of Jassy. It was intended to serve as an *entrepôt* for the commerce of the Russian dominions on the Black Sea and the Sea of Azoff, and has in a great measure answered the expectations of its founders. By an Imperial ukase, dated the 7th of February, 1817, it was declared a free port, and the inhabitants exempted from taxation for 30 years; since which period its increase has been extremely rapid. The bay or roadstead of Odessa is extensive, the water deep, and the anchorage good, the bottom being fine sand and gravel; it is, however, exposed to the south-easterly wind, which renders it less safe in winter. The port, which is artificial, being formed by 2 moles, one of which projects to a considerable distance into the sea, is fitted to contain about 300 ships. It has also the advantage of deep water. There is a convenient lazaretto, on the model of that of Marseilles. The want of fresh water used to be the greatest disadvantage under which the inhabitants laboured; but this has been obviated by the construction of a canal which conveys an abundant supply of water into the town. There are no trees in the vicinity, which has, in consequence, a bleak and arid appearance.

*Light-houses.* — A light-house has been erected on Cape Fontan, about 6½ nautical miles S. of Odessa. The light, which formerly revolved, is now fixed, and is about 208 (Russian) feet above the level of the sea. At the distance of 11 leagues E.S.E. ¼ S. from Odessa, on the north end of the long, narrow, low island of Tendra, a light-house has been erected, of great use to ships approaching Odessa from the S.

or W. The lantern is elevated 92½ (Russian) feet above the level of the sea. It consists of 3 reflecting lights, suspended in the form of a triangle, revolving in the space of 4 minutes, so that each lamp arrives at its maximum of brilliancy after an interval of 1 min. 20 sec. Being also of a red colour, this light is readily distinguished from Fontan light, and the other lights in the Black Sea. In foggy weather, a bell is kept ringing. — (*Coulier sur les Phares*, 2d ed.; *Norris's Sailing Directions for the Mediterranean and Black Seas*, &c.)

Not being at the mouth of any great river, nor having any considerable manufactures, Odessa is not a port for the exportation of what may be called articles of native growth; but in consequence of her convenient situation, excellent port, and the privileges she enjoys, she is, as already remarked, the emporium where most of the produce of Southern Russia destined for foreign countries is collected for exportation, and where most of the foreign articles required for home consumption are primarily imported. The shallowness of the water at Taganrog, and the short period during which the Sea of Azoff is navigable, tend to hinder foreign vessels of considerable burden from entering the Strait of Yenikalf, and occasion the shipment of a considerable portion of the produce brought down the Don in lighters to Caffa and Odessa, especially the latter. All the products brought down the Dniester, the Bug, and the Dnieper, are exported from Odessa; but owing to the difficult navigation of the first and last mentioned rivers, by far the greater part of the corn brought to Odessa from Podolia, the Ukraine, &c. is conveyed to the town in carts drawn by oxen. The roads traversed by these carts are only practicable at certain seasons of the year; and nothing would contribute so much to increase the commerce of the port, and the prosperity of S. Russia, as the opening of improved communications with the interior; whether by removing obstructions in the channels of the rivers, constructing canals, or railways, or good common roads.

Among the articles of export from Odessa, corn, especially wheat, occupies, as every one knows, a high rank; but tallow is also a most important article; and next to it are linseed, wool, iron, hides, copper, wax, caviar, potash, beef, furs, cordage, sail-cloth, tar, butter, linlasing, &c. We subjoin an official

Account of the Value of the Exports from and Imports into the Port of Odessa in the different Years from 1802 to 1839 inclusive.

Years	Exports.	Imports.	Years	Exports.	Imports.	Years	Exports.	Imports.
	<i>RMs.</i>	<i>RMs.</i>		<i>RMs.</i>	<i>RMs.</i>		<i>RMs.</i>	<i>RMs.</i>

1818	20,553,000	14,191,000	1838	1,673,000	6,193,000	1838	38,390,000	21,309,000
1819	15,225,000	8,598,000	1839	6,794,000	7,156,000	1839	46,636,550	

The great amount of the exports in 1816 and 1817 is ascribable to the failure of the corn crops in Italy and Western Europe during those two years, and to the consequent high price and ready demand for the wheat of Odessa, Dantzig, &c. The small amount of the trade in 1828 and 1829 is accounted for by the war with Turkey having interrupted all communication with the port by the channel of Constantinople. Subjoined is an

Account of the Arrivals of Wheat at Odessa since the beginning of the present Century.

1801	arrived	55,142 chetwerts.*	1835	arrived	578,100 chetwerts.
1802	—	235,106 —	1836	—	878,700 —
1803	—	494,239 —	1837	—	930,498 —
1804-15	—	1,898,267 average 184,836 chets. a year.	1838	—	1,241,000 —
1814-23	—	6,800,000 average 680,000 chets. do.	1839	—	1,159,000 —
1824-33	—	7,279,000 average 727,900 chets. do.	1840	—	680,000 —
1834	—	691,000 —			

\* A chetwert is equivalent to about 6 imperial bushels, or 3-4ths of a quarter.

The small amount of the wheat brought to Odessa in 1835 was owing to the almost total failure of the crops in S. Russia in the course of that year. The price of the best wheat in Odessa is rarely under 2s. or 2s. 6d. a quarter; and, during the 3 years ending with 1840, it was 3s. 6d. free on board; the freight and other charges on importing a quarter of wheat from Odessa to England may be estimated at about 16s. Constantinople, Genoa, Leghorn, Marseilles, and Malta are the principal markets for Odessa wheat; but when our crops are deficient, considerable quantities are shipped for England. In 1839, the exports from Odessa comprised, among other things, 1,210,232 chetwerts of wheat, nearly 200,000 do. rye, oats, &c., 155,194 do. linseed, 118,000 pounds wool, and 223,192 pounds tallow. The subjoined account of the merchants belonging to Odessa inscribed in the different guilds affords an additional illustration of the progress of its commerce since 1808.

Merchants.				
	In 1st Guild.	2d Guild.	3d Guild.	Total.
In 1808	-	-	135	904
1813	-	-	190	256
1823	-	-	215	281
1828	-	-	302	382
1838	-	-	644	763

The great articles of import into Odessa consist of sugar, coffee, and other colonial products; cottons, silks, woollens, and other manufactured goods; oil, wine, and spirits; spices and dye-stuffs; cotton twist and raw cotton; lemon juice; tin and tin plates; cutlery, timber for building and firewood, &c. About 800 ships from foreign parts enter and leave Odessa in ordinary years. Including Maltese and Ionians, nearly 200 ships under English colours have arrived in the port in a single season; but their number is very fluctuating, depending essentially on the state of the corn trade.

A Tribunal of commerce was established at Odessa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions except to the Senate. There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They register all transactions, and receive 1 per cent. from each party as commission. There is a discount or loan bank, established in 1828, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which costs next to nothing, is excellent. Fuel, however, is scarce and dear.

The exports of tallow have increased twenty-fold in 10 years; materially augmenting the value of the herds, and enriching vast countries, which must have remained comparatively poor, had not this outlet been found for their produce.

The increase in the exportation of wool is also very considerable. Within the last 20 years, the Merino breed of sheep has been extensively introduced into the governments of Taurida, Cherson, and

Ekaterinoslov; so that there has been not only a great increase in the quantity, but also a very decided improvement in the quality, of the wool exported.

The iron shipped at Odessa is principally brought from Siberia, partly by the Wolga, and partly by the Don to Taganrog, whence it is conveyed to Odessa. A good deal of it is in a manufactured state, from the founderies at Tula; but the demand for it both in Europe and Asia has been perceptibly diminishing for some years past, and the exports are now comparatively small. Timber for ship-building, and pitch and tar, are also brought from Taganrog.

**Corn Trade.**—The principal trade of Odessa is with Constantinople, Smyrna, and other towns in the Levant, Naples, Leghorn, Genoa, Marseilles, &c. "It is generally stated," says Mr. Jacob (*Memoir on the Trade of the Black Sea*, in the *Appendix to the 8vo edition of Voyages on the Corn Trade*), "that the supply of Constantinople requires annually 100,000 quarters of Black Sea wheat. The Greek islands scarcely, on the average of years, produce sufficient wheat for their own consumption, and, in some years, require a large supply, which is furnished partly from the neighbouring continent, and partly from the Black Sea."

"The Asiatic coasts of the Turkish Empire, especially in Anatolia, are nearly in the same predicament. At times, the market of Smyrna is very favourable for the sale of the corn of Southern Russia. The islands of Malta and Goso produce only about half as much corn as the 120,000 inhabitants require."

"Sicily, though it has greatly declined from its ancient productiveness, has still a quantity of grain to spare for the less fruitful parts of Italy, in most years; and its wheat enters into competition with that of the Black Sea, in the ports of Naples, Genoa, and Leghorn."

"There are few years in which Tuscany grows a sufficiency of wheat; and its chief port, Leghorn, being one of those in which ships can unload their cargoes of corn, without being detained to perform quarantine, has been at all times a place of deposit for the wheat of the Black Sea. A market at some price may always be found there, as the capitalists are disposed to purchase; relying on the uncertain productiveness of some adjacent country, in which they may realise a profit at no great distance."

"Genoa, like Leghorn, is a port where wheat can be unloaded within the bounds of the lazaretto. The country around it yields but little wheat; and at some periods, it enjoys a trade in that article even as far as Sunderland. This internal demand, and the chance of advantageous re-exportation, induces much trade in corn. There is said to be seldom less than 100,000 quarters in store at the two ports of Genoa and Leghorn; and at some periods, a far greater quantity."

"Nice, though not having the same advantageous quarantine regulations, and, consequently, not being a *depôt* for corn beyond its own demand, from the sterile soil that surrounds it, requires every year a large importation of wheat. That of Sicily and Odessa create a competition in its port; and the government draws a revenue, by imposing a heavy duty on both."

"Though the corn laws of France have kept the ports closed against the introduction of foreign corn for domestic use, yet it is allowed to be bonded for re-exportation. From the frequent local and partial scarcities which occur on the eastern coast of Spain, at which periods wheat is allowed to be lawfully imported, and, it is said, from the facility of its introduction by contraband, when not legally allowed, Marseilles has been a great *depôt* for the wheat of the Black Sea."

"From thence, as also from Gibraltar, where there is generally some in store, it can easily be transported to Spain, to Sardinia, to Corsica, to Tunis, to Tripoli, or wherever scarcity has created a beneficial market."

"The coasts of Barbary, though often having a surplus of wheat, much of which occasionally assists to feed Portugal, in some seasons have been affected with most deficient harvests. This was recently the case in a remarkable degree. Tripoli and Tunis experienced, in the year 1820, a harvest most miserably short, and were supplied from other countries."

**Charges on Shipping Corn.**—In 1816, the expenses of delivering a chetwert of wheat free on board, including commission, warehouse rent, and shipping charges, amounted to upwards of 5 roubles; but at present (1836) it does not exceed 2 roubles. The duties per chetwert are as follow:—

	Wheat.	Other grains.
Export duty	21 3-4ths cop.	11 cop.
Quarantine	7 1/2	4
Town and harbour duties	7 1/2	4
Lycoun duty	9	9
	88 1/2	24 1/2

The warehouse rent of corn at Odessa is from 8 to 10 copecks per chetwert per month. M. De Hagemeister supposes that Turkey and the different ports of the Mediterranean require, at an average, an annual supply of 1,400,000 chetwerts, or about 1,000,000 quarters, of which 1,000,000 chetwerts, or 750,000 quarters, are furnished by Southern Russia, and principally shipped from Odessa. Wallachia and Moldavia are both very fertile in corn; and were tranquillity and good order introduced into them, and the free navigation of the Danube secured, Galatz and Brailoff would be two of the principal European grain shipping ports. (See the excellent Report of Hagemeister on the Trade of the Black Sea, pp. 96-114. Eng. trans.)

Tallow exported from Odessa pays an export duty of 8 roubles per 10 poods.

Exclusive of corn, the other articles mentioned as being exported from Odessa, find their way to the different markets in the Mediterranean. Those shipped for Turkey are iron, tallow, sail-cloth, cordage, anchors for ships of war, butter, &c. The exports to Italy and other European countries are similar. The importation of all foreign articles into the Russian dominions on the Black Sea and the Sea of Azoff is confined to Odessa, Theodosia or Kaffa, and Taganrog. The import trade is, however, of inferior importance when compared with the export trade. The principal articles are sugar and coffee, dye woods, wine and brandy, cotton stuffs and yarn, woollen and silk manufactures, spices, cutlery; oranges, lemons, figs, and other fruit; lemon juice, oil, tin and tin plates, dried fruits, paper, silk, specie, &c.

The following instructive details as to the trade of Odessa in 1843 have been obtained from a quarter on which every reliance may be placed.

"The import trade at Odessa in 1842 exceeded, by a trifling amount, that of the two preceding years, in consequence of the larger quantities of olive oil and refined sugar introduced. Of these articles, the first is almost wholly carried into the country, even as far as Moscow; while the consumption of the latter is confined by the tariff to this town, though a part may no doubt be smuggled out of it. In wine there was a considerable falling off; and so there appears to have been in manufactures; but, on this head, the official report may be distrusted, and precise information can hardly be obtained. The ships that carry out manufactured goods from British and other ports for Odessa seldom bring them to their destination, the importers here preferring to have them transhipped in the Bosphorus into the steamers which run between Constantinople and this place, that they may avail themselves of the facilities accorded in favour of steam navigation, whereby some vexatious customs formalities are avoided. There is also a disposition in all parties to show imports at their least possible amount and value, lest any apparent excess should raise in Petersburg the suspicion of an illicit trade beyond the barriers of this privileged town. A new item in the return, that of opium of the value of 25,000*l.*, would have deserved more particular notice, were its future introduction not arrested by a duty, brought into force during the present year—40 silver roubles per pood, equal to 3*l.* 6*s.* per pound English—which is considered as implying prohibition. The drug imported from Smyrna, was sent to Moscow, destined for the caravans going to Kiachta.

"The return of exports exhibits an increase upon the trade of preceding years, from the larger shipments of wheat and tallow. The quantity of wheat exported was 631,694 quarters, of which 200,592 quarters were for England, and the remainder chiefly for Genoa, Leghorn, Marseilles, and other ports of the Mediterranean. The purchases for British account had in most part been made late in the autumn of 1841, though the shipments were long delayed by reason of the suspended navigation in the winter; those for the Mediterranean were, on the other hand, in great part made only after the cessation of demand for England, and prices had receded from 30s. and 32s., to 22s. and 30s. per quarter. The grain speculations were throughout unsuccessful, but those on English account were nothing less than ruinous. The Odessa commission merchants were not, however, involved in the losses, for they detained the wheat which had not been shipped, and by its resale covered their unpaid drafts. In this way many ships, that came chartered, found no cargoes; indeed such was the situation of 20 vessels belonging to one concern.

"It may be observed, that prices of wheat in this place are affected much more by a demand from England than by one from other countries; for the English agent goes into the market with orders in hand which are to be hastily executed, *more regard being had to time than to price, in consequence of the fluctuating duty in England.* Whereas those engaged in the regular trade for the Mediterranean purchase at leisure, and have even supplied the English purchasers from their own stores, securing to themselves an immediate profit. The quantity of wheat remaining at Odessa at the end of the year (1842) was about 120,000 quarters. This stock will not be augmented by the produce of the circumjacent Steppes, where the crops failed; but large supplies are expected to arrive next May and June from the Polish provinces, where the harvest was abundant. A new feature in the grain trade of 1842 was the arrival here of about 5,000 quarters of wheat from Austrian Galicia, which came down the Dniester as far as Mayak, and thence to Odessa overland. The duty on wheat brought into Russia over the land frontier is one rouble, paper money, per chetvert, which at the exchange of 23 roubles per £. is 1s. 3d. per quarter: but it is generally believed that this duty will be considerably augmented, if such importations are continued to any large amount.

"The exportation of tallow amounted to 9,266 tons, of which 8,851 tons went to England. The quantity shipped in 1840 and 1841 was only 6,222 and 5,933 tons. This excess was occasioned by the fact of the carriage of a good deal of tallow, made in neighbouring districts, and destined for Petersburg, having been prevented by the state of the roads from being sent thither. It was, therefore, sold to the Odessa merchants, who hope that those transactions may lead to a continued diversion of the tallow that formerly went to Petersburg into this new channel.

"Notwithstanding the export of wool has not fallen off, the owners of merinos complain of extreme distress arising from low prices, and from several disadvantages natural to this country, under which it is difficult for these establishments to prosper. They have, however, been signally favoured by the mildness of the two last winters, during which their flocks were kept upon open pasture. A transaction, too, which took place in October, seems to promise a new source of profit to them. A sale was made by Mr. Bagner, the owner of a fine flock in the vicinity of Kertch, of 2000 merino sheep to the Sultan. They were carried in five vessels to Constantinople, where they arrived in perfect condition, and gave great satisfaction. It is thought that Asia Minor unites in a high degree the various conditions necessary to the production of fine wool: and if the example set by the Sultan should open the way to such undertakings, the owners here will be able to dispose of their surplus stocks. The rates of freight situated as usual in these ports, having ranged from 65 to 35 shillings per ton. Great losses were incurred by the chartered ships which found no cargoes, and which, after the expiration of their 'lay days,' accepted low freights here, and had to claim the differences of their original charterers in England, in most cases bankrupts by the failure of grain speculations."

*Monies, Weights, and Measures, same as at Petersburg; which see.*

"The exports of wheat from Odessa in 1847, exceeded, we believe, the exports from any other port in any single year, either in ancient or modern times. They reached, as seen by the above table, the prodigious amount of 2,016,692 quarters, being 737,190 quarters more than their amount in 1845, the year of the greatest previous exportation. The average price of wheat free on board in 1847, considerably exceeded 40s. a quarter; but taking it only at that sum, the gross value of the exports of that grain from this single port must have exceeded 4 millions sterling! This excess may be ascribed in part to the extremely abundant harvest of 1846, in Southern Russia and Poland, and in part to the high prices and great demand for wheat in this country and in France, which made every corner of the country accessible by the Black Sea be ransacked for supplies. Of the quantity exported the largest share went to Marseilles: our imports were, however, very heavy, having amounted to 462,000 quarters, including those from Taganrog.

Account of the Quantities of the principal Articles imported into the U. Kingdom from Russian Ports within the Black Sea and the Sea of Azof in the undermentioned Years.

Odessa, in addition to its great and rapidly increasing trade with Constantinople and the countries on the Mediterranean, has a considerable trade with Redout-kalé at the mouth of the Phasis, and with Trebisond and several ports on the south coast of the Black Sea. Georgian and Armenian merchants are already considerable purchasers at the Leipsic and other German fairs; and civilization is beginning to strike its roots throughout all its extensive countries between the Black Sea and the Caspian. It is probable that, at no very remote period, the Phasis will be frequented by British ships; and that our merchants, without any enchantress to aid them, and depending only on the superior cheapness and excellence of their goods, will be hospitably received in the ancient Colchis, and bear away a richer prize than fell to the lot of Jason and his Argonauts.

*Epochs in the Trade of the Black Sea. Depth of Water. Difficulty of Navigation, &c.*—The trade of the Black or Euxine Sea was of great importance in antiquity. The shores of the Crimea, or Taurica Chersonesus, were settled by Milesian adventurers, who founded Panticapeum and Theodosia. The exports thence to Athens were nearly the same as those which are now sent from Odessa and Taganrog to Constantinople, Leghorn, &c.; viz. corn, timber, and naval stores, leather, wax, honey, salt fish, caviare, &c., with great numbers of slaves, the best and most serviceable that were anywhere to be met with. The Athenians set a very high value upon this trade, which supplied them annually with about 400,000 medimni of corn; and to preserve it they carefully cultivated the alliance of the Thracian princes, and kept a garrison at Sestus, on the Hellespont.—(See the authorities in *Anacharsis's Travels*, c. 55.; and in *Clarke's Connection of the Saxon and English Coins*, pp. 54—64.) During the middle ages, the Genoese acquired an ascendancy on this sea, and laboured with pretty considerable success to monopolise its trade. Their principal establishment was at Caffa, which was the centre of a considerable commerce. But the conquest of Constantinople by the Turks, in 1453, was soon after followed by the conquest of Caffa, and the total exclusion of European vessels from the Black Sea, which became in a great measure unknown. This exclusion was main-

tained for about 300 years, or till it was opened to the ships of Russia by the treaty of Kainardgi in 1774. The Austrians obtained a similar equality of privileges in 1784; and British, French, &c. ships were admitted by the treaty of Amiens. There were, however, some restraints still kept up; but these have been abolished by the late treaty between the Turks and Russians in 1829; and, for commercial purposes at least, the Black Sea is now as free as the Mediterranean.

Notwithstanding the number of English and other European ships that have visited this sea within the last 20 years, its geography is still very imperfectly known. A notion seems to have been long prevalent, that it was not only stormy, but also infested with numerous shoals. Polybius, indeed, contends, that, owing to the vast quantities of alluvial deposit brought down by the Danube and other large rivers that fall into the Black Sea, it was gradually filling up, and would become, at no very remote period, an immense morass! Dr. Clarke seems to have espoused the same theory. But, how probable soever it may appear, extremely little progress has hitherto been made towards the consummation described by Polybius. Instead of being shallow, the water is for the most part remarkably deep; with a bottom, where soundings have been obtained, of gravel, sand, and shells. A strong current sets from the Black Sea, through the Bosphorus, or Canal of Constantinople, into the Sea of Marmara, and from the latter through the Dardanelles, which it requires a fresh breeze to stem. This current is said to be sensibly felt in the Black Sea, 10 or 12 miles from the Bosphorus; and it may probably carry off some of the mud brought down by the rivers. — (See *Tournefort's Voyage du Levant*, Lett. 15, 16.; Art. 9. in No. I. of the *Journal of the Geographical Society; Macgill's Travels in Turkey*, vol. i. p. 245., &c.)

The navigation of the Black Sea has been represented by most modern and all ancient writers as exceedingly dangerous. We believe, however, that there is very little foundation for the greater number of the statements on this subject. It is said to be particularly subject to dense fogs, and to currents; but the former are prevalent only at particular seasons, and the influence of the latter is not greater than in many other seas which are not reputed dangerous. Tournefort, one of the best and most accurate of travellers, considers the navigation of the Black Sea as safe as that of the Mediterranean: — “*Il n'a rien de noir, pour ainsi dire, que le nom: les vents n'y soufflent pas avec plus de furie, et les orages ne sont guères plus fréquens que sur les autres mers.*” — (Tome ii. p. 164. 4to ed.) Dr. Clarke (*Travels*, vol. ii. p. 387. 8vo ed.) affects to doubt this: but he assigns no grounds for his opinion; and who would think of putting his authority in competition with that of Tournefort? Indeed the accuracy of the statements of the latter has been fully established by the recent reports of Captain Middleton and other able officers who have navigated this sea. But, though without “a hidden danger,” any sea would be dangerous to the Greek and Turkish pilots, by whom the Black Sea has been principally navigated. If the progress of navigation were to be estimated by its state amongst them, we should have to conclude that it had been stationary from the æra of the Argonauts. They seldom venture out of sight of the coasts; they have neither charts nor quadrants; and hardly even know that one of the points of the needle turns towards the North! — (*Tournefort, in loc. cit.*) There is not, certainly, much room for wonder at shipwrecks being frequent among vessels so navigated. On leaving the Black Sea, the greatest difficulty is in making the Bosphorus. “The mountains,” says Mr. Macgill, “are all so much alike, that it is difficult to determine which of them is at the entrance, until you are within a very few miles of the coast: then, with a fair wind, you are on a lee shore with a lee current; and if you make a mistake, destruction is almost inevitable. The Turks have two light-houses at the entrance; but unless you see them before sunset, they are of little use: in the forests, on its borders, great quantities of charcoal are made, and the lights from it bewilder, and often mislead, the unhappy mariner.” — (i. 245.)

From the vast quantity of fresh water poured into the Black Sea, the saline particles are so much diluted, that, with a slight frost, the surface becomes covered with ice; hence, during a great part of the year, hardly any navigation is attempted. The vessels that resort to Odessa seldom arrive at that port before the latter end of May; and those whose cargoes are not completed before the end of October, more frequently wait the return of spring, than adventure to encounter the dangers of an autumnal or winter voyage.

At Taganrog the frost commences earlier, and continues longer, than at Odessa; so that there are scarcely more than 4 or 5 months in the year, during which the Sea of Azoff can be safely navigated.

**OIL** (Fr. *Huile*; Ger. *Öel*; It. *Olie*; Lat. *Oleum*; Rus. *Maslo*; Sp. *Aceite*). The term *oil* is applied to designate a number of unctuous liquors, which, when dropped upon paper, sink into it and make it seem semi-transparent, or give it what is called a greasy stain. These bodies are very numerous, and have been in common use from time immemorial. Chemists have divided them into two classes; namely, *volatile* and *fixed oils*. We borrow from Dr. Thomas Thomson the following statement with respect to these bodies: —

1. **VOLATILE OILS**, called also *essential oils*, are distinguished by the following properties: — 1. Liquid, often almost as liquid as water, sometimes viscid; 2. Very combustible; 3. An acrid taste and a strong fragrant odour; 4. Volatilised at a temperature not higher than 212°; 5. Soluble in alcohol, and imperfectly in water; 6. Evaporate without leaving any stain on paper.

By this last test it is easy to discover whether they have been adulterated with any of the fixed oils. Let a drop of the volatile oil fall upon a sheet of writing paper, and then apply a gentle heat to it; if it evaporates without leaving any stain upon the paper, the oil is pure; but if it leaves a stain upon the paper, it has been contaminated with some fixed oil or other.

Volatile oils are almost all obtained from vegetables, and they exist in every part of plants, — the root, the bark, the wood, the leaves, the flower, and even the fruit; though they are never found in the substance of the cotyledons; whereas the fixed oils, on the contrary, are almost always contained in these bodies.

When the volatile oils are contained in great abundance in plants, they are sometimes obtained by simple expression. This is the case with oil of oranges, of lemons and bergamotte; but in general they can only be obtained by distillation. The part of the plant containing the oil is put into a still with a quantity of water, which is distilled off by the application of a moderate heat. The oil comes over along with the water, and swims upon its surface in the receiver. By this process are obtained the oil of peppermint, thyme, lavender, and a great many others, which are prepared and employed by the perfumer; others are procured by the distillation of resinous bodies. This is the case in particular with oil of turpentine, which is obtained by distilling a kind of resinous juice, called turpentine, that exudes from the juniper.

Volatile oils are exceedingly numerous. They have been long known; but as their use in chemistry is but limited, they have not, hitherto, been subjected to an accurate chemical investigation. They differ greatly in their properties from each other; but it is impossible at present to give a detailed account of each.

1. The greater number of volatile oils are *liquid*; many, indeed, are as limpid as water, and have none of that appearance which we usually consider oily. This is the case with the following; namely, oil of turpentine, oranges, lemons, bergamotte, roses. — Others have the oily viscosity. It varies in all degrees. This is the case with the oils of mace, cardamom, saffron, cloves, cinnamon. — Others have the property of becoming solid. This is the case with the oils of parsley, fennel, aniseed, balsam. — Others crystallise by slow evaporation. This is the case with oil of thyme, peppermint, marjoram. — The oil of nutmegs has usually the consistence of butter. This is the case also with the oils of hops and of pepper.

2. The colour of the volatile oils is as various as their other properties. A great number are limpid and colourless; as oil of turpentine, lavender, rosemary, saffron, aniseed; some are yellow; as spike, bergamotte; some are brown; as thyme, savory, wormwood; others blue; as camomile, motherwort; others green; as mint, pepper, hops, parsley, wormwood, catechu, juniper, sage, valerian; others, though at first colourless, become yellow or brown by age; as cloves, cinnamon, saffron.

3. The odours are so various as to defy all description. It is sufficient to say, that all the fragrance of the vegetable kingdom resides in volatile oils. Their taste is acrid, hot, and exceedingly unpleasant.

4. Their specific gravity varies very considerably, not only in different oils, but even in the same oil in different circumstances. The following are the specific gravities of several of the volatile oils, as ascertained by Dr. Lewis: —

Oil of saffron	-	-	1.064	Oil of lavender	-	-	.946
cinnamon	-	-	1.035	caraway seeds	-	-	.940
cloves	-	-	1.054	origanum	-	-	.940
fennel	-	-	.997	spike	-	-	.938
dill	-	-	.994	rosemary	-	-	.934
peppermint	-	-	.978	juniper berries	-	-	.911
cumin	-	-	.975	oranges	-	-	.888
mint	-	-	.975	turpentine	-	-	.778
nutmegs	-	-	.948				

When the volatile oils are heated in the open air, they evaporate readily, and without alteration diffuse their peculiar odours all around; but there is a considerable difference between the different oils in this respect. When distilled in close vessels, they do not so readily assume the form of vapour. Hence they lose their odour, become darker in colour, and are partly decomposed. Oils do not seem very susceptible of assuming the gaseous form, unless some other substance, as water, be present.

II. **FIXED OILS** are distinguished by the following characters: — 1. Liquid, or easily become so when exposed to a gentle heat; 2. An unctuous feel; 3. Very combustible; 4. A mild taste; 5. Boiling point not under 600°; 6. Insoluble in water, and nearly so in alcohol; 7. Leave a greasy stain upon paper.

These oils, which are called fat or expressed oils, are numerous, and are obtained partly from animals and partly from vegetables, by simple expression. As instances, may be mentioned whale oil or train oil obtained from the blubber of the whale and from cod; olive oil, obtained from the fruit of the olive; linseed oil and almond oil, obtained from linseed and almond kernels. Fixed oils may also be extracted from poppy seeds, hemp seeds, beech mast, and many other vegetable substances.

All these oils differ from each other in several particulars, but have also many particulars in common. 1. Fixed oil is usually a liquid with a certain degree of viscosity, adhering to the sides of the glass vessels in which it is contained, and forming streaks. It is never perfectly transparent; has always a certain degree of colour, most usually yellowish or greenish; its taste is sweet, or nearly insipid. When fresh it has little or no smell.

There exist also in the vegetable kingdom a considerable number of bodies which, at the ordinary temperature of the atmosphere, are solid, and have hitherto been considered as fixed oils. Palm oil may be mentioned as an example. The various substances used in India and Africa as substitutes for butter, and as unguents, may likewise be mentioned.

2. All the fixed oils hitherto examined are lighter than water; but they differ greatly from one another in specific gravity. The same difference is observable in different samples of the same oil. The following Table contains the specific gravity of such oils as have been examined: —

Oil of palm	-	-	.968	Oil of beech nuts	-	-	.928
hazel nuts	-	-	.941	ben	-	-	.917
popples	-	-	.939	olives	-	-	.915
linseed	-	-	.938	rape-seed	-	-	.913
almonds	-	-	.937	cacao	-	-	.932
walnuts	-	-	.925 to 947				

Fixed oil when in the state of vapour, takes fire on the approach of an ignited body, and burns with a yellowish white flame. It is upon this principle that candles and lamps burn. The tallow or oil is first converted into a state of vapour in the wick; it then takes fire, and supplies a sufficient quantity of heat to convert more oil into vapour; and this process goes on while any oil remains. The wick is necessary, to present a sufficiently small quantity of oil at once for the heat to act upon. If the heat were great enough to keep the whole oil at a temperature of 600°, no wick would be necessary, as is obvious from oil catching fire spontaneously when it has been raised to that temperature. When oil is used in this manner, either in the open air or in contact with oxygen gas, the only new products obtained are water and carbonic acid.

The drying oils are used as the vehicle of paints and varnishes. Linseed, nut, poppy, and hemp-seed oils belong to this class. These oils in their natural state possess the property of drying oils, but imper-

fectly. To prepare them for the use of the painter and varnish maker, they are boiled for some time in an iron pot, and sometimes burnt till they become viscid. When they burn for some time, their unctuous quality is much more completely destroyed than by any method that has been practised. Hence it is followed frequently in preparing the drying oils for varnishes, and always for printers' ink, which requires to be as free as possible from all unctuousity.

Nut oil has been found preferable to all other oils for printers' ink; though the dark colour which it acquires during boiling renders it not so proper for red ink as for black. Linseed oil is considered as next after nut oil in this respect. Other oils cannot be employed, because they cannot be sufficiently freed from their unctuousity. Ink made with them would be apt to come off and smear the paper while in the hands of the bookbinder, or even to spread beyond the mark of the types and stain the paper yellow.

For the regulations with respect to the importation and exportation of train oil, see p. 138.

\* **OLIBANUM** (Fr. *Encens*; Ger. *Weiranck*; It. *Olibano*; Arab. *Looban*), a gum-resin, the produce of a large tree (*Libanus thurifera*) growing in Arabia and India. It is imported in chests containing each about 1 cwt., from the Levant and India; the best comes from the former, and is the produce of Arabia. Good olibanum is in semi-transparent tears, of a pink colour, brittle, and adhesive when warm; when burnt, the odour is very agreeable; its taste is bitterish, and somewhat pungent and aromatic; it flames for a long time with a steady clear light, which is not easily extinguished, leaving behind a black (not, as has been said, a whitish) ash. Olibanum is the frankincense (*thus*) of the ancients; and was extensively used by them in sacrifices. — (*Plin. Hist. Nat. lib. xii. c. 14.*) It has also been used in the ceremonies of the Greek and Roman churches. — (*Ainslie's Mat. Indica*; *Thomson's Chemistry*; *Kippingii Antiq. Rom. lib. i. c. 11.*)

**OLIVE, OLIVES** (Ger. *Oliven*; Fr. *Olives*; It. *Ulive, Olive*; Sp. *Aceitunas*; Port. *Azeitonas*; Lat. *Olive*), a fruit yielding a large quantity of oil, the produce of the *Olea*, or olive tree. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The cultivated species grows spontaneously in Syria, and is easily reared in Spain, Italy, and the south of France. It has even been raised in the open air in England, but its fruit is said not to have ripened. The fruit is a smooth oval plum, about  $\frac{3}{4}$  of an inch in length, and  $\frac{1}{2}$  an inch in diameter; of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but replete with a bland oil; covering an oblong, pointed, rough nut. Olives intended for preservation are gathered before they are ripe. In pickling, the object is to remove their bitterness, and to preserve them green, by impregnating them with a brine of aromatised sea salt; for this purpose various methods are employed. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine polish of which it is susceptible.

**OLIVE OIL** (Ger. *Baumöl*; Fr. *Huile d'olives*; It. *Olio d'uliva*, Sp. *Aceite de aceitunas*; Lat. *Oleum olivarum*). The olive tree is principally cultivated for the sake of its oil. This is an insipid, inodorous, pale greenish yellow coloured, viscid fluid, unctuous to the feel, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils; and is largely used, particularly in Greece, Italy, Spain, and France, as an article of food, and in medicine, and the arts. It is also very extensively used in this country, particularly in the woollen manufacture.

The ripe fruit is gathered in November, and immediately bruised in a mill, the stones of which are set so wide as not to crush the kernel. The pulp is then subjected to the press in bags made of rushes; and by means of a gentle pressure, the best, or virgin oil, flows first; a second, and afterwards a third, quality of oil is obtained by moistening the residuum, breaking the kernels, &c., and increasing the pressure. When the fruit is not sufficiently ripe, the recent oil has a bitterish taste; and when too ripe, it is fatty. After the oil has been drawn, it deposits a white, fibrous, and albuminous matter but when this deposition has taken place, if it be put into clean glass flasks, it undergoes no further alteration; the common oil cannot, however, be preserved in casks above 1½ or 2 years. It is sometimes adulterated by the admixture of poppy oil. — (*Thomson's Dispensatory.*)

The best olive oil is said to be made in the vicinity of Aix, in France. That which is brought from Leghorn, in chests containing 30 bottles, or 4 English gallons, is also very superior; it is known in our markets by the name of Florence oil, and is used mostly for culinary purposes. Olive oil is the principal article of export from the kingdom of Naples. — (See NAPLES.) Apulia and Calabria are the provinces most celebrated for its production. The Apulian is the best, and is preferred by the woollen manufacturers, by whom it is extensively used. By far the largest portion of the olive oil brought to England is in general imported from Italy; principally from Gallipoli, on the east coast of the Gulf of Taranto, lat. 40° 2' N. lon. 18° 25' 55" E., whence it is commonly known by the name of Gallipoli oil. But, besides Italy, Spain sends us large quantities, and we derive smaller supplies from Turkey, the Ionian Islands, &c.

The price of olive oil, duty paid, in London, in June 1843, was as follows:—

	ton	40 to 47 0	Barberry	ton (222 gals.)	55 0 to 54 0
Gallipoli	-	-	-	-	-
Spanish Calabria	-	-	-	-	-
Candia, Genoa, and Provence, &c.	-	-	-	-	-
	75 0	80 0	5 10	6 10	1 3

The duty on olive oil was for a lengthened period most exorbitant. In 1834 it was fixed at 10s. 10s. a tun if imported in a Neapolitan, and at 8s. 8s. if imported in a British or other vessel. But as olive oil is of essential importance in the arts, being extensively used in the manufacture of woollens, in the pro-

paration of the best species of soaps, and other departments of industry, this duty was much and justly objected to. In consequence it was reduced in 1841, to 4*l.* 4*s.* a tun if imported indirectly and not in a Neapolitan ship, and in 1842, the duty was further reduced to 3*l.* and 4*l.* a ton according to the vessels in which it is imported. At present (1843), therefore, the amount of the duty cannot be justly objected to, but the differential principle on which it has been and is imported, is most objectionable. It imitates and (in so far as copying can do) justifies the worst part of the commercial policy of the Neapolitan government, and prompts them to keep up high discriminating duties on all articles imported into Naples and Sicily in British ships. So wretched an attempt at retaliation is quite unworthy of an enlightened nation, and deserves to be universally scouted. It is, in fact, injurious only to ourselves.

Account of the Quantities of Olive Oil imported into the United Kingdom during each of the 7 Years ending with 1841; specifying the Countries from which the Oil was brought and the Quantities brought from each, with the Quantities entered for Home Consumption.

Olive oil, the produce of Europe, may not be imported into the U. Kingdom for home consumption, except in British ships or in ships of the country of which it is the produce, or from which it is imported on forfeiture of the same and 100*l.* by the master of the ship. — (3 & 4 *Will.* 4. c. 54. § 2. 22.)

It is ordered by a Customs Minute of the 23d of July, 1828, that when the actual tare is not taken, 1-4*l.* for tare on each jar, and 1-7*th* for foot, may be allowed.

*Oil Trade of Naples.* — The oils of the kingdom of Naples are produced in Apulia, from Bari to its southern extremity, the Capo di Leuca; a district comprising the territories which export from Gallipoli and Taranto; and in Calabria from Rossano, on the Gulph of Taranto, across to Gioja. The whole coast from Gioja as far as Gaeta is covered with olive trees. They are also abundant in the Abruzzi and the Terra di Lavoro; but Apulia and Calabria furnish by far the greatest quantity of oil.

The principal magazines, or *caricatori*, for oil, are at Gallipoli and Gioja.

Gallipoli supplies England, Holland, the north of Europe, and, in short, all those countries that require the most perfect purified oil. It is clarified to the highest degree, by merely keeping it in cisterns hollowed out of the rock on which the town is built. The voyages it has to perform being long, it is put into casks so well constructed, that it frequently arrives at Petersburg in the heat of summer, without the least waste or leakage, — an advantage attributed to the seasoning of the staves, which, before they are put together, are well soaked in sea water.

We borrow the following details with respect to the preparation of oil at Gallipoli, from a very interesting paper, communicated by an English gentleman who had resided in the town, in the volume entitled *Vegetable Substances Materials of Manufactures*, published by the Society for the Diffusion of useful Knowledge.

"The rock on which the town is built is easily excavated; and in caverns thus constructed oil clarifies sooner, and keeps without rancidity much longer, than in any other place. Hence numerous oil-houses are established at Gallipoli, and a very considerable portion of the rock is cut into cisterns. A Gallipolitan oil warehouse generally occupies the ground floor of a dwelling-house, and has a low arched roof. Some are more extensive, but on an average they are about 30 feet square. In the stone floor you see 4, 6, or more holes, which are circular, about 2 feet in diameter, and like the mouths of wells. Each of these holes gives access to a separate cistern beneath your feet; and when the oil is poured into them care is taken not to mix different qualities, or oils at different stages, in the same reservoir. One cistern is set apart for *oglio mosto*, or oil that is not clarified, another for pure oil of the season, another for old oil, &c. I have seen oil that had thus been preserved for 7 years in a perfect state, or, as the Gallipolitan merchants have it, *chiaro, giallo, e lampante*, — words which, during some months, I have heard at least 100 times a day. I also many times verified the fact: the *mosto*, or oil in its turbid state, which arrived almost as black and thick as pitch, soon became bright and yellow in these excellent reservoirs, without any help from man.

"All the oil, whatever may be its quality, is brought to the magazine in sheep or goat skins, which are generally carried on mules — there being but few *strade rotabile*, or roads fit for wheeled carriages, in these parts. In a good year, and at the proper season, I have counted, in the course of an afternoon's ride, as many as 100 mules returning from Gallipoli, where they had been to deposit their unctuous burdens, to different towns and villages in the Terra d'Otranto, or the more distant province of Bari. The quantity of oil required may be conceived, when I state, that at one time (in the year 1816) I saw 9 English, 3 American, 2 French, and 6 Genoese vessels, (not to mention some small craft from the Adriatic,) all waiting in the port of Gallipoli for entire or partial cargoes of it. When the oil is to be shipped, it is drawn off the cistern into *ucri*, or skins, and so carried on men's shoulders down to a small house on the sea shore. In that house there is a large open basin, capable of containing a given quantity, and of measuring the oil; and into that the porters empty their skins as they arrive. A tube communicates from the basin to a large cock at the outside of the house. When the basin is full, well-made casks, of various sizes for the convenience of stowage, are placed under the cock, which is then turned, and the casks are filled. As the casks are closed up by the cooper, the porters roll them down to the brink of the sea, where the sailors secure several of them together with a rope, and taking the end of the cord into the boat, they row off to the vessel, towing the oil casks through the water after them.

"I first became acquainted with the Gallipolitans shortly after the fall of Napoleon, whose system, whatever good parts it may have done in the rest of Italy, was certainly most ruinous to the provinces of Lecce and Bari. Unable to export, or find any market for their produce, the proprietors in many parts of those provinces let the olives lie and rot upon the ground. For some years, indeed, the price of oil scarcely paid the cost of its preparation, to say nothing of transport and other necessary expenses. During the Continental system, the best *chiaro, giallo, e lampante* oil was sold at Gallipoli for 8 Neapolitan ducats the salma; in 1816 and 1817, it found a ready market at from 60 to 70 ducats per salma!

"Those who, during the evil time, had penetration enough to foresee better days, and that a system opposed to the general commercial prosperity of Europe could not last; and who had, at the same time, money enough for such objects; by annually making their oil as usual, and buying up the oil of others at the low current prices of the day, realised enormous profits when peace threw open the port of Gallipoli, and ships of all nations flocked thither as before.

"The olives of which the Gallipoli oil is made, are never gathered, but allowed to drop in their ma-

turity from the tree on the ground, where they are picked up chiefly by women and children, and carried to the mill.

"The machinery employed in expressing the oil is of the rudest kind, and, no doubt, numerous improvements might be introduced, not only into this branch, but into that of cultivating the olive tree. The peasantry, however, and, in the kingdom of Naples, those who stand higher in the scale of fortune and rank, are too often but bores in intellect, are obstinate in their attachment to old practices, and are apt, when any of these are reprehended, to stop discussion by saying—*Faccio come faceva la buon' anima di mio padre, e ciò basta.* (I do as my father of blessed memory did before me, and that's enough.)"

"The poor people of the country make culinary uses of the same oil that is exported, and which in England is only used in manufactures, or burnt in lamps; but in the houses of the gentry I have often tasted oil prepared with more care, which was truly delicious, being equal to that of Sorrento, Vico, and Massa, or even to the best oil of Tuscany or Provence." (Fp. 300—304.)

The oil received into the cisterns in Gallipoli, either belongs to the proprietor who buys it of the planter, or is received in deposit on account of some other party who gets a receipt (*biglietto di magazzino*) specifying the quantity of the oil received on his account, its quality, &c. Depositors pay at the rate of 20 grani a year for every salma of oil to the party holding it in deposit, and who is bound to account for it.

The *caricatori* of Bari and Monopoli furnish oils for the consumption of Upper Italy and Germany, through the medium of Venice and Trieste. They also draw supplies from Brindisi and Otranto.

The *caricatori* of Taranto, of Eastern Calabria or Retromarina, and of Western Calabria, the principal of which is Gioja, furnish supplies for Marseilles, &c. But the *caricatori* now mentioned, having no conveniences for clarification, produce only the thick oils used for soap-making.

The oils of Sicily, like those of Tunis, are too thin to be used singly in the making of soap; and being used only for mixing, are less valuable than most others.

At present (1843) a full crop of oil in the province of Terra d'Otranto is supposed to yield about 300,000 salme, or 41,666 tons. To facilitate transactions, orders or *cedules* are circulated, representing quantities of oil deposited in the provincial *caricatori*. These orders are negotiable, like bills of exchange, and are indorsed by the intermediate holder, who receives their value in cash, without, however, becoming liable for their due satisfaction. The only responsible parties are the drawer and drawee.

The latter is obliged to deliver the oil at sight of the order, or to hold it, at the bearer's disposal, till the 10th of November for the *caricatori* of Apulia, and till the 31st of December for those of Calabria. If the contract be for time, that is, from one year to another, the oil is usually placed at the purchaser's command on the 1st of March. Purchases for time are effected by means of a contract, wherein the vendor undertakes to deliver the oil by the end of January, on receiving payment of the money; but the oil, as observed above, is not really at the purchaser's disposal before the beginning of March. Hence, in time bargains, the payment of the money precedes the delivery of the oil more than a month: scarce an instance is on record of an engagement of this sort having been broken, and the order is as readily negotiable as any other security.

In purchases of oil at command, payment likewise precedes the delivery of the article; but in this case the advance is confined to the 5 days necessary to transmit the order to the *caricatore* where the oil is kept for delivery.

The oil remains in the *caricatore* under the care and responsibility of the vendor, to be delivered on demand to the bearer of the order, free of all costs and charges whatever for the first year; but for every successive year from 25 to 30 grains per salma are charged for keeping, and for renewal of warranty.—(We are indebted for these details to a very valuable Report by Mr. Steel, vice-consul at Gallipoli, and to a brochure of M. Millenet, entitled *Coup d'Œil sur le Royaume de Naples*. Naples, 1832.)

OMNIUM, a term used at the Stock Exchange, to express the aggregate value of the different stocks in which a loan is now usually funded.

Thus, in the loan of 36,000,000*l.* contracted for in June, 1815, the omnium consisted of 130*l.* 3 per cent. reduced annuities, 44*l.* 3 per cent. consols, and 10*l.* 4 per cent. annuities, for each 100*l.* subscribed.

The loan was contracted for on the 14th of June, when the prices of the above stocks were—3 per cent. reduced, 54; 3 per cent. consols, 55; 4 per cents., 70: hence the parcels of stock given for 100*l.* advanced, were worth—

	£.	s.	d.
130 <i>l.</i> reduced, at 54	-	-	70 4 0
44 <i>l.</i> consols, at 55	-	-	24 4 0
10 <i>l.</i> 4 per cents., at 70	-	-	7 0 0
Together	-	-	101 8 0

which would be the value of the omnium, or 1*l.* 8*s.* per cent. premium, independently of any discount for prompt payment.

ONION (Ger. *Zwiebel*; Fr. *Oignon*; It. *Cipolla*; Sp. *Cebolla*; Rus. *Лук*), a well known bulbous plant (*Allium Cepa* Linn.) cultivated all over Europe for culinary purposes. The Strasburg, Spanish, and Portuguese varieties are the most esteemed.

ONYX (Ger. *Onyx*; Fr. *Onix*; Sp. *Onique*; Lat. *Onyx*). "Any stone exhibiting layers of 2 or more colours strongly contrasted is called an *onyx*; as banded jasper, chalcedony, &c., but more particularly the latter, when it is marked with white, and stratified with opaque and translucent lines. But the Oriental onyx is considered a substance consisting of 2 or more layers or bands of distinct and different colours. A sard, or sardoine, having a layer of white upon it, would be called an *onyx*; and according to the number of layers it would be distinguished as an *onyx* with 3 or more bands. Some of the antique engravings are upon onyxes of 4 bands."—*Mawe's Treatise on Diamonds, &c.*)

OPAL (Ger. *Opal*; Fr. *Opale*; It. *Opalo*; Sp. *Opalo*, *Piedra iris*; Port. *Opala*; Lat. *Opalus*), a stone, of which there are several varieties, found in different parts of Europe, particularly in Hungary, and in the East Indies, &c. When first dug out of the earth it is soft, but it hardens and diminishes in bulk by exposure to the air. The opal is always amorphous; fracture conchoidal; commonly somewhat transparent. Hardness varies considerably. Specific gravity from 1.958 to 2.54. The lowness of its specific gravity in some cases is to be ascribed to accidental cavities which the stone contains. These are sometimes filled with drops of water. Some specimens of opal have the property of emitting various coloured rays, with a particular effulgency, when placed between the eye and the light. The opals which possess this property are distinguished

by lapidaries by the epithet *Oriental*; and often, by mineralogists, by the epithet *nobilis*. This property rendered the stone much esteemed by the ancients. — (*Thomson's Chemistry*; see also *Plin. Hist. Nat. lib. xxxvii. c. 6.*, where there are some very curious details as to this stone.)

Mr. Mawe gives the following statement with respect to the precious opal, or opal *nobilis*:—"The colour of the opal is white or pearl grey, and when held between the eye and the light is pale red, or wine yellow, with a milky translucency. By reflected light it exhibits, as its position is varied, elegant and most beautiful iridescent colours, particularly emerald green, golden yellow, flame and fire red, violet, purple, and celestial blue, so beautifully blended, and so fascinating, as to captivate the admirer. When the colour is arranged in small spangles, it takes the name of the barlequin opal. Sometimes it exhibits only 1 of the above colours, and of these the most esteemed are the vivid emerald green and the orange yellow. When the stone possesses the latter of these colours, it is called the golden opal.

"The precious opal is not quite so hard as rock crystal: it is frequently full of flaws, which greatly contribute to its beauty, as the vivid iridescent colours which it displays are occasioned by the reflection and refraction of light, which is decomposed at these fissures. It is never cut in facets, but always hemispherical. It is generally small, rarely so large as an almond or hazel nut, though I have seen some specimens the size of a small walnut, for which several hundred pounds were demanded. At present, a pretty opal may be bought at from 1 to 3 or 5 guineas, sufficiently large for a pin or ring stone. It requires great care and judgment in the cutting, as it is fragile and easily spoiled.

"The opal, in all ages, has been highly esteemed: the history of the Roman senator, who preferred death rather than give up his opal ring to the Emperor Nero, is familiar to every one. Among the Eastern nations, the opal ranks higher than in Europe.

"A spurious substance is sometimes sold for black and green opal, and often set in jewellery; it occurs of the size of a small almond, but more commonly not larger than a lentil or pea. This *precious gem* is nothing more than the cartilage of the hinge of a large shell. Glass, and even scoria, having an iridescent appearance, have also often been sold for opal."—(*Treatise on Diamonds*, &c. 2d ed. pp. 122—125.)

**OPIUM** (Ger. *Mohnsaft*; Fr. *Opium*; It. *Oppio*; Sp. and Port. *Opio*; Lat. *Opium*; Arab. *Ufyoos*; Hind. *Ufseem*; Turk. *Madjoon*), the concrete juice of the white poppy (*Papaver somniferum*), which is most probably a native of Asia, though now found growing wild in the southern parts of Europe, and even in England. Opium is chiefly prepared in India, Turkey, and Persia; but the white poppy is extensively cultivated in France, and other parts of Europe, on account of its capsules, and of the useful bland oil obtained from its seeds. It has also been cultivated, and opium made, in England: but there is very little probability of its ever being raised here to any considerable extent.

The poppy is an annual plant, with a stalk rising to the height of 3 or 4 feet; its leaves resemble those of the lettuce, and its flower has the appearance of a tulip. When at its full growth, an incision is made in the top of the plant, from which there issues a white milky juice, which soon hardens, and is scraped off the plants, and wrought into cakes. In India, these are covered with the petals of the plant to prevent their sticking together, and in this situation are dried, and packed in chests lined with hides and covered with gunny, each containing 40 cakes, and weighing 2 maunds or 149½ lbs.; they are exported in this state to the places where the opium is consumed. Turkey opium is in flat pieces, covered with leaves, and the reddish capsules of some species of *rumer*; which is considered an indication of its goodness, as the inferior kinds have none of these capsules adhering to them.

According to Dr. A. T. Thomson, Turkey opium has a peculiar, strong, heavy, narcotic odour, and a bitter taste, accompanied by a sensation of acrid heat, or biting on the tongue and lips, if it be well chewed. Its colour when good is a reddish brown, or fawn colour; its texture compact and uniform. Its specific gravity is 1.336. When soft, it is tenacious; but when long exposed to the air, it becomes hard, breaks with a uniform shining fracture, is pulverulent, and affords a yellowish brown powder.

East Indian opium has a strong empyreumatic smell; but not much of the peculiar narcotic, heavy odour of the Turkey opium; the taste is more bitter, and equally nauseous, but it has less acrimony. It agrees with the Turkey opium in other sensible qualities, except that its colour is blacker, and its texture less plastic, although it is as tenacious. Good Turkey opium has been found to yield nearly 3 times the quantity of *morphia*, or of the peculiar principle of the drug, that is yielded by East Indian opium.

Opium is regarded as bad, when it is very soft, greasy, light, friable, of an intensely black colour, or mixed with many impurities. A weak or empyreumatic odour, a slightly bitter or acrid, or a sweetish taste, or the power of marking a brown or black continuous streak when drawn across paper, are all symptoms of inferior opium.—(*Dispensatory*.)

The raising of opium is a very hazardous business; the poppy being a delicate plant, peculiarly liable to injury from insects, wind, hail, or unseasonable rain. The produce seldom agrees with the true average, but commonly runs in extremes; while one cultivator is disappointed, another reaps immense gain: one season does not pay the labour of the culture; another, peculiarly fortunate, enriches all the cultivators. This circumstance is well suited to allure man, ever confident of good fortune.—(*Colabrook's Husbandry of Bengal*, p. 119.)

In England, opium is little used, except as a medicine. During the 3 years ending with 1842, the quantity entered for home consumption amounted, at an average, to

44,683 lbs. a year. The principal part of our supply is brought from Turkey. Opium from the latter was worth, in the London market, in June 1843, from 8s. to 8s. 6d. per lb., duty (1s.) paid.

*Consumption and Trade of Opium in China.*—Opium is pretty extensively used, both as a masticatory and in smoking, in Turkey and India; but its great consumption is in China and the surrounding countries, where the habit of smoking it has become almost universal. The Chinese boil or seethe the crude opium; and by this process the impurities, resinous and gummy matter, are separated, and the remaining extract only is reserved for use. Thus prepared, the drug loses its ordinary strong and offensive aromatic odour, and has even a fragrant and agreeable perfume. A small ball of it, inserted in a large wooden pipe with some combustible matter, is lighted, and the amateur proceeds to inhale four or five whiffs, when he lies down and resigns himself to his dreams, which are said to have no inconsiderable resemblance to the sensations produced by inhaling the oxide of azote. Those who do not carry the indulgence to excess, do not, it is said, experience any bad effects from it.

Nine tenths of the supplies of opium for the consumption of China have always been derived from India, a comparatively small quantity only being derived from Turkey. The trade has always been contraband, the introduction of the drug having been prohibited by the Chinese government. Until about 1810 the trade had not attracted much attention, or become of any very great importance, but it has since been very greatly extended, and has been since 1828 of first-rate consequence. The trade was at first carried on at Whampoa, about 15 miles below Canton; next at Macao, whence it was driven by the exactions of the Portuguese; and thereafter in the bay of Lintin. Here the opium is kept on board ships, commonly called receiving ships, of which there are often 10 or 12 lying together at anchor. But latterly the trade has been carried on all along the south-east coast of China, by means of a species of fast sailing vessels called "clippers," built expressly for the trade and strongly armed. The sales are mostly effected by the English and American agents in Canton, who give orders for the delivery of the opium; which, on producing the order, is handed over to the Chinese smuggler, who comes alongside at night to receive it. Frequently, however, the smuggler purchases the opium on his own account, paying for it on the spot in silver; it being a rule of the trade, never departed from, to receive the money before the drug is delivered.

During the first 10 years of the present century, the exports of opium from India to China averaged about 2,500 chests, of 149½ lbs. each. But after the introduction of Malwa opium into the markets of Bombay and Calcutta, the exports began rapidly to increase. We subjoin

An Account of the Quantities and Prices (excluding Fractions) of the different Species of East India Opium, imported into China from the Season 1816-1817, down to Season 1837-1838, when the Trade was interrupted.

Seasons.	Patna and Benares.			Malwa.			Total.	
From April 1st to March 31st.	Number of Chests.	Price per Chest.	Value in Dollars.	Number of Chests.	Price per Chest.	Value in Dollars.	Number of Chests.	Value in Dollars.
1816-17	2,670	1,800	3,132,000	600	875	525,000	3,210	3,657,000
1817-18	2,530	1,865	3,800,450	1,150	612	703,800	3,680	4,504,250

*Note.*—The opium trade upon the coast of China east of Canton began to be of importance in the years 1832-33, since which it has rapidly increased, and bids fair to exceed that carried on at the Lintin station.

The imports of Turkish opium into China are believed to amount to about 1,000 chests. The East India Company did not engage in the opium trade, which has always been in the hands of individuals.

*Confiscation of Opium in 1839. War with China.*—We have already seen (see art. CANTON) that opium has always been prohibited in China, and that consequently its importation has always been looked upon as a smuggling speculation. There would seem, however, to be good grounds for thinking that the prohibition of the importation of opium was all along intended to be more apparent than real. At all events, it is certain

that the trade grew gradually up, from a small beginning, to be one of great extent and value; and it is contradictory and absurd to suppose that this should have been the case, had it encountered any considerable opposition from the Chinese authorities. But the truth is, that these functionaries, instead of opposing the trade, or even merely conniving at it, were parties to its being openly carried on; and received certain regulated and large fees on all the opium that was imported. It has even been alleged that a part of these fees found its way into the Imperial treasury at Peking, though that is more doubtful. The appetite for the drug increased with the increasing means of gratifying it; and there appeared to be no assignable limits to the quantity that might be disposed of in the empire.

The rapid extension of the trade seems at length to have drawn the attention of the court of Peking to the subject. We doubt, however, notwithstanding what has been alleged to the contrary, whether a sense of the injurious consequences of the use of the drug had much to do in the matter. This, indeed, is a part of the subject as to which there exists a great deal of misapprehension; and we are well assured, that, provided it be not carried to excess, the use of opium is not more injurious than that of wine, brandy, or other stimulants. The alarm of the Chinese government was probably not so much about the health or morals of its subjects, as about their bullion! They are still haunted by the same visionary fears of being drained of a due supply of gold and silver, that formerly haunted the people of this country. The imports of opium having increased so rapidly as to be no longer balanced by the exports of tea and silk, *sycee* silver began also to be exported! The paternal government of Peking might have tolerated what are called the demoralising effects of opium with stoical indifference, but the exportation of silver was not a thing to be endured. It is, however, only fair to state, that the Chinese statesmen are not all of the school of Mun and Gee; and that some of them appear to have taken an enlightened view of the question, and to have emancipated themselves from the prejudices that still influence the majority of their colleagues. The statesmen in question contended, that whether the use of the drug were injurious or not, the taste for it was too deeply seated and too widely diffused to admit of its effectual prohibition; and they, therefore, proposed that its importation should be legalised, subjecting it, at the same time, to a heavy duty. There cannot be a doubt that this was the proper mode of dealing with the subject. In the end, however, the government of Peking, influenced by unfounded theories, as to the mischievous effect of the export of the precious metals, came to a different conclusion, and resolved to put a stop to the traffic.

No sooner had this resolution been adopted, than a most extraordinary change appears to have taken place in the conduct of the Chinese authorities; and their usual caution seems to have wholly deserted them. They now became as precipitate and violent as they had previously been slow and circumspect; and resolved at all hazards to attempt forcibly to put down the trade. To accomplish this, all foreigners were, in March, 1839, prohibited from leaving Canton; and compulsory measures were at the same time resorted to for compelling them to deliver up the opium in their possession.

How the affair might have ended, had our countrymen at Canton been left to the exercise of their own judgment in this crisis, it is impossible to say; but we have been assured by those on whose statements we are disposed to rely, that they would most probably have succeeded in getting out of it with comparatively little loss. Instead, however, of acting for themselves, they had to act in obedience to the orders of Mr. Elliot, chief superintendent of the British trade in Canton; and he, while under constraint, occasioned by confinement to the factory, commanded all the opium belonging to British subjects to be given up to him for delivery to the Chinese authorities; declaring, at the same time, that "failing the surrender of the said opium," the British government should be free "of all measure of responsibility or liability in respect of British-owned opium."

We do not presume to offer any opinion as to the necessity or policy of this proceeding on the part of the superintendent; but, in consequence thereof, and of the unjustifiable proceedings of the Chinese, above 20,000 chests of opium were delivered up to Mr. Elliot by British subjects, and by him to the Chinese authorities; and the latter, not satisfied with the possession of the opium, which it was their duty to have placed in a state of security till the matters with respect to it should be arranged, immediately proceeded to destroy it! Having succeeded thus far, the Chinese next insisted that the foreign merchants should subscribe a bond, pledging themselves not to import opium into any part of China; or that, if they did, they were to be justly liable to the penalty of *death*. But this condition being refused, and no arrangement having been come to, Mr. Elliot suspended the trade on the 22d of May. Our readers do not require to be told that a war with China grew out of these extraordinary proceedings, which terminated in the treaty already laid before the reader. — (See *anté*, art. CANTON.) Perhaps, however, we may be allowed, before dismissing this subject, to make a few

observations on the grounds on which we undertook this contest, which seem to have been a good deal misunderstood.

That the Chinese have the same right to exclude opium from their empire, that we have to prohibit the importation of beef, or ammunition, or to lay a duty on corn, does not admit of any question. But in endeavouring to suppress a trade that had been carried on under the sanction of the authorities at Canton, all of whom had largely participated in its profits, justice required that notice should have been given to the parties concerned of the intentions of government. It is necessary to bear in mind that the Chinese were in the habit of frequently issuing proclamations against the importation of opium; but as no attempt was ever made to give any real effect to these proclamations, the parties engaged in the trade were naturally led to conclude that such would always be the case. Hence the necessity for a distinct intimation being made, that the laws against the importation of opium were, in future, to be *bond fide* and truly carried into effect, and for fixing some period after which all parties found engaged in the trade would be subject to certain penalties. No valid objection could have been made to such a course of proceeding. The Chinese are clearly entitled to prohibit the importation of opium; but neither the Chinese nor any other nation are entitled, after having, by a long connivance at and participation in the trade, induced foreigners to import a large amount of valuable property into their territories, to pounce upon and seize such property on pretence of its being contraband! The Chinese are a remarkably clever people; and it is impossible that they should not see that, in this instance, their government was guilty of gross injustice; and that it consequently rendered itself liable for the value of the property it so unwarrantably seized upon and destroyed.

Suppose the British parliament had, in 1796, passed an act prohibiting the importation of tea; and suppose, farther, that the collector of customs and other authorities in Liverpool had paid no attention whatever to this act, but that, from 1796 down to the present day, they had openly countenanced the trade; that it had rapidly increased; and that every year scores of Chinese ships laden with tea had arrived in the Mersey, safely unloaded their cargoes, and sailed either with silver or other British produce on board: what, under these circumstances, would the Chinese have said, had the British government suddenly turned round and declared, "You are engaged in an illegal trade;" and, without farther intimation, have proceeded to seize and destroy all the tea belonging to them in England? Would not the Chinese, the Russians, French, and, in short, the whole world, have declared such an act to be flagrantly unjust? And would not every honest man in England have said that the Chinese had been swindled; and that the government of China did not deserve to be treated with ordinary respect, if it did not endeavour to procure redress for its subjects.

Now, this is precisely the case of England against the Chinese. The morality or immorality of the opium trade is wholly beside the question. Though the use of opium were ten times more injurious than has ever been represented, that would not alter the fact that the trade in it had been openly countenanced by the Chinese authorities for a period of more than forty years; and such being the case, foreigners were certainly entitled to infer that that countenance would not suddenly be withdrawn; and that, at all events, their property would be respected. This, in fact, is not a question about which there is any real room for doubt or difference of opinion. The conduct of the Chinese was most unwarrantable; and the government of this country had not only a well-founded claim for redress, but was called upon to enforce it by a just regard for the national honour and the interests of the British subjects, whose rights had been so outrageously violated at Canton.

But we may farther observe, in reference to this matter, that though it be laid down by all writers on public law, that it depends wholly on the will of a nation to carry on commerce with another, or not to carry it on, and to regulate the manner in which it shall be carried on (*Vattel*, book i. § 8.), we incline to think that this rule must be interpreted as applying only to such commercial states as recognise the general principles of public or international law. If a state possessed of a rich and extensive territory, and abounding with products suited for the use and accommodation of the people of other countries, insulates itself by its institutions, and adopts a system of policy that is plainly inconsistent with the interests of every other nation, it appears to us that such nation may be justly compelled to adopt a course of policy more consistent with the general well-being of mankind. No doubt, the right of interference, in cases of this sort, is one that should be exercised with extreme caution, and requires strong grounds for its vindication. But that this right does exist, seems sufficiently clear. We admit that a slight degree of inconvenience, experienced from one nation refusing to enter into commercial transactions with another, or from its insisting that these transactions should be carried on in a troublesome and vexatious manner, would not warrant any interference with its internal affairs: but this, like all other questions of the same kind,

is one of degree. Should the inconvenience resulting from such anti-social variations conduct become very oppressive on others, the parties so oppressed would have as good a right to interfere to enforce a change of conduct, as if the state that has adopted this anti-social offensive policy had openly attacked their territory or their citizens. A state has a perfect right to enact such rules and regulations for its internal government and the conduct of its trade as it pleases, provided they do not exercise any very injurious influence over others. But should such be the case—should the domestic or commercial policy of any particular state involve principles or regulations that trench on the rights or seriously injure the interests of other parties, none can doubt that these others have a right to complain; and, if the injury be of a grave character, and redress be not obtained on complaint being made,—no reasonable doubt can be entertained that the aggrieved party is justified in resorting to force.

These principles appear to apply with peculiar force in the case of China. Tea, a peculiar product of that country, has become a necessary of life in England; and no one can doubt that a most serious injury would be inflicted on the people of Britain, were any considerable impediment thrown in the way of its importation; and as the arbitrary policy of the Chinese government, which is not influenced by the maxims, and is regardless of the forms, that prevail among civilised states, has on various occasions interrupted this trade, and constantly exposes it to great dangers, it certainly appears that this was a case for forcible intervention—*dignus vindicæ nodus*,—and that we were entitled to demand that the trade should be placed on a solid footing, that the import and export duties should be rendered intelligible and moderate, and that an end should be put to the extortion and interference of the Chinese authorities.

*Indemnity for the Opium destroyed in China.*—The question as to the amount of the compensation that should be awarded to the parties who delivered up the opium to the superintendent in China, has since attracted considerable attention. The merchants contended that they were entitled to its cost, or to the price at which it had been invoiced to them, or to above 2,900,000*l*. It is, however, admitted on all hands that the price of opium is exceedingly fluctuating, and that it is influenced in a very high degree by variations in the facilities for smuggling into China. And it was contended by government, that such were the obstacles thrown in the way of its clandestine importation when the delivery was made in 1839, that the price of opium had fallen to less than half its invoice cost, and that supposing the merchants had retained it, they must necessarily have sustained a very heavy loss. Having taken this view of the matter, government proposed that indemnity should be made at the rate of 64*l*. per chest (1,250,000*l*. in all), being (though little more than half the sum claimed) considerably above the current price of opium in Canton previously to its being delivered up. As might have been expected, this decision was much found fault with. On the whole, however, we think it eminently fair and reasonable. No one doubts, though not a pound of the opium had been delivered up to Captain Elliot, that its owners must, in consequence of the increased difficulties in the way of its sale, have lost heavily; and, under the circumstances, we see no ground for contending that government was bound, because their agent had interfered, to place the merchants in a better position than they would have been in, but for that interference. All that they could justly require was, that it should not be permitted to injure them.

*Cultivation of Opium in India. Monopoly.*—The cultivation of opium in India is a government monopoly, and is confined to the provinces of Bahar\* and Benares, and Malwa in Central India. Every one within the prescribed limits may engage in the opium cultivation; but the drug, when prepared, must all be sold at a fixed price to the Company's agents. The price is very far below the price at which it is afterwards sold for exportation; and the circumstance of its being fixed and inadequate deprives the cultivator of most part of the favourable chances in the lottery previously alluded to by Mr. Colebrooke. Indeed, Mr. C. distinctly tells us (*Hush. Bengal*, p. 118.) that, except in a few situations that are peculiarly favourable, its cultivation is unprofitable. The peasants engage in it with reluctance; and are tempted only by the immediate advances the government agents are obliged to make to enable them to carry on the business.

The monopoly has sometimes produced a nett revenue of about 1,000,000*l*. a year. Latterly, however, this revenue has been materially diminished. This has been occasioned, partly by the conquest of Malwa, and the impossibility of extending the same sort of monopoly into that province that was established in Bahar and Benares, and partly to the introduction of Turkey opium into the Chinese market by the Americans.

The system under which the Indian opium trade has been conducted, has been the theme of much eulogy, and has been supposed to afford the only example of an *unexceptionable monopoly*! By confining the cultivation of the plant to particular districts, and taking care that the whole produce raised in them shall be exported, we prevent, it is said, the use of this deleterious drug from gaining ground in India, while the high price at which it is sold produces a large revenue to the Company's treasury. It is affirmed, too, that even the interests of the Chinese are consulted by the system; that they obtain the drug in a state of purity, which would otherwise be adulterated; and that the high price they are obliged to pay for it merely acts as a wholesome restraint on their vicious propensity to indulge in what is so very injurious. We doubt, however, whether there be much foundation for these suppositions. There can be no question that opium is a very excellent subject for taxation; and the higher the duty can be raised on it, without encouraging smuggling, the better. It is not, however, so clear that the monopoly system is the best way of accomplishing this; and, though the system had been originally a good one, it is no longer possible to

\* The opium of Bahar is known in commerce by the name of Patna opium.

enforce it. To imagine, indeed, that the illicit cultivation of, and traffic in, opium can be prevented, now that it is raised in most parts of the extensive country of Malwa, is altogether ludicrous. As to the supposed influence of the monopoly in insuring the purity of the drug, it is sufficient to observe, that Malwa opium, which is produced under a comparatively free system, has been rapidly improving in its quality, and now very often fetches a higher price than the opium of Bahar and Benares, where the strictest surveillance is kept up. The latter, indeed, has sometimes been nearly unsaleable, from the careless way in which it has been prepared, and the extent to which it was adulterated. — (*Crawford on the Monopoly of the East India Company*, p. 55.) It is needless, however, to say more on this point, than that Turkish opium maintains, in respect of purity and careful preparation, a decidedly higher reputation than any produced in India. — (*Thomson's Dispensatory*.)

We doubt, too, whether the use of opium, when taken in moderate quantities, be really so injurious as has been represented. That it may, like spirits and wine, be abused, is abundantly certain; but it has not been shown that it is more liable to abuse than either of these articles. No one doubts that the Chinese, by whom it is principally consumed, are a highly industrious, sober, frugal people; but though it were otherwise, we really do not see that the East India Company are warranted in subjecting a profitable article of cultivation in India to the fetters of monopoly, that the morals of the Chinese may be preserved. It is unnecessary, however, to dwell upon this view of the matter. The Turks and Americans have no scruples of this sort; and the only effect of the Company's attempting to force up the price of opium to an extravagant height, would be to throw a still greater proportion of the trade into the hands of their active competitors, to the great injury of the Indian cultivators.

Neither must the interests of the cultivators in India be lost sight of, who are materially injured by the existing system. Even were it in other respects proper, their allowances are far too small.

Upon the whole, therefore, we do not see any solid grounds for supposing that this monopoly forms an exception to the common rule; and we agree with those who think that the better way would be to establish the same system, as to the trade in opium, that is established with respect to the spirit trade in this country; that is, to allow every one to cultivate it upon taking out a licence, and to lay an excise duty on the prepared article. Such a plan would put an end to some most oppressive regulations; and while it would open a new source of wealth to the cultivators, the revenue derived by government would be materially augmented.

Besides the works previously referred to, we have consulted, in compiling this article, *Ainslie's Mat. Indica*; *Mitburn's Orient. Com.*; *Bell's Review of the Commerce of Bengal*; *Evidence on East Indian Affairs, before the Parliamentary Committee*, in 1830 and 1831, &c. &c.

#### OPOBALSAM. See BALSAM.

**OPOPONAX** (Ger. *Opopanax*; Fr. *Opopanax*; It. *Opoponasso*; Sp. *Opoponacu*; Arab. *Jawesheer*), a gum-resin obtained from the *Pastinaca Opoponax*, a species of parsnep. It is a native of the south of Europe, and Asia Minor. The stem rises to the height of 4 or 5 feet, with a thick branched yellow-coloured root. The roots being wounded, a milky juice flows from them, which, being dried in the sun, is the opoponax of the shops. It is in lumps of a reddish yellow colour, and white within. Smell peculiar. Taste bitter and acrid. Specific gravity 1.622. It is imported from Turkey. Being used only to a small extent in medicine, the consumption is inconsiderable. — (*Thomson's Chemistry*; *Ainslie's Mat. Indica*.)

**OPORTO, or PORTO**, a large city and sea-port of Portugal, on the north bank of the Douro, about 2 miles from its mouth, lat. 41° 10' 30" N., lon. 8° 37' 18" W. It is a beautifully situated, well-built city; and is supposed to contain, including the suburbs of Villanora and Gaya, on the opposite bank of the river, about, 80,000 inhabitants.

**Harbour.** — The harbour of Oporto is a bar harbour, and can only be entered, at least by vessels of considerable burden, at high water; and it is seldom at any time practicable for vessels drawing more than 16 feet. On the north side of the entrance is the castle of St. Joao de Fos, whence a ledge of rocks, some of which are at all times above water, extends in a south-west direction. The outermost of these rocks, named Pilguela, which is always visible, is left on the left or larboard side on entering. Cabedelo Point, forming the southern extremity of the entrance, is low and sandy. The bar being liable, from the action of the tides, and of sudden swellings or *freshes* in the river, to perpetual alterations, it is exceedingly dangerous for any vessel to attempt crossing it without a pilot. Pilots are always on the alert, and ready to offer their services when a vessel comes in sight, unless the weather be so bad that they cannot go off. On some few occasions of this sort, vessels have been detained for 3 weeks off the port, without having an opportunity of entering. The chapel of St. Catherine is in a line with that of St. Michael leads over the bar. The ordinary rise of spring tides is from 10 to 12 feet, and of neaps from 6 to 8 feet. A lighthouse with a fixed light is erected on a hill about 600 yards N. N. W. of St. Joao de Fos.

The swellings of the river, or *freshes*, as they are called, most commonly occur in spring, and are caused by heavy rains, and by the melting of the snow on the mountains. The rise of water at such times is frequently as much as 40 feet; and the rapidity and force of the current are so very great, that no dependence can be placed on anchors in the stream. Fortunately a *fresh* never occurs without previous warning; and it is then the practice to moor with a cable made fast to trees, or stone pillars erected on the shore for that purpose. — (For further information as to the harbour of Oporto, see *Furday's Sailing Directions for the Bay of Biscay*.)
